Early the next morning we were again greeted with the sight of the crow on the sandy beach. He was pompously strutting about with his eyes bent upon our camp. He was doubtless the outpost of some colony of these thievish birds, who were in concealment in the rear, only awaiting the signal of our departure for a general raid into our deserted quarters for the debris of food that might perchance be strewn around. The weather becoming too unpropitious for the angle, we got down to our favorite game of crib. I evened up in a short time the score in which I had been sadly in arrears. I made a discovery at this sitting that there were two pins in the cribbage board that were loose and that the slightest jar caused them to fall in their sockets. The board, I will explain, was one of those "pull-up" boards, in which a sliding pin is in each hole. When you register the points of each hand you pull up a front pin, always keeping the pin behind it which registered the last count in position, so as to always have your last score on the board, while the others which may happen to be up are considered "dead wood" and are pushed down after the front peg is pulled up. Well, I accidentally saw one of these pins, which Ned always turned to my side, fall through a jar Ned made in slapping his card down. Like a flash of lightning the truth dawned on me that Ned had been having a little quiet fun in taking advantage of this, as I frequently found my head pin down and was at a loss to know where my correct count was and was not absolutely sure that I had pulled it up at all. He would never permit me to take any points in advance of the pin remaining. When I saw that pin fall I quickly turned to him and said:

"You arrant rogue; you ought to be sent to the Dry Tortugas for such a base swindle."

At this he looked as if he would be seized with cerebral paralysis, but he was only holding back a regular avalanche of laughter that finally came bursting forth. After his mirthful flow had subsided I wanted to know how many games he had thus defrauded me of. He answered: "Only five."

"Then I will take ten."

"What for?"

"On the principle of confession, that only half has been told."

"Then I am an Ananias, am I?"

"Not only that, but a Barabbas."

An examination as to the total score of games was now made, and the exhibit showed that with the last ten I had justly strangled out of Ned, I was just that many ahead. Ned never got through laughing over the trick of the falling pins, and said it was a kind of offset to the fun I had gotten out of his pet creation, "the horny-headed ibis." He has told that trick a thousand times since his return, but what can you expect from one that has caught trout in the "Ould Country" by the tickling trick.

About 10 o'clock that morning a heavy storm accompanied with terrific thunder and lurid lightning set in, which was soon followed by a heavy downpour from the regions of Jupiter Pluvius. This necessitated careful protection to our provisions, beds, blankets, etc. The boatmen took good care of the commissary stores, while we were gathering the bedding and placed it in the center of the tent, over which was thrown an oil cloth. The tent was fairly protected by a "fly," which covered it with the exception of about a foot at each end, yet notwithstanding all this precaution little rills would course along the sides and occasionally a drop or two would trickle down your neck, and when you looked to see from whence it came you would catch it in the eye, and then bob down to escape the cold drops. As the wag said, it was a very wet rain, and it began to get wetter very fast. Soon we had to close the door of the tent, as the wind had veered around and was taking our front door by storm. There may be something very cheerful about this free life in the forest, but it never strikes you that way on a rainy day. Ned, who was always a nightingale under bright skies, had entirely lost his melody in the present flood of affairs. He sat with a bowed head and heavy heart in the dark and musty surroundings, and only moved when the rain drops were inclined to give him a shower bath. He finally got interested in some questionable mathematics about the warring elements, and as a result of the solution of the problems, stated that the present rainfall amounted to about an inch an hour, and it would continue for three days or more. He was sadly at variance with solid facts, for in about three hours the rain entirely ceased, and then the dark clouds, like a hulk from the recent battle, floated swiftly away.

"And Phœbus, fresh as bridegroom to his mate,
Came dancing forth, shaking his dewy hair,
And hurled his glist'ning beams through gloomy air."

The odor from the balsam, the pine and the spruce embalmed the air like the perfume of wild flowers, while the freshness and the beauty now dominant lifted our hearts from the abyss of despair to that of overflowing joy. Ned caught the splendor of the surroundings at once, and sent his delicious notes echoing o'er water along shore and in the freshened wood. Being anxious about the condition of the anchored fish, we took the boat and went on a tour of inspection. We found six of them about to start for another world, so we brought them ashore and had them cleaned and salted, and then carefully put in a box amid cooling grasses.

CINCINNATI, Ohio.

ALEX. STARBUCK.

ANGLING NOTES.

WE think it is generally understood that pompano are rarely taken on a hook and line, but Col. Babbett, a well-known Florida angler, tells us that he has enjoyed magnificent sport with the dainty fish, and gives the following directions for their capture: The proper rod for pompano fishing is a medium weight bait-rod, such as one would use for black bass. The reel should be large enough to contain at least 50 yds. of No. 9 Cuttyhunk line, and a No. 4 Sproat should be fastened directly to the line. The best bait is the small crab found in the oyster, or a small bit of white crab meat not larger than a good-sized pea. Anchor at the ground where these fish are found and let the bait rest on the bottom, a very small sinker may be used. Above all things, the Colonel says, keep perfectly quiet, do not move about in the boat or make any noise or disturbance, as these fish are exceedingly shy and timid. When hooked they afford glorious sport and fight like tigers. The most careful angler will not be able to save over three out of five fish hooked, as they have very tender mouths. Sometimes they appear in great numbers on the surface, skimming over the water in every direction. When they are in this mood they will not take the bait, but when in the humor they take hold rapidly.

At the time of writing these notes, Feb. 28, the peepers are giving their evening concerts in the marshes, the blackbirds are flying around the salt meadows in large flocks, and the frost is entirely out of the ground. And there is no doubt if the season opened for trout fishing on March 1, as it used to, the trout would rise well to the fly. Yet there is no telling what the weather bureau may have in store for us between now and the first of April. It is only a few years ago that the writer of these lines was out snowshoeing on the first of April, and the memory of the great March blizzard is still fresh in our minds.

In old times March 1, then the opening day of the trout season, was a great day on Long Island. Every place where trout could be caught, from Jim Smith's to Patchogue, had its full complement of guests, and a jolly crowd they were. There was little sleep to be had the night before the opening. The most famous of these places were Massapequa Pond, Carman's, Liff Snedecor's, Green's Creek at Sayville, Fireplace and Stump Pond. Now all is changed, and there are no free waters worth mentioning. All the ponds and streams are controlled by clubs and private individuals: the very few that are public have been fished and poached to death. There were many days when the season was open in March that the angler found his line frozen like a wire and fly-fishing was uphill work. The wind would blow cold over the salt meadows, rattling the dry bullrushes and causing the angler's teeth to chatter an accompaniment. It used to be whispered that instead of fishing, anglers would seek the comforts of the tavern and before an open fire indulge in hot Scotch and games of poker, and other wicked devices of the Evil One; but these were undoubtedly base slanders, circulated by curious matter-of-fact people who do not appreciate angling.

THE CANADIAN FISHING LEASES.

Editor Forest and Stream:

In your last issue I notice mention of the muddle that seems to prevail in the matter of leased fishing rights in the Province of Quebec, Canada, the general Government having notified all parties purchasing under the sale by the Commissioner of Crown Lands in January last that such sales were illegal, and conveyed no rights or privileges. This is pleasant news for those who purchased and paid a year's rental in advance, especially to those clubs that have expended money in the erection of houses and improvements. The whole business relating to the sale of the rights on the days named in the advertisement was characterized by those interested as a barefaced instance of favoritism, and utter disregard of the terms and conditions stated in the advertisement of the list of rivers and lakes to be sold at auction to the highest bidder; whereas many were withdrawn or rather not sold, no reason being given; and many were negotiated for privately and obtained without any chance being given for competition. It seemed to be only necessary to have "a pull" or back-door access to the Commissioner to obtain whatever was wanted; in fact the advertised sale at auction was simply a farce, and people who went to Quebec, intending to purchase privileges, expended their time and money on a useless errand, and have just cause to criticise the course of the Crown Lands Department for favoritism and failure to keep faith with the public in its manner of disposing of the "rights" in accordance with the advertised programme.

The conclusion to be arrived at is, that the Crown Lands Department is weak and sadly deficient in dignity and good faith, or whatever else the public may choose to think. Except those who may suffer by its acts, people will rather rejoice at the snub it is receiving from the General Government at its assumption of local ownership of the fishing privileges of the Province of Quebec.

As the case stands now, there are no privileges for the money paid; no exclusive use of any waters in the Province of Quebec, and no apparent immediate settlement of the question, who can or who will grant leases or on what conditions?

Under the circumstances, the money received under the Crown Lands licenses should be returned.

It would naturally strike any sensible person that the General Government had entire jurisdiction over all Canada, and a Province has no more right to lease its rivers and lakes than a county in the State of New York has to lease the streams within its limits. The principle is the same; so it looks very equally for the parties who have purchased "rights" either to get the exclusive privilege they purchased or the money back paid for them. The Crown Lands Department does not seem to set up any protest to the claim of the Hon. Charles H. Tupper, Minister of Marine and Fisheries, that it has transcended its power and authority in selling what did not belong to it. Those who purchased leases and paid their money would like very much to know what the Honorable Commissioner of the Crown Lands Department is going to do about it.

The opening season is near at hand, and we fishermen would be glad to know what our rights are or whether we have any rights at all. Will the Commissioner speak up and tell us how we stand?

FISHERMAN.

RANDOM CASTS.—III.

A MAN hardly realizes what good health is until he has been on a fishing trip. Once tried under the proper conditions he is a poor mortal who does not hanker for more.

Not only is it unsportsmanlike to keep fish under size, it is most unjust, for you deprive others of the benefits that they would derive were the small ones permitted to mature. Therefore, if uninjured in the gills, when there is always a chance of their living, return the babies to the water at once.

Must we wait until our shores become as bare of fine food fish as those of the "old country" before we awake to a realization of the fact that the steam menhaden fishermen are fast destroying one of nature's greatest gifts to man? If so we may prepare to do as the Englishman does, eat skates and sea robins for the want of something better. Will the politician ever realize that fish would become so cheap in our markets as to afford the poorest family a good meal were this manure traffic to be properly and justly restricted?

BIG REEL.

LENGTH AND WEIGHT OF FISHES.

Editor Forest and Stream:

A great desideratum is tables of constants for fishes, and especially one giving the relative lengths and weights for different ages or stages. One might suppose that such information could readily be obtained, but from considerable experience I find that such is not the case. Will not some of your numerous readers supply the want to some extent? Commissioner Blackford is just the man who could give the information readily and accurately, on account of the great numbers of fishes which come under his observation. A certain number (say 100 to 1,000—the more the better), representing the average of those marketed, should be exactly measured in a perfectly straight line from the snout to the hindmost part of the tail fin and the precise weight of each fish correlated with the length. A table representing in detail the ratio of length and weight for each specimen would enable us to obtain a fair idea of the average ratios, as well as an approximation to the maxima and minima of the species as marketed. I need scarcely add that such tables would be useful and even invaluable to the angler. With a tape measure he could then deduce the closely approximate weight of his captured fish, and we would have fewer of the random guesses and hits far of the mark that every critical reader of angling literature constantly meets with in the course of his reading.

Cannot you induce some one with fresh fish to help with such tables? Will not Commissioner Blackford delegate some one to perform the much needed work? Whoever will publish such tables will deserve and undoubtedly receive the thanks alike of anglers and ichthyologists.

THEO. GILL.

SMITHSONIAN INSTITUTION, Washington, Feb. 24.

[This is a subject in which we have long been interested, but without having the opportunity to carry out

the line of investigation suggested by Dr. Gill. We find in our notes a few items bearing upon the matter, and present them as a small beginning, hoping that others may continue and complete the work. Mr. F. A. Lucas had a pike (*Lucius lucius*) weighing 5lbs. and measuring 30in. He studied a large-mouthed black bass (*Micropterus salmoides*) weighing 5lbs. and measuring 18in.; another one weighed 5½lbs. and measured 21in. He states that the yellow perch (*Perca americana*) averages 1lb. to one foot of length. In the red snapper fishery off the mouth of the Gulf of Mexico during February, 600 red snappers (*Lutjanus blackfordi*) weighed about 9,000lbs.; 100 jewfish (*Promicrops itaiara*) weighed about 7,000lbs. Capt. J. W. Emmons, of New London, gives the average weight of the red snapper the season through as about 10lbs. On Feb. 7, 1885, the Albatross caught seven red snappers of unusual size off Cape San Blas, Florida, the largest of them weighing 27½lbs. We are sorry to say that the length corresponding with these weights is not recorded.]

BATH, Feb. 24.—Editor Forest and Stream: At the annual meeting of the Sagadahoc Fish and Game Protective Association, held on the evening of the 21st, the following officers were elected: Dr. Chas. A. Packard, President; James Purrington and Wm. E. Hogan, Vice-Presidents; Geo. E. Newman, Secretary and Treasurer; Geo. H. Nichols, Brunswick; S. W. Carr, Bowdoinham; Augustus Hatch, Bath; Chas. H. Greenleaf, Bath, and Chas. B. Furber, Bath, Executive Committee. The subject of stocking some of the streams in this vicinity with trout was discussed, and the executive committee were authorized to expend such an amount of money for that purpose as they deemed advisable. Several ponds suitable for the purpose were stocked with black bass some years ago, and they have done well, a few weighing 2 or 3lbs. have recently been taken. Our efficient game warden, James Bailey, has been doing good work here in restraining and bringing to justice some of the law-breaking poachers who prey upon the menhaden, mackerel, lobsters, striped bass, game, etc., and the sentiment in regard to fish and game protection is improving daily in this region. This has been brought about, we believe, largely through the influence of our association, aided by your ever welcome and interesting paper.—N.

In another column the Syracuse Bamboo Furniture Co. advertise their patent Gang Trolling Bait, which it is claimed will hook two to one of any other bait used. They are light and easy running, and many prominent anglers have testified to their killing qualities. The makers offer a series of prizes for the largest fish taken with these baits.—Adv.

TO SECRETARIES OF ANGLING ASSOCIATIONS!—If you will send us catalogues containing the names of your members, we will send you samples of our gang trolling baits. Address Syracuse Bamboo Furniture Co., successors to Syracuse Fish Rod Co., Syracuse, N. Y., U. S. A.—Adv.

Fishculture.

CALIFORNIA FISH TOPICS.

THE recent action of the State Fish Commissioners in discharging two deputies has created a great deal of talk among fishermen, and is likely to lead to many acrimonious discussions. Briefly, the State Board having received many complaints that some of its own deputies were guilty of illegal fishing, made an investigation this week. Carl Procht and Charles Ohm; both deputies, were found to have fished out of season for trout and small fish, in Sonoma Creek. They responded that the fish they had been obtaining were salmon, not trout.

Fish Commissioner Joseph Routier, a very able and energetic man, has taken much interest in this phase of the question. He says that every fisherman on the coast knows that the trick of calling the same fish salmon at one season and trout at another has ruined many excellent streams. Hon. Ramon Wilson, attorney of the Board, says that the fish can and must be protected at this time of year, and that prosecutions can be maintained. The Board sustained these views and the deputies were dismissed.

They are popular men, and were backed up by resolutions passed by a club or two, and every effort has been made to obscure the real issue. For instance, complaints were laid against Mr. Lamotte, who is hatching trout for the San Francisco & North Pacific R.R., and has already put nearly half a million young trout in the Sonoma. He secures spawn from fish caught by a weir, and then restores them unhurt, as he has been doing for years. He is one of the principal defenders of the fishing interests of Sonoma Creek, and has the unqualified support of the Fish Commissioners.

I have talked of this matter with many of the quiet gentlemanly fishermen who always keep on the safe side, and they all think that the "trout-salmon dodge" is becoming very stale, especially for deputy Fish Commissioners. Most of the newspapers take the same view of the subject. A few vigorous prosecutions are what is needed, no matter who is hurt. If a prosecution cannot be maintained, owing to the ambiguity of the law, the next Legislature will readily amend it. But Mr. Wilson is an able lawyer, and his view is that the case is plain.

The most promising event of the year is the scale of work on which it is proposed to push the new hatcheries of lake trout (from Pyramid Lake) at Tahoe and in San Francisco. The Indians on the Pyramid Lake reservation have been slaughtering them at all seasons along the shallows of Truckee, where they spawn, but a stop has now been put to this performance. The California Indians make their fish carnival at the spawning season. I have seen them clubbing salmon by the hundreds at Redding, on the Upper Sacramento, twenty years ago. The waste and destruction at that time was frightful. Pyramid Lake is still well stocked with trout, and Supt. Woodbury of the State Commission thinks that in a few years the old fame of California for this magnificent fish will have even added lustre.

At the beautiful little Sisson hatchery, Sisson's Lake, Siskiyou county, there are now more than 1,800,000 young salmon ready to distribute. This mountain lake, fed by springs, which maintains its temperature at about 40 deg., summer and winter, is one of the most charming spots in California. Great pines and firs are all about it, and snow-crowned mountains tower over it. I visited the place early in winter, and helped the old pioneer to feed his little pets. When it becomes necessary additional ponds can be made at Sisson's, and tenfold the number of salmon hatched there.

CHARLES H. SHINN.

SAN FRANCISCO, Cal.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Natic," "Glean," "Dick Stryker," "Sphillene" and other competent authorities to be the best treatise on the subject extant.

The Kennel.

FIXTURES.
DOG SHOWS.

March 4 to 7.—Second Annual Dog Show of the Mascoutah Kennel Club, Chicago, Ill. Geo. H. Hill, Superintendent, 175 Dearborn street. Entries close Feb. 17.

March 11 to 14.—Second Annual Dog Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

March 18 to 21.—First Annual Dog Show of the Maryland Kennel Club, at Baltimore, Md. W. Stewart Diffenderfer, 220 N. Charles street, Secretary. Entries close March 4.

April 1 to 4.—Sixth Annual Dog Show of the New England Kennel Club, at Boston, Mass. J. W. Newman, Secretary.

April 15 to 18.—Show of the Buffalo Kennel Club, Buffalo, N. Y. A. W. Smith, Secretary.

Oct. 6 to 11.—Ninth Annual Dog Show of the Danbury Agricultural Society, at Danbury, Conn. B. C. Lynes, Secretary.

FIELD TRIALS.

Nov. 17.—Twelfth Annual Field Trials of the Eastern Field Trials Club, at Otterburn Springs, Va. W. A. Coster, Saratoga Springs, N. Y., Secretary.

Dec. 1.—Second Annual Field Trials of the Central Field Trials Club, at Lexington, N. C. C. H. Odell, Mills Building, New York, Secretary.

1891.

Jan. 19.—Eighth Annual Field Trials of the Pacific Kennel Club, at Bakersfield, Cal. H. H. Briggs, Secretary.

Feb. 2.—Third Annual Field Trials of the Southern Field Trials Club. T. M. Brunby, Secretary, Marietta, Ga.

BOSTON DOG SHOW.

THE premium list of the sixth annual dog show of the New England Kennel Club is ready for distribution. In the classes for mastiffs, rough-coated St. Bernards, smooth-coated St. Bernards, large pointers, small pointers, English setters, Irish setters, Gordon setters, collies and fox terriers the prizes are challenge dogs \$20 and \$10; bitches the same; open dogs \$20, \$10, \$5 and \$3; bitches the same; puppies, each sex, \$5, \$3 and bronze medal; novice \$10, \$5 and \$3. Deerhounds, challenge dogs, \$10 and \$5; bitches the same; open dogs \$15, \$10 and \$5; bitches the same; puppies, one class, \$5, \$3 and bronze medal. Bulldogs, bull-terriers and pugs, challenge dogs, \$10 and \$5; bitches the same; open dogs \$10, \$5 and \$3; bitches the same; puppies, one class, \$5, \$3 and bronze medal. Greyhounds, beagles, Irish terriers and Yorkshire terriers, challenge, one class, \$10 and \$5; open dogs, \$10, \$5 and \$3; bitches the same; puppies \$5 and bronze medal. The Spaniel Club's classification No. 2 is adopted with prizes of \$10 and \$5 in the challenge and \$10, \$5 and bronze medal in open and novice and \$5, \$3 and bronze medal in puppy classes. Black and tan terriers and toy spaniels (except King Charles), challenge, one class, \$10 and \$5; open dogs the same; bitches the same. King Charles spaniels, challenge, one class, \$10 and \$5; open, one class, \$10, \$5 and \$3. Bloodhounds, dogs, \$10 and \$5; bitches the same. Great Danes, dogs, \$10, \$5 and \$3; bitches the same. Newfoundland, Chesapeake Bay, dachshunde, poodles, Scotch, Dandie Dimont, Bedlington and Skye terriers and miscellaneous, one class each, \$10, \$5 and \$3. Schipperkes, one class, \$10, \$5 and bronze medal. Mexican hairless, \$10 and \$5. Round-headed bull and terriers, large, \$10, \$5 and \$1; small the same; puppies, \$5, \$3 and bronze medal. Kennel prizes of \$10 each are offered for the best three mastiffs, St. Bernards, pointers, English setters, Irish setters, Gordon setters, spaniels, collies, bull-terriers, fox-terriers and pugs. To compete for these prizes all must be American bred. The St. Bernard Club offers \$25 silver cup each for rough and smooth brood bitch, and medal each for American-bred smooth dog over 18 months, under 18 months, bitches the same, and the same for rough-coated; all to be owned by members of the St. Bernard Club. The A. K. C. offers a set of Stud Books for the best kennel of four St. Bernards owned by a member of the St. Bernard Club. The Pointer Club offers \$10 for the best pointer dog and \$10 for the best bitch that has won a heat at any field trial. Mr. F. R. Hitchcock offers \$25 for the best kennel of four pointers. The Spaniel Club trophy, value \$100, for the best field spaniel owned by a member of the Spaniel Club, will be competed for. The Collie Club offers \$10 for the best collie dog in open class owned by a member of the Collie Club, and \$5 for best bitch, same conditions. The Fox-Terrier Club offers \$10 for the best fox-terrier and \$10 for best in open class. The Fox-Terrier Club Grand Challenge Cup for the Home-Bred Puppy Stakes for 1890 will be competed for.

The show will be held April 1 to 4, in Mechanics' Hall. The judges are: Mr. James Mortimer, mastiffs, St. Bernards, bloodhounds and poodles; Mr. John Davidson beagles, English, Irish and Gordon setters, deerhounds and greyhounds; Mr. J. H. Winslow, pointers; Mr. Wm. West, spaniels, except toy; Mr. Martin Dennis, collies; Mr. John E. Thayer, bulldogs; Mr. H. W. Jacy, great Danes, Newfoundlands, dachshunde, terriers except fox-terriers, pugs, toy spaniels, Mexican hairless and miscellaneous; Mr. Geo. B. Inches, Chesapeake Bay dogs; Mr. Nathaniel Seabury, round-headed bull and terrier and Schipperke; Mr. Mayhew fox-terriers. Mr. John Read will superintend the show and Dr. Daniel Lee is veterinarian. Entries close March 17. Address Bench Show Committee, 6 Hamilton place, Boston, Mass.

BALTIMORE DOG SHOW.

BALTIMORE, March 1.—Editor Forest and Stream: On the threshold of closing our entry list it is gratifying to know that our most sanguine expectations have been more than realized. The Chesapeake Bay classes have filled so well that the exhibition of this breed will far and away excel any yet given in America. There will be over twenty of these dogs shown, and they will include the finest specimens in existence. Each would-be winner of the duckers' silver cup declares that he has the monarch Chesapeake, and some of our most prominent Marylanders have entered. Hence we can promise the sporting writers an excellent test of the Chesapeake Bay dog.

The interest shown here in the show seems to fairly cluster around the Chesapeakes. The exhibit is dear and near to the Maryland heart. This feature will in itself go far toward packing Natatorium Hall.

It gives me pleasure to announce that Mr. Percy C. Ohl, of New York, will superintend the show.

Thanking you for your kindly interest in our enterprise heretofore, and with a hearty invitation to you to trace the famous "milk route" ere the April showers, I am,

W. STEWART DIFFENDERFER, Secretary.

IMPORTATION OF WATCH.—Toledo, O., March 1.—Editor Forest and Stream: Thinking you will be glad to get some dog news from here, I give you the following, which I think will be very welcome news to the breeders of St. Bernards in this country. Mr. John Poag, of this city (an amateur), has purchased the celebrated St. Bernard dog watch (E.K.C.S.B. 25,094); he sails to-day via steamer Nevada. He probably is the champion of all smooth-coats. His owner would not sell or make a price to remain in England. He will be placed in the public stud as soon as he is in condition after his arrival, due notice of which will probably be given in your columns. Mr. Poag has never had any experience heretofore in the business, and I think he should be encouraged, as he had to put his hand into a big bank account to reach this prize.—W. J. FARRAR.

ENGLISH NOTES.

LIVERPOOL held its tenth show this week, and a great success it turned out. The dog show is always held in combination with the poultry, pigeon, horse, cattle and other shows, and the combination, of course, brings together a multitude of exhibitors. McKenzie, the Liverpool secretary, is a very good fellow, who does his work thoroughly well, being one of those who regards himself as the servant of the exhibitors, not *vice versa*, as many show secretaries do. T. H. and E. C. Stretch reside at Liverpool; they will be known to your readers as the great owners of one or two of the best stud collies, and of course they help the show a great deal in every way. Besides collies they are large pigeon and poultry men. Sumner, the Liverpool veterinary surgeon and Irish terrier fancier, also lent valuable assistance in making the show "go," and the combined efforts of the committee may be summed up in two words—"glorious success."

St. Bernards were judged by S. W. Smith. Sir Bedivere was alone in the challenge class and proved the great attraction he always does. He seems to me to improve both in size and character. In smooth challenge dogs the winner, Rustie, had an exceedingly difficult task to beat Baron Wallace; as it was I think he only did it in consequence of the latter being a bit lame. Baron Camrose won in the rough open class, a really good dog who may eventually get into the challenge class and then perhaps find his way to America. Orson, second, is also a good one but lacks in size when compared with the winner. Lady Ida, the winner in bitches is only a fair one. Wavertree Mab, Florian and Queen of Scots are only passable ones. Courtier won in novice dogs, and a good one he is. Florian won in the similar bitch class, while Marvel, an enormous-headed but somewhat plain-faced youngster won in puppies.

Great Danes were poorly represented. There is no doubt whatever that before long this breed will only be kept by a few of the most ardent admirers of the same, for each succeeding year shows a steady decrease of fanciers and exhibitors. Stolte's Queen of Saxony won in the open and novice classes, only a middling one. Danes were also judged by S. W. Smith. He also adjudicated upon bloodhounds. Mrs. Tinker's Darby won, beating Craven's recent acquisition, Koodoo, a big mistake in my opinion, for the dog is a very short-headed one and not owning the best of bodies. Koodoo has a fair head, but her body, legs and feet are probably not to be excelled by any hound on the benches. Craven has recently purchased Cromwell from George Krehl, and it is reported that he does not intend to show the only undefeated bloodhound again. Retrievers were a poor lot, both the curly and wavy varieties being poorly represented. Pointers were also very small classes and not a real good one among them. The North country is not a good place for pointers, the best always coming from the west country, Devonshire being particularly famous for them, but Lancashire is a veritable hotbed for the curly retrievers, and I am surprised at the poor entry. It really seems that sporting dogs do not muster well at any of the provincial shows, and that if one wants to see a really good collection of pointers, setters, retrievers, spaniels and such like dogs, that it is only possible to do so at either the summer or the winter show of the Kennel Club.

Basset hounds mustered fairly well both in quality and in numbers. Mrs. C. C. Ellis having quite a field day of it. This lady won first, second and third in open class, first and third in bitches, first, second and third in novices, and of course won the couple prize. This feat is something to be proud of, especially as the lady bred the lot. Xena looks like making up into a very hot champion. Bevolina won in Dalmatians. She is about the best of her breed going, and is owned by Drosse, the secretary of the club which was recently formed to look after the interests of this breed. British Monarch won in challenge bulldogs. His owner evidently meant to break the record of prizes won with him. It is rather a pity to see so good a dog being hawked about all over the country pot hunting; it neither does the dog's health good, nor does it add to the owner's reputation, and this continual showing a dog certainly does him harm from a stock-getting point of view. Hades won in the open class, a good dog all over but a nasty tempered customer.

In bull-terriers the good Little Baron won, and in the open class Charming Tom got premier honors, followed by Diamond King—both very good ones and not much to choose between them. Brickbat won in challenge Irish terriers. The Irishmen were judged by Dr. Carey, who certainly ought to know a lot about the breed, but from the way in which he placed his awards I am very much afraid that those who entertained that opinion of him previously to his judging do not think so now. He made one or two lamentable errors which upset some of the fancy. For instance, St. Simon, the winner in the open dog class, is a perfect duffer compared with Daniel II., who is undoubtedly next to Bredenhill, the best Irish terrier now in the open classes. Beucher, too, was very low down in the prize list, when he ought to have been in the first three. The winner in bitches, too, Miss Peggotty, was badly placed, the class containing at least three better specimens of the breed.

Pugs were fairly represented, Loris being the only one in the challenge class. Some One, a grand little pug, Bonsor, a grander little pug, and Logie, a very nice one, were placed in the order written, but Bonsor should have won, he being a much better pug all over—bar wrinkle—than Some One.

Toy spaniels were poor. The best of this breed are to be found in or close to London, and it is seldom that their owners care to travel so far off as Liverpool.

A few Schipperkes—the new fashionable breed—put in an appearance, and they attracted a deal of attention at the show. I know very little about this breed myself, but a Belgian gentleman whom I met at the show and who seemed to me to know a tremendous lot about them, and who told me that he had bred them for thirty-eight years, was of opinion that they were badly judged. In his opinion Jo Piot (third) should have been first—in fact, he went into ecstasies over this lively little dog, and said he thought him about the best of the breed he had ever seen. Black Beetle, first, he thought a poor one, as he did Blackball, second. English terriers found Melipse—a clinking terrier all over, bar eyes, which are full and "gogzled"—in the challenge class, and Semolina and Pearl placed as written in the open class. This is a very nice breed to go in for, being both graceful to look at and full of life and dash. They are not so heavy as the bull-terrier, nor so "fast" looking.

The collies were fairly good numerically, and some tip-top representatives of the breed were on view, notwithstanding the fact that not many champions put in an appearance. Edghaston Fox (Megson's £200 Crystal Palace purchase) was alone in the challenge class. In the open class for smooths the same owner's Pickmere, a good one all over, won from Majda, who is a hot one to contend against at any time, but the dog shows a great deal more collie character than does the bitch. What may be termed the sensation of the show came in the open class for rough dogs. Here Stretch's Christopher, the swell stud dog of the day, was put over Morton Campbell's Stracatro Ralph, the dog who created such a tremendous sensation at Birmingham, where he won all before him, and whose owner refused £250 for him at that show. [N. B.—In a former letter I stated that I heard that £400 had been offered and refused for this dog. I stated this on hearsay; it turns out to be incorrect, but the £250 offer is quite true.] C. H. Wheeler was the judge, and I think I may safely say his award between these two dogs was indorsed by those present, but I fancy if Ralph had been in the hands of Stretch and Christopher in Campbell's the award would have been reversed, for Stretch is a thoroughly practical collie exhibitor and knows how to get a dog into the best possible form, while

Campbell's dogs are all good workmen at sheep and he does not pay sufficient attention to keeping a collie in his best coat. The winner was in grand form, but Ralph looked as though he had been disporting himself on his owner's moors up in Bonnie Scotland. He won some very valuable special prizes. Hollen Bitters, a true collie, and unlucky to meet such fine specimens of the breed as were in front of him, came third, a good performance in a class of twenty-one. In bitches Bleachfield Wonder was first, a very nice one indeed, who should have a prosperous future before her; she excels in coat and symmetry and her facial expression is of the best. Keepsake, second, is also a rare good one, and in the opinion of many fanciers should have beaten the winner. Both belong to Percy Heaton. Keepsake is a bit on the small side, but otherwise is equal to Bleachfield Wonder, and if the former grows a little and fills out more, her chances of beating her more successful rival here, are pretty certain. Hollen Bitters won in puppies (dogs) and Keepsake in the corresponding bitch class.

Fox-terriers were a capital lot, and, of course, handled well by Geo. Raper, who is undoubtedly a good judge of the breed. Brockenhurst Lottery won from Surety in the smooth challenge class—both good ones and not much to choose between them. Lenden Nettle—better known by the name of Quacktock Nettle—won in the corresponding class for wire-hairs, looking, as usual, A1. In open smooth dogs Kernincham Trumps, first; Milnrow Process, second, and Redmond's Director third. The latter is the truest-built terrier of the trio, but he is spoiled by a peculiar expression about the eyes which detracts considerably from his otherwise smart appearance. Trumps is a grand-headed one and a capital mover in the ring. Process's chief fault is lightness of bone. Be Quick won in smooth bitches—shown in capital form and improving. Second went to "L. N. R.," which I presume is intended for a pun on "Eleanor." This bitch set the mouths of many terrier men watering, for she is a nailer, and if she improves with age will make our best bitch sit up later on, but many good judges seemed to think she is one that is now at her best and would not improve. Grouse II., third, is also a good specimen. Hollandaise won in wire-hairs, followed by Velocity—both are only just fair ones at their best. Wire-hairs were generally poorly represented, and nothing of particularly promising quality turned up in the novice, puppy and local classes.

Tremendous excitement prevails in bulldog circles this week, and feeling runs very high over the election of a new secretary for the Bulldog Club. Pybus-Sellon has occupied that post for the past six years, and has served that term with credit to himself and great benefit to the breed and the club. Prior to his tenure of office the committee of the club were continually being called upon to put their hands in their pockets and pay the debts of the club, but since he became secretary he has paid all debts out of his own pocket, and to-day the club is quite at the head of the specialist clubs which exist, solely owing to Pybus-Sellon's devotion to the British bulldog. No man has ever owned a finer kennel than he, and no one has won more prizes. He is supposed to be giving up the secretaryship on account of its being too much call upon his time, but it strikes me very forcibly that the main reason of it is that many of the members have disgusted him by their actions. Some people suppose he is giving up the breed as well. This is a great mistake, for Pybus-Sellon's love for the bulldog is stronger now than it was when he first commenced showing them, ten years ago, and he has one or two youngsters in his kennels which will astonish the natives very shortly. Cyril Jackson, of Bath, and Sprague are the candidates for the vacant post. Every one thinks the polling between the two left in will be very close indeed, as both are popular, and moreover men who have done a lot of work for the breed.

A LIVELY LORD.

TEXAS FIELD TRIALS.

MARSHALL, Texas, Feb. 18.—Editor Forest and Stream: The Texas Field Trials Club held their annual meeting at Waskom station, about twenty miles east of this place, with the results as given below. The judging was done by Capt. W. W. Tucker and Messrs. W. L. Thomas and F. Y. Hall until after the Ross-Capt. Craig heat in the All-Aged Stake, when the judges were Messrs. Hall and Thomas and Mr. W. E. Winston. The running was done on the 11th and 12th, the 13th and 14th being entirely too wet.

Fourth annual meeting of the Texas Field Trials Club, open to amateurs only.

THE DERBY.

Fifty dollars to first, \$25 to second, and \$10 to third.
First Series.—Hamilton and Jackson's black, white and tan English setter dog Fred Gates (Bob Gates—Lilly B.) beat R. M. Hutching's black, white and tan English setter dog El Rio Ray (Gath's Mark—Blue Chiqua). Robert W. Shaw's liver and white pointer Brazos (Spring—Daisy White) beat Ben Cook's black pointer Rex (Lossing—Tyne). R. R. Scott's black setter Jack (Joe—Kretz's bitch) beat A. J. Ross's orange and white cross-bred setter bitch Light Foot (Breckenridge—Kate Coleman).

Second Series.—Fred Gates beat Brazos, Jack a bye.
Third Series.—Fred Gates beat Jack and won first.
Fourth Series.—El Rio Ray beat Jack and won second. Jack placed third.

ALL-AGED STAKE.

One hundred dollars to first, \$50 to second, and \$10 to third.
First Series.—A. J. Ross's orange and white cross-bred setter bitch Kate Coleman (Guy—Stela) beat R. M. Hutching's liver and white pointer dog Spring (Mainspring—Curfew). W. J. Rosborough, Jr.'s liver and white pointer dog Bang (Cloud—Fantine) beat R. R. Scott's black and white cross-bred setter Jack (Joe—Kretz's bitch). W. J. Cook's liver and white pointer bitch Ross (Bruce Ranger—Frank) beat John L. Phillips's white, black and tan English setter dog Capt. Craig (Gladstone—Lady M.). S. H. Green's black pointer dog King Cotton (Tyler—Dream S.) a bye.
Second Series.—Kate Coleman beat King Cotton, Ross beat Bang.

Third Series.—Ross beat Kate Coleman and won first.
Fourth Series.—Kate Coleman beat Bang and won second. Spring placed third.

The number of entries was small, owing to the fact that several members of the club were absent from the State and others sick. Everything passed off very pleasantly.

W. L. THOMAS, Sec'y.

BUFFALO DOG SHOW.—In addition to the cash specials offered by the American Spaniel Club it has been decided that the second competition for the \$100 challenge cup for cockers shall take place at Buffalo. The American Kennel Club offer a complete set of Stud Books for the best kennel of four Gordon setters and a large number of other specials are promised. Entries close March 25.

EASTERN FIELD TRIALS CLUB MEETING.—The adjourned annual meeting of the Eastern Field Trials Club will be held at the office of Mr. F. R. Hitchcock, 44 Broadway, New York, on Tuesday, March 11, at 3 P. M. A full attendance is desired. Those who cannot be present are requested to send proxies to the secretary, Mr. W. A. Coster.

KING CHARLES SPANIEL IMPORTATION.—Mr. John P. Shea, of New York, has imported the King Charles spaniel bitch puppy Dagmar from the kennel of Mr. Edward Arnold, London, Eng.; she is nine months old and is by Ben Lomond and out of Lilly.

DOGS OF THE DAY.

MR. J. H. WINSLOW, of Philadelphia, has purchased from Mr. J. L. Anthony the pointer dog Tempest, by Beppo III. out of Lass of Bow. Tempest is a nicely-marked liver and white dog in the heavy-weight class, and Mr. Winslow told me last Friday evening, as we stood on a back seat at the Philadelphia Fencing and Sparring Club's entertainment, that he has a good one in Tempest, "and you will see him at Chicago if you are going." Well, I am going, and hope Tempest will fill my eye as well as he does his new owner's. This dog won third prize at the Southern Trials at Amory, Miss., last December. Mr. Winslow does not mean to switch over to the setters just yet. Mr. Taylor, the Philadelphia Kennel Club treasurer, in FOREST AND STREAM of last week refers to a remark of mine respecting no show this year in the Quaker City, states that the club members are after a lot of good dogs to win at the field trials, and adds that the club will henceforth eschew dog shows. It is a pleasure to have my own private information respecting field trials so ably vouched for, and a gentleman of Mr. Taylor's experience will agree with me that an improvement was certainly to be desired over the form of say two years ago. On the question of dog shows there does not seem to be a unanimity of spirit in the Philadelphia Club, for Secretary Brown, in a letter to a local paper, writes of a dog show next year. Such a thing may be, but I doubt its being held by the Philadelphia Kennel Club after its experience of 1889. Mr. Charles G. Thompson said at the associate members' meeting at New York, "We have had all we want of dog shows in our club. It has cost a few of us a matter of \$7,000 to try and make them popular and self-supporting in Philadelphia."

Mr. C. E. Rowland, secretary and treasurer of the Toledo Kennel Club, sends word that his club will hold its twentieth annual bench show in connection with the Tri-State Fair, on Sept. 9 to 12. We are promised list of judges, etc., as soon as decided upon. Mr. Rowland adds by way of a P. S. "We hope to give a nice and pleasant show. Get your entries on time this year, so I won't have to refuse them as I did last time." Toledo has only to repeat its kind treatment of exhibitors last year. I remember I had more than one letter after the show last September to the effect that "Toledo treated up splendidly." About the late entry. I made out the blank on the proper date and left it with other mail matter on starting that evening for a day or two in the country. To my surprise and disgust the entry was returned "mailed too late." The facts as given here were communicated to Mr. Rowland, but he stuck to his text. It is an ill wind that blows nobody good and the mishap at Toledo put me in communication with the nicest lot of dog men at Augusta, Ga., it has been my good fortune to come across for some time. There was the greater pleasure in this instance because a person who had visited Augusta at a previous show, complained very much of sectional prejudice and the lack of that cordiality so prominent a feature among Northern dog men. My informant was not a person to give rise to any such display or lack of display of feeling, and I am at a loss to account for our different opinions or what caused them.

Some of the dog papers of the country have copied without correction the Associated Press cable that Fullerton beat Downpour "by three lengths" for the Waterloo cup. One can look over the ignorance of an ordinary editor in printing these bungled cable messages on a subject of which he knew nothing. But an editor of a kennel column is quite another thing. To such I commend a very chatty article on coursing in *Outing* for March from the pen of Mr. Hugh Dalziel. The illustrations by Moore are also good, and help more than words can to give strangers an idea of what coursing at Altcar is. Mr. Dalziel is good enough to refer, in the *Bazaar*, to the notes which appear under the caption of "Dogs of the Day." I appreciate very highly Mr. Dalziel's reference to myself, particularly as Hugh and I have been at pens drawn for some years. Perhaps the very silly though amusing criticism of my ability as an editor, written by an English amateur editor of fewer months' experience than I have devoted years to the business, prompted Mr. Dalziel to remember that we were both born north of the Tweed.

This "kennel vendetta" is very shallow business. If a man cannot make a success as an editor by the work of his individual pen or his executive ability, he will never do it by posing as a martyr. American readers may not be well posted, so here is an outline of the latest English fuss, for which, by the way, America is in a good part responsible. One of your contemporaneous English correspondents has an unenviable reputation for vilifying people and for making false accusations. Mr. Everett Millais, who is a new hand at journalism, as represented by the *Fanciers' Gazette*, of London, warmly defends this correspondent when he is attacked, declines to see anything wrong in his conduct, apologizes for him on the ground that he has a wife and eight children to support, and seemingly considers him a most estimable gentleman, worthy of his most heartfelt sympathy and support under any and all circumstances, even to the extent of the most flagrant plagiarism. At this stage of the game another correspondent comes on the carpet, whose copy was edited by myself. "The member," as he was called, didn't seem to have any love or affection for the Martyr Kennel Director, and lost few occasions to say unkind things. A good many of these were eliminated and others pruned down within bounds, bearing in mind the support Mr. Millais accorded the plagiarist. Then there was a change, and Mr. Millais wrote letters to America he could not publish in England, using very undignified language for the son of a baronet, even admitting that that baronet was created. I don't know, however, that to Americans it is more honorable to have a man a baronet for something he has done himself rather than getting the title from some one who came over with William the Conqueror. But English gentlemen are not in the habit of bragging of created titles, as Mr. Millais did in one of his letters, and do not say "I am the son of Sir ——" implying thereby descent from "gentle" blood. The little skits did not please Mr. Millais, and since then he has been the Martyr Kennel Director, and everything that can by any stretch of the imagination be brought forward as an adjunct to the posing figure in the foreground is called into requisition. "Holy Friar's" attack on Mr. Hodgson in an English paper, the "Lively Lord's" letters in FOREST AND STREAM are both made to do duty at this interesting ceremony of posing as the Martyr Kennel Director.

That is not the way editorial reputations are made, and Mr. Millais will find it out sooner or later. The public like best the man who is not afraid of hard raps, and who in place of offering his other cheek does a bit of cross countering. Posers may be popular in some circles, but not with men or women of the world, and Mr. Millais would do well to leave the business to such artists as Mr. Fred Leslie. This, then, is the Kennel Vendetta we are hearing so much about. On one side we have Messrs. Millais and Huscroft arrayed against what it seems to me at this distance to be all English kennel writers.

The particular iniquity of which "Holy Friar" was guilty was an attack on Mr. Hodgson of the bulldog club and former owner of Harper, the dog Mr. R. B. Sawyer won with at New York. "Holy Friar," among other things, wrote that as Mr. Hodgson had withdrawn from the contest for the club secretaryship, the position would now be filled by a

gentleman. The candidates left in the field were Mr. W. H. Sprague and Mr. A. C. Jackson. Mr. Sprague is "Holy Friar," and Mr. Millais's paper as well as "Thomas Tattle" made so much fuss about the Hodgson outrage and proposed to give voice to the feelings of the entire kennel world, it was to be expected that Mr. Sprague would retire as Mr. Hodgson had done, or if he had the temerity to stand for votes, would be snowed under. In place of this being the case, however, the popular Mr. Jackson was defeated by the evidently still more popular Mr. Sprague by a majority of 18 out of 74 votes, and in result reads as a set back to Mr. Hodgson and his supporters.

Dr. Derby's mastiff bitch Lady Temple, by Beaufort out of Lady Margery, which was sent over for service by champion Hotspur, is now in her owner's kennels.

There is no prospect of the Pacific and California kennel clubs joining. The latter has cash on hand and the former has "nary a red," so they could not agree upon terms of amalgamation. The result will doubtless be the election of the California K. C. as a member of the A. K. C. J. W.

NEW YORK DOG SHOW.

Editor Forest and Stream:

As a matter of history I would say that it is true that attendants at the late New York show were drunk. As I was sitting in the smoking room with a gentleman unknown to me, an attendant came in most disgustingly drunk, and wanted half a dollar to take his coat out of pawn. I got rid of the beast somehow, and I remember how my companion said, "I don't know you; what business have you to speak to me?" and the way that bum left was a caution to snakes. This again impresses on me the force of Mr. G. W. Moore's suggestion to draw the attendants for a dog show from the sub list of the fire departments; here can be found a body of young, active men, accustomed to discipline, nervy, prompt and generally self-respecting, the sort of men that would add very largely to the clean appearance of the show. I commended this suggestion of Mr. Moore's (made in FOREST AND STREAM about a year since) to some of the Boston show committee, and it was very favorably received, and I hope it will be acted on. By the way, Boston with its usual enterprise has a new wrinkle in mind as a show attraction; watch out for it, as I won't "give it away."

In common with all who know him, I extend my most sincere sympathy to Mr. Mortimer for his grievous affliction, your note on which was the first intimation I had of it.

Your impudence in electing me an authority on Russian wolfhounds is truly immense. Before I set up as "authority" on them, I will wait until some authority has been developed somewhere. As it is, that article is *non est inventus*, and is truly "upstumpum, in swampo." However, I don't see that it requires the weight of authority to ask "Brittle" why he put that quadruped snake Zerry second for? Ivan Romanoff, first, was all right, and while Rival is no great shakes, surely he is a dog in some respects, while that bitch Zerry had absolutely the least substance of anything in the dog line I ever saw. She really seemed no deeper through the chest than through the loin. The Russian dogs are certainly of the greyhound family, and they seem distinguished for depth of chest, and this thing looked like one snake with pieces of two more stuck under each end of it. I don't care if two Emperors of Germany bred her and three Empresses dynursed her, she isn't the beginning of a dog now, and if she is "typical," the sooner the breed becomes extinct the better for them. The reporter of a certain Western paper gets off his usual stupidity acent this breed. He accidentally got hold of a *Fancier's Gazette*, with some of Mr. A. J. Rosseau's tiresome fussings about the name of "Barzois" being the appropriate one for the breed (as if he cared what "harsh northern guttural" Russians call them), and this wild Western light actually thinks he knows something about the breed. The repetition of his Denver rot on spaniels comes out again in his cheeky assertion that the breed is not used for wolf hunting, against the positive statements of Mr. Walter Winans that he has seen groups of statuary in Russia showing these very dogs engaged in wolf catching, the production of the illustrations in the *London Sporting and Dramatic News* of the same fact, and the statement of the St. Petersburg correspondent of the *Fancier's Gazette*, that he saw a "Barzois" bitch catch and throw a dog wolf single-handed. Truly "some mens knows somfin and some knows nuffin."

I must fall foul of general press comments on Beaufort with the reservation that FOREST AND STREAM seems to appreciate the dog better than any other paper. The general comment is that Beaufort is light in loin; but this is forgetting that the dog was shown in the very prime of condition, the muscles well developed, the dog strong and active, but not in "killing order," which seems to be the meaning of "condition" with too many. Had he been shown with a few more pounds of soft, flabby flesh on him his loin would have been more than sufficient for all reasonable purposes; and his photos taken in England show him admirable in this point. Considering his value as a stud dog, Mr. Winchell deserves abundant praise for the rare condition he showed the dog in. How a mountain of soft fat is to be efficient as a stud dog is a conundrum determinable only by the Linc Kilm Club. The other fault found with the dog is that he moves badly behind. To a certain extent this is true; but the inference ordinarily drawn from such a statement, that he lacks power behind or is not strong and active, is a very great mistake. He really springs (not a common performance of modern mastiffs) with the activity of a cat, and all his joints, before and behind, are sound and well placed, with abundant muscle to operate them. The cause of his clumsy movements behind is the very large dew claws that disfigure his hindlegs. These prevent his bringing his hindfeet close to each other in moving; if he did it, these dew claws would scratch each other and soon raise sores, and the habit has grown on him to travel wide behind, and no animal can do this with grace and vigor. Just try a man walking with one foot on each side of a board a foot wide. I fancy that these dew claws on Beaufort are a result of Dr. Turner's super-sensitiveness as to "faking," or they would have been removed when the dog was a puppy, and I would earnestly impress on mastiff breeders the duty of removing them as soon as possible. This cannot be held to be "faking," as they are neither censured nor encouraged, but are simply "admissible." Nor can I believe that the dog is deficient in wrinkle. Certainly his face is not constantly suggestive of the roughest of rough mountains, but when his attention is excited, the wrinkle is ample. How many mastiffs are there with redundant wrinkle that are not disfigured by excess of dewlap, or as the slang expression goes, are "too throaty"? To sum up, I cannot but see this dog as the incarnation of "quality." I dislike to use the word, as it is a piece of dog-show jargon that is utterly devoid of meaning in nine cases out of ten, but despite dog-show obscurities, there is such a thing as a "mastiff, all over," and this is the crowning virtue of Beaufort; other animals may excel him in this, that or the other "property," but he is so evenly balanced all over, such a picture of harmonious proportion, that it seems hard to imagine his superior.

I regret to find that I am in accord with "Clique Club Number 1" in my opinion of this dog, but it seems an unavoidable unpleasantness. By the way, I forgot to mention the one enormous defect in Beaufort, he actually has white toe nails all round! In view of the funny but popular superstition on this matter, this is enormous. W. WADE.

HULTON, Pa., Feb. 22.

A VISIT TO THE NEW YORK DOG SHOW.

I DO love going to a dog show. I like going to any show, as for that matter; there are always people to be seen; but when you go to a dog show it is like going to a reception, only with dogs to do the honors. Mamma says the Westminster Kennel Club's show is a great educational institution, and that she wouldn't have missed it for anything. I never thought of that before this year, although I do remember that last year when mamma was going round with her horrid old catalogue and finding out what the dogs were, I thought it would be much nicer if they would write up "greyhounds" and "mastiffs" and "pointers," and all that sort of thing, you know, over the cages. And it's not a bit of good listening to what other people say; at least not as a rule. I tried that way, and stood a long time before one of the cages with a big spotted dog that I now know is an Ulmer, or great Dane, and some called him a greyhound and some a mastiff, and some one thing and some another, and of course they were all wrong. But this year we had a lovely chaperon, who told us about all the dogs and made it very interesting, and I could have staid all day, and, in fact, all four days, listening to him. I never enjoyed anything so much in my life. He wasn't a professional, nor a dog doctor, nor a judge, nor anything of that sort, you know; but he had beautiful blue eyes and curly chestnut hair, and a love of a mustache, and knew a great deal more about dogs than any of them.

And the way we made his acquaintance was quite an adventure. There were no introductions nor anything of that kind, and of course he would never have spoken first; and if any one had told me in the morning that I would have spoken to a strange gentleman and made his acquaintance, and that mamma would have asked him to call, I would have said it was simply impossible, but I believe these things are fate, and sure to happen without your doing anything to help it.

It happened in this way. We—that is, mamma and I—had strolled right down through the middle of the buildings, mamma with her catalogue in her hand, finding out what the dogs were, and when we got to the back of a cage at the end, there were two tall curly-haired dogs, with slender waists and beautiful long noses like an Italian greyhound's, and mamma said at once without looking at the catalogue: "Oh, these are the bloodhounds."

There was a gentleman looking at them with his back toward us, and when mamma said they were bloodhounds and was looking at the catalogue to see, he turned round and looked at me in a sort of sad, reproachful way, with a countenance expressive more of sorrow than of anger, you know, and I knew directly that mamma was wrong, and his blue eyes and his mustache and his look altogether were so speaking, that for the life of me I couldn't help saying: "Are they not bloodhounds?" and the next moment I could have sunk into the ground; but that was soon over.

Mamma looked up at once from the catalogue, and looking rather at her than me he replied, "No, madame, these are Siberian wolfhounds."

His voice was very pleasant, and I could see that mamma was interested, for she remarked at once, "I suppose the Russian nobles employ them to kill the dreadful wolves in that country."

For a moment he did not reply, but smiled, such a pleasant sunny smile, just showing his rows of beautiful white teeth. "That is a very natural mistake for any one not familiar with Russia to fall into," he said at length, "and I believe that even the judges here have fallen into the same error, but the fact is they are called wolfhounds because they are the only dogs fast enough to run away from a wolf."

"You see," he continued, "that in Siberia, for they are more generally called Siberian wolfhounds, the wolves go in packs of scores and even hundreds, and if any attempt were made to hunt them with dogs, the wolves would overpower them by numbers and eat them; but in Siberia and northern Russia the shepherds employ dogs not merely to watch the sheep, but to scour the country round in quest of wolves, and at the first intimation of danger the dogs return to the shepherd, who at once sends them off to the villages for help, and makes the best of his way up a tree. In old times they had a breed of shepherd dogs that was not fast enough for the purpose. The wolves frequently caught them before they could return to the flock, and sometimes the shepherd, being taken unawares, fell a victim to their ferocity together with the sheep; and the need of swifter dogs led to the introduction of Persian greyhounds into the country; and these, with some modification due to climate and the work they are employed on, with perhaps a slight admixture of native blood, have become the Siberian wolfhound, which, as you see, is a taller and stouter animal than the parent stock."

"But wouldn't one of those dogs kill a wolf?" I asked, timidly.

"No," he replied, "two of them will chase a single wolf and attack him from behind, and cut and tear him, and when the wolf turns at bay, one always attacks from behind, until he is worn out and weakened with loss of blood, but they have not the courage to face a wolf single-handed, and even if they had they would be barely a match for him in strength."

"If you want to see dogs that are singly a match for the Russian wolf, that surpass him both in strength and courage, just step to this next row and look at the great Danes, that will kill one every time they get hold of him."

And so in the most natural way in the world he constituted himself our chaperon, and led us from one cage to the other, and explained all about the dogs, and made it very interesting, and wherever we went other people followed, simply to listen to him I am sure.

At last we came to some cages with a lot of black dogs with faces just like my own darling Tinker, but the hair or wool, or whatever it is—I always call it wool—only on the front part, and the back part all bare, and I said to mamma, "If these dogs had wool all over, wouldn't they be just like Tinker?"

"Perhaps," said our friend, we didn't know his name then, "if Tinker had the wool clipped off his hinder parts he would be just like these dogs."

"I do believe you are right," said mamma. "Tinker was given to Alice when he was a little puppy (I could see the gleam of pleasure in his eye when he heard my name) and we never thought of asking what breed he is, and I have never seen any dogs exactly like him."

"I would give anything to know what he is," I remarked without thinking; that is without real malice prepense you know, and our guide replied at once that he had no doubt he could solve that difficulty for us if mamma would allow him to call, and at once took out his card and offered it to mamma, who told him she would be delighted to see him at our house. Mamma gave him her hand at parting, and thanked him for the great pleasure he had afforded us by his interesting conversation, and, of course, I gave him my hand, which he pressed ever so gently, promising to do himself the pleasure of calling on us in a day or two and classifying Tinker. I know mamma thinks that all his attentions were paid to her, but I don't, for although I am only fifteen, I am sure that when he looked at me his eyes fairly spoke, and what is more, I felt sure that I could understand what they meant, and that my own eyes answered timidly in the same language.

But he never called, and poor Tinker remains unclassified to this day. All the next week too the papers were full of a shocking scandal about a spurious Russian nobleman who had been imposing on Boston society and borrowing money, and flying kites, although I don't see much harm in that, but there were all sorts of dreadful things about him; and papa, who is a shocking tease, says that this may be our

friend; but mamma I am sure would never be imposed on that way, nor I either, and moreover the impostor isn't tall, and he hasn't blue eyes nor chestnut hair.

Something has happened to prevent his calling, I am sure. He may be sick among strangers, but that he will come as soon as he can, and that we shall know all about Tinker, I am as sure as I can be of anything. ALICE DEMAREST.

THREE FOOL FOXES.

"WELL! the fool foxes were out to-day sure," remarked one of the local shooters as we were gathered in Lisha's back room on a recent Saturday night, and a recital of the day's event would seem to indicate that he was right, for some queer capers were certainly cut up.

E. T. Whittaker and John R. Thayer hunted about ten miles north of the city. They found the following pretty hard, but Tilden and Guess got one up and followed him nearly all day, until John R. stopped him. They had a good hunt, but no thrilling experiences. Down the other side of the city, however, the fun was fast and furious. A. B. F. Kinney and D. M. Earl went down to Millbury to hunt with John White, and they enjoyed every minute of the day, from the time the bounds for the day's hunt were selected from the pack, in John's original and highly interesting manner, to the supper at the close of the hunt. They started for Potter's Hill behind John's pair of nudes (especially bred and broken to take John and guests of the Tourtellot House on hunting trips, for John is the proprietor of that famous hostelry), with the hounds sandwiched in among their feet. They soon had one on a crossing, but a short time when he heard the dogs swing his way, so he peeled off his ulster and as they drew nearer put his gun to his shoulder expecting to see the fox break cover, and sure enough she did. Hopped right up on to a rock about six rods off and stood listening to the dogs. John put it right on to her and pulled, and the fox hopped down and started off, but the second barrel stopped her, and the party gathered around while John took off her pelt.

They bothered John a considerable about missing the fox as she stood on the rock and killing her on the run. Finally he figured it out. "There," said John, "I know how it was. The other day I jabbed my gun down on the ground and bent one barrel at the muzzle so it was about half closed. Some one told me to take it up to Cyrus Holden and he could take it out so you would never know it, but I didn't have time, so I took an old whip stock and drove down into the barrel and hammered it out, and I'll bet I took the choke all out of that barrel." It afterward transpired that he shot the other barrel at the fox first; and killed her with the "whip-stock choke."

From here they went over toward Singletary Pond, and when opposite it the dogs took a scent and started toward the pond. A couple of the party followed to see what the dogs would make of it, leaving John and Mr. Earle in the team. In no time the fox was up and started down the narrow strip between the pond and the road, which runs nearly parallel. "He'll cross about a mile below," said John, "and we will have to cut to head him;" and he shook the reins over the mares as they broke into a run. When about half way down they saw the fox shoot across a pasture with his ears tight to his head and the pack almost at his heels. "Get out your gun, Dave," said John, as he gave the mares the whip; "something's going to happen pretty quick. He's got to cross the road this side of the bridge."

In a moment he jumped over into the road right in front of the horses, and not being able to get across in front of them, he turned right down the road ahead of them. John plied the whip while Earle stood up between the seats with his gun ready.

"Shall I shoot, John?"

"Yes, give it to him, Dave. I'll risk the horses. They can't run any faster than they are going now."

"Duck your head then and I'll try him," and he braced his knee against the seat and shot between the horses heads, dropping the fox right under their feet, and the whole team went over him.

The mares were stopped in a few rods, and before they could get back the dogs had come up and all had a "shake." The fox had been hit with two shots near the spine, and both wheels passed over it. This is no "fairy tale" but an actual fact, and one of the most remarkable shots I know of. Mr. Earle says he considers it one chance in a hundred that he touched the fox at all.

Three foxes in one day sounds pretty well, but it fails utterly to express the amount of fun the chasing of them brought about. Still we always have a good hunt when we go with John, and the boys' familiar expression hits it about right, "There is only one John White, and he's the man to hunt foxes with if you want fun." HAL.

WORCESTER, Mass.

A DOG MURDER.—Ogdensburg, March 3.—*Editor Forest and Stream:* Sunday afternoon, Feb. 23, Addison R. Strong of this city shot in the neck and badly mutilated the liver and white pointer Troy (A.K.R. 6630) belonging to W. H. Massey, his next door neighbor. The following day he was arrested under the charge of cruelty to animals and the trial before Recorder Dorwin occurred Tuesday. It was thoroughly proven and admitted by the defendant that he had shot the dog with bird shot, "to tickle him" as he said, but that he had no intention to kill him, that he had the gun loaded for ten days previous awaiting the opportunity, that his yard where the dog was shot was a perfect runway for dogs, and that he had taken no means to stop them; and in extenuation he claimed that the dog had ruined some cakes of ice on his back step. The case created considerable interest and was tried without a jury, and one of the most unheard of decisions was rendered by the Recorder, contrary to all law and the evidence in the case, and it was that, "I hold the case of cruelty is proven, but the man was justified." What would the late Mr. Bergh have thought of such a decision; probably the same as most of the spectators, who expressed themselves rather freely over the outrage of condoning such a brutal offense as the evidence proved this to be. The poor dog was suffering so Thursday, that I had him put out of his misery with as little pain as possible and his last motion was a wag of his tail.—WM. H. MURPHY.

GERDA.—The mastiff bitch Gerda, well known as the winner at Barn Elms in June, 1887, of the prize offered by Mr. Wade for the best moving mastiff, and recently imported by Mr. Winchell, of Fairhaven, Vt., gave birth on Sunday, March 2, to ten puppies—four dogs and six bitches. If nothing befalls this litter Mr. Winchell will probably have something worth showing in a year or two, as Gerda has proven herself to be an excellent brood bitch, being the dam of the well known English winner General Von Moltke.

RUSSIAN WOLFHOUNDS.—Hulton, Pa., Feb. 28.—*Editor Forest and Stream:* Please allow me to say that my Russian wolfhound bitch Elsie whelped three dog and six bitch puppies, at the residence of Mr. Freeman Lloyd, in London, on Feb. 18; all strong and well. The puppies will come over here in about two months, and Elsie will remain in England for another visit to Kriklutt.—W. WADE.

BRUNSWICK FUR CLUB.

Editor Forest and Stream:

The second annual meet of the Brunswick Fur Club took place during the month of February at the Gurnet House, Brunswick, Me. The members from all parts of New England met at the Gurnet House, Monday, Feb. 3, and the same day elected the following officers for the ensuing year: President, L. O. Dennison; Vice-Presidents, R. D. Perry, Dr. A. C. Heffenger, C. G. Greenleaf; Treasury, Henry Stetson; Secretary, J. H. Baird; Executive Committee—L. O. Dennison, Samuel Knight, Jr., H. C. Newell, A. McDonald, W. B. Stone, Master of Foxhounds, A. M. Gerry.

The meeting was a large and enthusiastic one, and many important steps were taken to place the club on a firmer footing and insure a brilliant future for it. The hunt began on Tuesday morning, Feb. 4, and continued every suitable morning thereafter till the end of the month. About fifty members attended the daily meets and an equal number of invited guests. There were twenty-five couples of hounds in the kennels, and four to six couples were drafted for each day's runs. There were many grand rounds at the meet, representing pure English, Byron, Cook, Whitlock, Lewis, Buckfield, New England native and cross-bred strains. Of the veterans of the club's kennels there were present Ben Butler, Jack of Diamonds, Major O'Rourke, Joe Forester, Tramp, Bugle, Jeff, Drive III, and Jim. Many new and fine working hounds were brought, proving themselves valuable additions to the kennels.

The hunting was done on Great Island, and as foxes were found in abundance the runs were daily and brilliant, and many glossy red skins were hung up in the office of the Gurnet House as trophies of the chase. During nearly every run the foxes would decoy the hounds out on the bad salt-water ice, and often an entire pack would be seen struggling in the water; but most fortunately none were drowned.

Had our brother fox hunters of the South and West been with us, they would have fully realized the absurdity of expecting hounds to catch foxes in this country. These hounds were from the best packs in all parts of the country, and the running at different times was upon bare ground, soft snow and crust, yet at no time was there the slightest prospect of a fox being caught, and they did not hole either, but would run all day if the hounds could follow them.

During the meet, by request of the club, Dr. Heffenger delivered an address on the foxhound, giving his origin, development, perfections and imperfections, the various strains of America, and finally the type needed for New England work. Dr. F. H. Wilson addressed the club at length on his experience as a fox hunter, and his remarks were highly instructive and most cordially received.

Before closing the meet the club decided to bench a pack of fine dogs and fine bitches at the coming show of the New England Kennel Club, in Boston, and Mr. R. D. Perry was appointed by the president to take charge of the benching arrangements. The club further voted to offer a prize for the best American-bred foxhound.

No further meets of the club will be held till next autumn, when the annual field trials will be held, and it is hoped that some of the Western and Southern packs may be entered to compete with our hounds and catch a few foxes if they can.

PORTSMOUTH, N. H.

CHICAGO DOG SHOW.

[Special to Forest and Stream.]

CHICAGO, Ill., March 4.—The dog show opened to-day. The weather is very cold, but the attendance has been very good, and the show is a great improvement on that of last year. With the exception of a few specials the judging finished at 9 o'clock this evening. The winners in the important classes are as below: Mastiffs—Moses and Lady Coteus in challenge, and Iford Chancellor and Countess Dunsmore in open classes. St. Bernards, rough-coated—Ben Lomond and Lady Wellington in challenge and Hesper and Lady Miles in open. Smooth-coated—Victor Joseph and Thibe in challenge, and Mascot Royal and Meadowthorpe Norah in open. Great Danes—Brook ad Juno in challenge, and Helior and Nevezel in open. Deerhounds—Robber Chieftain and Wanda in open. Greyhounds—Highland Chief in challenge, and Babazon and Miss Rare in open. Pointers, large—Graphic and Revel III. in challenge, and Luck of Idstone and Sal II. in open. Small—King of Kent and Meally in challenge and Laurelot and Fan in open. English Setters—Leddesdale in challenge and Monk of Furness and Cambriana in open. Irish Setters—Elcho, Jr., in challenge and Max and Ruby Glenmore in open. Gordon Setters—Little Boy and Rose in challenge and Heather Boy and Jessie in open. Irish Water Spaniels—Patsy O'Connor in challenge and Dennis O'Donoghue and Irish Flora in open. Clumber Spaniels—Boys III. and Bromine. Field Spaniels—Bridford Gladys in challenge and Baron and Dorothy in open. Cocker Spaniels—Bene Silk in challenge and Red Jacket and Yarrow in open. Collies—Scotilla in challenge and The Squire and Roslyn Clara in open and Marmion in puppies. Bulldogs—Rabagas in challenge and Harper and Dimple in open. Bull Terriers—Jubilee and Marguerite in challenge and Briton and Attraction in large open and Dusty Miller and Ellen Terry in small open. Beagles—Little Duke and Low in challenge and Racer, Jr., and Whisper in open. Fox Terriers—Valet in challenge and Veronese and Richmond Dazzle in open, and Eskdale Broom and Dartmoor Sunbeam in wire-haired. Irish Terriers—Burnside and Gesella. Skye Terriers—Sir Stafford. Black and Tan Terriers—Buffalo General and Meersbrook Maiden. Pugs—Bessie in challenge and Lord Nelson and Bo Peep.

BULLDOG JUDGE AT BOSTON.—Birmingham, Conn. *Editor Forest and Stream:* I see by the premium list of Boston show that Mr. John E. Thayer is to judge bulldogs. I have been waiting for some time to see Mr. Thayer in the ring, and at last Boston has obtained his services. I hope every owner of this breed will send their dogs to Boston, so as to make the entry as large as possible. I shall send Harper, and if my new importations arrive they will be there also. It will be a great treat to have a man like Mr. Thayer to judge. **R. B. SAWYER.**

BEAGLE CLUB OFFICERS.—East Saginaw, Mich., March 1.—*Editor Forest and Stream:* Below is the list of recently-elected officers of the American English Beagle Club: Pres., Mr. H. F. Schellhass, Brooklyn, N. Y.; Sec., Treas., Mr. Louis Smith, East Saginaw, Mich.; Executive Committee, Messrs. George Laick, Tarrytown, N. Y.; Wm. H. Child, Philadelphia, Pa., and J. M. Fronefeld, Jr., Wayne, Pa.—**LOUIS SMITH.**

PREMIUM LISTS.—Bench show managers should send to this office copies of their premium lists for distribution. It often occurs that an intending exhibitor will call on us for entry blanks, upon the day that the entries close, and unless we can supply him the entry is not made. We also frequently have calls for blanks from persons who have not received them, and in most cases we can supply them and it would be a pleasure to be able to do so in all.

Dogs: Their Management and Treatment in Disease. By Ashmont. Price \$2. *Kennel Record and Account Book.* Price \$2. *Training vs. Breaking.* By S. T. Hammond. Price \$1. *First Lessons in Dog Training, with Points of all Breeds.* Price 50 cents.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

Prepared Blanks sent free on application.

Chief of Yonkers. By C. L. Schember, Yonkers, N. Y., for sable and white collie dog, whelped Nov. 6, 1889, by Clipper (Eclipse) out of Glen Belle (Glenlivet—Nellie McGregor).

Jack. By Wachusett Kennels, Fitchburg, Mass., for liver and white pointer dog, whelped Oct. 8, 1889, pedigree unknown.

May G. By Wachusett Kennels, Fitchburg, Mass., for liver, white and ticked pointer bitch, whelped July 25, 1889, by Beaufort H. (champion Beaufort—Zuba) out of May B. (Gen. Graphic—Jeanette).

Bayard W. By Wachusett Kennels, Fitchburg, Mass., for orange tawny St. Bernard dog, whelped Nov. 8, 1889, by Alp III. (Rosseau—Doxie) out of Milley Rose (Hector—Mesina).

BRED.

Prepared Blanks sent free on application.

Gipse—Conspirator. Devon Kennels' (New York) greyhound bitch Gipse (Thunder—Normal) to their Conspirator (Workman—Feb. 24).

Troy Lass—Prince George. John Marshall's (Troy, N. Y.) Newfoundland bitch Troy Lass (Courtier—Baroness) to his Prince George (Lord Nelson—Countess of Aberdeen), Feb. 1.

Countess Wanda—Duke of Vernon. Burt Whiteley's (Springfield, O.) pointer bitch Countess Wanda (Whiteley's Don—Ouida) to L. Gardner's Duke of Vernon (Glendale—Spotless), Feb. 25.

Lady Thurman—Kash. Eberhart Pug Kennels' (Cincinnati, O.) pug bitch Lady Thurman (Silver Shoe—Judy) to A. E. Pitts's champion Kash (champion Bradford Ruby—Lady Clary), Feb. 24.

Dora Deane—Roger. L. Gardner's (Mt. Vernon, N. Y.) English setter bitch Dora Deane (Count Paris—Nellie Cambridge) to his Roger (Count Noble—Queen Meg), March 1.

Bertha—Marquis of Stafford. Weishrod & Hess's (Philadelphia, Pa.) St. Bernard bitch Bertha to Jas. F. Hall's Marquis of Stafford (champion Save—Miss Plinlimmon), Jan. 30.

Countess—Marquis of Stafford. Menthon Kennels' (Phoenixville, Pa.) St. Bernard bitch Countess to Jas. F. Hall's Marquis of Stafford (champion Save—Miss Plinlimmon), Jan. 9.

Donna—Rockingham. Roserott Kennels' English setter bitch Donna (Yale Belton—Forest Dora) to F. Windholz's champion Rockingham (Belthus—Bess), Jan. 31.

Countess Flo—Pilot. Beaumont Kennels' (New York) Gordon setter bitch Countess Flo (Heather Boy—Molly) to Dr. E. G. Dixon's Pilot (champion Grouse—Maud).

Belle Stephen—Beaumont. J. E. Dager's (Toledo, O.) Gordon setter bitch Belle Stephen (champion Royal Duke—Bessie) to Beaumont Kennels' Beaumont (Ronald III.—champion Floss), Feb. 21.

Madge—Beaumont. Beaumont Kennels' (New York) Gordon setter bitch Madge (Luck—Nell) to their Beaumont (Ronald III.—champion Floss), Feb. 25.

Queenie—Newton Abbot Skipper. Dr. Bradbury's (New York) spaniel bitch Queenie (Sweep—Loto) to W. T. Payne's Newton Abbot Skipper (champion Newton Abbot Darkie—Newton Abbot Blossom), Feb. 26.

Bridford Ruby—Newton Abbot Skipper. Bridford Kennels' (New York) field spaniel bitch Bridford Ruby (champion Bridford Dalian—Bridford Bida) to W. T. Payne's Newton Abbot Skipper (champion Newton Abbot Darkie—Newton Abbot Blossom), Nov. 6.

Dinah—Newton Abbot Skipper. Jesse Riggs's (Princeton, N. J.) field spaniel bitch Dinah (Newton Abbot Skipper—Bonnibel) to W. T. Payne's Newton Abbot Skipper, Dec. 1.

Rose S.—Hillside Tarquin. Learnerd Kennels' (Hudson, N. Y.) fox-terrier bitch Rose S. (Luke—Nora) to E. F. Stuppelbein's Hillside Tarquin, Jan. 20.

Nora—Raby Rex. Learnerd Kennels' (Hudson, N. Y.) fox-terrier bitch Nora (A.K.R. 6191) to H. J. Tobey's Raby Rex (Raby Tyrant—Beauty), March 1.

WHELPS.

Prepared Blanks sent free on application.

New York Lass. John Marshall's (Troy, N. Y.) Newfoundland bitch New York Lass (Courtier—Jenny), Feb. 21, nine (three dogs), by his Prince George (Lord Nelson—Countess of Aberdeen).

Bridford Ruby. Dr. J. F. Kirk's (Toronto, Ont.) field spaniel bitch Bridford Ruby (champion Bridford Dalian—Bridford Bida), Jan. 4, four (one dog), by W. T. Payne's Newton Abbot Skipper (champion Newton Abbot Darkie—Newton Abbot Blossom).

SALES.

Prepared Blanks sent free on application.

Helen McGregor. Black, white and tan collie bitch, whelped July 13, 1888, by champion Clipper out of Nellie McGregor, by Warner & Hamilton, Canaan Four Corners, N. Y., to H. H. B. Angell, New York.

Devonshire Firth. Liver and white pointer bitch, whelped May 18, 1886, by Croxteth Bang out of Croxteth Rival Queen, by F. L. Shaw, Forest, Ont., to Shenandoah Kennels, Shenandoah, Pa.

Nellie Bly. Liver and white pointer bitch, age not given, by Devonshire Drake out of Rosetta Croxteth, by Oliver Mason, Jacksonville, Ill., to Shenandoah Kennels, Shenandoah, Pa.

O'Donovan Rosa—Lulu V. whelp. Red Irish setter dog, whelped Nov. 2, 1889, by Michael Flynn, Jr., Bristol, R. I., to J. T. Gwatwar, Brooklyn, N. Y.

Bridford Ruby. Golden liver field spaniel bitch, whelped February, 1886, by Bridford Dalian out of Bridford Bida, by Bridford Kennels, New York, to Dr. J. F. Kirk, Toronto, Ont.

KENNEL MANAGEMENT.

No Notice Taken of Anonymous Correspondents.

T. H. U., Jeffersonville, Ind.—What shall I do for a Gordon setter, 2½ years old, which has recently had an attack of distemper and still shows some discharge about the eyes, and has been left with a twitching of the left hindleg—chorus? It is not very bad, but enough to make hunting her disagreeable. Have tried arsenic and quinine, but without noticeably good results. Will breeding her tend to remove the trouble? She has never been bred. Ans. Arsenic is an excellent remedy in such cases. It should be used continuously for three weeks, and then a week or ten days omitted and begin again. The citrate of iron and strychnine in 2-grain pills may be given three times daily. Breeding would not do any harm, and might benefit.

H. W. L., Washington, D. C.—I have a pointer pup, 11 months old, and for a number of weeks past he has eaten but very little; got a cough and is becoming blind; his breath smells like that of a dog having the distemper. Will you please publish in your next issue what I can do for him? Ans. Keep bowels free with castor oil or syrup of buckthorn (2 teaspoonful doses). Give 5 ccs. of quinine in pill form concealed in a morsel of meat each morning. Give a teaspoon three times daily of the following:

B. Creosote..... 3 i
Glycerine..... 3 ii
Whisky..... 3 ii
Aq. ad..... 3 iv

Mis. W. B. U., Syracuse.—I have a spartel bitch that has little red spots all over her skin. She scratches so that the hair comes out and makes it sore. I have used carbolic acid and glycerine on the spots that have been raw; they heal up but break out somewhere else. Have also given her three drops of Fowler's solution twice daily without success. Her hair is dry but nose is cold, and she eats well. Can you tell me through your paper what the trouble is and what will do her good? My kennel is dry and well ventilated, also warm. If you can tell me so it will help her I will be very much obliged. Ans. Keep on with Fowler's solution, giving her three weeks and then putting her on a week. Keep the bowels free with syrup of buckthorn in teaspoonful doses. Get some zinc oxide ointment and rub it in daily over the affected part. A two-grain quinine pill may be given three times daily. It can be concealed in a morsel of meat.

MUST HAVE IT.—Oakfield, Wis., Feb. 25, 1890.—Dear Boys: Inclosed find ex. order for \$4, to pay my subscription another year. I had to wear my old overcoat this winter (could not afford to buy a new one), but I have to have the FOREST AND STREAM even if I am compelled to wear a Texas costume (paper collar and pair of spurs) next summer. Yours truly.—W. S. R.

Rifle and Trap Shooting.

RANGE AND GALLERY.

BOSTON, March 1.—The regular weekly shoot of the Massachusetts Rifle Association was held at Walnut Hill range to-day. Following are the scores made to-day, distance 20 yds., Standard American target:

Record Off-hand Match.
W Charles.....84 H L Lee.....81 P Fitz.....79
S O Sydney.....83 H Severance.....79 H W Gill.....78

Champion Off-hand Match.

THE U. S. CARTRIDGE CO.'S TOUR.

[From Our Own Representative.]

EN ROUTE.—Arizona, Feb. 14.—We have been passing through several thousand miles of country which seems struggling in its own mind whether to be a semi-mountainous desert or just a plain desert, with no trimmings. Sage brush and acacia make the main vegetation. There are many specimens of the great organ cactus, 20ft. or more in height. The only animal seen was a lone coyote, lit genius for the scene. The weather is disagreeably warm, and one removes his hat very early.

We stopped for a time at Yuma, in the middle of the day. Yuma is well known as the hottest place on earth. It is lower down than the level of the sea, and hotter, by common report, than the regions lower yet. Here we saw the usual crowd of more or less naked Yuma Indians. They don't wear anything much but hair, but are blessed with abundance of that. In figure they are plump but wiry-looking. They delight in being treated as a scanty garb, and are picturesque-looking beggars enough. I wish I could send on a picture of two Yuma belles who, dressed in about half a yard of red calico each, sat on a box at the station and ogled the good-looking young men of our party. These poverty-stricken people are not destitute of spirit, as a little incident of our stay witnessed. A good specimen of the genus Smart Aleck, a contemptible little squirt from some place or other, was making his scarce, came off with a photograph of one of the young bucks, who, added him, protested, and finally picked up a stone and stood on the aggressive. (These Indians think that death soon follows for any one who has his picture taken.) The blessed idiot with the camera pulled his six-shooter partly from his pocket, and for a brief moment posed in his own mind as a cool, weathered country general. A school-teacher from Boston, looking on, was promenade with unconscious grace before the two trains on the platform at the station. Several hearts had longed but not courage to make the acquaintance of this goddess, but Harvey McMurchy, as usual full of lissome grace and riant beauty, was the first to attract her glance of open and undisguised admiration and affection. In a moment he had offered his arm and the two were promenade before a dozen pairs of envious eyes. The boys all paired off also and ostentatiously strutted up and down the platform, but Harvey and the fair one were unconscious of all this. The bell rang and the boys all crowded back into the Iolanthe, but Harvey did not appear. He was in the front coach with the damsel of rosy hair. A committee was appointed to visit him, and some three hours later he appeared, and the boys were seated at dinner. In the meantime a fiendish scheme had been concocted. When the gallant captain appeared and began to exonerate upon the charms of the siren in the front coach, he was greeted with a stony silence. He stammered, grew red in the face, and accosted each man of the party in turn, but got no reply whatever. The boys talked all around him, but said nothing to him, and would not even pass him a dish at the table when he was placed at it. He was an hour or more left in this little purgatory, and then began a cursing which has not yet ceased. By reason of these occurrences Captain McMurchy received from his envious associates the sobriquet of "White Horse Harvey," a title which is apt to cling to him for some time. As soon as it is possible he will be publicly presented with a floral white horse, as tribute alike to his prowess and to the beauty of the auburn-haired enchantress of the Gila Plains.

Los Angeles, Cal., Evening.—Toward dusk we began to leave the desert and to approach country which seemed more suitable for habitation. We reached Colton, Cal., at 7:45 P. M., and here were greeted by the advance guard of the Los Angeles and Colton sportsmen, in the form of a committee who had come down the road to meet the Iolanthe party. This committee consisted of Mr. H. T. Payne, of the Los Angeles Tribune, president of the California State Sportsmen's Association, and a gentleman known in sporting circles all over the coast; Messrs. E. Maxwell and E. Unger, of the Los Angeles Road and Gun Club; Mr. E. B. Tufts, of the Tufts-Lyons Arms Co.; Mr. J. H. Keifer, of the Los Angeles Recreation Gun Club, with Dr. M. E. Taber and Mr. A. W. Bruner, of the Colton Gun Club. Mr. S. J. Ballard, of the S. P. R. R. Co., also rode into the city on our car in company with his former townsman, Mr. Budd. The boys have found friends waiting for them in this way all along the road.

It was about 10 P. M. when the Southern Pacific through train pulled into this beautiful city, and late as it was the caged animals of the Iolanthe broke out and scattered over the town. The hot weather seems past. The evening is cool, and instead of the dreary sands, through which we have passed all day, we are now in a strange and beautiful land of half-tropical trees and a vegetation whose luxuriance is beautiful and surprising.

Feb. 15.—So much has been written about Los Angeles that little need be added in this brief itinerary. It would be impossible to exaggerate the beauty and attractiveness of this place. The city is a gem of unique civilization set in green mountains and margined with abundant foliage of unexcelled beauty. Life Orange trees are common, and to-day the car is decorated with great clusters of these golden globes.

The generosity of nature seems to reproduce itself here in the men who people this country. They are large-natured. There has been no heartier reception accorded the party anywhere, and the regret is loud-spoken that we cannot lie over here a day or so and accept the numerous invitations to see the city and the many attractions of interest. We are only about 20 miles from the sea and the famous Santa Monica Beach, and the country round about is a paradise on earth.

For the past fortnight the weather has been beautiful and warm, but to-day it blew up cold and cloudy, with light rain in the evening. Shooting began a little after 2 P. M. at the baseball grounds across the river. There were a number of teams present, and 350 in all, many of whom had come into the city from distant towns. They saw only a very fair exhibition of team shooting, although the Eastern team made about its usual showing, which at 178 is a hard gain for a 5-man team to travel. The conditions of light, background, etc., were very favorable, and there was no excuse for the lamentable spectacle the Western team made of itself. Rubie made three beautiful shots, and was placed in the lead, but being unable to balk on the second pair shot over and got both to score. Budd couldn't hit the singles, Cahoon and W. S. Perry indulged in their usual generous contest of shooting worse than each other, and to-day Cahoon came out ahead and shot less than Perry. The latter seems improving a trifle, and is more apt to gather than Cahoon, who apparently grows daily less reliable for his team and more for the target. As for the Eastern team, Perry snaps at his birds with a low position of the butt of the gun before calling pull. Cahoon is very slow and loses his birds by not getting on quick enough. Any of the men has had off days, and that is liable to occur to any shooter, especially one subjected to the hardships of constant railway travel, but enough matches have been shot to enable an observer of the scores to make a pretty fair guess at the future averages of each shooter. The Eastern team is now two matches ahead in the series. Score, regular match:

Eastern Team.		
H. M. Murchy.....	11 11 11 11 11—55	
W. Wolstencroft.....	11 10 10 11 11—53	
W. E. Perry.....	11 11 11 11 11—55	
W. S. Perry.....	11 11 11 11 11—55	
H. B. Whitney.....	11 11 11 11 11—55	

Western Team.		
C. W. Budd.....	11 11 11 11 11—55	
J. A. Rubie.....	11 11 11 11 11—55	
R. O. Heikes.....	11 11 11 11 11—55	
C. E. Cahoon.....	11 11 11 11 11—55	
J. R. Stice.....	11 11 11 11 11—55	

Mr. H. T. Payne of the Tribune acted as calling judge; Mr. F. S. Ecker, who had come up from San Diego to see the match, acted as other judge. Mr. Dimick, net-Dimick, acted as time-keeper. It is this city the usual \$25 offer was made to any local shooter who equals the score of a man named from the teams before the shot. Mr. E. Unger, a well-known and skillful trap shot of Los Angeles, appeared for this contest. Mr. Dimick named Whitney of the Eastern team. Result, Whitney 38, Unger 32. Following is Mr. Unger's score:

Mr. Unger.....	11 11 11 11 11—55	
----------------	-------------------	--

At 10:40 P. M. the Iolanthe pulled out for Stockton, and the boys all turned in at once.

En Route, San Joaquin Valley, Cal., Feb. 16, A. M.—We have come through the Loop in the Tehachapi Mountains, and are now running out into perhaps the most wonderful river valley of the world. The San Joaquin valley, with its Sierras to the coast range, 200 miles long, and floored with ground as rich as gold. The wheat fields stretch far as we can see, and the unplowed ground

is yellow for miles with the blossom of the wild poppies. We had a belt of yellow flowers, then a belt of predominating white, then a belt of blue. Rain fell in the morning, but the sky has cleared and the country is lovely. We saw one flock of ducks and a number of great swarms of wild geese feeding on the wheat this morning. As the sky clears we can see the deep blue of the mountain ranges upon either hand as we go north. A day of steady travel and we do not half way cross this single State of wonderful beauty and richness. If this trip does nothing else, it should educate each man of the party into a reverence for this great land of the United States.

Letters are received from San Francisco stating that the S. P. C. A. has announced its intention of spending \$250 if necessary to stop the live bird matches arranged for that city. The party stops three days at San Francisco.

Stockton, Cal., Feb. 17.—We got into this city at early bed time last night. This morning the weather seemed threatening and residents prophesied rain. The boys were cordially received by the Stockton shooters, Major Kellogg, who had come down from San Francisco to meet the party, acting as guide and introducing friend for a time, assisted also by Mr. Chas. J. Hoar, who rode up on our car from Lathrop to his home in Stockton. The gun story of Dix Bros. was made headquarters here, and here the crew met the best of treatment, and became acquainted with most of the Stockton sportsmen, among whom may be named Messrs. James Budd, Austin Sperry, Chas. Merrill, Dr. S. N. Cross and dozens of others. By Mr. Sperry's courtesy the teams were extended the hospitalities of the luxurious and beautifully appointed apartments of the Yosemite Club, of Stockton. Mr. Sperry is vice-president of the State Sportsmen's Association, and also of the Pacific Field Trials Club. From accounts of these different gentlemen we learned that Stockton is situated in a fine game country. Ducks and snipe were coming in along the San Joaquin in good numbers during our stay. Stockton is on tide water and is surrounded by countless creeks and lakes, which the recent high rains have made seem more numerous and important.

Rain was falling steadily at 10 o'clock when the boys finished a hearty lunch and started for the baseball grounds. The down pour increased for nearly an hour, and the only wonder was that the 100 or so of spectators came out at all. Had they not been of the faithful they would not have done so. The grounds were

THE E. T. ALLEN TROPHY.

spacious and well provided with grand stand and comfortable rooms. The background was good, with exception that No. 3 threw its bird directly toward a dwelling house just beyond range. The score was laid close in to the buildings, so that the boys could at once step back under cover after shooting. Mr. Dimick, referee, and Messrs. Quimby and Tucker, who were the only ones who had to take the rain, which mercifully stopped now and then, just short of the drowning point.

Once more the Western team went to pieces and allowed the bloated aristocrats of the effete East to score a victory. The record as shown in the score needs explanation. Charlie Budd is not falling down to 26 out of 40 as a plain every-day occurrence. The fact is, Charlie made a blunder that deserved to lose him the shooting match. He brought out in his gun case the stock of one of his guns, and the set of barrels that belonged to another, and result was that he didn't have any gun at all. He borrowed McMurchy's gun and found it too straight for him. Then he tried Stice's, and then Whitney's, and before he was done he had tried about all the guns and all the ammunition on both of the teams. The result is interesting to those who think expert shots can shoot any kind of a gun, or can by careful sighting overcome the drawback of a gun that does not fit. Had Charlie shot at 30 or above, where he is belonging, and had Cahoon shot above 30, where any man belonging to either of these expert teams certainly does belong all the time, the result would have at least been a decent showing for the Western team. The apparent breakdown has been the occasion of abundant discussion, and there are probably twenty different wagers up to-night between the two teams, the Westerners freely backing themselves to win in the next race, and the Eastern boys eagerly taking them. McMurchy and Whitney did good work to-day. Rubie made another beautiful German duet and spoiled a good score. Stice shot a slashing gut on the doubles again. Stice is ahead of the lot on doubles. He has broken 76 out of his last 80. Cahoon and Perry engaged in their usual friendly struggle again, and this time Perry came out ahead, succeeding in breaking only 28, while Cahoon unfortunately hit another bird and so scored 29. Perry has bet Cahoon 50 cents on each race from here to Boston that he will in each race beat Cahoon's score. He has also bet \$5 to nothing that Cahoon will not make his 30 singles straight on the trip. He is adding the privilege of using 2½oz. shot, and standing at the traps instead of at the score. This is a sample of the wagers constantly making in this gang. Tex, the wildcat, is the tamest thing on the car. Score, usual race:

En Route.—Immediately after the close of the shoot the party hurried to the car, which at 4 P. M. pulled out for San Francisco. This evening we are passing through a flat country, cut up by pounds and lakes in and over which great numbers of wildfowl are seen. The Coast range is plainly visible, and its higher peaks are covered with snow. We must get on the other side of the range to reach Frisco. Rain all the evening. The boys are on a feast to-night. As the clouds were clearing, sparring and betting has not been witnessed since the beginning of the journey. Rubie has found an old friend in a green hat on another car.

8 P. M.—We are on Oakland Pier, across the bay from the main

city. Mr. Chas. Sonntag, whose gun store will be headquarters for the gang, meets us here and brings over a quantity of mail, which is eagerly consumed.

Oakland Pier, Feb. 18.—At 5 A. M. this morning we were awakened by a tapping on the windows. The intruder turned out to be no one less than our own and only advance man, Tee Kay, who had been wired for a week ago, and who escaped from a snow-bound train in the Sierras just in time to reach us here. There is a general whoop-her-up on board the Iolanthe at this writing, and Tee Kay is relating his adventures in the wild West to an appreciative audience. He says it is awful wet up in Oregon, never saw such a place in his life; you can't go into a bank to get a draft cashed without the cashier inviting you to take a drink. Tee Kay thinks it doubtful whether we can get up to Portland, the washouts have been so bad. Portland has been flooded, and he went into Hudson's gun store in a boat.

We will be at San Francisco for three days, and the boys will get time to stretch their limbs and take a rest. This morning they have all deserted the car and taken the ferry over to the city. The Iolanthe is now being thoroughly overhauled and cleaned down in the yards, preparatory to be taken across the bay into San Francisco. Between the uproar and dust of this work and the efforts of Tex, the wildcat, to chew up the copy as fast as it is produced, the matter of writing is a difficult one, and it seems wisest to quit and join the crowd up town.

To-day Mr. Sonntag tells us that he thinks there will be no interference with the live-bird matches. Ten men, chosen from all over the State, have been selected to compete with our joint teams in a grand live bird contest. Budd and Tucker, West, also shoot McMurchy and Quimby, East, at this place. This will be the greatest point of the entire trip doubtless. Enthusiasm is intense and general. The objects of this tour have been accomplished so far, but the record of the next few days will show that this is preeminently and prominently true for this great sporting city. California could not be said to be alive on trap matters, when such towns as Stockton have no regularly organized and active club. But the advent of this touring party never fails to stir things up. At this point we meet the concentrated force and activity of the whole State.

Feb. 19.—It is raining again this morning and it rained all day yesterday. The prospect for decent weather for the several shoots at this city seems remote. The boys spent yesterday in seeing the sights of this great and interesting city. In this they have been materially aided by the courtesies of Messrs. Chas. Sonntag & Co., Mr. E. T. Allen and Messrs. Clabrough, all shooting goods dealers here; by Mr. Briggs, of the Breeder and Sportsman; Mr. Edwards, president of the Pacific Field Trials Club; Mr. Block, Mr. Fay and Mr. Crittenden Robinson and many others of the California Athletic Club, and very many others, not the least of whom have been Mr. Skinner and Mr. Beker, Mr. E. T. Lane's house. Here also we have met Mr. Charles G. Yale, who has in the past written good work for FOREST AND STREAM under the name of "Saucelito," with Mr. Kellogg, of the Cordelia Club; Mr. Pavot, of the Espinosa Club; Mr. Whitier and Mr. Goodall, of the Teal Club, and so very many others who have conspired to make the life of our party here one of constant interest and pleasure that we may be forgiven if we can mention only a few. The reception accorded the party has been worthy of California and as large and as generous as herself. For instance, it is doubtless known how exclusive are the methods of the famous California Athletic Club, tickets not being obtainable through love or favor to its entertainments, yet last night the entire party was admitted to one of these exhibitions, and very many others, not the least of which Mr. J. Dempsey, of New York, and Mr. W. McCarty, of Australia, figured prominently, somewhat to the ultimate discomfiture of the latter named gentleman.

There are two magnificent trophies offered for the competition here. The first is presented by Mr. E. T. Allen, the sporting goods dealer, to the team of ten men which shall win in the live-bird contest of Saturday next, ten California men against the combined teams of East and West. It has not been met by a finer trophy than this. It was designed by Phil B. Beker, of the above firm, and executed by Vanderslice & Co., of this city. The material is pure silver, and the design is that of a graceful urn, mounted upon a polished ebony base. The design of the trophy is 16½ in. the base being 3½ in. high by 7 in. diameter. The design is simple and plain, but striking and pleasing. The figure upon the base of the urn is a faithful miniature of the California emblem, the grizzly bear, and is done in oxidized silver by a hand of no mean skill. It took the artisan one week of labor to make this figure alone. One hundred ounces of silver was melted to make the body of the urn. At the sides of the urn are three silver guns, sin. in length, and these are the features of the whole. They are actual guns, made in perfect proportion after the actual drawings taken from an actual gun. The barrels are silver tubes, and the ribs were fitted to these as in a real gun, the barrels and stock being joined later, as in a perfect arm. The inscription is:

CALIFORNIA
VS.
UNITED STATES.
Presented by
E. T. ALLEN,
Feb. 22, 1896,
San Francisco, Cal.

The entire trophy cost somewhat more than \$200, and it is singularly appropriate and indicative of the broad methods of this city.

The other trophy is that offered by Messrs. Clabrough, Golcher & Co., sporting goods dealers of this city, and is also an elegant and expensive affair. This goes to the winning team in the regular East vs. West contest of to-day, and by the terms of gift will become the individual property of the man on the winning team making the highest average in the next four shoots following. The design of this trophy is that of a silver pitcher, with crossed guns upon the one side and the inscription upon the other:

Presented by
CLABROUGH, GOLCHER & CO.,
San Francisco, Cal.

The inscription scrolled about the crossed guns reads "East vs. West, 1896." Upon the top of the lid is an exquisite little image of a bluerock trap, which is a real working model, with spring, arm, etc., which can be set and sprung. This is a trophy which no teams of inamates-shooters have yet seen equalled, to the best of the writer's knowledge. It is no wonder that the interest of the teams is highly excited here.

Feb. 19, P. M.—The glowing climate of California fairly laid itself out to-day and tried to see what it could do. It rained all day, with the wettest, dimmest, drenchingest rain ever was. They say that such weather has been known here since the wet spring of '72. No real Californian can speak of this weather without his cheek mantling with a blush of shame. East of here, in the mountains, the snowstorms have been terrible, and at this date a blockade of all through trains exists, whose continuance is an indefinite quantity. The floods to the north here have cut off all chance of getting up to Oregon and the Sound country, and the delays for the section have all been canceled. The team shoots at Sacramento next Monday, and after that future dates are problematical, as Tee Kay, our advance man, cannot get out and over the hill to do any work. It is likely that Ogden will be dropped and the mountain list concluded with Salt Lake City, Denver and Cheyenne. What the dates there will be cannot be told now, as east-bound traffic may be long delayed over the C. P. Eastern mails are now all going via P. R. R. The rain today soaked about \$500 out of Mr. Dimick's pocket.

The interest manifested here is great, and as this is one of the greatest sporting cities in the world, the management had a right to expect a generous showing at the very accessible and suitable grounds at Haight street park. As it was, barely a hundred or so, wet and shivering, gathered under cover to see the exhibition of trap-shooting under difficult conditions. The team and Stice were steady as best they could with rubber coats and umbrellas, but the match was shot under the most disagreeable and trying circumstances possible. Whitney's straight 40 was remarkable under the conditions. Three others of the Eastern team shot a steady race, the remaining shooter, W. S. Perry, going to pieces. Cahoon on the West was barely better, and Rola Heikes was unaccountably and unrespectably brought up in business. The team and Stice were steady enough in the singles, and Rubie made the singular score of 80 straight singles and 3 "Dutch doubles" in the pairs. The East won again, and is now four matches ahead. Heikes will probably not go so low again. What Cahoon may find among his capabili-

ties or possibilities remains a question, and one of absorbing interest to his team. Score, 30 singles and 5 pairs bluebirds:

Eastern Team.					
H McMurphy	11	11	11	10-36
W Wolstencroft	11	11	11	10-35
W E Perry	11	11	11	11-36
W S Perry	11	11	11	10-34
H B Whitney	11	11	11	11-40-171
Western Team.					
C V Budd	11	11	11	10-33
J A Ruble	00	00	00	01-32
R O Heikes	10	10	11	11-29
C E Cahoon	00	00	10	11-20
J R Stice	11	11	10	11-37-185

Major S. I. Kellogg, of the Selby Lead and Smelting Company, and Mr. Golcher, of Clabrough, Golcher & Co., both of this city, acted as judges. Mr. Dimick referee. One bird was scored to McMurphy which received him a shot at broken piece and missed it; one of the judges seeing the piece falling doubtless thought it broken by the shooter. This did not affect the result in any way.

By the result of this match, the Eastern team wins the beautiful Clabrough & Golcher trophy described above, and they are heartily to be congratulated thereon. When the boys bring this East, their brother sportsmen will agree that it is as magnificent a trophy as ever was seen in that country. There is only one California, and it is broad, deep and big. Witness further the beautiful gift of the Selby Lead and Smelting Company, also won by the East in this match. This came in the shape of six elegant gold keyrings, with plate for name of owner. Even the substitute, Mr. Fred Quimby, that man of deplorable morals who acts as *de facto* chaplain to the gang—and who is loved more than most members of the party—received one of the rings, which doubtless he believes to be a bangle bracelet. Being a chaplain, he especially prizes this pretty little souvenir, as being an article of vertu.

If the undertaking of this tour has been planned in wide lines and generously conceived, the reception accorded it at San Francisco has certainly been not less broad and generous. California delights in the sportsman, and she has not hesitated to grasp the import of this enterprise instinctively and been eager to foster and further such an enterprise as one after her own heart. The sporting goods trade of San Francisco, notably the firms mentioned earlier—E. T. Allen, Chas. Sonntag & Co., Clabrough, Golcher & Co. and the Selby Lead Smelting & Co.—have been especially cordial and energetic in the reception extended to the championship party, and they have placed the management of each member of the party under obligations which can not well be repaid. It was perhaps due partly to the San Francisco gun trade and partly to the aid of as hearty and thoroughgoing a newspaper man as the writer has ever met—Mr. Horace Briggs, of the *Breeder and Sportsman*—that the courtesies of the San Francisco Press Club were last night extended to the party in the form of an elegant dinner at the Elkus and the Elkus organization. No one but a newspaper man could have secured the admission to that exclusive body, and no one but Mr. Briggs could so thoroughly have persuaded each and every member of the dinner party that he was one of the "perf'ish," in good and regular standing. Mr. Briggs came down to the rendezvous in the evening. "Ah, Col. Dimick," he remarked blandly, "I am pleased to see you. Do you still reside in California? As I understand it, this is an unsuspicious and an opportune time for you to be in California, and roast canvass into this band of friends with whom you are starting this end of the firmament. Will you kindly marshal the animals, while I go and see if the supplies of beef and hay have been properly attended to? Thanks. As I look at it, it may be well to proceed at once, for there are to be certain festivities subsequent to the struggle of the Press Club to appease the appetite of the members."

Therefore the menagerie proceeded, and was early engaged in the struggle, much to the depletion of the stores, solid and liquid, arranged against this occasion. It was really an exceptionally pleasant little dinner, and devoid entirely of all the stiffness and much of the formality which sometimes haunt such affairs. With all deference to the sporting trade of San Francisco (for it is impossible to ignore it), and with all deference to the sportsman (as an affair) it may be said that much and most of the success of the occasion was due to the wit, aplomb and courteous readiness of Mr. Briggs, who will pardon a sister paper and a humbler worker for complimenting him sincerely as a presiding genius and an after-dinner speaker and toast propounder worthy even of California. Mr. Briggs called for Mr. Dimick. Mr. Dimick replied briefly and to the point. Mr. Briggs then introduced Mr. Quimby, the professional hard talker for the Iolanthe. [Applause.] Mr. Quimby spoke with an eloquence which brought tears to the eyes of the hardened men who sat about him. Mr. Briggs called for Mr. H. T. Payne, president of the California State Sportsman's Association. Mr. Payne responded nicely, referring to Mr. Briggs as one of the distinctive features of California. He then introduced Mr. E. T. Allen, of the Yosemite Valley, the big trees and the glorious climate. The chairman and members of the teams, the advance agent (Tee Kay), and the sporting press, were all proposed, and left on record replies of one sort or other, each of which the worthy chairman accepted with remarks of his own better than those of the speaker. Mr. Dimick called for the members of the trade. Mr. Allen, Major Kellogg, Mr. Golcher, and Mr. Chas. Sonntag, of the support Powder Co. (all here) responded with cheerfulness and vigor. The affair was a happy one, and so long as Dr. Abbey (manager of Mrs. Lily Langtry's California ranch) was on hand, it was by no means a quiet one. I wish I might write of it more fully, or express properly the thanks which all of the Iolanthe people have since privately declared to be still due for the delightful evening.

At about midnight, every body having made a speech who was capable of doing so, there appeared upon the stage, Mr. E. T. Clumdan, of the night detective service of San Francisco, Mr. F. P. Callandun, his brother (well known as the very efficient head of the State Fish Commission), and their brother "Doc" Callandun, who were duly announced as guides, counsellors and friends for a visit to that singular portion of this great city known as Chinatown. All these gentlemen, for any reason of their occupations familiar with the Chinese district, and there was no danger of a detective or to pursue violators of the law. The proper police permits had been secured, and it may be briefly said that our party, which now numbered over 20, saw all the sights and smelled all the odors of that most detestable plague spot and moral cancer on the face of this fair city. The trip to the Chinese quarter has often been written up, and at best all that could here be said would be to say that we saw what we saw. The party went into a Chinese theater, stood on the stage, eyed the actors, ogled the actresses, dickered with the first violin for his instrument of hellish misery, gave a Chinese baby all the nickles we had and passed on. We went through the indescribable holes under the ground where the actors live, under the theater; we went into one foul den after another, saw opium smoking at its best and at its worst, saw the most filthy and filthy of the filthiest, lowdown, abominable things that any one could see more than any one could imagine unaided, prowled from one dark alley to another, squeezed through narrow reeking halls, drank tea in a Chinese restaurant, bought chopsticks, stole marking sticks, begged Chinese money, bought ribbons from questionable localities, saw all manner of things, and finally, at 5 o'clock in the morning, after a night which may be said to have been pretty thoroughly enjoyed, in, snatched an hour's sleep, drank tea, and went to bed, and got ready to be entertained some more. Any cartridge companies contemplating a future tour like this should be careful to select men of good constitutions and able to be entertained for 48 hours at a stretch, without a skip or a break, if they expect to show in this town.

This afternoon was Col. Chas. Sonntag who had designs on the outfit. He could not ask a party to come down to take a ride on the cable car. Col. Sonntag chartered a steamer. The afternoon was to be spent in a trip down the bay to see the most wonderful natural harbor on earth, and to gaze at that passage-way of untold millions of unsorted wealth known the world over and for all time as the great Golden Gate. The boys were scattered so widely over the city to-day that it was impossible to get together to make a trip, and they were very ready to accept upon what was really about the most enjoyable feature of the San Francisco reception. The weather cleared to-day, and this afternoon the sun shone nicely, so that the steamer ride was something delightful. The route lay past the crowded piers and docks, where lies the shipping of all nations of the earth, from English collier to American whaler. We saw the picturesque lateen sails of the much-famed fish boat, and a U.S. man-of-war (just completed in building here), and we saw a number of every kind and craft. Making the circuit of the bay, we ran easily along in full view of green mountains that rise about it on every hand, topped by white-fronted Diablo Peak, Oakland Mole, Oakland itself, and all the sister towns we could see easily when we stopped at the Government Lighthouse supply station, which made nearly the outer point of our trip. The party was composed of Col. Chas. Sonntag, Mr. E. T. Allen, Mr. Chas. Sonntag, of the Winchester Arms Co.'s house in this city, Mr. H. C. Golcher, "Uncle Bob" Liddle (beloved of all sportsmen here), besides Mr. Dimick, Captain Budd, of the West, Mr. W. E. Perry,

of the East, Mr. Clark, of the *Chronicle*, and the writer. A very small showing, this, of the party intended to be assembled, but nevertheless a very delightful party, and one appreciative of the lunch on board ship.

The boys were fairly alive with ducks, a great many of them canvasbacks, with thousands of bluebirds. Major Kellogg had brought along a .22-cal. rifle, and this came into constant play on the ducks, cormorants and sheldrakes. The birds were wild, and most of shooting was done on the wing. It was interesting to note how far behind the bird the bullet usually struck the water, even when the aim was thought to be far ahead. Charlie Budd showed well at wing practice with the rifle. One duck started nearly 60 yds. from the boat, and Charlie fired three times at it as it flew. The second shot was closer than the first, and at the third down came the duck as if struck by lightning. It was a singular shot, perhaps due partly to chance, but more to skill and experience in wing shooting. The air was full of gulls, and these often sailed along with the boat, and so near one could nearly strike them with a cane. Mr. Dimick doubled up one with the .22. The gulls are not shot in San Francisco, and I believe, protected by an ordinance. They are great, bold, fearless fellows. They sailed along so close we could see every feather, and the beauty of their flight was indescribable. You cannot see where a gull keeps his feet when flying. His body is a pointed, smooth and rounded missile for the wings.

It was evening when the Caroline pulled into Jackson street pier, and the Iolanthe to-night was dimly patronized. Nobody knows where all the boys are, but they are going to do next. This is a great city and it is more like Chicago than any city in America. Col. Sonntag commented upon this fact to-day. There is something in the push and enterprise and liberality of the two cities which makes them near of kin.

On the day following the Iolanthe was shot on the water. The United States will great live-bird contest, no shoot on land. This is too important an event to be balked by the weather, and should Saturday seem too rainy to give the shoot a fair chance, it is likely that Mr. Dimick will run up and shoot Sacramento Monday, returning here, lying by till decent weather comes. We can't get East over the mountains any longer. Nobody cares for that, so long as the beef and hay hold out. Hope it will be a year.

San Francisco, Cal., Feb. 22.—We have met the enemy and we have their hair. California summoned the best ten men she could get together, and our boys celebrated Washington's Birthday by gracefully robbing them of the greatest victory which has been put in question on the entire trip, and one which will not be passed up by the California boys as a sign of weakness. More than all this, the victory is the result of as good a gun and a cleverly aimed shot as ever was shot on any grounds. There is no boasting to be made over this victory, and there is no sting in the defeat. If the match were to be shot over again to-morrow, it would be as safe to bet upon the California team as upon the Pan-American, although as the matter stands to-night, there are a good many reasons why the California team is beginning to think that the latter folks can shoot a little bit. This is the first time the party has been challenged by local men, and each time it has come out victorious.

The faces were propitious to-day. Tex, the Iolanthe mascot, smiled blandly on each man of the teams as he made his morning salutations. Despite recent late hours and general high jinks, the California boys were clear-headed, alert, and a good appetite which would have done credit to a bay wolf. The best of all, the rain stopped purposely for the occasion, the prayers for clear weather were answered and the sun shone brightly all day long—something which it has not done for the past two months. This gave the people a chance. There has been a great deal of interest taken in this match by San Francisco men, and perhaps will see, on the trip. A fair estimate would place the attendance between 1,500 and 2,000.

The shooting was at Haight street baseball park, and the first man stepped to the score at a trifle after 1 o'clock. The match went on steadily, and occupied about three hours. The California men were a fine-looking set of men. The team was chosen from the best of the California men, and is well known the State over. Mr. Bassford comes from Vacaville, near the Mexican border, and Martinez Chick, who shoots in Spanish, is from San Diego, also far to the South. Messrs. Merrill and Haas are both from Stockton, and the remaining gentlemen are from San Francisco. Mr. Chick is champion of the State at inanimates, and Mr. Merrill has that honor, it is said, in live-bird shooting. Not a man on the west side of the Coast is a shot, and a mighty good one, too.

The race to-day was in some respects a singular one. The mutual arrangement at the start was that Chas. Stevens's dog should do the retrieving. This dog, Roy, is a dropper, pointer and Gordon, and is the best retriever that any of our shooters had ever seen work. He was quick, obedient and full of judgment. He repeatedly caught birds as they rose to fly, when a man would have failed to do so. It is probable that one or two birds were lost by gathering, which Roy would have saved, and the use of this dog occasioned the only nitch of the whole performance. On three different occasions, after the referee (who, contrary to the best usage, did the calling instead of one of the judges) had called "dead," the dog, sent in by the shooter to retrieve, scared up and drove the bird out of bounds, upon which the referee called "lost bird." These birds were lost to the California boys, and as they were used to seeing a "dead bird" remain here so unless challenged, there was some little demur. In each of these cases, however, the shooter had taken his chances and called for the dog, so if any injury was sustained it was through *laches* of the shooter.

This same thing happened a fourth time for the California team, and the shooter should have been scored lost, but doing being a slight question whether the dog had not broken loose without order, this bird was cheerfully given to the Californians as dead, and thereafter Mr. Dimick did not announce any bird until it was gathered or taken up by the dog. There was no injustice wrought by this matter, as there remained a lead of four clean and unquestioned birds above those three. There would have been no harm in the matter, had the California boys been allowed to shoot under the American Association rules, instead of the California State Association rules. As it was, nothing can be urged against the courtesy of the East and West teams, for they claimed no bird not clean scored, prevented no scoring on the other side, and really made a present of one bird which they had a kicker's right to claim. There was not the slightest hard feeling. The race, as first, was a pretty and plucky exhibition as ever was seen.

Mr. Orr captained the California team, and Mr. McMurphy the East and West. The shooting was sharp and clean on both sides, and there was little slobbering of birds. On the California team Merrill and Fay probably divided the honors for brilliancy of style. The latter rather better and snappier, though not to be thought sure for a long time, as he is a very good shot. The California team was a long team of the whole team but did some here and there. Golcher cut down a giant taller at nearly 60 yds. and won applause in abundance. Major Kellogg also got down one or two corks, and Mr. Haas, Mr. Deimas, Mr. Bassford, Mr. Orr and Dr. Knowles all had their ability put severely to test and stood the test well.

For the East and West, Wolstencroft as usual, won much applause, but he was not always getting his birds squarely with the point of his rifle, and he does not think he shot as well as he was. The best or longest seconds made on the team, however, were made by Fred Quimby, who got down some birds that seemed out of range. Heikes shot clean. Ruble showed his ability on doubles, as his score will show. He didn't always have to do it, but he did. Whitney shot like a house a-fire, and Tucker shot a quick and clean gat, which his work on targets would not permit one to prophesy at all. The best work was done by the California boys, who were clear above the average, the last five adding a few more reluctant starters. We are told that the birds at San Bruno, the great live-bird place near here, are much harder than those of to-day, and they are doubtless the best of the coast, but the birds of to-day were grand ones, and if easier than the California boys are used to, should have favored them rather than not.

The victory of to-day carries with it the magnificent trophy, the solid silver tankard offered by Mr. E. T. Allen of this city, and described earlier in the account from this city. A cut of this beautiful prize appears on this page. The Clabrough, Golcher & Co.'s inanimate trophy was illustrated last week. It was doubtless with regret that the California boys saw this noble trophy leave their State, but when the result was announced they gave their hearts to the East and West teams, and three to Mr. Dimick and his company, to which the winners responded heartily with three rousing cheers in turn for the California team. Surely if ever a body of men should give cheers as compliments

to their entertainers, the crew of the Iolanthe should do so here, for they have been treated magnificently in every regard. The bare record of the scores and the shooting on this trip would make no adequate report of it, and do no justice to the undertaking in its best phases. There has sprung up here a warmer feeling for the gun than simply upon a shooting match. The gun trade of San Francisco declares that the management has helped it. The management could only say it has been treated better than it could have dreamed by the gun trade of San Francisco.

Beyond that, countless happy acquaintanceships have been formed, and the general bonds of sportsmanship kindled and strengthened. It is for this reason that the projector and the manager of this tour deserve congratulations quite different from that due to merely a successful business project. The car will leave this city to-morrow evening for Sacramento, but there is a sort of feeling that after this it will rather be down-hill, for if this be not the zenith of the trip then its horizon is broader than was known.

It is deeply regretted that the heavy floods have made it impossible to go to Portland, Tacoma, and Seattle as was intended. Yesterday trains were moving slowly on the Central Pacific. It is expected we will start east from Sacramento to-morrow.

The following is the score of to-day's shoot. The California team was: John K. Orr, Ed Fay and H. C. Golcher, of San Francisco; Martinez Chick, of San Diego; Joseph Deimas, of San Jose; C. J. Haas and C. A. Merrill, of Stockton; H. A. Bassford, of Vacaville; S. I. Kellogg, of Oakland; Dr. Knowles, of Sausalito. Conditions, 15 live birds per man, new American rules:

California Team.					
H A Bassford (10-g.)	1	0	2	1-12
S I Kellogg (12)	2	1	2	0-10
H C Golcher (12)	1	2	0	1-12
S E Knowles (10)	1	0	2	1-12
J K Orr (10)	1	1	2	1-12
Ed Fay (12)	2	2	1	2-14
Martinez Chick (12)	1	0	2	1-12
C A Merrill (12)	1	1	2	1-12
Jos Deimas (10)	1	1	1	1-12
C J Haas (12)	1	2	2	1-12-130

East and West Team.					
W H Wolstencroft (12-g.)	2	1	2	1-12
C V Budd (12)	2	1	1	1-15
H McMurphy (12)	1	1	1	1-15
J R Stice (12)	1	1	1	1-15
W E Perry (10)	2	2	1	1-13
W S Perry (10)	2	2	2	2-10
R O Heikes (12)	2	2	2	2-10
J A Ruble (12)	2	2	2	2-10
H B Whitney (10)	2	1	1	1-15
S A Tucker (10)	1	1	1	1-13

Dead out of bounds. Judges, Mr. Ramone E. Wilson and Mr. Horace Briggs of the *Breeder and Sportsman*; referee, Mr. Dimick; official scorer, FOREST AND STREAM.

San Francisco, Feb. 23.—Opportunity offers now before we pull out for Sacramento to add a few words about the late live-bird match and its connected events. It seems that the shoot was watched with greater interest than we had supposed. Mr. Ed. Fay, well acquainted with the run of sporting events in San Francisco, informs me that at least \$2,000 changed hands on the result. The betting was about even, the continuous practice of the game being thought a factor against the confidence of the California men in their skill. The result was close enough to show the odds were wisely considered, and should a return match ever be shot, as there is a bare possibility of happening, more money than ever will go up, and our men will be slow to back themselves too heavily on the California men who will shoot the match over down at San Bruno, on the swift, hard birds they are used to.

As mentioned earlier, there had been much talk at San Francisco about this shoot by the S. P. C. A. It is only Col. Sonntag's prominent connection with this body which prevents me from calling that revered and august organization the Society for the Promotion of Cant among Asses. It was due to Col. Sonntag's offer that the match was off so late in the season, and the interference, I have already said that the shoot was a fair one, and this should be repeated. It was resolved that no point for a hint of cruelty should be allowed the critics. Each bird was retrieved at once, before another shot was fired, and the second barrel was repeatedly used when not in the least necessary to score. Mr. Orr, captain of the California team, was keen-eyed and quick on his feet, and all crippled birds were killed after crossing the boundary.

Major S. I. Kellogg, of Oakland, manager of the Selby Smelting Lead Company, whose liberality has been mentioned before, has superintended the loading of a large quantity of shells taken on here for the teams. When the boxes came down to the car they were each nicely labeled in red, "Charlie Budd's Champion fond," "Major S. I. Kellogg's Champion," "Fred Quimby's Annihilators," "S. A. Tucker's Scorchers," etc., and the inscriptions at least did not impair the efficacy of the loads, it would seem. Major Sheldon has been attentive to the last degree to this party, and the last proof of this came to-night in a beautiful floral display of rare and choice blossom and foliage, with the letters "U. S." displayed in violets in the center. This graceful souvenir went into a central arched alcove of the Iolanthe's receiving room, a crowning glory to the various bird and hijouterie, which has now accumulated in quantities on the car. We have everything now, from a stuffed California quail to a Chinese guitar. The latter article is owned by Rolla Heikes, and he plays very soulfully upon it. It only has three strings, and the box, covered with snake skin, is not larger than one's hand. This is a general complaint, and a heavy rain prevented the live-bird match between Mr. Tucker and Mr. Quimby, respectively of the West and of the East. I was going to tell in the report of that match how Fred Quimby got the title of the Blue Island Champion, as I promised earlier to do, but as the match has not been shot this must be deferred. If the shoot ever does come off—and in view of the constant strutting and challenging of the Californians it is to be hoped it will—the Blue Island man will look to his laurels, for Tucker shot a mighty good live-bird style in this late match. He shoots birds far better than target, and is very quick with birds while very slow with targets. It was wise that he was put on the live-bird team.

The long rest the boys have had here has put them all in good fettle, and the jokes they are playing off on each other are endless. Stice and Quimby went into a restaurant together with a few companions, and after Fred had seated himself Jim called the cashier up to him and whispered to him, pointing to Fred, "You want to watch that fellow, and you'd better collect in advance or fire him out. Say, I know him, and he's a regular beat—never pays for a meal, and got a check like a mule. Don't let him run no game on you, but just drop on to him." So the cashier dropped and there was no explanation as to where he was made. A little while after Harvey McMurphy became the victim of another conspiracy in which Charlie Budd and Whitney figured largely. They waited until after dinner, and then offered him a cigar, which he accepted with thanks and tried to smoke, but couldn't. It was one of the twelve-for-a-dime variety, not made by white labor, and it knocked Mac out in about two rounds.

High jinks on the Iolanthe to-night, but a great many regrets at leaving San Francisco. This is the summit of the trip. Col. Sonntag and Major Kellogg, with Mr. Henry E. Skinner, of the E. T. Allen gun house, have come clear across the bay to say good-by, as we start from Oakland Mole. Major Kellogg goes to Sacramento with us.

And now she rolls. E. HUGH.

The teams will shoot at these points on the dates named: Des Moines, March 7; Davenport, 8th; Kansas City, 10th and 11th; St. Paul and Minneapolis, 13th; Milwaukee, 14th.

CLEVELAND, O., Feb. 27.—Good scores were made at the regular shoot of the Cleveland Gun Club yesterday on the club's grounds. Upson and Whitney were the winners, dropping on 25 for the first badge, and in the shoot-off Tamblin and Wherry dropped on 23, Upson winning the badge. Holt's 22 carried off the second badge. Three traps were used. While the regular shoot was going on there was a shoot at 25 birds to a man on the side traps. The scores of both shoots will be found below. There was also a sweepstake at 3 singles and 3 pairs of doubles. Upson and Tamblin dividing first money, Wherry and Elworthy second, Holt third.

Club Shoot.					
Williams	17	Harris	19
Upson	23	Wall	17
Wheal	23	FH	18
Moser	22	Sisby	17
Holt	15	W Tamblin	23

Side Shoot.					
Williams	23	Flick	16
Wheal	18	W Tamblin	19

lication in the current issue. It is particularly requested that scores be sent us as early as possible.

SEAWANHAKA, CORINTHIAN Y. C.—The March meeting was held at the club house on March 1, with Mr. Roosevelt, the senior captain present, in the chair. Mr. Iselin's amendment to the sailing rules, substituting the words "any sailing master who may be aboard" in place of the term "sailing master," was passed, and the question of defining the term "sailing master" was fully discussed, but no conclusion was reached as to the desirability of such a definition, or the best mode of framing it, the matter finally being referred to the race committee. It was decided to hold the annual regatta on June 21, with special races for the 30 and 40 ft. yachts on June 5 and 23. On motion of Secretary 600, the Royal Nova Scotia Y. C. was added to the list of clubs to be invited to take part in the races of the S. O. Y. C., and the officer in charge of the Branch Hydrographic Office in New York was made an honorary member of the club. A vote of thanks was passed to Mr. J. M. Macdonough, owner of the yacht Condor, for a painting of his vessel. Mr. Macdonough, who has carried the S. C. Y. C. burgee on the Condor for several years in foreign waters, is likely to bring her across this year and to join the cruise of the club in the fall. Condor, Capt. Mr. Fife, Sr., is one of the largest yachts afloat, being about 90 ft. l.w.l. by 20 ft. beam.

THE CRUISE OF THE ETOCETERA.—A letter from Mr. Thornton H. Smith, dated at Jekyll Island, gives the following particulars of the cruise of the Etoctereta. After leaving Savannah on Feb. 19, having taken aboard naphtha, water, stores and a "mud pilot," as they are called in the South, and also a steward, both colored, the launch proceeded down the Savannah River and thence to the inland passage or lagoons. Sixty miles of steaming through these crooked and interminable streams brought the party to the famous game preserve of St. Catherine's, Ga. Two days were spent in hunting over the island, a most charming place, with its wilderness of palmettos and tall pine laden with long hanging white moss. After making a fine bag of game for two days the cruise was continued through the inner lagoons to St. Simon's Island, where they were enjoying themselves at last accounts with the thermometer at 78° in the shade, intending to sail on Feb. 23 for Jacksonville. Magnolia, steam yacht, of the Etoctereta, was also at anchor off the island during the Etoctereta's stay, both flying the N. Y. Y. C. burgee.

NEW ROCHELLE Y. C.—The following officers were elected on Nov. 30 Com., J. G. Prague, sloop Anaconda; Vice-Com., Z. Edwards Lewis, M.D.; Rear-Com., Wm. F. Abbott; Sec., R. Condit Eddy, M.D.; Treas., Walter Lange Meun., C. G. Miller; Trustees, Geo. W. Chandler, M.D., Jabez Harris and H. S. Price; Regatta Committee, B. W. Dismore, A. D. Embury and E. T. Smyth; Law Committee, John F. Lambden and Charles H. Naxon; Membership Committee, Caspar C. Barnette, Henry A. Gouge and Henry E. Roosevelt. It was decided to hold the opening regatta on May 15 and the annual regatta on July 5.

UVIRA.—This name has been given to the new 22 ft. cutter, building from Mr. Fife's design, for Mr. James Fraser, of Halifax, N. S., at Hatcher's yard, Southampton. The Royal Nova Scotia Y. C. uses the Y. R. A. Rules, the new yacht being for the 20-rating class. She thus comes between the Dragon and Vreda, 45x10 ft., and the American forties, 40x13 to 14 ft., all being practically of 20-rating. It is not unlikely that she may be seen as far south as New York this season. She will sail across as soon as completed.

CANVAS BOATS.—Editor Forest and Stream: Your correspondent "Lancewood" refers to canvas folding boats and speaks well of them. Cannot other of your readers who have used them add their testimony as to their utility? It would help solve the doubts of many who have not used them.—SUBSCRIBER.

HURON, cutter, has been purchased by Mr. Wm. Butler Duncan, Jr., of the Seawanhaka C. Y. C., who will use her for cruising. Capt. Smith, who was last year in Gorilla, will be in charge of Huron.

A NEW AUXILIARY NAPHTHA LAUNCH.—Mr. A. Cary Smith is now engaged on a design for a 50 ft. l.w.l. auxiliary launch, to be built of steel and engine by the Gas Engine and Power Co. The launch will be yawl rigged and of shoal draft, for use about the Florida coast.

SYBILLA, steam yacht, from Philadelphia for Philadelphia, was at Charleston on Feb. 27. Iroquois, schr., Rear-Com. Ellis, S. C. Y. C., is on her way to New York after an extended cruise in the West Indies.

CORONA, steam yacht, Mr. E. T. Taft, of Holyoke, Mass., sank at her berth at Weymouth, on Feb. 23.

A THREE-MASTED SCHOONER YACHT.—A report comes from London of a proposed schooner yacht 141 ft. l.w.l., 27 ft. beam, and 14 ft. draft, to be rigged as a three-masted schooner. Mr. Alfred H. Brown is the designer.

SILK SAILS.—Both Liris and Kathleen will be newly canvassed by Laphorne, all the kites being of silk. Many of the Boston craft, new and old, will try the silk kites this season.

FIXTURES FOR 1890.—We publish this week the fixtures thus far announced for 1890. Secretaries of yacht clubs are requested to notify us of changes and additions.

ACCEA, schr., Mr. David Sears, has been sold to New York pilots. She is a keel boat, 92 ft. l.w.l., 22 ft. beam, and 11 ft. draft, built in 1880.

DORCHESTER Y. C.—A new club, with headquarters at Harrison Square, Dorchester, has taken this name, lately vacated by the present Massachusetts Y. C.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1889-90.
Commodore: HENRY STANTON, New York.
Secretary-Treasurer: W. L. DUNNELL, New York.
Vice-Com. Rear-Com. Purser.
Central Div., Geo. A. Warder, E. L. French, F. F. Andrews, 4 Exchange place, Rochester.
Eastern Div., Dr. J. A. Gate, A. S. Putnam, Ralph Brazier, Lowell, Mass.
Northern Div., W. J. White, W. J. Read, C. M. Whitely, Montreal, Can.
Atlantic Div., M. V. Brokaw, I. V. Dorland, W. R. Hayland, Yonkers, N. Y.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of \$2.00 for entrance fee and dues for current year. Every member attending the general A. C. A. camp shall pay \$1.00 for camp expense. Application sent to the Sec'y-Treas. will be forwarded by him to the proper Division. Persons residing in any Division and wishing to become members of the A. C. A., will be furnished with printed forms of application by addressing the Purser.

WESTERN CANOE ASSOCIATION.

Commodore—C. J. Steedman, Cincinnati, Ohio.
Vice-Commodore—T. J. Kirkpatrick, Springfield, O.
Rear-Commodore—Thos. S. Geates, Columbus, O.
Secretary-Treasurer—J. B. Knoch, 34 Montauk Block, Chicago, Ill.
Applications for membership should be made to the Sec'y-Treas. on blanks which may be obtained from him, and should be accompanied by \$2 as initiation fee and dues for the current year.

FIXTURES.

MAY.
30. South Boston, Open.
JUNE.
7. Marine and Field, Bath.
14. New York, Annual.
14. Ianthe, Spring.
JULY.
12. South Boston, Open.
12-26. W. C. A. Meet, Ballast Island, of Two Mountains.

1,500 MILES IN AN ADIRONDACK BOAT.

PART X.

ST. LAWRENCE RIVER, Oct. 6.—Monday.—The matin bells at the Catholic chapel in the village awakened me at 6 o'clock. It rained hard during the night, and in the morning a strong wind blowing from the N.E. I found that the rapids below, though dangerous, could be run if one knew just the right place to go, the descent being tortuous and difficult. I found after some little delay I managed to secure the services of an old pilot of forty years' standing, named Jean Le Blanc, a French Canadian, whose knowledge of the great waters was as extensive as his ideas of the English language were limited. He was a fine-looking old chap. He had a large hatch with high freeboard, a sort of huge canoe, that would have held two boats like mine, or a whole lot of broad, stout and tough specimen of his race to help row, while he paddled and did the talking.

We made adieu to St. Zaticque at 8 A. M., and rowed along shore to Coteau du Lac, one mile, with the wind strong against us. The five feet did not like the wind, it being contrary to the course of the falls below, and consequently making the water rough. Opposite the town on the south shore, but some distance from the rapids, the entrance to the Beauharnais Canal, cut around the rapids, 11 1/4 miles in length, and opening out again into the Lake of St. Louis below. The weather being lowering, the rapids looked all the more dreadful; but I had not the same fear here as at one which I had met so on approaching the Long Sault, my boat and crew were one of the few words which I had heard of the mighty flood, one could not help feeling that the power of the heavy current began after passing the first point beyond the village, and I noticed more care and watchfulness on the part of my companions, their efforts being directed to keeping their boat straight in the course of the river. The banks and islands were well wooded, and the scenery was of the finest.

After an hour or two, or three miles, between some large islands and the south shore, the Coteau du Lac appeared. The river's channel here is three-quarters of a mile wide, presenting an imposing sight, the torrent rushing down grade before us for some distance, then taking a quicker fall "down hill," afterward leaping up a fearfully steep ascent in one broad wave of gigantic proportions, thence ending in a mile of broken waters and eddies, and finally ending in a mile of white clouds of foam, with the spray leaping aloft in white clouds, and exhaling a few words which I had heard of just before reaching this place, shouting as loudly as could, though we were close together, as the noise and thundering of the troubled waters seemed alone to assert their right to be heard. The rate at which the river was traveling at this point was terrific. With paddle in hand I sat as calmly as possible, awaiting the danger is indelibly impressed on the mind.

Taking a glance at my guides, now 100 yds. on my right, I saw Le Blanc paddling away like a maniac, his face red with exertion, his excited shouts sounding like the cries of a man going to certain destruction. My boat swerving at this juncture, I remember thrusting one of my long paddle down into the water for the first time, and as she swung back again straight toward the huge billow ahead I had just time to grasp my life line, and to crouch down, when the dive came. A race of foam, crushing deluge of water completely covered the boat and myself, and then the waves seemed to throw us clear out of the river. After this I found myself battling with the element and trying my best to keep the boat's head up to them, while the air about was filled with spray and foam, which, splashing in my face, was blinding.

The mile of rough water passed in reality very quickly, and on emerging into another long, smooth sweep, only disturbed by breaking eddies here and there, I saw my comrades bailing out their boat, both shouting meanwhile at the top of their lungs. They were considerably behind me now and were pointing out the right course ahead. The way in which both men managed their boat was admirable, but it was a marvelous thing to me how they ever got through that mile of wrath. In this very race of foam, Americans who were crossing the river above in bateaux during the war of 1812, were engulfed and lost.

We passed near Long Island, which divides the St. Lawrence here, whose forests are very fine, their changing foliage adding much to the wild aspect on all sides. This island is untenanted and undeveloped, and the aspect of the island is barren, none can pass, and doubtless its appearance is about the same in the days of Father Abraham. Just below this we had to cut across the flood, and to accomplish this in time required great exertion. The water was comparatively smooth, though very swift, the only difficulty of this kind arising being the eddies which were of the size of a mill race, and twirl the boat around in every direction. There was a little French village on the north shore, conspicuous this place, conspicuous by its tin-covered shining church steeple, which marks all of these towns.

The next 6 miles passed in less than half an hour, when another mighty rush announced the approach of the Cedar Rapids. I was several hundred feet ahead of Le Blanc and put my boat into the rapids, and then I saw a channel between two awful masses of breakers, a narrow, rocky, and very shallow one. The thunder of the waters was appalling, and made me fairly tremble from fear. In a few seconds more came another sloop, with all the previous experiences of plunging and reeling, blinding spray, and water buzzing in the ears. On opening my eyes I beheld a grand wave towering aloft just ahead, and about to topple over. One stroke of the paddle, and I was down, and then, shrinking up to get as little of it as possible, I lay down, and, soon enough to take one's breath away. My first thought after this double race of admiration for my little boat, as it did not seem to be within human possibility for her to live through it.

My companions had nearly allowed their craft to broach to in one place, in which case it would have been all up with them. In a momentary lull I saw them working away, though cowering behind the bulwarks of the boat to avoid the rush of water. Le Blanc was yelling like a madman to his comrade, French, and looked as if he were beside himself. Two more lines of heavy swells below ended the Cedars, and after passing them we breathed more freely. My boat had taken in considerable water, which was bailed out as quickly as possible. On looking back at the rapids, the descent was truly magnificent; for the width of a mile the torrent descended in a mass of foam, breakers, leaping and tumbling into each other and rushing down the apparently steep grade; while half a mile below we were rising on a mighty swell which extended entirely across the river. Such a spectacle cannot be expressed in words; to appreciate it one would have to see it himself, and from the surface of the water too. It seems almost worth while to risk life to attain such a conception of the power of water.

Two miles below this rift and the Cascades drew nigh, heaving in sight just as their voices drowned the thunders of the Cedars behind us. These are the worst of all, and Le Blanc's anxious face bore evidence that a danger of no common order was approaching. He and his companion occupied the intervening space in talking of dear life, and when they resumed their paddling they could hardly see how they felt about the French, never once took his eyes off the water, and I think that I have never mortgaged my whole future to have been on dry land or provided with a pair of wings now, as the very sight of the turbulence beyond was enough to chill the marrow in one's bones.

I was not 100 ft. ahead of my guides here, a dangerous proximity. The scene below was one of indescribable grandeur, each wave appearing to be filled with life and battling to assert its right for existence over a thousand others, now sinking down exhausted and again leaping on high, filled with fresh vigor, as if impelled by some submarine power. Doubled up, with my head between my elbows and my hands grasping the ropes which lashed me to my boat, I never felt on water so great a shock before as that which knocked my boat about as if it were a mere feather. In one very bad place I heaved a yell, and immediately after saw the stern of the bateau and Le Blanc directly over my head. I expected that the next instant would hurl us both into eternity, as our doom seemed inevitable, but a sudden swirl must have separated us. All took place in an instant, but it was a most terrible moment. Afterward they dropped astern and disappeared in the waves below.

Thinking that they had been swamped, I glanced around again and saw the old man high on the top of a huge billow shooting lustily to his lieutenant and paddling like a Trojan. There were three rifts here, and the last one was most dreadful; after each successive plunge I feared that my little boat would never rise again. She went completely under twice, and then, shooting out again, took a long and sharp dive for the last time, emerging in a smoother descent, though still surrounded by swirling waters; from this we came out on the bosom of Lake St. Louis, about half full of water. I was drenched through of course, and glad to get a full breath of air. For half an hour all of us bailed at our respective skills, and having wrung out our clothes, parted mutually well pleased, my friends making for Beauharnais 1 1/2 miles distant to return whence we came, and I for the lake.

The scenery down the rapids was very fine, and some of the long sweeps around the bends between the islands were beautiful. It is a great mystery to me how such boats can possibly live in these rapids, as the last was enough to swamp a three-master, certain it is that were the steamers which shoot them to broach

to they would quickly be submerged and swamped. At one place in the Cedars we ran through a place where 10 ft. on one side would have insured our certain death; and again, at another, we ran within 20 ft. of some rocks, passing them at a speed of 18 to 20 miles per hour, where one mis-stroke would have resulted fatally. It was a fine spectacle to view the rapids from the lake; for two miles they were to be seen descending the long broad hill, a mass of white spray and foam.

The weather cleared off shortly after reaching the lake, and I proceeded on my journey. Lake St. Louis is 25 miles long and about 6 miles across, another resting place for the St. Lawrence before making its final plunge down the Lachine Rapids below. The lake was very beautiful, but does not impress one like its sister, St. Francis. It was more complex, and I did not see my row clearly, while rowing ahead on a guess would mean traveling miles out of my way. Without changing my soaking attire, I pulled five miles to a stony point on Perrot Island, where there was a quaint old farmhouse. The end of the lake could not be seen from here. Partly for dinner and partly for inspection, though going considerably out of my course by so doing, I stopped here at 12 M.

Observing a grizzled old peasant poking along shore, I accosted him in my politest manner, but without getting any response. Knowing something was wrong, as a stranger in these out-of-the-way places, I went down at a little distance, and after inverting it to dry out, placing my wet things on my coat for purpose, I walked up to the man and demanded an explanation. Finding out quickly that he did not understand English at all, I made a beeline for the house, and finding there a woman with two daughters, made known my wants in all the French that I could muster. Finally she offered a place by the fire, as I was cold and wretched. Finally, no more to be said, I took my things, and, all wearing moccasins and sabots. Two of the girls were quite attractive, and it was far easier to make them comprehend than the men; had it not been for their quick wits it is doubtful whether I should have obtained any dinner.

I lived in an old French stone house, picturesquely situated near the lake, and I think I can speak a word of English, and we accordingly had some very amusing scenes which caused much merriment. "Parlez vous en Français?" was about my constant limit in French; this would immediately bring a chorus of "Oui, oui," from several throats, launching me into a dilemma whence my only means of escape was by pantomime. One thing I said which made some of the women blush, but elicited roars of laughter from the men; but to this day I am unaware what it was. Changing my clothes, I sat down at a little table in the spare room and was waited on by the prettiest girl, a very attractive one, and my feelings. I ate everything brought to me, and when finally appeased discovered a piano in another room, the sight of which was quite startling. This broke the ice right away, and having had some mutual performances thereon, we parted good friends, leaving them my good wishes and some "change" and taking some milk, bread and a few noble apples, the family escorting me to the shore.

I thought that the sight of all my domestic arrangements lying on the boat would abash the feminine portion of the crowd, but they did not appear to object in the least. The matron assisted me out with the boat herself, doing an immense amount of talking all the time, and with one foot on the shore, and the other in the boat, looking very picturesque, and all stood around in a group, hands all around and said good-bye. I pulled out, and adieu, Monsieur!" came thick and fast. The girls all wore short flannel dresses and moccasins, while the men had sabots on their feet.

The Ottawa River, from the Lac Des Montagnes, comes into Lake St. Louis on the north side of Isle Perrot, and I had a good view of it. The other branch of the Ottawa, tending west, comes in below Montreal, thus making Montreal an island. I left Isle Perrot at 2 P. M. and made for Nun's Island, which has a high hill on it midway down the lake and near the mouth of the English River. It is a small bit of land owned by the Catholic monks of Montreal, and is highly cultivated. I did some very steady rowing, passing some ducks and divers on the way and seeing a huge fish leap out of the water ear by, and also some loons. Besides these attractions, a steamer having several barges in tow came along, making for the Beauharnais Canal.

The lake here was very wide and the shores appeared to be densely wooded. Once near Nun's Island, I found myself near shore, having come across the wide part of the lake, and observed looking from the shore, a bluff. The "Nunnery" is a romantic-looking place, with some sandy beaches and picturesque woodlands. Just beyond the island, Lake St. Louis begins to narrow gradually, and soon Montreal Mountain, 30 miles distant, came in range to the east and south are sighted. Portions of the lake near its eastern end are quite shallow, and along the south shore I passed through many reed beds, etc.

From Nun's Island to the Lachine Rapids the direction of the St. Lawrence due west, and as far as Kingston been northeast. The country on the south shore of the lake is densely forested and seemed to be perfectly wild. Near the extremity of the lake three lightships are moored. Caughnawaga, an Indian village, at last here in sight at the foot of the lake. The river proper begins here again and is about one mile across, with a swift current just beyond the lake, whose influence is felt before reaching the settlement of the town of Lachine, is opposite Caughnawaga. Stopping a moment to inquire of some canoeists fishing from a pier concerning the rapids below, I made preparations to descend them, keeping close to the south shore.

A storm, which for some time had been threatening, now began, coming up rapidly from the west and covering the whole of that part of the sky from the zenith with lurid black clouds of the darkest description. My mind already filled with the horrors of the Lachine Rapids below, I viewed the approach of the hurricane with faltering hopes, heralding its approach as a sign of my fast nearing fate. It was already evening, and there being a lively prospect of having to run down the rapids in the dark, of all things to be avoided, I watched for an opportunity to make a last effort to get out of the town of Lachine, and before long I came to the little village of Caughnawaga. Watching my chance, I got into back current behind a long line of rocks, and landed under some trees just above the rapids.

The rate of the river in mid-stream in this place is nearly 15 miles per hour. The few houses scattered here and there were soon left behind, though some were quite large. The first person I stumbled on was an Italian lad, walking along the narrow little road, who said nothing but "Yes" to each question I put to him. On cross-examining him, I soon found out that he understood not a word of English or French, and as it was beginning over head, I overturned my boat, and taking a blanket, made for the largest house of the three in sight. Here I got a reluctant invitation to stay all night, all done in pantomime.

It was a farmer's family, and very numerous the children, three rather good-looking daughters, all moccasined, and three or three ladies, and eight strapping men. The old farmer himself was a splendid looking man. One girl in the room who sat near the huge fireplace, was evidently crazy; her expression of countenance was fearful to behold. I think that it was owing to this that they evidently did not resist my company. Every moment I expected to see her pounce on somebody, as she looked wild and uncontrollable. Three sets of us had to sit down to the table in rotation, the ladies coming in last.

After supper the enormous deal table was cleared, and we all sat around it, under a lamp. I amused them by exhibiting my various trinkets, the revolver coming in for the greatest share of the attention. We had a good many laughs together at trifling things, but this, and a large dish of delicious apples, was all that we had in common. The old man was very hospitable, and I have rarely seen a finer specimen of the "genus homo." One of the young men could master about six English words, a remarkably nice young fellow, and all, in fact, had some refinement about them.

I slept under my own blanket on a cot in a sort of an open hall up stairs, wherein were two other beds of another. With a few unpleasant anticipations of being awakened by the mad girl, I at length fell asleep, feeling for all the world like an early pioneer of the "Dominion." The Lachine Rapids are so-called because the early French voyageurs thought that they had discovered hence a route to China. I have made 42 miles to-day from St. Zaticque, 14 miles being swift water, 30 miles under oars, the balance with the paddle.

PHILADELPHIA, Pa.

M. B.

CANOEING ON THE DELAWARE RIVER.—A great deal has been published in the FOREST AND STREAM concerning the Delaware River, and for the assistance of many of our readers we give the following references. The river has been followed from Duncansbury, Pennsylvania, N. Y., to Cape May, how much further up cruising is possible, and the season and height of water: 1878, Aug. 15, 22, 29; Oct. 12, Oct. 18, 25; 1879, Oct. 23, 30, Nov. 6, 1885, Sept. 3, Oct. 12, 1886, Aug. 19; 1888, July 12.

IRRAWADDI C. C.—For the first time in its history this club, of Davenport, Ia., was afloat in February, a short cruise being made on the 14th. The club is making active preparations for an early opening.

A. C. A. MEET TRANSPORTATION.

WE have received from Sec'y-Treas. Dunnell the following instructions to persons attending the A. C. A. meet:

(1) The concession is for persons going to the meeting from Trunk Line Territory, *i. e.*, Niagara Falls, Buffalo and Salamanca, N. Y., Pittsburgh, Pa., Bellaire, O., Wheeling and Parkersburg, W. Va., and points east thereof, except in New England, (2) and applies to persons starting from said territory by any of the roads listed on the other side hereof. If the starting point is not located on one of those roads or is a point on those roads where certificates and through tickets are not issued, tickets should be purchased to the most convenient point on any of the said lines, and thence by direct routes only through to place of meeting. (3) The concession is fare and a third on committee's certificate. It is conditional on there being an attendance at the meeting of not less than 50 persons holding such certificates. (4) The going ticket must be purchased within three days before or two days after the opening date of the meeting, otherwise no reduction will be made on the return passage. (5) Each person availing of the concession will pay full tariff first-class fare going to the meeting and get a certificate filled in on one side by the agent of whom the ticket is purchased. The agent at all stations of any importance keep the certificates in stock. (6) Present the certificate to the proper officer at the meeting that the other side may be filled in. (7) Certificates are not transferable. (8) On presentation of the certificate, duly filled in on both sides, within three days (Sunday excepted) after the meeting, the ticket agent at the place of meeting will return the person to his starting point at one-third the highest limited fare. The return ticket will be issued over the route used in going to the meeting and will be available for continuous passage only. (9) No refund of fare will be made on account of failure of any person to obtain a certificate. The person indorsing certificates at the meeting must fill in the blank side of the certificate and sign name, provided there is an attendance at the meeting of not less than 50 persons holding Trunk Line certificates. Should the Central Traffic, Southern Passenger, Western States Passenger, or New England Association join in the concession, the certificates of either or all the associations may be counted in the 50. The certificate will then entitle its holder to the concession set forth in clause 3. Delegates and others availing of the concession should present themselves at the offices for certificates and tickets at least 30 minutes before departure of trains.

CORINTHIAN MOSQUITO FLEET.—Secretary Ledyard has lately prepared and sent out to other clubs a very neat list of the club's officers for 1890.

LANTHE C. C. CAMP-FIRE.—Winter canoeing has been very active about New York this winter, and a number of meetings and camp-fires have served to keep canoeists together. One of the pleasantest of the season was that of the Lanthé C. C. of Newark on Feb. 26. A large audience, including many ladies, was present in Library Hall, Newark. The performance opened with an exhibition of lantern slides by Mr. F. L. Dunnell, Secretary and Treasurer of the A. C. A. The views, illustrating races, cruises and the A. C. A. meets, were explained by Mr. Wilkin, of the Brooklyn C. C. Later in the evening the Yonkers C. C. quintette sang a number of songs and gave some very acceptable music on the banjo, guitar and mandolin. After this the stage was set to represent a canoe camp, with a couple of tents, a canoe with a big racing rig, and a roaring camp-fire of real wood. A group of canoeists about the fire sang a number of camp songs, the whole scene being very realistic. The evening ended with the exhibition of some views of Jessup's Neck, where the next A. C. A. meet will be held. The entertainment was quite a success, and does much credit to the Lanthé C. C., while it is likely to bring in many new recruits from the neighborhood of Newark.

CORINTHIAN NAVY.—Names offered for membership in the Corinthian navy: Com. Robert Center, S. C. Y. C.; Gaspar C. Barrette, K. Y. C.; Allan A. Sexton, N. Y. C.; Joseph H. Phillips, R. McCormick, W. G. Newman, K. Y. C.; J. F. Block, Vice-Com. Knickerbocker Y. C.; G. H. Bungard, Frank Berg, Lester Eldridge, Alexander Stewart, J. A. Morrison. The next regular meeting will be held at the Marlborough Hotel, Thirty-sixth street and Broadway, on March 6, at 8 P. M. The committee on rules and regulations will report. The first lecture will be given on March 14 by Com. Center, S. C. Y. C.

MOHICAN C. C.—The officers for 1890 are: Capt., Charles V. Winne; Mate, Wm. A. Wheeler; Purser and Sec., Harry C. Cushman; Member of Executive Committee, Wm. B. Wackerhagen. The club will be present in goodly numbers at Jessup's Neck, Captain Winne being already at work over the transportation question.

A. C. A. MEMBERSHIP.—Eastern Division, F. B. Towne, Holyoke, Mass.; S. M. Wales, Walnut Hill, Mass.; J. Arthur Smith, Hartford, Conn. Atlantic Division, W. C. Lawrence, Trenton, N. J.

RED DRAGON C. C.—This club is now in its new club house, with a fleet of 16 canoes, 2 yawls, 2 yachts and a steam launch.

YOUNG AMERICA, Moorfield, W. Va.—There is a letter for you here.

M. G., New Haven, Conn.—We have no knowledge of the kennel mentioned.

J. F. C. Windsor, N. S.—We cannot recommend any special make of boat.

HURON, Bellona, N. Y.—There is nothing that will produce the result mentioned that will not be very likely to injure the animal.

E. C., Jr., Albany.—The boat you refer to was lately mentioned in our columns. We cannot recommend any special make of boat.

C. M. D., Ithaca, N. Y.—The secretary of the Canadian Kennel Club, Mr. C. A. Stone, has removed from London to Toronto. His address is Canadian Kennel Gazette office, 58 Bay street Toronto, Ont.

T.—1. Can you identify these birds? They were the size of red-winged blackbird, brick red in color except the wings and tail, which were a reddish brown, bill short but very thick and strong. A small flock of half a dozen were feeding on the scrub pines—were very tame. 2. If a stranger shoots a rabbit ahead of my dog is the game his or mine? What is the hunter's law? Ans. 1. Impossible to answer definitely. Birds may have been pine grosbeaks (*Pinicola enucleator*). 2. Generally accepted law is that the game belongs to the dog that gets up to it first.

C. M. D., Valentine, Neb.—I have a cocker spaniel about 11 months old; he is a splendid dog in all respects, but he has no scent. The last time I hunted with him is about two months ago, and found that this dog will actually walk over a dead grouse when sent to retrieve and not scent the same, also I have several times shot grouse and sent the dog to retrieve and he has passed within a foot of the dead bird, back and forth, but could apparently not scent the same. What can I do to improve this dog's scent? have been very cautious in regard to food, feeding very little meat. He had a slight touch of mange about four months ago perhaps that affected his nose to some extent. Ans. If the dog is naturally deficient in scenting power there is no help for him; but if the trouble is from disease he will probably improve in nose as he gets over his trouble.

PAWNEE

HERO STORIES AND FOLK-TALES

With Notes on the Origin, Customs and Character of the Pawnee People.

By GEORGE BIRD GRINNELL ("YO.")

Cloth, 417 pages.

Illustrated.

Price \$2.00.

In these stories we find examples of self sacrifice, gratitude, honor and curiously enough, an idea of the atonement for sin, an intermediate state, and communication between this and the invisible world. Mr. Grinnell's "Notes," as he modestly calls them, are really a history of the tribe, its origin, its relationships, its medicines and mystery, and its present condition and progress. The book is beautifully printed, bound and illustrated with first-rate drawings.—*Hartford Courant*.

The folk-tales are full of magic transformations and mystery, and they are related with a strong feeling for dramatic effect and often with much poetic grace.—*Springfield Republican*.

The Indian will become extinct or will be civilized. In either case their stories and myths will pass into oblivion. It is well that those of the Pawnees have been rescued and are preserved in this book so that generations yet to come shall read Indian tales as Indians told them to Indians.—*Home Journal*.

Their stories abound with humor, pathos and sentiment. The plan of the book is comprehensive and vividly portrays the Pawnee race from its historic, social and intellectual standpoint. The author has performed a valuable service, and his work will be welcome and prized as it deserves.—*Magazine of American History*.

It is an important contribution to folk-lore literature that is especially valuable because of the insight it affords into the origin, customs and character of the Pawnee people.—*Philadelphia Times*.

This volume is a novelty and a valuable acquisition to American literature. While volume upon volume has been written of the folk-lore and hero stories of other and distant nationalities, the Indian (except in some fanciful sketches and romantic poems) has been overlooked. And yet the American Indian is the wisest and shrewdest and most manly of all the unlettered people on the globe. This collection, not fanciful, but drawn directly from the Indian oracles, shows that with his heroism and cunning he has wisdom and soul. * * * The volume is charming upon every page.—*Chicago Inter-Ocean*.

FOREST AND STREAM PUB. CO., 318 Broadway, N. Y.

LONDON: DAVIES & CO., 1 Finch Lane, Cornhill.

Canoe and Camp Cookery

By "SENECA."

A practical cook book for canoeists, Corinthian sailors and others. 'Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 98 pages. Price \$1.00.

ANSWERS TO CORRESPONDENTS.

DOGS IN MASSACHUSETTS.

A PROPOSED change in the Massachusetts dog law is naturally enough exciting the dog owners of that Commonwealth. The Legislature is asked to so amend the law that the keeping of a dog will be very burdensome for any one, and in fact will be impossible for a large class of the community. Among the changes suggested are the following: That the tax on dogs shall be increased, that they shall be kept muzzled the year round, shall be confined to the owner's premises, and that the owner shall give bonds to make good all damages committed by the dog. Such a law would result in one of two things. Either it would be impossible for persons of limited means to keep dogs, or else the law could not be enforced, and would become a dead letter. Neither of these two things is desirable, and no such radical changes in the dog law ought to be made.

Hearings have been given by the Committee on Agriculture of the Massachusetts Senate, at which a great deal was said for and against the proposed change in the law. On one side were gathered dog owners and humanitarians, and members of gun clubs; while opposed to them were a number of people who fear that they may some time be bitten by dogs, and a few sheep owners.

The reasons advanced for the radical legislation asked for by the petitioners to the Legislature are two: (1) the danger to life from hydrophobia and (2) the danger to the farmers' flocks from sheep-killing dogs. Neither of these reasons seems a good one. Many of the most intelligent and best informed members of the medical profession doubt the existence of such a disease as hydrophobia, though it is not to be denied that death on rare occasions does follow the bite of a dog. There is, however, grave question whether it is ever due directly to such a bite. At all events it is quite certain that death from lightning stroke is much more frequent than from hydrophobia. According to statistics gathered by the Massachusetts State Board of Health there were during the seven years from 1881 to 1889 a total of 65,246 deaths from pulmonary and throat diseases and only two from

hydrophobia. The record shows that the widespread popular fear of hydrophobia has no basis in fact, and justifies intelligent men in disregarding it. The injury to the farmers' flocks is cared for under the existing laws of Massachusetts, which provides that the farmer who loses sheep through the ravages of unknown dogs shall be remunerated for his loss from the county treasury. The statute also provides that persons bitten by dogs may collect double damages.

The changes asked for should never be granted by the Massachusetts Legislature. Humanity, justice and public policy are all against legislation of this character. To keep dogs muzzled at all seasons and to confine them to the owner's premises, would be cruel in the extreme; to increase the tax and oblige the owner to give bonds would be to put it out of the power of the poor man to keep the dog that is the guardian of his home by night and the playfellow of his children by day, while his wealthy neighbor could still have his one dog or twenty. The passage of such a law would be in many cases a virtual confiscation of property. Perhaps there is no State in the Union where there are more and better breeding kennels than in Massachusetts. Such a law would render it impossible for them to be kept up in the State.

It is hardly necessary at this late day to mention the vast usefulness of the dog to man, the many and varied services which he renders in return for his food and care. That dogs sometimes bite and sometimes kill sheep is true, but the injury which they inflict in this way is a thousand times counterbalanced by the services which they render. They are far too useful to the community to be dispensed with, and the proposed change in the law would, if enforced, be equivalent to an edict of destruction.

SNAP SHOTS.

COMPLAINT has very justly been made by visitors to the National Park of one feature of the coupon ticket system. Heretofore when a passenger started in a stage, he was entitled to one seat in that particular stage, which he could keep during the whole trip of four or five days. If for any reason he desired to stop over at one of the hotels on the route—if he wished for example to remain twenty-four hours at the Upper Geyser Basin on the chance of seeing an eruption of some one of the larger geysers, if he was tired by the drive, if he was sick—and gave up his seat, it was a matter of some uncertainty when he would be able to proceed on his journey. The regular stages left the Mammoth Hot Springs loaded to their fullest capacity, and for the most part with passengers who wished to make the regular round and return to the Hot Springs. These passengers had paid for their seats, and could not be crowded out of them to make room for the transient, who had stopped over. His only chance of proceeding on his journey was to get a place on an extra stage, if one came along, or to find one that was not full. Not infrequently passengers were in this way detained in one place for days. The next season in the Park will see a change for the better in this respect. The transportation schedule will be so altered, it is promised, that there will be no detentions of this kind, but that any one who enters the Park will be able to stop just where he pleases as long as he cares to, and when he desires to leave can do so. This new arrangement for the convenience of the public will be brought about by the running of daily stages from all points in the Park, enabling tourists to travel about with a freedom hitherto unknown. It will add a vast deal to the comfort of visitors, and will be highly appreciated, especially by those who have had experience of the methods in vogue in the past.

Mr. John H. Starin, the well-known steamboat owner, has recently imported to this country six pure Galloway cows and one bull, which he proposes to use in experiments in breeding buffalo cattle. These Galloways reached this country last December, and after being held in quarantine for ninety days have now gone to Mr. Starin's place at Fultonville, Montgomery county, N. Y., where his buffalo are. Mr. Starin's experiments will be in line with those now being carried on by Hon. C. J. Jones, of Kansas. It is believed that the cross between the buffalo and the Galloway will give a superb beef animal, with a splendid robe. It may be added that among the half-breed calves already dropped this spring in Mr. Jones's herd is one half-breed pure Galloway and buffalo heifer,

which is represented as being a remarkably large and beautiful animal. A report of the season's crop of half-breeds from the Jones herd will be awaited with interest.

The bill authorizing the New York Forestry Commission to purchase land in the Adirondacks at the rate of \$1.50 per acre to the extent of \$25,000 has passed both houses. The other bill, to which reference was made in these columns a fortnight ago, proposing to set off a State park and to lease certain choice portions for hotel and residence sites, has gone over, at least for the present. The adoption of the following resolution by the Senate will as we are advised, be concurred in by the Assembly, and the effect will be to defer all legislation relating to the Adirondack forests until another year. The resolution reads:

Resolved, (if the Assembly concur.) that the Forest Commission be, and hereby is, directed to take into consideration the message of the Governor, addressed to the Legislature, calling attention to the subject of establishing of a State park in and about the headwaters of the rivers having their sources in the Adirondacks wilderness, and after thoroughly investigating the possibilities of such an undertaking, to report to the Legislature its conclusions thereon, and its recommendations as to the most effective methods to be employed to accomplish that end—either by bill or otherwise—together with any pertinent facts within the knowledge of the Commission relating to the general subject of forest preservation or extension; and further to report the number of acres or square miles of land essential to fulfilling the requirements of a suitable reservation or park, and the probable cost thereof, and to report also in regard to other subjects referred to in said message of the Governor.

The subject should not be permitted to drop out of discussion, however. Between the present and the meeting of the next Legislature the people of this State should be fully advised on every phase of the Adirondack forestry problem; the needs of the North Woods should be carefully considered; the immediate and ultimate effects of proposed methods should be exhaustively studied; and the people should be so informed as to demand of their representatives at Albany prompt, wise and honest dealing with this matter. In adopting a scheme for the preservation of these priceless possessions the people of the State of New York cannot afford to act hastily. Whatever plan is resolved upon should be the fruit of earnest, deliberate and intelligently directed investigation and consideration. If ever there was a question that demanded for its solution the exercise of wisdom guided by patriotism and lofty motives on the part of the people's representatives this is such an one. In this affair, to subordinate the public good to political interests would be nothing short of a monstrous crime.

Confusion worse confounded would be the state of affairs if the thirty odd fish and game bills now before the New York Legislature were to become laws. But there is one bill on which effort should be concentrated. That is the one which provides for the codification of present statutes. This is of the utmost importance. It is virtually taking bearings to determine just where we are. Gov. Hill is reported to have declared that he would sign no game or fish bill sent him until the codification bill is passed. There is certainly no good reason why the Legislature should hesitate or delay to approve the measure. It means bringing order out of chaos.

Capt. F. A. Boutelle, of the First Cavalry, the Superintendent of the Yellowstone National Park, has been ordered east by the Secretary of War, and is now in Washington. He will no doubt appear before the Public Land Committee of the House of Representatives when the bill for the protection of the National Park comes up for consideration. Capt. Boutelle confirms the announcements, already made in the FOREST AND STREAM, with regard to the abundance of elk in the Park. He speaks, however, of only one bunch of buffalo, numbering about forty-five, seen this season so far.

Salmon have been seen in the Hudson River this year. One, estimated to weigh 10lbs. or more, was noted on Washington's Birthday, trying to jump a dam near Troy. The work of providing fishways is progressing and will be completed this year. Then the fish can have free passage to their spawning grounds near Glen Falls.

To meet the demand for space, caused by a great supply of news in the different departments, the present number consists of thirty-two pages.

The Sportsman Tourist.

WOE IN THE WILDERNESS.

SURROUNDED daily as I am in the pursuit of my profession, with all the current literature of the times, I welcome no printed pages more eagerly than those between the covers of *FOREST AND STREAM*. Born under the shadow of the mountains in sight of the broken ranges which traverse West Virginia, Maryland and Pennsylvania, the love which the writer cherishes for their wooded and lonely fastnesses has naturally developed with himself, and now their more familiar domain assists in enjoying a periodical vacation. I can turn with pride to a little journal wherein as a boy I recorded having shot a quail on the wing over my mongrel dog when eleven years old.

But these same old mountain friends of mine played me a scurvy trick three winters ago, by which they drove any idea that I am acquainted with all their secrets out of my head in a very short space of time. I will proceed to tell how it all happened. A few days before Thanksgiving two veterans of the late war and myself penetrated the West Virginia wilderness. Neither of my soldier companions could plead "physical disability unfitting them for manual labor," and I consider myself the equal of either. We arrived at the last house that we could expect to see until our return to it after an absence of two days in the forest in search of game. The weather being beautiful our party started early next morning into the forest depths with all our duffle, guns and two days' rations on our backs. After traveling several miles a cold rain began to fall, and the storm rapidly developed into a regular mountain roarer. Just before nightfall we bundled into a bark-peeler's shelter, long since deserted by the builder, but at the time of our arrival occupied temporarily by the aged John Browning, who like ourselves had taken refuge from the storm.

I must say a word about Mr. B., for he is the grandson of the famed pioneer, trapper and hunter, Meshack Browning, whose adventures in these wilds when few save Indians penetrated them form the nucleus of hundreds of fireside legends well known in this part of the country. He was the hero of "The Wilderness," a volume published years ago, but now rarely seen. With the weight of more than seventy years and nearly two hundred pounds of avoirdupois this grandson, scion of a race of woodsmen, travels the forest each winter armed with his long muzzleloading rifle and cutlery of his own manufacture, clad in moccasins and fur, accompanied only by his "yaller" dog, which is always discreet enough to heed his bidding. He said he would some day trade his rifle for a shotgun. So we found him here with perhaps a half dozen bread cakes in his bag and no game. Our shelter was about ten feet long by seven wide, with one side and two ends to it. Fortunately the exposed side did not face the storm. With everything wet and cold, having no axe, we worried through until morning, when we found that the number of our family had been increased by the arrival of two Pittsburgh gentlemen, who were also in want of provision and shelter. The new day dawned upon about a foot of wet snow and the weather was rough. The entire party set out by twos in quest of meat. The old soldiers being together saw two deer but failed to kill either, having fallen into the blunder of waiting too long for better shots, and that night's scant supper ended our stock of edibles and even the last of our tobacco supply. Then there arrived at intervals five more recruits to our party, and among them Mr. Browning's eldest son. The new lodgers brought an axe and we soon had a comfortable fire and an intolerable smoke if nothing else. That smoke all but drove us out of the shanty, and we all looked more like country cured hams than white men by the time we left there. During the night the bedding caught fire, and later the roof was in a blaze at one corner, but with the exception of these two alarms we passed another night unmolested and full of hope of success on the morrow.

The next morning dawned with a driving storm of snow and sleet, the ground covered to the depth of over eighteen inches, no grub for eleven hungry men whose sharpened appetites were not wholly due to the purity of mountain air. Pating a bold face on the matter on this "Thanksgiving Day" morning, all parties, as I thought, except myself, struck out determinedly into the forest, most of them going toward the west. And here begins "my tale of woe" concerning a series of unanticipated events which will ever make that Thanksgiving Day a memorable one to me, and which nearly ended the career of two of us. An idea had gotten into my head that the most likely place to kill game in that country was on the "benches," an immense plateau of the most inaccessible mountain near us, lying directly south some miles distant, but as no one had ever been known to go there I had determined that I would do it this day and alone, nor did I take the trouble to explain my intentions to the others who had just started out. While I was getting ready to start, one of my veteran friends of the original party put in his appearance, having been to a neighboring spring and not having started with the rest. Still more to our mutual surprise we learned that our plans for the day were identical, and without further delay we finished our preparations and set out with empty stomachs but full of hope for success.

My plan was to travel four miles south, hunt about six miles west over the best ground, and return by the most inviting route to camp. After going through some immense laurel thickets, with their evergreen foliage weighted down with the wet snow, we were compelled to wade waist deep across a stream. Here we began the ascent to the first bench through the worst laurel and dead pine brush thicket I have ever seen. When we emerged we found ourselves on top of an immense ledge of rocks probably 25ft. in perpendicular height and facing the bench. Alleys several feet in width divided this rocky table into many sections, and it was with great difficulty and loss of time that we finally stood at its base. From this time on in the driving sleet, which was now colder than ever, we struggled through thickets of laurel, jungles of briers, swamps, windfalls and the like in the futile search for game large or small. We kept our course correctly but our progress was slow, and ourselves weak and benumbed when the gathering shadows of evening added somewhat of mental gloom to our physical sufferings. As night gathered we found ourselves still breaking our way through thickets in the direction of camp, as our compass told us, but alas, not less than

six miles yet to tramp. A mouth full of broken teeth are evidence of how I gnawed at that compass to open it when my hands were too stiff and shaky to be any longer able to perform their proper functions. My companion would generally hold his hat to catch the important little instrument when I had succeeded in opening it, being fearful that it might fall in the snow and be lost.

We were now in a truly alarming condition. The weather had grown much colder, night was upon us, our clothes were almost torn off us, our matches had been lost when the pocket that contained them was left hanging in shreds on a snag, and we had not eaten a mouthful for twenty-four hours. No wonder we were exhausted and discouraged, and then we were certain that no living person knew of the direction we had taken and would likely think that we had returned to the settlement. Struggling onward in the darkness, and growing weaker every minute, we were continually falling, and bad blind falls they were, too. Each time we found it more difficult to regain our footing. We spent a long time in trying to make a fire by firing charges of powder into the driest recesses of logs and rocks, but each attempt ended in a failure.

Now, by the way, my companion, the veteran of many bloody fields, sometimes swears when surrounding circumstances are not auspicious, and his oft-repeated remark of "Deacon, by ———, we'll never get out of here. I'll never go into such a ——— country again if I get out of this." And then he would take a solemn oath to break his gun over a tree as soon as he got strong enough to do it, and never hunt deer any more. But my friend must be excused from keeping these promises, made under such trying circumstances, though his epithets sounded somewhat incongruous upon so serious an occasion.

Becoming more dumb and exhausted our very mental faculties gradually deserted us and from this point to the end of the adventure our tale is compiled from evident facts and the evidence of others. We unwittingly separated and then all was a blank in the memory of either of us. The others, it seemed, had returned to camp early in the day and dispatched a detail to the settlement for provisions. When these returned in the evening they created the first thought of anxiety for us by stating that we had not been there. As they found most of our duffle still in camp they knew that we had gone hunting and were lost. Search parties started out in different directions, and between ten and eleven o'clock that night the other old soldier of our original party accidentally stumbled over the body of my fellow sufferer. They then indeed were "comrades in arms." Over four miles of forest hills he went, and when awakened from the deadly sleep by the frantic efforts of the hunters he was able to give them some clue to my whereabouts. His back track was easily followed, as it was not snowing now, and in due course of time I was extended on a buffalo robe, my clothes, or what was left of them, cut off, and a corps of rough but kind-hearted nurses were ministering to both of us. I revived about 11 o'clock the next day and was about as sorry a looking mortal as could well be imagined. We were so sore both inside and out, frost-bitten and bruised, that it was out of the question to move, eat or sleep for a day or two, and then but little of either sufficed us.

It is needless to say that this escapade ended hunting, as far as we were concerned, for this trip, though our companions were eventually quite successful with the deer and turkey. Through the kindness of a native I marched through Pittsburgh clad in a home-made pair of "Johnny Reb" pantaloons of a size intended for a man at least one cubit less in stature than I am; but he has my thanks just the same for giving the best he had. I will add that on this memorable Thanksgiving Day I carried a half pint bottle of whisky, and when in my extremity I sought to revive my flagging energies by taking a dram of it, I discovered its utter inability to supply the demand made upon it; and I never finished that bottle nor would I put any faith in its utility in such cases, and I am by no means a Prohibitionist, but consider good liquor an excellent beverage.

GREENSBURG, PA.

ANTOINE HEARD FROM.

DANVIS, Vt., Feb. 25.—*Editor Forest and Stream:* I have been importuned by an aged Canadian, resident of this township, to communicate to you some of his ideas in his own imperfect English, concerning articles which have appeared in the columns of your valuable journal. Such portions of which as interest him, it is my custom to read to him on Saturday evenings. I would greatly prefer to clothe his ideas in elegant English, but he insists that I shall write as he speaks, and evidently cherishes the opinion that he has a better command of the language, which he only began to acquire when he had arrived at manhood and never has made much progress in, than I, an American by birth and a schoolmaster by profession.

Without further comment, I submit his letter to you. If you should be inclined to consider it worthy of publication, I doubt not it will be followed by others.

Very Respectfully,

HORACE MUMFORD.

DANVIS, 8 Februaire, 1890.

M'sieu de zhoontyemans what mek Fores' Strim papier:

'F Ah ant read all of it, Ah 'll hear greddeal of you papier, an' Ah 'll tink gret many tam. Ah 'll wrote to you mah pinyin sometyngs you 'll primp in it.

Naow, Ah 'll took motion Ah 'll wrote because you primp dat lett' Ah 'll wrote to dat kan o' cussin for me, what he 'll call it heeself Creholes, an' dat lett' he gat M'sieu Ufer wrote to me.

Ah 'll ant hear of it some more. Ah guess he was feel so big for be keek aout Canada, to wrote to mans dat come off 'cause he ant want be keek, Ah do' know, me.

Ah 'll faght in de Papeneau war, me. Ah 'll ant hear of mah cussin Arsene LeBlanc gran'faders faght moch, hein? Probbly he 'll tink it was healthy for be safety, Ah guess. Wal, Ah don' care for dat.

Ah 'll goin' wrote 'bout what Ah read in *FORES' STRIM*, an' Ah 'll been go all 'raoun' an' see gret many, an' Ah do' know 'f Ah want tol' sometyngs mahself.

Ah 'll see gret many man tol' more as he do. An' Ah 'll see gret many do more as he tol' of it, same Ah do, but Ah lak bese of it.

Eef manant mek gret many do, and tol' more as dat, he mek it more interest as it was 'f he tol' jus what he do.

Eef man do more as he tol', dat was bes for save hees breathe, don't it? Ah 'll be so modesty, Ah ant never tol'

more as Ah 'll do, not quat so moch, an' Ah 'll ant gat hairs on me ant hones, 'cep' some, Ah 'll lose top mah head of it, an' Ah 'll ant to blame for dat.

Ah 'll hear read what folks tol' he do in *FORES' STRIM*. Some of it Ah 'll b'lieve, some of it Ah 'll ant. Ah 'll use mah hown notion for dat.

W'en someboddee tol' he keel greasily bear wid leetly shot for chickmonk or pigin, Ah 'll b'lieve it jus' moch Ah b'lieve someboddee tol' me he keel ten paterage evree ten shot, w'en he fly up in de hwood "vroopl vroopl!"

Dey 'll ant bese can do dat, more as Ah can flew, bah gosh!

Ah 'll ant see dat greasily bear, but Ah see dat paterage an' Ah know of it. Mans can keel de black bear, ant so bigger as me, same what we'll gat in Canada, wid leetly shot. Haow spose he'll goin' keel greasily bear, bigger as hoxens, hein?

One man he'll mek it rittymatick an' mek some photy-grab wid hees pen for show bes' way for shot paterage w'en he flew, shot 'head of it, where he ant be, den paterage flew raght into de shoot. 'F he 'll shot where he was, he 'll ant be dare w'en shoot got in dat place.

Nodder mans say he 'll ant want see hees gawn w'en he shot only jus' look raght at paterage all tam he shot—pung! he keel it mo' evree tam.

Ah do' know how he'll keel of it 'f be behine of it 'less hees gawn keek lak hole tunder, me, Ah do' know for bese of it.

Ah can' wase mah shoot, ten cen' a paoun' on store in Danvit, for shot him w'en Ah 'll ant took sight. What use for be so foolishly?

W'en Ah want paterage Ah 'll go steel on hwood ant mek it more nowse as leetly mice, 'cep' win' blow lak hol' Hairy Cain, den Ah 'll ant care for leetly nowse. Ah 'll go cally an' slow, look more faster as Ah 'll go. Bombye Ah 'll hear paterage say, "Quit! quit!"

Ah 'll ant quit, but Ah 'll spik it of, "Wheu, wheu, wheu," kan o' sofly. Den he stop for listlin, an' Ah 'll see it an' Ah 'll pint mah gawn so straight at it Ah 'll felt dat paterage in my pocket coat; Ah 'll mos' smelt heem in Ursule hees pot. "Pung!" Ah 'll gat she.

Mebby Ah 'll see it fus tam on lawg mek heeself look lak knot, mebbly on tree way up, look at for see me, tink Ah 'll can' see heem. But he 'll gat no deefrence, me.

"Pung! Bloom! Flup, flup, flup-flup!" Ah 'll ant wase mah tam, mah shoot, mah cap—notings, an' dat paterage go home long to me, mebbly two, tree hees folks, for see Ursule, an' she be veree glad an' mah chillun too, for see dat company Ah 'll brought home to dinny.

ANTOINETTE BISSETTE.

SCRIPPOUS.—Miss Hudly Sam Lovel, he 'll tol' mah waf Ursule dat lett' ant good 'f r moch 'less he 'll gat scrippos Ah b'lieve he'll call it. 'F dat was be so Ah 'll gat have one. Guess Ah 'll goin' say for it, Ah wrote gin 'baout sometyngs Ah 'll gat on mah min', pooty soon. A. B.

NOTE.—I have examined Mr. Bisette's ancient weapon. The inscription engraved on its battered heel-plate, which he takes to be the name of the maker, is "G. R. S., No. 10," and on the lock-plate the word "Tower."

I conclude that it is a Tower musket, manufactured in the reign of George II. and belonged to the 10th Regiment, which quite probably participated in Abercrombie's disastrous assault upon Ticonderoga. If so, it may have come into the possession of Mr. Bisette's ancestor (if he had one) in the manner he describes. It is more probable that he himself appropriated the arm during his service in the Papineau war.

My observations compel the conclusion that, owing to their great longevity, the French Canadians have very few ancestors, and also that the truth may be more easily reached by believing the opposite of any statement made by these people, than by placing implicit confidence in their assertions.—H. M.

Natural History.

ROBINS AND OLIVES.

ONE feature of the effect of the severe winter on this coast is the presence with us of great numbers of birds that usually winter further north. Wild pigeons are with us in countless flocks. The varied thrush or Oregon robin, called here "tree robin," has invaded us in hordes. Both this and the common robin make their winter home in this State, but we have never seen the Oregon robin so plentiful before, probably because they are all driven down out of the northern portions of their wintering grounds. This little city has been invaded by them, and every yard and lot has its dozens, hunting the elusive earthworm.

In respect to the life of the common robin in this State, a new element has been introduced. The foothills at the elevation of this place—that is to say about 1,000ft.—have always been a favorite wintering ground of this bird, owing to the presence in great plenty of the shrub or small tree called "toyon" by the Mexicans and "holly" by the Americans. It is scientifically known as *Heteromeles arbutifolia*. This tree bears abundant loads of scarlet berries, much used in California for winter decorations, which persist, like those of the mountain ash, throughout the winter. This has been the *pièce de résistance* for the robins' winter dinner in this part of the State, and has always brought countless thousands here.

And now comes in a new factor that may ultimately cut a very large figure in the survival of this familiar bird—at least on this coast. Olive growing is a new industry, that has been introduced into Placer county within the last ten years. Numerous olive orchards are just coming into bearing, and the robins took an active part in harvesting the crop this season. The olive is late to ripen, not being fit to gather for the purpose of oil making until December, consequently the robins have all arrived here in time to take a hand in the harvesting. The writer has always held the opinion, since tasting one, that any creature that could eat a ripe olive, and survive, ought to have a medal. It is a mystery how such a delicious article of diet as olive oil can be derived from such a vile-tasting fruit as an olive. It is astringent, sour, bitter, acrid, greasy and altogether damnable! It seems to suit the robin's palate, however, and the only full-bearing orchard here was robbed of \$4,000 worth of fruit in three days, in spite of half a dozen guns, kept in constant use, and the death of over a thousand of the birds in that time.

AREFAR.

AUBURN, California, Feb. 23.

QUAIL IN PACKS.

"THE CEDARS," Tennessee, Feb. 25.—*Editor Forest and Stream:* The season near closing has been an unusually good one for quail in this district, and the mild winter leaves an abundance of birds for stock. English snipe are just coming on, and I am anticipating good sport with them for the next few weeks.

A curious experience occurred a short time back to a friend of mine who went on a hunt to north Mississippi, where he had been earlier in the season and found birds plentiful. He was accompanied by his brother, and they had a brace of good dogs. They hunted for hours without the sign of a bird, and could not account for the apparent scarcity. At last their dogs made game, but before they could establish a point the birds commenced getting up all around and in front of them. They were confident that there were from 75 to 100 birds, and instead of their taking the usual quail flight, they rose clear up in the air like a flock of pigeons, and went away for half a mile. They followed the line, which was in an open country, and found a few scattered birds in an old cotton field, fully the distance named from where the birds took their flight. They gave up finding more, and started again; and after a prolonged tramp they had a duplicate of their first experience, finding a second flock or drove—not a bevy, for they say there were nearly a hundred. Like the former, they made an immense flight.

Now, I know that it is common for the grouse in Scotland to pack, occasionally the English partridges do, and our prairie chickens; but I never saw nor heard of quail doing so before.

EDMUND ORGILL.

[In Iowa thirty-eight years ago, when crossing through a piece of woods from one prairie to another, we came upon a clearing of two or three acres of wheat stubble, and a large drove of quail got up, at least 200 or 300, but they scattered in every direction. To this day we can see that clearing and how the quail filled the air. This is the only thing that has come under our personal observation that looked like the Mississippi case. At the trials of 1881, at Robins Island, there were from 100 to 200 quail in the air at one time, at the north end of the island. But these birds had been liberated only a short time before and were not yet used to their surroundings. In California and the Southwest, i. e., in Arizona and Texas, we have seen quail act in precisely the manner described by Mr. Orgill, but these quail were not the common Virginia partridge of sport, but were plumed quail, a bird which rarely lies to a dog. It is unusual for Virginia quail to pack, in the sense that pinnated grouse, sage grouse and sharp-tail grouse pack, at the approach of winter, and yet we are inclined to believe that they sometimes do so.]

BIG BIVALVES.

WE are reminded by one of our exchanges that the largest oysters known occur at Port Lincoln, in South Australia. The shell of this species is said to reach more than a foot in diameter and is nearly circular in shape. The meat of the oyster fills the shell almost to the margin. Mr. S. F. Denton, of the U. S. Fish Commission, informs us that he has collected a true oyster (*Ostrea*) at Thursday Island, Northern Queensland, Australia, the empty shell of which weighed 5 lbs. He has it now in his cabinet. The oyster itself was very small and thin compared with its covering. In shape this oyster resembles our common one, but the shell is much heavier.

The greatest of all known bivalves is the giant clam (*Tridacna gigas*) of the Indo Pacific Ocean. In Northern Australia this is considered an edible species and is regularly sought after by the natives. Mr. Denton has seen clams containing 49 or 50 lbs. of meat, and it is a matter of record that individuals weighing 302 lbs. have been observed. The giant clam lies almost concealed in the reefs, just showing the beautiful blue and green of its mantle above the coral. The crushing power of this shell is startling. Mr. Denton thrust a stick as big as a man's leg between the valves of one of them and it was broken short off. A man's foot would be crushed as easily as a pipe stem. The natives have a wholesome dread of stepping unawares into one of these formidable traps. They kill the animal by stabbing it with a long sword and then remove the meat without disturbing the shell, thus saving themselves a vast amount of trouble and labor.

NOTES OF THE BIRDS.

NOTED the first bluebird Jan. 29, the robin Feb. 11, purple grackle Feb. 27, and the next day the song sparrow gave us a delightful sirenade from the top of a blackberry bush in the corner of the lot. On the same day high over head I heard the notes of the kid-eer. Sorry to see them so early, for outside is very rough to-day, a mild sort of a blizzard, sleet and snow to the depth of 1 in., and indications are good for bad weather. Our winter has been open, and in that respect has been a grand one for our birds and game. We have had but few cold days, one in which the mercury registered 9° above zero; last Sunday was second best, with a record of 10°, and then there were several days in which 18° above was the lowest. Think of it! A winter here in western Pennsylvania whose "cold day" was 9° above zero.—Y. A. S. (Beaver, Pa.).

Saw a native redwing blackbird early this morning; acted as if he had come to stay. A friend informs me that there is an abundance of grouse left for seed in and around Tonawanda swamp, which is about twelve miles south of here. Ten degrees above zero is the lowest the mercury has been this winter.—F. E. W. (Carlton, N. Y., Feb. 27).

During the past week bluebirds and robins have made their appearance in this neighborhood, the weather as well as the birds having every indication that spring will soon be here. Ducks are seen on the river here feeding among the willows. The first flight of the season seems to be on. Most of them seem to be black ducks. To-day (Sunday) the weather is very cold again, and many of the new comers will no doubt suffer hard-ships for their early migration.—W. F. DITTRICH (Towanda, Pa., March 2).

In a letter received yesterday from Petersburg, Va., the writer says: "English snipe were selling here last week in market, three for a quarter, and robins at fifty

cents a dozen. What do you think of that?" I shouldn't like to say what I think of it and don't suppose it would do much good anyway. But apropos of robins (live ones), I may say that a flock of 25 or 30 has been "u-ing" around St. Peter's churchyard for the last four or five days, accompanied by a few cedar birds. The trees are bare and the ground has been covered with snow and ice. But the birds have discovered the berries on the ivy vines which cover the eastern end of the church and eat them greedily. Two years ago the Lenten services were actually disturbed by the loud and ceaseless chirping of innumerable English sparrows, since which time I have thinned them out to the number of over 1,200 with C.B. caps from a Stevens pocket rifle. But to day God's acre was vocal with the welcome notes of the "migratory thrushes" as they partook of their creator's bounty. And as their shadows flitted to and fro across the chancel window, the choir within sang: "O all ye fowls of the air, bless ye the Lord; praise Him and magnify Him forever!"—J. L. K. (Perth Amboy, N. J., March 9).

A TWO-HEADED GROUSE.—A correspondent at West Chetzetcook reports that one Theodore Belfontaine was returning from an unsuccessful bear hunt last week about sundown, having with him a double-barreled gun, one barrel being loaded with ball and the other with partridge shot. A partridge crossing he fired the barrel containing the bullet, and was surprised to see the bird continue its flight, knowing himself to be an expert marksman. He pulled the other trigger and the bird fell. On proceeding to the spot where the bird had been when he first fired, he found the head of the partridge, and on picking it up observed one of the eyes to open and close slightly. The head was lengthy and the beak large. Proceeding he found the bird, which was a very fine one, and what was most remarkable it had another and complete head attached, rounder and fuller than the other, but with a smaller beak. It was evidently a wonderful freak of nature—a partridge with one crop and two heads. He carefully carried it home, but carelessly throwing it on a chair while he put away his gun, a young dog destroyed it. He was very much disappointed and annoyed, as he intended bringing it to town and presenting it to the museum as one of nature's curiosities.—*Halifax (Ont.) Morning Chronicle.*

CONNECTICUT WILDCAT AND OTTER.—Granby, Conn., March 4.—Mr. Norris Bacon, of Simsbury, Conn., one of the most successful fox hunters in this vicinity, was out hunting on Hedgehog Mountain a few days ago and saw a wildcat coming off from the mountain, walking on top of an old fence. He fired at it, one shot entering an eye and another breaking a hindleg. The cat jumped about 10 ft. and soon died. On examination the cat was judged to be less than two years old, and weighed 19 lbs. Charley and Edward Owen, of East Granby, Conn., have killed thirteen foxes the past winter. Mr. Lem Dewy, of North Granby, Conn., caught an otter a few days ago that weighed 19 lbs.—N. E.

INTRODUCING BEAVERS.—Greensburg, Pa.—*Editor Forest and Stream:* We have on a large game preserve a beaver meadow with old dams and cuttings. The beavers were all killed before we came into its possession, but they would now be protected. Will some of your readers tell me whether the beavers would likely stay there if we stocked the meadows and how and at what expense good young breeders can be obtained? What would be the best time of year to introduce them?—DEACON. [Beaver have been introduced into country adapted to them and have thrived. The chief difficulty would be in procuring a half-dozen animals to begin with.]

EVENING GROSBREASTS IN ONTARIO.—So far as shown by the reports already in, the recent extraordinary immigration of *Coccothraustes vespertina* occurred throughout the region of Ontario that lies immediately to the north and west of Lake Ontario. The migration has been a remarkable one, and the birds were quite common in Toronto streets for over a month, wherever there were any mountain ash trees or other sources of a food supply. I will not give further details now as I do not wish to forestall a paper on the subject now in preparation by one of the members of our ornithological subsection.—ERNEST E. THOMPSON (86 Howard street, Toronto, Can.).

THE HORNED LARKS OF NORTH AMERICA.—At a meeting of the New York Academy, held March 10, in Hamilton Hall, Columbia College, Mr. Jonathan Dwight, Jr. read an interesting paper on the Geographical Variations in the Horned Larks of North America. The paper was illustrated by specimens and a map.

THE EVENING GROSBREAST has been taken at Saginaw, Mich., this winter. John S. Barrett, of that city, secured one out of a flock of five.

RECENT ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN.—Purchased.—One Chinese myna (*Acridotheres cristatellus*), one black-eared marmoset (*Leopoldo penicillata*), two white-eared cougars (*Conurus leucotis*), one magpie tanager (*Cisporus leucianus*), two Barnard's parakeets (*Polypeltis barnardii*), two black-crowned cardinals (*Gubernatrix cristata*), three royal pythons (*Python regius*), one incisor snake (*Splotes erubescens*), one common nose snake (*Heterodon platyrhynchus*), one glass snake (*Ophiosaurus ventralis*). Presented.—One brown capurin (*Cebus fuscus*), two opossums (*Didelphys virginiana*), four alligators (*Alligator mississippiensis*), one striped turtle (*Chelopus insculptus*). Born.—One hog deer (*Cervus porcinus*).

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-Tales," giving a table of contents and specimen illustrations from the volume.—*Adv.*

NAMES AND PORTRAITS OF BIRDS, by Gordon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price \$2.50. For sale by FOREST AND STREAM.

FOREST AND STREAM, Box 2,533, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nant," "Joan," "Dick Swiveller," "Svillene" and other competent authorities to be the best treatise on the subject extant.

Game Bag and Gun.

"FOREST AND STREAM" GUN TESTS.

THE following guns have been tested at the FOREST AND STREAM Range, and reported upon in the issues named. Copies of any date will be sent on receipt of price, ten cents:

COLT 12, July 25.	PARKER 12, hammerless, June 1.
COLT 10 and 12, Oct. 24.	REMINGTON 16, May 30.
FOLSON 10 and 12, Sept. 20.	REMINGTON 12, Dec. 5.
FRANCOTTE 12, Dec. 12.	REMINGTON 10, Dec. 26.
GREENER 12, Aug. 1.	SCOTT 10, Sept. 5.
GREENER 10, Sept. 12, Sept. 19.	L. C. SMITH 12, Oct. 10.
HOLLIS 10, Nov. 7.	WINCHESTER 10 and 12, Oct. 3.
PARKER 10, hammer, June 6.	

PACIFIC COAST GAME.

THE unprecedented snowfall and prolonged storms of the present winter on the Pacific coast have wrought havoc among the game in the mountains and foothills of this State. The snow has come down upon the foothills to an altitude of 500 ft. on several occasions during the winter, and at 2,000 ft. elevation the snow has been almost continuously upon the ground since October, and to a depth of 4 or 5 ft., too. As the mountain quail (*Oreortyx picta*) seldom resort to a lower altitude than 1,000 ft., and generally make their winter home at about 2,000 ft., this winter means starvation to them. Thousands have been snowed under the chapparal and perished. The writer has had occasion to be much in the mountain region from home up to 5,000 ft. above sea level, and these statements are all from personal observation or from reliable witnesses in those regions.

The other day a boy of sixteen was met carrying a bunch of quail. He said that he had just picked them up off the ground beneath a manzanita bush. Thinking that possibly a trap had been beneath the bush also, we examined them and found that they were emaciated and had surely died of starvation. Being almost assured by this that they had been trapped and allowed to die of thirst and want of food, we made the boy guide us to the spot where he found them. Surely enough, as the tracks in the snow plainly showed, these quail had been snowed under while seeking shelter, and had perished. On scraping the snow away, two more dead birds were discovered in the same spot, making eight in all. This set us thinking and inquiring, and we find that dozens of similar instances have been noted in the same locality. This means such widespread destruction of these fine birds as will take years to repair. *O. picta* is a hardy bird, but he can't stand everything.

We are also informed, on what we consider good authority, that great numbers of deer have perished in a similar manner. The greater number of the deer in the Sierra Nevada make their winter home at an elevation of from 1,500 to 3,500 ft. As the snowfall at the latter altitude has been 8 to 10 ft., and continuously on the ground for three months, the deer have yarded, as they do in the East in the winter season, and have starved to death. We are told that in the neighborhood of Dutch Flat dozens of carcasses are lying on the mountain side in one locality. This is third-hand information, and may not be entirely true, but that many deer have perished in this county alone is well known to the writer.

Sport in the mountains this season has been very poor. There have been but few good days since the 1st of October. The writer started for a deer hunt on four different occasions, and got driven in on the first day out by violent storms each time. Our quail season will end March 1, and with small records for the gunners. AREFAR.

AUBURN, California, Feb. 25.

Editor Forest and Stream:

A large puma or California lion was shot a short time ago in Marin county, about thirty miles from San Francisco, by Wm. H. Abbott, the manager of a large dairy ranch. The animal had been living on the calves from various dairies in the region and weighed nearly 200 lbs. There was talk of trying a puma steak, which old hunters say is excellent, but only the skin was saved. Adams, the noted grizzly hunter, used to roast puma meat whenever he had a chance.

Among the most interesting and famous hunters in Alameda county were two brothers, Howard and Michael Overacker, the latter now dead. Howard Overacker has been kind enough to send me the following note from his home near Centerville: "As you requested me to think over my hunting experience and give you the result, I will say that my brother and I averaged about twenty-five deer a year from 1860 to 1880. We simply hunted for our recreation and health. We never sold a pound of venison, but distributed it freely among our friends. Sometimes we have dried it, as we never intended to kill any to waste. The largest deer I ever weighed dressed 140 lbs."

If my memory serves me, almost all of the hunting done by the Overackers was in the Coast range, within a hundred miles of San Francisco. They were rare good fellows, as well as being rare riflemen, and the whole group of old-timers to whom they belonged, the Tysons, Bonners, Morrisons, Henions, Walkers, and a dozen other families, were natural campers-out, hunters, fishermen and lovers of sport. Their sons, as a rule, take after them, but California has settled up so much in the past ten years that the Overacker record is not easily to be broken. C. H. SHINN.

NILES, California.

NEW YORK ASSOCIATION.—The regular monthly meeting of the New York Association for the Protection of Game held at Pinard's Monday evening, was an unusually well attended and enthusiastic one. Fish Commissioner Backford read the titles and explained the purpose of 38 different acts relating to fish and game. There were four of them heartily indorsed by the Association, namely the act to prevent netting in Jamaica Bay, the act to enforce the lifting of the shad nets throughout the Hudson River during Sundays, the act to appoint a commission of three to codify the game laws, and the act to move the office of the chief game protector from Albany to New York. The executive committee reported that they had engaged the services of detectives to try and obtain evidence against the many uptown restaurants that are still selling game out of season. Almost every fashionable restaurant is reported as serving quail under some outlandish name, and one gentleman stated that he had heard of woodcock being served,

A RECORD OF TWENTY-SEVEN SHOTS.

A FRIEND of mine asked me a few days ago how many cartridges I usually carried with me on my hunting trips. I told him I took generally a good many more than were necessary, so as to be on the safe side, and probably brought back more than I used. He seemed surprised at this last statement, so I said, "What do you suppose I do with my cartridges when I am in the woods? Suppose I take a box of cartridges—I always take as many as that, sometimes more—there are fifty shots; surely that should be enough for a month's trip. I do not shoot at a mark, in the woods or out of them, so none are wasted that way. As to game, one moose, a stray deer or bear, perhaps an otter, a mink or two, a few ducks and grouse for the breakfast table make up a good enough list for three or four weeks in the woods and would not take many loads. Allow five shots for the large game, one for an otter, two for a couple of minks, six for as many ducks and twenty for fifteen grouse, and the total is only thirty-four. I am speaking of course of my Winchester, not of a shotgun. I have before me a little book containing memoranda of a trip made in 1880, when I was in the woods from Sept. 12 to Oct. 4, inclusive, and find by examining it that I fired twenty-seven shots in that time. With these I killed one moose, one deer, two minks, a duck, five grouse and a muskrat. Two shots were put in the moose, leaving fourteen misses. This seems to make a poor showing for one whose reputation for never letting game get away is good, but Marshall Marmont's idea was that more can be learned from studying our defeats than from chronicling our victories, so I will tell you about those twenty-seven shots, misses included.

I started on my canoe journey into the woods in 188—, on the 12th of September, and up to noon on the 15th had not fired a shot at anything. There were three of us in the canoe. I sat in the bow, my son, a boy of twelve, in the middle, and our Indian, Gabriel, a man I had never employed before, in the stern.

Gabriel had heard of me from other Indians and was anxious to see me shoot. Not long after dinner, as we were paddling along a stretch of smooth water, we, to quote my note made at the time, "saw two ducks about 40 or 50 yds.; I shot the head off one." Considering that I had not fired a shot from my Winchester or any other gun since I stood it in the corner nearly a year before, when I returned from my hunt, this seemed to be a pretty good beginning. The creek up which we were traveling is a large one, draining many lakes and ponds, and although to reach the lake we wished to camp on some fifteen portages have to be crossed, these are separated by stretches of good paddling water, sometimes a number of miles long. Not very far beyond where I shot the duck the creek became quite crooked, and as the country looked gamy I kept my rifle ready for instant use. About two o'clock, as we turned a bend in the stream, a deer "stepped out ahead of us, about 20 or 25 yds. off, and I killed it." This seemed a very natural way to begin the trip and insured us a supply of meat for some time. The deer was "almost a year old" and excellent eating; and the weather being cold, kept well. We camped in a spruce thicket, to keep out of the wind, and started on the 16th at 8 o'clock, and that day I did not fire a shot.

The night of the 16th we spent at the upper portage, only twenty yards long, where the stream, after winding through some miles of flat country, pours over a ledge of rock four or five feet high. On the 17th we started early and about noon reached Smoky Lake, the end of our journey in this direction, and soon after dinner had our camp in shape. In the afternoon we went up the inlet, but saw little fresh signs of moose or other game. Sunday was, as a matter of course, spent quietly in camp. On Monday I took John and Gabriel, went back down the creek several miles, then turned up another stream running into the main creek from the south, and reached another lake at noon, a beautiful sheet of water about two miles long, with rocky banks and surrounded by hard wood ridges, on which the autumnal coloring of the foliage was most beautiful. Just as we left Smoky Lake in the morning and entered the outlet, there quite wide, but shallow, and much grown up with rushes, we ran across a pair of fawns, beautiful creatures that had never seen a man and wondered what we were. We sat still and floated to within a few feet of them, where they stood in a few inches of water on the sandy bottom. I would gladly have photographed them, but my camera was not ready. It was as interesting as amusing to watch them look at us, stamp their little feet, and then bob their heads together as if consulting. After a while we waved our hands and off the little creatures bounded as our canoe shot forward and we sped on our way down stream. When we reached the "Island Lake," as we called it, the wind blew furiously, and I did not much like canoeing among the white caps. However, we made the island and camped there. The wind fell in the afternoon, and while paddling about the lake before dark we saw three deer and got within a few yards, but did not molest them, having no use for them. Next morning we started back to Smoky Lake, but before reaching the main creek turned up an affluent of the one we were on, and looked for moose and beaver, but found no fresh signs in a long way, so returned to our work and before noon reached the creek. Just as we turned into it we saw two otters, which discovered us and started up stream, with us in furious pursuit.

Although the water was smooth and of good depth, and we could follow the otters by their wake showing on the surface at intervals as they swam below it, there was considerable current and the bends in the creek were so short and close together that going up stream as we were it was hard to make good time, and the beasts had such a good start that we did not know at what moment, when out of sight around a bend ahead of us, they might escape by taking to the shore unknown to us. Gabriel was excited, and with the full strength of his sinewy arms, swept the canoe along with mighty strokes of his heavy, broad-bladed paddle, one so strong and heavy that ten minutes use of it would have tired me out, although I could use my own light one all day. What we feared really happened. As we shot around a bend I saw the ripple on the surface as one of the otters pushed around the next one beyond, and with my Winchester cocked and across my arm, kept my eye fixed ahead. Suddenly, "Shoot! shoot!" cried Gabriel. "There's one of them out on the bank," said John; "Look! Oh he'll get away." All this time the canoe plunged forward, but with

slackening speed as Gabriel, when he saw the otter slip out on the bank, stopped paddling, but as neither he nor John said where the otter was, it was only after I turned to them to ask what all the row was about that I found it had been so hard pressed that it ran out on the bank almost abreast of us, and they saw it to our left as we flew by it, while I had my gaze fixed on the wake of the one ahead.

There was no time to stop to discuss how or why we had let this one get away, we must go on after the one before us, and in an instant the big blade was "shoving her ahead," so that at every stroke the bow of the canoe left the water, and behind us the waves caused by our wild rush washed both banks of the creek. Another bend was passed, and another, until as we shot from behind a point into a longer reach of water than usual we saw, 30 yds. away, to our right, the ripple of the otter's swimming as it turned another bend again to the right. At this moment as we were shooting forward in one direction, and it, 30 yds. off, was going nearly as fast in a parallel but directly opposite direction, the otter put up its head for an instant—I say its head, but it was really only so much of its head as would uncover its eye and permit it to see what pursued it—and any one who knows how close an otter's eye is to its nose knows what sort of a mark I had to shoot at. As the head appeared I clapped the gun to my shoulder, dropped my eye into the notch of the hind sight, caught the front sight as it swung to the right, and just as it cleared the otter's nose by an apparent 4 in. space, pulled trigger. There was a swirl in the water as the otter's race came to a sudden end, and it changed ends like a flash. Instead of its head its tail now stuck out of water, straight up like a stick; it was evidently dead. Our exciting chase was over, and I had made one of my best shots. An examination of our prize showed a good sized otter 52 in. long, with fur dark, and, for so early in the season, in very good condition. The ball had gone in one eye and out the other, without smashing the head or in any way marring the skin.

After congratulating ourselves on the success of our efforts, Gabriel's skillful handling of the canoe having the most to do with it, and grumbling at the loss of the other otter, we bethought ourselves of dinner, and landing on a convenient point, where were a thicket of spruce and hemlock for shade and a dead stub for wood, we started a small fire and cooked our dinner. Our hunger satisfied, and everything packed up again, Gabriel shouldered the canoe and we tramped off to a lake some distance back from the north bank of the creek. It was a very irregularly-shaped body of water, queer bays and nooks running about in all sorts of directions; but we saw no game about it, and at 3 o'clock were at the creek again and started for our permanent camp at Smoky Lake, reaching there at sundown. The next day the wind was southwest and it rained all day, but even John, though young in years, was too old a woodsman to mind that, so after dinner we broke camp and started homeward, our plan being to go up as far as Gabriel's cabin and then ascend the north prong of the creek and spend a week as we had on this branch. We traveled rapidly down stream, and reached the head of the long carry, that night, and the next day went clear through to Gabriel's. On the way I killed a ruffed grouse, shooting its head off. This was my fourth shot.

The next day (Friday), having procured a small addition to our supply of provisions from Gabriel's stock, we started up the north prong of the creek, called by the Indians the Ze-gond-e ga-boos-bee (sippi), which Gabriel explained meant "something like thick balsam creek; like you couldn't see very far 'cause dem balsams hung so thick; you couldn't see nothing if you look up de creek." We left at 8:45 A. M., and pushed ahead as hard as we could. We reached the fourth portage at 10:30 and had carried the canoe and all our traps half way over by 11:20, when we stopped for dinner. The falls and pools here were so grand that while Gabriel cooked I took several photographs. By 1:42 P. M. we had dined and completed the second half of the portage, and hard work by all hands took us to the lower end of the twelfth portage, where we camped. The night was clear, cold and frosty, and we slept soundly. Saturday was bright and clear. After breakfast and two trips apiece over the portage we left the head of No. 12 at 8:30 o'clock, and between that and the next portage I got out on the bank to lighten the canoe. Becoming aware of a grouse walking along a limb of a tree near me with its head stuck out in front of it, I missed it three shots in succession. Surprised at this proceeding, the bird stopped and straightened itself up to inspect me, when I knocked its head off. It is easy enough to take off a grouse's head if it is standing or sitting erect, but when walking with the neck nearly horizontal the elevation is as important an element as the line, and the chance for a miss is a good one. I had now doubled my number of shots; had fired eight and missed three, all the latter at this one grouse.

We got to the fourteenth portage at 9:35, and while Gabriel mended the canoe I photographed. We left again 10:20; from 11 to 1 o'clock stopped for dinner, and at 3:30 P. M. reached the Deserted Cabin Pond, where we camped. We used up the rest of the day by portaging some three-fourths of a mile over to a beautiful lake with a fine island in it, where we saw an otter but no moose. We spent Sunday quietly in and about camp. Gabriel told us the deserted cabin was built by a fellow named Basquin, who had his family there all winter. He is no hunter, and provisions running low and the snow falling so deep as to prevent traveling to the settlements for more, they had to eat moose hides and the like to keep from starving. Of the many, many nights I have spent in camp either for pleasure or from necessity, there are two or three I remember with particular clearness. One in the winter of 1860-61 was spent on the banks of a little nameless lake some ten or twelve miles, as I remember the distance, south of Raquette Lake, with Mitch Sabatis, Bill Wood and Ransom Palmer. The snow was 5 ft. deep in the woods and we were after moose. The only blanket in the party was my traveling shawl, but we slept soundly for all that, cold as it was. We had been snowshoeing all day and were tired, but I was not too tired to sit up and watch the glorious moonlight until Mitch and Bill Wood came back from "a little run around that mountain across the lake," which took them from after supper until 9 o'clock, when they came back and we turned in. Another was one of these two nights at the Deserted Cabin Pond. It was cold and there was a magnificent aurora borealis, the whole sky to the zenith

blazing with waving streamers of various colored light shifting and changing every moment with mysterious silent grace. John and I put out in the canoe and floating in mid air, as it were, saw the "heavenly vision," to quote old Saint Paul's expression, both above and below us; the clear, still water reflecting everything with marvelous distinctness and fidelity.

On Monday we left camp at 7 o'clock in the morning and continued our way up stream; stopped for dinner at 11 o'clock; went on again at 1, and at 3 P. M. halted and camped. The latter part of our day's journey was through burnt country—brûé—and our camp was only half a mile below a small lake, ordinarily a likely place for moose. During the day it turned warm, after 10 o'clock in the morning; Sunday night had been cold and ice formed. Early in the day I killed a grouse by knocking its head off with a single shot—the ninth one so far—and in the afternoon Gabriel killed a muskrat with his paddle. Later, but before we camped, he set a trap for mink to show John how to do it, using a piece of the rat for bait. About sundown we went up to the pond to watch for moose and heard our old bull, but he didn't come in sight, although not far off. When we found he had started we paddled furiously down stream to head him off, but were too late.

Tuesday we went up a branch of the creek to a large lake in the midst of the desolate burnt country. The stream was low and crooked, and there were many logs across it, so that we spent about as much of our time out of the canoe as in it. As we rounded one point that was thickly covered with alders and other brush, we scared some animal we did not see, but supposed was a bear, and shortly afterward saw, or at least Gabriel did, a cow moose. I was not sure I saw it and would not have shot at it in any event. A mile or two before reaching the lake, the stream became wide and still with low hills to the left as we ascended and a wide expanse of bog to the right, perfectly flat and dotted over with dead tamarack saplings charred by some long ago fire. We saw a number of ducks on this part of the stream and a doe and two fawns ran off across the bog as we approached them. We got to the lake just before noon and found it a fine sheet of water with a number of islands in it, some of them containing a number of acres and with bold rocky shores. Had the hills around the lake and these islands been wooded, it would have been a delightful place to the eye, but fires had been everywhere and in places had burned everything off down to the solid rock. In blueberry time this is no doubt a great place for bears, but we saw nothing, and after dining and taking an hour's cruise about the lake, started down stream and got to camp by tea time. There was a heavy frost at night and the next morning was clear and pleasant.

CECIL CLAY.

WASHINGTON, D. C.

[TO BE CONCLUDED NEXT WEEK.]

THE BUCK WE SHOT.

ONE morning last November when I awoke I found the ground covered with snow. I thought, "How glorious for a deer hunt." As I was on my way to the hotel for breakfast, I met Stephens all rigged out in his hunting suit. "I'm after you," he said, "Let's go and get a deer." "All right," I responded, and in a brief while we were driving out of Detroit City, Becker county, Minn., toward the Ottertail River. After driving eight or nine miles we came to a place where Stephens said we had better stop and look for signs. We put the horse in an old stable that stood in a little clearing some distance from the road, and then we started back for the road but had gone only a short distance when we found fresh tracks, three deer having gone along recently. We took the tracks, and had gone but a short distance—I tracking and Stephens making a detour—when I heard Stephens shoot and saw the three deer disappear over a little hill followed by a second shot from Stephens but they were gone untouched, a fine doe and two fawns. We tracked these deer all the forenoon, but did not get sight of them again. About noon they were joined by a buck and went very much faster.

While eating our lunch we debated what to do next, and finally concluded to go nearer the river to some pine "slashings" that we knew of. We stopped at a man's house and had his boy go and get our horse and bring it to his barn. We took a road across the "slashings" and were walking along talking together when a grand big buck jumped from the brush not three rods away. Bang! went Stephens's Winchester, but away went the buck. I took his track and Stephens went to head him off. I had gone but a short distance when I heard S.'s rifle ring out again. He told me later that he shot at a doe that he started. At the same time I heard his rifle the buck I was tracking sprang up a short distance from me. I shot but he went off safely. Again I took the track, and Stephens made the cut off. Suddenly I heard Stephens's rifle ring out seven times. I hurried along and found S., but the buck was away in seeming safety.

We took the track again and kept together, two tired and disgusted hunters. On we went, and just before sundown we started him again in plain sight on an open hillside. Two rifle shots rang out, but away went the buck. But stay. On a rise of ground he paused and looked back at us, a grand picture, with whole form and noble antlers outlined against the sky, a sight to be remembered while life lasts. Again Stephens's rifle rang out; and I saw the buck drop as if smitten by lightning. It was a fatal last look to him. As we started forward Stephens said, "Did I hit him?" "Yes," I said, "Well, if he is not there, he can go; I'll not go one step further after him," said Stephens. But he was there, a fine fellow, shot through the neck, dropping where he stood. I tired us both out hauling him back to the road. We went and hitched up the horse, and as we were driving back in the dusk to load in the buck, a deer went across the road just ahead of the horse. Stephens fired, but he got off, whether wounded or not we could not tell. Thus ended our first day after deer last fall. We saw six deer and killed one, but he was a monster and led us such a chase.

DETROIT CITY, MICH.

MONTREAL, March 11.—Wild geese have put in an appearance in this vicinity. The first flock was seen last week.—STANSTEAD.

PATTERN AND PENETRATION.

LEFEVER 10-GAUGE GUN.

A FEW days preceding Nov. 6 a note received at this office from Dr. R. J. Carroll, of Red Hook, N. Y., asked that he be permitted to test a fine gun, of which he had great hopes, at the FOREST AND STREAM testing screen. Of course he was told to come on with his gun, and such cartridges as he wished to have it tried with. He fixed the date and was promptly on hand. When the case was opened the gun proved to be a fine hammerless Lefever which he had purchased a year before. He had put the gun through a series of tests with various cartridges, until he had found out just what he could use to the best advantage. He had found out, for instance, that while both barrels were fine samples of the full length taper choke used by the Lefever Co., that the left barrel was by far the better one of the two. He found, too, that with a certain charge of Schultze powder he could do far better in pattern than with black powder. In fact he had gone through a series of trials such as every gun buyer should make when he comes into possession of a new arm. He should take nobody's off-hand opinion of what its best load is, but with sheets of paper and pads

should experiment a while, and soon he finds out just what he can do the best work with, and ever after has a confidence born of knowledge in his weapon. There is entirely too much rule of thumb business in gun loading, and when gun users find out that what is food to one gun is poison to another, they will do more testing, alike for their own satisfaction and the advantage of gun manufacturers.

But to return to our gun in hand. Dr. Carroll had chosen a good afternoon for his test, not quite as muggy and damp as a gun expert might have wished, but clear and with not enough wind to bother the shot. The charges brought down by the shooter included a set of Schultze loaded shells and another with Dead Shot powder. In addition a few shots were fired at 40yds. with some cartridges loaded with No. 7 shot, and then at the same distance two shots from each barrel were had with

LEFEVER, 40YDS., RIGHT BARREL, SCHULTZE POWDER, 318 PELLETS.

the paper shell cartridges which did so well in the Colt 12-gauge gun. The No. 7 shot cartridges were found to have 90grs. of powder behind the 495grs. of shot counting out 357 pellets. The loading, as in the other black powder charge of Dr. Carroll, was with two P. E. wads only over the powder and without the usual card there. It will be remembered that the Colt cartridge had 3 1/2 drs. of Dead Shot powder behind 1 1/2 oz. of LeRoy No. 8 shot, or according to our laboratory test, 97grs. of powder and 482grs. of shot with 418 pellets by count.

With these few explanatory facts as to charges, we can give the returns for the several tests as follows:

MARCH 8.—I AM once more at my home in Ocean Springs, Miss., March 8.—I am once more at my home in Ocean Springs, Miss., South; glad to escape the Northern March, for bad as is the character of that month in other parts of the world, here on the Gulf Coast it is most delightful. The winter here has been very pleasant and dry, but a little warmer than usual. At present cooler weather prevails, which I welcome as tending to prolong the season of snipe shooting. Yesterday I went out to interview the quail, and found them quite plentiful. March is a very favorable month for quail shooting here, as the birds are large and strong and very fat, and are feeding on the most open ground. As there is very little grain raised here the birds subsist entirely upon wild seeds. At present their main reliance is on certain grass seeds, which they find most readily on open ground where the dead grass has been burned away. There is no objection to shooting them in March on the score of game protection, for they do not begin to pair until after the middle of May. Why they should be so tardy in regard to this matter here on the Gulf Coast is more than I know, but I watched closely for five years, and the 20th of May is the earliest I have ever seen paired birds. My pointer Banjo II. (Bang Bang—Moonstone) is showing great speed and range, and his work is in every way worthy of his illustrious lineage.—JOHN M. TRACY.

STOCKING MASSACHUSETTS COVERS.

THE efforts of the Massachusetts Fish and Game Protective Association toward restocking the State with game birds are meeting with considerable encouragement. The attention of sportsmen in nearly all parts of the State has been called to the objects of the Association in a very favorable manner, by what they are trying to do, and their work now appears in a light more favorable than it could have been put by any other arrangement. Even the Park Commissioners, or those in care of the new city park at West Roxbury, have applied to the committee of the Association having the distribution of birds in charge, for quail with which to stock the groves of the Park. Their object, they say, is that the men, women and children of Boston shall have a chance to see these beautiful birds, and hear their merry *Bob White* in the summer time. The committee will probably grant this request, being well aware that the birds will naturally drift out of the park and escape in the woods near at hand. But all the same they are willing that the Park Commissioners shall have a chance to try the birds; they promising all possible protection. The committee most fears the depredations of cats, but once enlist the boys in favor of the quail, and the cats will be invited to summarily leave the park on every occasion. Gun clubs from all over the State are asking the committee for quail and other game birds to put out, and the best feature of all is that these club members are constituting themselves into game protectors in a manner that is very pleasing to the Association. The clubs promise the best of protection to the quail, and they will also ask the Legislature for more stringent legislation for the better protection of the birds. Men and boys that have "kicked" against game legislation heretofore, are now, in numerous instances, coming to the committee and declaring themselves in favor of stringent protection, and promising everything that could be asked, provided their favorite localities may be restocked. That form of the statute which permits of the shooting of woodcock during August and early September, while partridge and quail are still in the midst of the close season, these gunners will themselves ask to have changed, making a general open season on all game birds, and putting it as late as necessary. They will ask this for the reason that the quail, in which they have begun to take so great an interest, would not be safe, were the woodcock gunners permitted to be abroad while the partridge and quail are yet in their infancy. The Dedham Gun Club is among the foremost and the most earnest for restocking, and the committee of the Association will doubtless supply the club with birds. The leaders of the club, in the movement, also promise to sow grain for the quail to feed upon and to scatter it in winter for their sustenance.

By the way, a little involuntary stocking with quail has lately happened in Vernon, Vt. Mr. J. O. Frost, a wealthy and genial gentleman, in the flour trade of Boston, owns a farm at South Vernon, in which he takes great comfort. He is a lover of fancy stock, pigs and sheep, while poultry and birds are a great delight to him. Recently he procured some 30 quail from Tennessee, at a considerable cost, with a view of keeping them in a large inclosure on his estate. The birds came in good order, and were put into a big barn chamber, till spring, when better quarters could be prepared for them. By some accident the window of the chamber got broken and before the attendants of the farm were aware of it, every bird had escaped. Mr. Frost was rather inclined to laugh at his involuntary restocking, and since the weather was then very mild for February, with the ground entirely bare, he calculated that every quail would survive. He immediately laid in with the boys of the vicinity to scatter grain about, and the chances of the birds were good till the recent very heavy fall of snow, accompanied with cold weather. At first the birds were frequently seen and their whistling was heard in the trees, but since the snow they have not been heard from.

SPECIAL.

THE WINTER AND THE GAME.

THE present winter is a terror to game in the State of Washington. Ordinarily our snowstorms alternate with Chinook winds, which tend to lower and harden the snow, and to remove it altogether from the southwestern slopes of the mountains and the higher hills. During the present winter, however, the snow has accumulated until a depth of 3 ft. has been attained, and this, breathed upon by a very mild chinook, was crusted just enough to impede and annoy the deer, while at the same time furnishing a splendid bridge for the coyotes, and for weeks the deer were completely at their mercy. The prospect for a full crop of fat wolves in our mountains during the coming year appears bright.

The first morning after the formation of the crust, as fresh meat was being clamored for from the kitchen, I strapped on the big snowshoes, and after a hard struggle climbed up the timbered foothill a mile to the westward, and at last jumped a fine buck. He bounded bravely off out of sight in the bushes, and I followed slowly along his trail, occasionally crashing through the thin crust and pitching headlong in the snow, and my progress was necessarily slow. Before he had gone half a mile he was completely exhausted, and I overtook him easily. In all my hunting experience I have never before seen a deer so helpless. For weeks afterward the coyotes held high carnival.

A neighbor, while driving along a mountain road near here, heard the barking of dogs in a thicket, and leaving his team he rushed in among the bushes and found a pair of stray dogs which had overtaken a band of seven deer, and had already stretched three of the hapless animals dead upon the snow before the deliverer reached the scene. Venison will scarcely be a drug in our markets during the coming year.

And such weather as we have had. Blustering old Boreas, having long since driven the gentle Chinook across the mountains and back to her cradle upon the heaving bosom of the Pacific, has in her absence ruled with a rod of iron. And when some days since she crept timidly back, and, peeping over the crest of the Cascades, gently blew a forgiving kiss in the direction of the incorrigible old wretch, he in return showed his teeth (a full set by the way and in an excellent state of preservation), and the gentle creature has not since dared to breathe a promise of her return. Her time, however, is near at hand, when we hope to see her streaming hair in the filmy moisture, laden clouds floating up from the

great ocean, when the warm welcome of her breath will be felt upon every cheek, and when the voice of her cheery coming will rustle the swelling buds overhanging the mountain streams.

THEIRTS, Washington.

ORIN BELKNAP.

Editor Forest and Stream.

On the morning of Feb. 25, I was fox hunting in the Sagamore Hills near this place. It was hardly daylight, my dog had taken a trail and gone off at a pace that soon promised a start. While hurrying across the hills to a distant runway, I passed through a rough piece of ground covered with broken boulders and stones, and coming to a springy place among tall grass and bushes, something sprang up in the darkness and the *scaipe*, *scaipe* of a snipe came to my astonished ears. I afterward visited the place and saw unmistakable signs of its snipeship. The weather was freezing cold and the ground covered with snow at the time.

J. E. FULLER.

ESSEX, Massachusetts.

Editor Forest and Stream.

As far as I can learn from questioning the farmers, game has wintered well, but from the hints occasionally given I think that shooting has been kept up in and out of season, regardless of game laws or good common sense. Kill all you can the year around seems to be the prevailing motto among the farmer boys back in the hills, with no care of the morrow or seasons to come. They will discover their error, but too late, when the covers contain no game and their sport, as well as that of many others, is gone never to return, except by restocking.

W. F. DITTRICH.

TOWANDA, Pa., March 13.

Editor Forest and Stream.

The ducks and geese are still with us, though spring is evidently approaching. I have been told by a good many that they pass the summer here. This must certainly be a mistake. The sun is getting decidedly tropical and makes an outing rather uncomfortable. Still I hope to have a parting fling at the webfoot some of these days. The other kinds of game are not very well represented around here. We have a quail, fairly abundant in some places, which seems to have got its characteristics mixed with those of the ostrich tribe. He is a ready and desperate runner, and will not fly if he can help it. I can shoot him on the ground with the best conscience of any game bird I know. There are plenty of rabbits—hares, of course—but one soon tires of exposing himself to the hot sun for such game.

AZTEC.

MEXICO, Feb. 25.

Editor Forest and Stream.

The aggregate snowfall for the winter has not exceeded one foot in depth. December and January were virtually without snow, and the total fall for February was only six inches, divided with several different periods of time, each fall remaining but two or three days.

The rainfall has been reduced to away below the average, and a majority of the days of each month were warm and pleasant.

Of course all this is favorable to the game, which appears to be flourishing. The great numbers of quail and chicken went into the winter in first-class order; the autumn was warm and bright, and food for them has been abundant in all the fields, as there is much corn left, owing to the stock law which restrains swine.

Hunting has been only slightly indulged in and this together with the almost total absence of snow, will enable the majority of quail and chicken to survive the winter, thus promising another year of numerous multitudes of these splendid game birds.

Scarcely a week has passed but what I have observed great flocks of mallards, sprigtails, canvasbacks and other species of ducks; and so numerous have they been, that they remind me of the time ten years or more ago, when this great valley was the home and feeding ground of millions of waterfowl during a greater part of the year.

Geese are plentiful, and are so fat that if one is shot on the wing it will burst when it strikes the ground. Indeed, I have not seen within a period of ten or more years so many geese. Here in the first week of this month flocks of them, often numbering 150 to 200, are quietly feeding on the broad fields of wheat, and are seldom disturbed by sportsmen. Bluebirds have been with us all winter, and robins returned to their northern homes along early in February. A meadow lark appeared here on Feb. 17, which is the earliest I have ever noticed them here. Out in the pines of our house two beautiful redbirds, with their proud and dignified uniforms and their clear voices, are celebrating the bright day.

ALEXANDRIA, Mo.

JASPER BLINES.

"OLD BETSEY" AGAIN.—Since the old musket has "got into the papers," perhaps a little history is not out of place. An older brother writes me as follows: "Your experience with the old musket, as related in FOREST AND STREAM, amused me. Perhaps you do not know the history of that old gun. In the fall of 1864 ('Aztec' was only three years old then), a company of Confederates making their way back south after Price's raid through Missouri, passed grandfather's one night and called for a guide around Ebenezer (a village about ten miles away), as some militia were stationed there. Jimmie Lusk—a boy then about fifteen years old—went with them, and on his way back next day found the old musket which one of the tired and sleepy soldiers had dropped. So it is a Confederate relic."—AZTEC (Mexico).

WEST VIRGINIA has an abundance of quail and pheasants or ruffed grouse, the most noble birds that fly. With my pointer dog Dash and my Laverack dog Bob, I managed to bag 528 quail and something over one hundred rabbits during the hunting season. We have some gray snipes in spring and a few woodcock, but they do not stay long with us; they are like the ducks—we only get those that are starved out on their flight and have to stop to feed. We have deer, bear and turkey that don't often starve out in this part, and we get a few of them in season, more deer than turkeys. We get those fellows in the Allegheny and Eupine Mountains, some 120 miles from this place or about five hours' ride on the C. & O.—W. V. A. DICK.

QUAIL IN THE NORTHWEST TERRITORIES.—London, Ont.—*Editor Forest and Stream:* A friend in Calgary, Northwest Territories, writes me as follows: "We have formed a rod and gun club here, with the objects at present of protecting fish and game and introducing quail. Regarding the latter we have written to several parties in the United States who advertise quail for sale, but they seem to be out of them. Do you think we could get any from Ontario? The Northern birds, we think, would be the best, perhaps the only ones that would become acclimatized. Or do you know of any one I could correspond with about the matter? Our membership is increasing rapidly, and we expect to influence the Northwest Assembly strongly to pass laws that we want. Macleod has organized, and several other places are falling in line. Weather very beastly, 38° below last night and 16° below at noon. I think it will touch 50° below to-night. Any quantity of snow—W. H. H." I do not know of any one in Ontario who could be relied on to supply the birds, but even supposing a number to have been captured and the long journey to have been successful, I have grave doubts of their living through the winter in that part of the country, where there is so little cover. Of course the present winter has been rather more severe than usual in some parts of the West. I should think that birds could be procured from some nearer point than this to Calgary, I mean in the western United States, as I do not think there are any quail northwest of British North America. I have been forwarding my FOREST AND STREAM to Calgary for some years, and I hope it may have been the cause of this game protection movement. I would be obliged for any advice you would be kind enough to give.—R. G. M. [If birds could be obtained from Nebraska or southern Dakota, they would probably be better than those from further east or south. At the same time we think it doubtful if quail would do well as far north as Calgary. Besides the danger from the winter, they would probably find food hard to obtain, since Calgary is situated in a region devoted to cattle rather than to grain growing. Even in the great wheat-growing section of Dakota we do not know that quail are found, though they do occur in the Missouri Valley as far up as White River. Quail have been introduced near Salt Lake City, and we believe near Helena, Mont. We do not know definitely with what results in either place. If they will do well at Helena they might be tried at Calgary, though the food question would still remain an open one.]

THE GOOSE "HOLLERED."—Towanda, Pa., March 3.—Four sportsmen from Sayre, Pa., floated to this place in one boat by river, a distance of sixteen miles, wildfowl shooting on Wednesday last. Their bag on arrival here consisted of four ducks. Reported seeing quite a number. A big goose was jumped out of some willows, eight barrels responding to its appearance. Although they claimed it "squeaked" at every shot it continued on its migratory flight. Sam Butler claimed it "hollered the loudest" at the report of his gun.—W. F. D.

SARATOGA, N. Y.—I am busy with the co-operation of Armstrong our game warden in organizing and perfecting a game and fish protective association. We have a good start, and I hope the trout streams, lake and the fields will be well protected. We are going to plant numerous pairs of quail soon, and I am going to start my wild rice in pots very soon. We planted about 5 lbs. last fall. Things as regards sporting are generally on the boom.—BUCK.

THAT NORTH CAROLINA TRIP.

Editor Forest and Stream.

In the last number of FOREST AND STREAM, "P. K."—who appears to be the "Shelly" of my recent article on "A Quail Hunt in North Carolina"—accuses the writer of "perverting facts." An examination of the article in question will show that the writer only claims to have found six full coveys and some scattered birds in the day's hunt. As a matter of fact, in one day's shooting over the same ground precisely, he and his friend Ed, hunting with the two to four ten full coveys. The six coveys referred to should (and did) average at least fifteen birds apiece, a total of nearly one hundred quail, and thirty-seven is not at all a large bag to make under the circumstances related in the article. Certainly it is no more remarkable a feat than the bagging of over fifty birds in three hours, referred to by the conscientious and truthful "P. K."

The reference made by the supposed "Mr. Shelley" to "Mrs. Alice" is extremely unkind. The lady referred to, a most estimable lady, has been compelled to take boarders to support herself and family, and being in the midst of a shooting country, has advertised in the sporting press. The remark of "P. K." concerning this lady is totally uncalled for, and inasmuch as it may tend to create an entirely false impression in the minds of his readers with regard to herself and her surroundings, has a direct tendency to prevent many who might otherwise wish to do so from availing themselves of her advertised offer. Besides that, "P. K." does not claim, nor does it anywhere appear to be a fact, that "Mrs. Alice" was in any way responsible for the statements which appeared in a Western paper concerning the wonderful quantity and variety of game on her plantation; nevertheless, the writer's experience on this subject was quite different. "P. K." for while game was not quite so thick as he hoped to find it, still he found six or seven coveys in a day, and all within a mile of "Mrs. Alice's" house.

As to "P. K.'s" account of his experience with Mr. Sherral, we have only this to say—that his statement is entirely different from that which his two companions of the occasion referred to and Mr. Sherral himself gave us, and was such that we deemed it better for "P. K.'s" reputation that it be omitted from our article. We assure "P. K." however, that in what was said about his little difficulty with Sherral, there was no intention of reopening old sores.

H. W. K.

SPORTSMEN'S JACKETS.

WITH a shoulder black and blue from the thumping of a gun used at a tournament in this vicinity, about 150 cartridges being fired, the writer rises for some sympathy and perhaps a suggestion which shall hereafter prevent the occurrence of such a mauling. My gun is 7 1/2 lbs. and carefully made in way of measurements, to fit the physique of the owner. Usual charge for game and this shoot was 34 grs. of Oriental wing-shot No. 3 powder, 1 1/2 oz. No. 8 chilled shot, two black-edge wads and a card over powder, one card over shot and shell crimped nearly.

It is rarely with this load and gun or any other gun I have ever shot, that my shoulder has not suffered considerably, less in summer, however, than in fall and winter, when clothing is of necessity thicker and more of it. It suddenly struck me the other day that it was the fault of my jacket rather than of the gun, and if any brother sportsman who has been in the same predicament and found a remedy, will publish it, I for one would thank him kindly. My last heavy jacket was the pride of my heart, made of a beautiful piece of corduroy, double-breasted, and lined with cassimere; best of all, it fit; but alas! that same fit brought the butt of the gun just where it ought not to be, and the result was a landscape in black, blue and green.

When one is hunting, recoil is not noticed so much, but it is there just the same, and is felt at night, due, I believe, to the improper fitting of clothing, both underwear and outside, more particularly the jacket, and I question whether there is to-day a jacket made in America which takes into consideration the anatomy of the man it covers. The tailor who brings out the pattern which shall permit the most perfect freedom of movement, and

be proportioned upon the lines of one's ordinary clothes, and less like a monstrosity than the present style, will have one customer at any rate. For trap-shooting one needs a coat, or rather two, one for summer and the other for winter, which shall only differ from the ordinary business coat in the freedom of arm movement, and at the same time be dressy enough to wear if one goes away from home to shoot. It has seemed to me that a vest with sleeves would best answer the purpose, provided the armhole is cut larger than is usual, the sleeves cut full at the elbow, and to button at the wrist like a blouse. A man's gun must fit in the hollow between the shoulder and breast, if he would save himself from the recoil, and unless his clothing will permit the butt resting there, it will slip down on the arm just where the long head of the bipeds is inserted and cause a bruise which takes time to cure, and might readily result in a permanent injury.

It is a strange fact that American sportsmen will accept and use what any other nationality of sportsmen would not condescend to look at, and if Mr. Lancaster's "Art of Shooting" portrays the average English shooting suit correctly, I have yet to see anything in our country as practical and comfortable in appearance as the gaherdie jacket and knickerbockers figured therein, yet there is no reason why we should not have quite as sensible and comfortable clothing as any nation on earth. Have we no tailors who are sportsmen? To look over the piles of clothing designed for sportsmen one would think not, for the jackets resemble anything else, and if you give your average tailor an order for a shooting jacket, you get a cross between a business coat and a smoking gown, fit only to wear when you don't intend to use it. A fair share of the blame could be put on a comfortable boot or shoe for field work; now they are made to suit the most fastidious. I have a pair which I wore when fresh from the maker's hands for one solid week's shooting in Virginia, with never a gall or corn to show at the end of seven days' hard walking. Would that some genius will design a jacket upon serviceable principles, and earn not only the gratitude of those who wear his goods, but a fair share of the lure now spent for what are termed by courtesy sportsmen's jackets.

FONT HILL, HOWARD CO., MD.

Sea and River Fishing.

ON THE NORTH SHORE.—VII.

A THREE WEEKS' TROUTING TRIP ON THE NORTH SHORE OF LAKE SUPERIOR.

THAT evening, after supper, we again found our pears left on the table, and this roused the lion in Ned, who in an authoritative voice ordered them removed and cared for at once. Peter obeyed with alacrity, for he feared another revolution, which would probably not end quite as mild as the last. Ned averred that his theory, "that a dead Indian is the only good Indian," still held good with him. There are good Indians at the "Soo," but they are like angel's visits, exceedingly rare.

During the trip I made a few years ago to the Nepigon, in which Ned was of the party, we had three of the most faithful half-breeds I ever met. They were kind, courteous and industrious and strove to please us in everything. They reside at Garden City, on the Soo River, twelve miles below the rapids. Their names are Joe Bell, Pat and Ed. Sayers, a trinity of guides hard to beat. Then again there is that veteran at the "Soo," John Boucher, who is eagerly sought for and liked by everybody. There are a few more, and when the entire roll is called it is small indeed. Many chapters could be given of the hardships and annoyances anglers have experienced of having engaged guides or boatmen who turned out to be slothful, dirty, sullen and insubordinate, and cared nothing for their employer's comfort or pleasure. It is far better when a case of this kind develops for the disappointed and deceived angler to return at once, as that cuts off their revenue and places them on the already large blacklist of incompetents. It is very amusing to hear that veteran angler of the Nepigon, Mr. W. M. Cameron, from whom "Cameron's Pool" on that famous river takes its name, relate his experiences with the half-breeds and Indians. They would fill a volume if given in detail. I will relate a few of them as they fell from the lips of this accomplished angler. On one occasion when he was on a North Shore expedition, one of his Indians played the sick dodge for about two days. Tiring of the sham, he concluded to leave him a shore, and so started without him. The boat had not gone over a rod or two before the deserted Indian came running out of the bushes holding up his hands for parley. Cameron told him that he would have no sick person aboard.

"Me all well," cried the Indian.

"Quite sure?"

"Me very sound."

"All right then."

And so they took him aboard, and from that time he proved the best "helper" in camp.

On another occasion he desired to cross a bay which was about ten miles wide, in a canoe, in order to meet an overdue steamer. The Indian absolutely refused to go, as he declared it too hazardous. Cameron very deliberately drew his revolver and marched him down to the frail craft at the point of the muzzle. The Indian loudly protested, but it was of no use, and fearing the revolver and the threatening aspect of the stern man behind him he tremblingly got into the canoe and paddled out with the hazardous man. The steamer was met and they were picked up, much to the delight of the Indian.

It was on the Nepigon a decade of years ago and when he was in his prime that he conquered a very insolent Indian in pure prize ring style. One morning the Indian in question excited his ire by his impudence, and Cameron in consequence gave him a most vicious kick. The Indian turned around to strike back, when he was confronted with the glistening steel of a death-dealing "Swamp Angel." The off-ending Indian went sullenly away, muttering threats of dire revenge. On joining the other Indians of the camp, there being two more parties of sportsmen here at that time, he stated to them that he would have whipped Monsieur Cameron, as he called him, if it had not been for the revolver drawn on him. This coming to Cameron's ears it aroused the lion in his heart, and putting his revolver away and stripping off his jacket, he went over to the Indian's quarters, followed by all the campers. Cameron was not only fearless, but had that matchless physique which few men could equal. His sinews stood out like whipcords, while his iron-like muscles were of an unexampled size that a prize fighter would have envied. He was the very personification of an athlete. Finding the Indian, who was sprawling on the ground nursing his swelled wrath, Cameron, whose keen, sharp eyes by this time were flashing fire, gave him a kick which brought him to his feet with a countenance perfectly fiendish.

"You say you can whip me without my revolver?" asks the thoroughly aroused angler.

"Yes," replied the savage,

"Come on, then."

"Me don't want fight."

"Yes, but you shall fight."

And with this avowal Cameron struck him in the face with his open hand, and then the Indian, with the pent up rage bursting forth, made a vicious lunge at his fiery adversary. Cameron, who had stepped back a few feet to give freedom to his actions, parried the blow of his frantic foe with his left hand, and then he let that terrible right of his sail out with a strength that would have felled an ox. It took the Indian on the jugular below the ear and sent him to mother earth some ten feet distant, with the blood freely flowing from his nose and mouth. He lay there unconscious for a while, and when he arose to his feet he was still dazed with the terrible blow.

"Want some more?" said Cameron.

"Me got nuff."

"Now behave yourself."

And he did from that time out, but he never forgot that white man's blow, and we doubt if he ever forgave it. Such were the veteran Cameron's methods on his outings, and they were always a success. The Indians and half-breeds not only learned to respect him, but feared him as some one with supernatural powers. He is known by every Indian on the Nepigon, and, we might also add, North Shore. The veteran is now in his seventy-seventh year, and is yet hale and hearty, which he attributes as much to his open-air sports as aught else. We learned on our last trip to the Nepigon that the subdued Indian had been drowned in consequence of being too full of fire water when canoeing.

Mr. H. P. Smith, of the Chippewa House at Sault Ste. Marie, says he will never forget Cameron and his party, which every summer for many years made his house their stopping place when en route to their trouting grounds. "There were four of them, including old Ned, and they were all thoroughbreds. They were big-hearted men, splendid anglers, and ever alert for a practical joke. If the burning of my hotel would have served their purpose in carrying out any humorous frolic, they would not have hesitated a minute in applying the torch, and then setting the bill like princes. One morning one of the party being in his room espied some choice young chickens in the adjoining yard, and desiring to secure some of them procured some corn and commenced angling for them from the window. In pulling in the fifth the lady of the house, being attracted by the pitiful cries, came into the yard to see 'what on earth' was the matter with her fowls. She got there just in time to observe the fowl-fishing angler when he was reeling in the struggling chicken.

"What does this mean?" says the now angered woman.

"Beg pardon, but we are out of spring chickens and must have 'em.' What are they worth?"

"I charge fifty cents when I deliver them, but when they are stolen with hook and line one dollar is my price."

"A five dollar bill fluttered in the air and dropped at the lady's feet. At that prompt settlement she looked up at the crestfallen chicken angler, and with a sunny smile overspreading her face said:

"Do you wish to do any more fishing in my back yard this morning?"

"Not at a dollar a head, I assure you."

"The boomerang had this time recoiled heavily upon the practical joker.

"They perpetrated a joke upon me," continued Smith, "which was as amusing as it was costly. The four were seated on the front gallery of the hotel one delightful morning discussing various topics, when, on discovering my wife at the window just over them, one of them says: 'How much did Smith lose at poker last evening?' At the mention of my name, coupled with poker, my wife, woman like, was eager to hear the story to the end, and so became an attentive listener. 'He lost four hundred dollars,' said another. 'Nonsense,' still another cried, 'he lost five hundred if he lost a dollar.' The information coming to my wife, as she thought, without knowledge of the gentlemen stating it, unduly excited her, for she has an utter abhorrence of all gambling, and of course she sought me at once and gave me a lecture that I haven't forgotten to this day. All I could say or do would not satisfy her as to my innocence of the grave charge. She clung to it that such gentlemen would not falsify about it. It cost me a magnificent seal-skin cloak to bribe my wife to silence on the subject. The joking anglers never let up on it, and two years ago, when Cameron came up from Petoskey to have a talk over the halcyon days of the past, he refreshed my memory with the poker joke. Woe to the tenderfoot who ever struck this combination, for they would have his hide hanging on the fence in short order. I always breathed easier when they left on their trouting trip, but at the same time I was always glad to see these big-hearted men return. They were so overflowing with such a superabundance of the vital forces, that they must need work it off with 'cap and bells' in hand."

I am digressing and must return to camp affairs ere I lose the thread of my narrative. We concluded that evening before returning that if the wind was favorable in the morning we would take an early start and endeavor to make the "Soo" that day.

The dawn disclosed the wind in the right quarter, but with dull ashen gray clouds and a slight fog. We determined to start as soon as possible and make what distance the weather would permit. Breakfast was hurriedly finished, and in a few minutes we had the camp dismantled and everything aboard. Joe was uncertain about the weather, as there was an ugly look both overhead and in the waters, but there was a fine sailing breeze, with the white caps dancing quite lively. We started before the wind like a racer, and as we got in the misty masses of the fog, which seemed to be on the increase, our heavy overcoats were resorted to for comfort. Just before we passed the point that shut us out from a view of the camp grounds, I turned to take a last look at the now deserted place, when lo, and behold! there was our old crow with several of his companions on the beach in the act of sweeping down on our abandoned quarters. "Caw, caw, caw," cried the crows, and then on wing they rose and settled on the trees near the coveted ground. They were yet a little cautious, but before we passed entirely out of sight they had taken full possession, and were amply rewarded with the broken food that in our hasty departure we left scattered around. Down came mist-laden clouds of fog until the chill in the atmosphere seemed to crowd into your very bones.

Not a drop of comfort was to be had; even the lines of the wooded shore were fast being shut out. I tried to extract some satisfaction out of the weird shadows hanging on the shores by endeavoring to find some picturesque objects in the moving masses as they mingled with the forests. I imagined at one time I saw a Gothic castle perfect in its architecture, but the foundation and the turrets tumbled together and the imposing structure melted into misty air. Again a shepherdess and her dog in statuesque attitude seemed to leap out of the fog, but the dog's hindlegs instantly disappeared and the shepherdess lost her head and staff at the same time. Caverns and cliffs, hills and vales were abundantly carved from these moving masses, but they had such facility of getting mixed and ill-shapen that all recognition of form was impossible. Grotto and grove, the beauty of Arcadian life, were eagerly sought for, but were nowhere to be found in these incongruous forms, and the only fountain presented was that of the unshapely mist, which coldly sprayed upon us; in fact, no poetic beauty was discoverable, or could be had with the most expansive imagination. It was an elemental strife, a striking difference between the temperatures of air and water with the results which so enshrouded us as to cut us off from all that is beautiful in nature and leave us as castaways without a beacon guide. I turned to Ned in sheer desperation in expectation of getting him to exercise his vocal organ, but, on seeing him so buried in his great overcoat and shivering with the cold, I well knew he could not emit one note of melody, and so another grand scheme for solace went glimmering.

We were now getting near Goulais Bay Point and the question arose as to whether it would be safe to attempt its crossing in the fog without a compass. Joe assured me that he could hold the boat square for the point on the other side, and that the only danger to fear was the arising of a sudden storm. Ned and I considered, as we were beyond the three score, that we would not lose much in the calendar of time even if the cruel waves did take us into their safe keeping, and so we ordered the compassless boat across the nine-mile stretch. We had not gone far from the shore before we realized a strong wind and a lumpy sea. Our little boat behaved nobly, but every now and then she would take a header (is that nautical?) in some big wave, and then a shower of spray would come down upon us, much to our discomfort. It was jolly fun, I assure you, but none of us either smiled or laughed about it; it was too earnest to be trifled with.

I had read Byron's "Corsair" in the poetic days of my youth and still remembered that stanza which so smoothly glides:

"Once more upon the waters; yet once more,
And the waves bound beneath me, as a steed
That knows his rider!"

This may sound mellifluous from the deck of some man-of-war, but from a little open sailboat, that has to keep near the shore, I didn't think it at all appropriate, and concluded that Byron was no "great shakes" after all. There was no poetic fact in it for us, as the waters had a strong tendency to bound over instead of under us, and as things were rattling from one end of the boat to the other, the waves growing larger every minute, the spray dashing over us more frequently, our course all guesswork, and "The steed that knows his rider" knew us not, Byron's "Corsair" to me at that moment was a fraud and a delusion. I mean the facts, not the rhythm. I have no doubt that I could have enjoyed it on shore just then, and might not have differed from him as to its realism, but the bounding billows in that poetry had no charm for me just at that particular time; they were an aggravation I could have cheerfully dispensed with.

We had gone about three miles when Joe made the announcement that the wind had evidently let down a little.

Ned answered in melancholy tones that "it had let down to take a fresh hold."

"Here is a false prophet, Joe; shall we throw him overboard?"

"If it blows more we want him for ballast," replied Joe.

"All right, then, into the ballast he goes."

So Ned was permitted to remain and enjoy, if he could, his prognostications as ballast, if they were realized; but he was doomed to agreeable disappointment, as the wind lulled in a little while perceptibly. The fog also was lifting, as we could see a much greater distance on the lake, and soon the outlines of the wooded shore ahead of us were made manifest. Joe had the nose of the boat in direct line with Goulais Bay Point. He had held her as true as the needle to the magnet. Under such conditions our gloomy feelings soon dissipated and cheerfulness began to possess every one, and even Byron went up a notch or two as a man of great poetic genius. I had discovered great merit in his "Corsair," and readily realized that "the waves bound beneath me as a steed that knows his rider."

To add to the agreeable change, we had a glimpse of the sun's lovely face, which was striving hard to battle away the clouds of dense vapor. He soon triumphed and was as radiant as ever.

"Turning, w' th splendor in his precious eye,
The meagre cloudy earth to glittering gold."

As we neared shore the atmosphere was rapidly becoming warmer, and overcoats, in consequence, were removed. The charming change was akin to a rapid trip from the snow-clad regions of the Arctic to the balmy and fragrant air of the tropics. Ned now opened up his budget of rollicking songs about the sea, the flashing brine, the spray and the tempest's roar, the wet sheet and the flowing sea, a life on the ocean wave, and so on without end. His organ was in full play, and he so infused everybody with his vocal magnetism that a regular operatic troupe went into full rehearsal. I laugh as I now write when I think about the lively antics we all indulged in. Ned introduced an imported song with pantomimic accompaniment that made a world of fun. Each one as the song was rendered was to imitate the playing of the instrument assigned him, be it violin, flute, trombone or drum, the pieces selected on this occasion. Ned, the vocalist and leader, took the violin. Now, whenever he dropped his instrument and took up one of the others, that one was to take his and go through the pantomimic playing. All mistakes were made finable, and I assure you it took a quick eye and active mind to escape the penalty. Ned called the band to order, and all being on the *qui vive*, started off singing:

The holy man,
The gable man,
And I'll do all that ever I can,
To help the holy gable man.

And suddenly dropping his mythical violin took up the trombone, and then the fun commenced, as the remaining trinity all got mixed in the change, sometimes all drumming, playing flute or trombone or violin. Ned rapped the confused performers to order, and assessing the fines, started off again with the violin, saying:

The lovely man,
The angling man,
And I'll do all that ever I can,
To help the lovely angling man.

Ned dropping his violin for a drum just before ending caused another confusion in the band; I escaped the fine, but the half-breeds, being caught on the wrong side of the musical score, were put down for another fine. Another verse was given which had some significance in it, and which caused quick exchanges of glances between the half-breeds. It ran:

The sulky man,
The half-breed man,
And I'll do all that ever I can,
To help the sulky half-breed man.

This resulted as the others in undue confusion, merriment and fines. There are as many verses to this song as the leader's impromptu abilities will admit of—without end you might say. The shouts and laughter that greeted the conclusion of each verse made the welkin ring. It was as if a party of Venetian revelers from the carnival were returning home, overjoyed with libations of the purple wine. Shakespeare when he wrote that "Men are but children of a larger growth," had a sweet knowledge of human nature, as did also he who wrote that

"A little nonsense now and then
Is relished by the best of men."

We were now over the bay and coasting along a highly picturesque shore surrounded by the solemn silence of the slumbering rocks and trees and the heroic forms of towering pines and firs that stood out like bronzed warriors on their granite pedestals. For miles such scenery passed in pleasing review. When we reached the high hills, the Pillars of Hercules, just off Gros Cap Island, the wind had entirely died out and our sail hung perfectly lifeless. It was meridian and shadowless, and the warm sun spread in one golden glow o'er the receding wood, the rock-bound shore and the quiet waters. Not a sound reached us, not even the murmuring of the gentle ripples. Only now and then a lone bird twittered, or the snowy breast of a screaming gull flashed against the gray rocks. Everything was calm and peaceful, and the tenderness of a fleecy sky mellowed all things in the bright landscape spread before us. The shores were bathed in rosy mist, while lovely Gros Cap Island, just ahead, looked like an emerald or an amethyst set in silver, with the lighthouse tower in the far distance standing like a watchful sentinel. The view at that auspicious moment was magnificent beyond description, and as our boat drifted in expectation of a rising breeze we gave ourselves up to the ethereal softness of the balmy air and lapsed into sweet reverie and dreamy indolence, and then I murmured:

"No more, no more
The worldly shore
Upbraids me with its loud uproar!
With dreamful eyes
My spirit lies
Under the walls of Paradise."

Our *dolce far niente* was soon dissipated, as Lake Superior, true to its reputation, in a fitful mood sent us a spanking breeze that raced us o'er the arching waves into harbor at Gros Cap Island. Here we took our final meal of the trip, dried our tents, which had been deluged by the fog and spray in crossing Goulais Bay, burnished the kitchen ware, spruced up a little, and then once more were on the white-capped billows with a stiff breeze at our heels. We reached the enterprising city of the rapids about 4 o'clock, delighted beyond measure with the trip of three weeks spent in woods and on waters, and which to us will always be a delight to memory dear.

ALEX. STARBUCK.

CINCINNATI, Ohio.

The following paragraphs of Mr. Starbuck's paper were inadvertently omitted in their proper place; they should have formed the opening part of the second number of the series, printed in the issue of Feb 6:

A trapper, a full-blooded Indian, who had his tepee in our immediate vicinity, started out at twilight in his canoe to "pump" for lake trout. He had a squid heavy-weighted, over which he drew the skin of a fish, and this he kept bobbing up and down in the water, which suggested to me the idea of pumping for the coveted fish. The evening before he had caught seven by this method, but this time he returned without the quarry. He took his failure quite philosophically and ever hopeful for the future said:

"Me git 'em next time."

After we had retired in the evening the prowling canines we had driven away came nosing around our camp in search of food. They would poke their noses under the tent in such a savage manner, that Ned was fearful they would take a bite out of him and so laid for them with a heavy club. He sent several of them howling away by his well-directed blows and then they left as for good and our slumbers were peaceful the remainder of the night. In the morning we awoke only to realize that a heavy wind was prevailing and that our wished for departure was for the present delayed. Ned by this time had succeeded in possessing himself with stoical qualities, and when fully realizing in the dawn the true situation of affairs outside, turned over in his blanket with the determination of having another nap, even as he said, "if it blowed great guns for a week." I followed suit, content to await the sunny side of events.

Pete, when the blow came up in the evening, got aid from some of the Indians near by, and took our boat ashore and hauled it over into a small pond near by. Joe, who had gone to his home, which was about a mile distant, in the early hours of the evening, returned when Pete had the breakfast well under way. As we were weather bound, and likely to be for a few days, we con-

cluded, Indian-like, to have extra bills of fare for our meals. That morning Joe had brought us ten pounds of maple sugar which we had purchased of him, and which we desired to turn into syrup for our hot breakfast cakes. A beautiful half-breed, with large lustrous eyes and plaintive voice, who resided within a stone's throw of our camp, persuaded us to purchase several quarts of delicious raspberries. These, added to our already well-supplied larder of luxuries and substantial, enabled us to do something toward emulating Lucullus or some other less distinguished hero of the groaning table. As we have no desire to arouse the envy of other camping anglers, will omit the particulars of the *menu*. Suffice it to say that, while the gale held us here for two days, we feasted so royally that Ned got an idea that the gout had started in his toe. I reminded him that though our first parents ate themselves out of Paradise and that Job's children junketed and feasted together often, but that they never once complained of gout from such excesses either in the toe or elsewhere. As a matter looking to relief of that toe, which was doubtless suffering from a sensitive corn, I ordered the delicacies to be omitted for the present from the usual bill of fare. Ned soon imagined that his toe improved with the regimen of diet, but he afterward ascertained that a bunion he was doctoring with a patent salve was poisoned by the questionable remedy. He then came back to his feed, and nothing henceforth was too luxurious for the table.

CANADIAN FISHING LEASES.

Editor Forest and Stream:

The recent "protest" of the Minister of Fisheries of the Dominion of Canada seems to have given rise to considerable misapprehension, as well as apprehension, on the part of those who leased salmon fishing privileges at the recent sale in Quebec. The facts material to their interests are as follows:

The Dominion of Canada is the result of the "British North American Act" of 1867. Under this Act the separate Provinces were united to form that Dominion. It has been termed the Constitution of the Dominion, and it defines the relations of the Central and the Provincial Governments one to the other, and their reciprocal rights and powers.

Section 91 of this Act gave exclusive jurisdiction of the "Seacoast and Inland Fisheries" to the Dominion.

The question then is this: Do the words "inland fisheries" include the rod-fishings on non-navigable waters? "Non-navigable waters" are, in the well-settled common-law definition, those above the ebb and flow of the tide, whether actually boatable or not.

In the case of the Queen vs. Robertson, decided in 1882, the report of which fills nearly 100 pages in the sixth volume of the Canada Supreme Court Reports, this question was brought to an issue by reason of a lease given by the Dominion Minister of Fisheries of the salmon fishing of a portion of the Miramichi River above tidewater. This case was appealed first to the Exchequer Court of Canada and thence to the Supreme Court of Canada.

The question whether the right to lease the fishing in non-tidal waters opposite ungranted Crown Lands was in the Dominion, or in the Province in which such land was situated, was exhaustively discussed.

The decision of the Supreme Court of Canada was clear and emphatic.

The fishings on non-navigable waters were not included in the words "inland fisheries" of the Act. Such fishings were the property of the riparian owners—that is, those who own the banks of the river. As to fishings opposite ungranted Crown Lands, the right to lease was in the Province where the lands were situated, and not in the Dominion.

The uniform practice has since been in accordance with this decision, and the Province of Quebec held the recent sale directly under its authority.

The Dominion Minister of Fisheries in his recent "protest" moved directly in the face of this decision.

It becomes important therefore to consider the status of the Supreme Court of Canada in its interpretation of the law of the Dominion.

The Supreme Court of Canada corresponds closely to our Supreme Court of the United States. It is the highest appellate tribunal in Canada. Its decision is final and conclusive, except as follows: As a matter of favor, and not of right, the Judicial Committee of the Privy Council in England may grant leave to bring a further appeal before it. In this way only can a judgment of the Supreme Court of Canada be set aside. How likely a British tribunal is voluntarily to thrust its fingers into the crack between the Dominion and one of its Provinces in a mere property dispute involving but a few thousands of dollars, any one at all familiar with British Colonial policy, especially in reference to semi-independent Canada, can easily determine for himself.

Yet either this must be done and the Privy Council over-rule the Queen vs. Robinson, or the Supreme Court of Canada must be induced to reverse itself, before the Dominion Minister of Fisheries has a legal leg to stand on in any active interference with the enjoyment of the rights purchased at the Quebec sale.

Neither of these has happened as yet. Neither is likely to happen at all. Neither can possibly happen except in what may be considered the remote future as compared to the life of the Quebec leases.

Indeed it is inconceivable that the Minister can have made his "protest" with any such idea. The "protest" seems to be simply a protest and nothing more—a familiar legal step taken by him who wishes to save such rights as he may have from the consequences of an implied acquiescence in a proceeding hostile to the possibility of his right.

HENRY P. WELLS.

NEW YORK, March 7.

PROTECT POTOMAC FISHES.—The law of March 2, 1885, providing for the protection of fish in the Potomac River within the limits of the District of Columbia, expired by limitation a few days ago, and there is now nothing to prevent the hauling of seines on the spawning grounds and the consequent destruction of fish eggs. Efforts for the reenactment of the law are opposed by the owners of a few fishing shores, which cannot be rented with a protective law in operation. Hundreds of fishermen on the lower Potomac and hundreds of anglers in and around Washington are anxious to have the law revived and will hope for the renewal of protective measures, the benefits of which are plainly evident.

BUZZARD'S BAY REFORM.

Editor Forest and Stream:

As many of your readers are interested in the sea fisheries of southern Massachusetts, and especially of the waters of Buzzard's Bay, I think that the action of the town of Fairhaven at its annual meeting on Monday last cannot fail to afford them the greatest satisfaction.

It has long been my opinion that the setting of pounds, weirs, traps and other fixed apparatus for the catching of fish has been destructive of the fisheries of the sea coast, and has been the great cause of the scarcity of many of the species of our best food fishes, in which our waters formerly abounded.

About twenty years ago I, with a few others, commenced an attack upon them which we have maintained in spite of constant and repeated defeats, down to this day.

As I stated in my communication to you of June 8, 1889, published in your issue of July 4 of that year, we have always been met and opposed by a powerful combination of several interests, backed up by any amount of money, and sustained, so far as any restrictive legislation was asked for, by legislative committees chosen specially to look out for and protect those interests.

By persistent efforts and by making frequent use of the public journals and other means of calling the attention of the people to a matter of so much consequence to them, and of which they were generally so little informed, we have been able to procure the passage of some laws from year to year to regulate and control though not to prohibit the use of such destructive engines and except that a law was passed in 1870 to protect the fisheries in the headwaters of Buzzard's Bay absolutely prohibiting the use of any nets or constructing or maintaining any weirs, pounds or traps northerly of a certain line.

In 1889 another act was passed which provided that "Whoever constructs or maintains a fish weir in tide waters without first having obtained authority to do so from the Selectmen of the town or the Mayor and Aldermen of cities in which such weir is constructed or maintained, should be liable to a fine, to be indicted and enjoined therefrom."

The authority thus given was to be in the form of a written license for a term not exceeding five years.

These laws are now in force on the east side of the Acusnet River in the town of Fairhaven, and running out into Buzzard's Bay there is a narrow neck of land about three miles in length called Sconcut Neck. This has been found to be the favorite resort of the food fishes of the sea in the early part of the season, along the shores of which they come to deposit their spawn.

Aware of this and taking advantage of the provision of the law made for that purpose, the fishermen have for the last twenty years lined the shore with pounds, weirs, nets and traps, in numbers varying from four or five to twenty-four or twenty-five, capturing in them vast numbers of the best food fishes of the sea in their spawning season. Those that were fit for sale were thrown upon the market, and the rest into the compost heap for manure.

Twenty years ago we began our efforts to stop the licensing of these ponds and weirs in the waters of Fairhaven by petitioning the Legislature year after year, and by repeated attempts to get the town of Fairhaven to instruct its Selectmen to grant no licenses. Five years ago a Board of Selectmen, of which a very prominent trapman (as we call them) was chairman, granted licenses to himself and others for the term of five years. As there was no way to avoid those licenses during that term, about three years ago we were able to get the town to instruct the Selectmen not to grant licenses for a longer term than to the longest term of licenses then unexpired.

The next year the same thing was done, the public sentiment all the while increasing against the pounds and stationary apparatus for fishing, and so on until this year, when all the licenses having expired, a Board of Selectmen has been chosen who will certainly carry out the instructions of the town, and the town has voted by a large majority to grant no more licenses to set pounds, weirs or traps within the limits. This will do entirely away with from twenty to twenty-four pounds and weirs, and leave the shores of Fairhaven free for the passage, increase and growth of the fishes.

Our New York and other non-resident friends who come down here to see us in the summer, and fish in our waters, we hope will appreciate what we have done, and congratulate themselves as well as us.

The Southern Massachusetts Fish and Game League has been very active in this work, and its triumph now over so many obstacles ought to insure to it a large increase of non-resident members. There is a great deal yet to be done, and as our enemies are wide awake, in order to save our fish and our fisheries no efforts must be relaxed, no vigilance laid aside.

Of course, no great increase in the number of fish can, for a year or two, be expected; but we shall find that they will be distributed according to their natural instincts, and that millions of fishes will be set free to deposit their spawn and to mature for future increase and growth. The pound men have enjoyed the monopoly of the fishes for more than a quarter of a century, and it is only fair that the people now should come in for their share of a property so valuable to them and so peculiarly their own.

NEW BEDFORD, March 5.

GEO. H. PALMER.

ABUNDANCE OF BLUEFISH.—Off the mouth of Albemarle Sound bluefish are reported to be present in great numbers, attracted probably by the shoals of river herring, or alewives. Thirty thousand alewives were recently taken in a single haul of a seine in the Roanoke Island region. It may not be generally known that alewives migrate along our east coast in immense schools every year, only the sexually mature ones entering streams, while the immature fish remain at sea, where they are destroyed in myriads by bluefish and sharks.

NAMES OF THE HELGRAMITE.—On the North Branch of the Susquehanna River helgramites have a variety of names, among them being, "clippers," "dobsons," "helgramites" and "devil-catchers." About three crops are found in the river during the year. They are plentiful late in the fall, but at two or three intervals in summer they cannot be obtained. When the helgramite shows a red or yellowish color on its head, it works to the shore and hides under stones; later it goes into the sand to complete its development.—GEO. W. LUNG (Wilkesbarre, Pa.)

A NEW SNELL FOR TARPON.

Editor Forest and Stream:

I send with this a new form of tarpon snell, which I think is not open to any of the objections which have been made to all of the existing snells. Ever since it was found that the tarpon could be taken on a small line with a rod and reel, the tarpon fishermen have been hunting for a snell which will hold the tarpon, and yet let the troublesome shark go free. All the varieties of chain and wire snells now in use will hold the shark, and that means either a great waste of time and labor, or the loss of a portion of the line. The fisherman who uses a heavy rod and a large line and is thereby enabled to gaff his tarpon in twenty or thirty minutes, will succeed very well with the ordinary cotton snell, but if the rod and line are light, and he has to play his fish from one to two hours, the chances are much against him, for the sandpaper-like jaws of the tarpon will chafe off in that time any unfortified cotton.

Last April I visited St. James City, Pine Island, with two of my friends, and in four days we caught eight tarpon, the two largest (189lbs. and 133lbs.) falling to my lot. Then I found how great an annoyance the shark really was, and how expensive a sport tarpon fishing might become, if each time a shark was hooked there was a loss of a portion of the line.

With the hope of avoiding this trouble I made a few snells like the one I send you, and last November I used them at St. James City with perfect success. An experience of one hour and fifty minutes with a tarpon did not show any abrasion of the snell, and yet even the smallest mark of three or four feet in length could cut it easily, thus enabling me to save the line, and what is even of greater importance, to avoid scaring the tarpon. As it is a shy fish, this advantage is a great one.

The snell I send you is of my own make and is made as follows: Take a small cable-laid cotton line and worm the lays, phosphor bronze wire (No. 31 with a tensile strength of about 74lbs.) then eye-splice one end to the ring on the hook, and the other end to a box swivel. Then coat with paraffine and lampblack; wipe off the excess of paraffine and the snell is ready for use. To summarize, its advantages are as follows: (1) It will hold the tarpon, (2) it will not hold even a small shark, (3) it is all and flexible and will not alarm the fish, (4) if made three-feet lengths, the fisherman can after losing one tarpon, bend on another one and his snell is as good as new, only being about 4in. shorter. Indeed last November I lost three hooks off of one snell before it became too short for use. (5) These snells can easily be made by the fisherman himself at a cost of about twenty cents apiece, thus affording him amusement and enabling him to practice economy at the same time. For those who do not care to make them, I will state that John Krider, Philadelphia, will fill any orders. J. V. INGHAM.

FISHING WATERS NEAR NEW YORK.

THE weather changes so rapidly that it is enough to bewilder the angler. March 6 in the vicinity of New York we had sleighing, snowshoeing and tobogganing, while at the same time bluebirds and blackbirds were twittering and snow buntings whirling about in flocks. This morning in the suburbs the thermometer registered 5° above zero. One thing certain, it has put a stop to poaching, for we are sorry to have to say that a good many trout were being taken contrary to law. Particularly in New Jersey the change of the open season of March 1 to April 1 was apparently forgotten.

The time is rapidly approaching when the ardent angler begins to consider where he can go to cast his lines to advantage on the opening day. And we will endeavor to point him to the best of our ability, but we must say it is rather a difficult task, for as we have mentioned before in these notes, nearly, if not all, trout waters in the vicinity of New York are private. Of course there is very little trout fishing in the beginning of April, excepting on Long Island. Very early trips to these waters are apt to be disappointing. Trout will not rise to a fly so long as there is any snow-water running in the streams, and if they do take bait it is in a stupid picker-like fashion that affords but poor sport and little satisfaction to the fisherman.

In May, say about from the 15th to the 20th, the weather is generally settled and the streams are in good condition, then the fly-fisherman is in his glory. We consider for our mountain streams that the last two weeks in May and the first two weeks in June are the nicest of the whole season. After that time the trout begin to fight shy of artificial flies, at least in the day time, and the angler must content himself with the early morning and the evening fishing.

The nearest waters open to the public are to be found in Glen Cove, on the north side of Long Island, and at or near Freeport, on the south side. If the angler has sufficient influence to get a permit from the Brooklyn authorities, he will find some very fair fishing at Massapequa pond. There were over 300 trout killed there on the first 10 days of April last spring. This pond, formerly the property of Mr. Floyd-Jones, now belongs to the Brooklyn Water Works, and it has always been considered one of the finest waters on the island. Once in a while the rains in that neighborhood and beyond, as far as Maitville, afford a little good fishing. The hotel-keepers at these places can generally put the angler who stops with them on the track of trout fishing if they feel inclined to.

Another famous place on the Island is Smithtown. We believe that quite a number of trout are taken there every spring, and there, as elsewhere, it would pay the visitor to get on the right side of the hotel-keeper. Stellingworth, at Islip, also used to be able to give his guests fair fishing. We do not know how it is at present, but it would be worth while for the angler to drop in a line.

Later on, the streams at Henryville (East and West roadhead's creeks) and so on up the road to Pocono and Poyhanna afford fair fishing, and the Bushkill near Roudsburg is considered excellent. For information regarding the last named stream, write to Harry Peters, Peters House, Bushkill, Pike county, Pa. Then there are streams near Milford and Dingman's Ferry, Pa., and also about Williamsport, Pa. After May 1 the trout streams of Ulster, Sullivan and Delaware counties, N. Y., are open and easily reached by the Ontario & Western R. R., and thanks to the liberal stocking done by this road, the angler will find excellent fishing in that section.

The upper waters of the Bronx, in Westchester county, N. Y., afford a few trout to the experienced angler in the early part of the season, but one must be well posted to be able to find them. Years ago the Bronx was one of the finest trout streams in this State. The best flies for the early season are the scarlet-ibis, coachman, royal-coachman, Abbey, grizzly-king, professor, queen-of-the-water, Cahill, cowdung, Lowery, black-gnat, blue-dun, great-dun, Gen.-Hooker, Imbrie, Beaverkill, March-brown and brown-hen. Size of hooks from 8 to 10 spout.

We sincerely trust that the angler who makes use of the above information will respect the six-inch law and remember that his future sport, as well as that of his brother anglers, depends on his observance of this law.

THE MAYOR'S CREVALLE.

OH! ho! What's the matter with Peekskill's mayor? A little sloop moored to a palm tree on the shores of a lovely cove. A very wet man in his underclothing standing on the forward deck drying himself in Florida's tropical sun. Coat and pants dripping with brine hanging in the rigging. Papers, matches, tobacco, pocket-book spread out upon the cabin deck to dry. A broken fishing rod and a broken line. All alone? Yes, the president of Peekskill's Common Council stood there all alone, but he was prouder than when he heard the result of the last municipal election. He had caught an enormous crevalle, the largest ever taken in Florida waters.

When you know that it takes pretty good maneuvering and a strong line to land a crevalle 2ft. long; that they dart through the water like a flash of lightning; that they run out a hundred feet of line against all the tension you dare give it, and sweep round the arc of a circle of which your line is the radius, then rush in upon you a hundred times faster than any multiplying reel can take up the slack, and then when you think you have them tamed do the same thing over again, you can imagine what kind of a fight a fish of that kind 3ft. long and 23in. girth would make. Few have ever been caught that were over 2ft. long.

That long narrow strip of land on the east coast of Florida, between the ocean and the sound, has a beautiful cove just opposite the southern point of Merritt's Island. The water is so deep close to shore that almost any Indian River sailboat can land her passengers directly upon the hard shell beach. The largest shell mound in this country is on the shores of the cove. In the winter time the ground beneath the thick wild grove back of the mound is all bestrewn with luscious-looking oranges. Mind you, I say luscious-looking. Well, they are not quite as sour as lemons.

Pick your way eastward through this thicket, climb over the trunks of fallen orange trees that have apparently died of old age, dodge the thorns of young orange trees, stop and admire the great India rubber trees with their dark green, glossy foliage, and at the same time pity the poor oaks and palms that they are hugging the life out of; stop again and unhook yourself from a wait-a-bit vine with its cat like claws; don't attempt to run down Spanish bayonets and cacti, take your time and walk around the saw-palmettoes, and you will presently come to a monumental mound that was constructed by a race of people who evidently liked to work better than the people that we are in the habit of calling the aborigines of this country. That's where Will Pierce—by the way, I believe that pretty nearly all the manufacturers of guns and breeders of hunting dogs know Mr. W. H. Pierce, of Peekskill—that's where he had piloted Mayor Free's son Charley—this part of the world is not new to Will—and where those vandals were searching for the heroes of a long extinct race, the enthusiastic sportsman had the racket with the big fish. The skipper had taken his cast net and gone half a mile up the shore to catch some bait. The sloop was moored before a little Moorish castle which sets back only a few steps from the shore in the shade of a beautiful grove of palms. A grassy lawn stretches from the house down to the beach of the lovely cove. There is no other dwelling along the shore for many miles in either direction. The miniature castle belongs to "The Hermit," and that solitary individual was hoeing in his banana patch way back in the garden, so Mr. Free had "a great time and nobody to it."

After the crevalle had run out half a hundred yards of line, making the reel hum like a spindle, after shooting through a semi-circle like a meteor until he was almost stranded on the shore; then, whirling, flashing back again, making the water foam and seethe along the same curved path, after running in and darting out again, and after becoming almost exhausted, he is towed in by the Hudson River man, who wonders whether he has hooked a whale or whether it is only a porpoise. When the fish is brought up alongside he makes one feeble effort, runs under the bow and the line catches in the bobstay and parts. The fisherman is overboard in an instant, snatches the short piece of line that his prize is trying to get away with, leads him up as he would a broken colt, seizes him in his hands and throws him on deck. MOSELEY.

Tropic, Florida.

WEST VIRGINIA STREAMS.—Charlestown, W. Va.—Let my brother anglers try some of the West Virginia waters and become convinced that our mountain trout fishing is as fine as any this side of California. Our bass fishing cannot be beaten. Whitesalmon fishing is fine in season; pike fishing is good at times, as are many other kinds of fishing in our rivers and small streams that make it interesting to anglers. Last summer Mr. G. K. and myself devoted one day of each week to trolling in the Elk River, a tributary of the Great Kanawha, and the greatest estimate of fish caught in five hours was 63, and the lowest estimate was 23. I name five hours for fishing, as we have to drive or row ten miles to reach the trolling water. We used the white and silver belly phantom minnow and sometimes the spook bait. The fishing was a success at times. The largest bass caught, 5½lbs., the smallest ½lb. The most I ever caught in one day was in September, 1884, from sunup to sundown, 96 bass and 8 white salmon, the largest salmon weighing 13½lbs. and the largest bass 5½lbs. This trolling was done in the Elk River some forty-five miles from its mouth.—DICK.

BLACK BASS FISHING IN NEW YORK STATE opens May 30; the law was changed to accommodate anglers who wish to go fishing on Decoration Day, and quite regardless of the fact that the spawning season is not then over.

KENTUCKY FISH AND GAME.

LOUISVILLE, Ky., March 6.—A heavy rise in all the rivers has completely ruined what little fishing there was in Kentucky and Indiana, and as the waters are receding very slowly it will delay what promised to be an early and excellent season for anglers. The Ohio River rose to a height of nearly 34ft., driving back the Potomac shad which were until then coming up over the falls in great numbers. The Kentucky River overflowed its banks and reached a stage unmarked in the history of the Corn-cracker State. Yellow bass were plentiful at the headwaters of this stream, but the muddy waters have caused a decided abatement in piscatorial sports up there.

The Cumberland River, too, went on the rampage, and the large white salmon and fat bass cannot be caught until the mud settles and the water recedes to its usual stage.

In Indiana all the streams were flooded and the fishing received a cold, cruel blow. The work of putting in fish ladders over there has been stopped by the raging waters. These ladders were ordered placed at all dams by the U. S. Fish Commission, that the finny tribe might ascend to the headwaters and deposit their spawn away from the reach of the larger fish which inhabit the deeper waters below. The Commission will see that the work is resumed as soon as the waters are low enough to admit of the progress of the work.

The high water has also knocked spring shooting higher than Gildero's kite. The Diamond Island Shooting Club had intended to take the steam yacht the City of Charters and spend a week or so on their excellent grounds shooting geese and ducks, which are plentiful but cannot be reached, as the water is over all of the island save where the club house—one of the finest in the West—is located. The club members are all sadly disappointed.

Equally sad are the members of the Hovey Lake Duck Club, which has a ten years' lease on 7,000 acres of lake and swamp on the south side of the classic Ohio, a short distance below Uniontown, Ky. The land is owned by Governor Alvin Hovey, and the club talks of purchasing it outright. Both ducks and geese are very plentiful, but the water is several feet deep over the entire reserve and the shelter is all under water.

Appropos to all these setbacks the local dealers in tackle are doing a good business, and the indications are that when the season does open up the entire State will be covered by fishermen from Louisville. C. A. D.

LOUISVILLE, March 5.

RANDOM CASTS.—IV.

A TRUNK rod, as far as action is concerned, is just about good for what its name indicates; to lay in a trunk. The multiplicity of ferrules, meaning so many unyielding spots, and the combination of short tips and joints, make it a poor substitute for either a fly or bait rod.

Not satisfied with the discrepancies of that sham, the combination fly and bait rod, we are now to be afflicted with a combination rod and reel. Whether this is any worse than the trunk botch, is a matter that little time need be wasted over; it has only to be seen to be avoided. To a schoolboy, possibly, its cheapness may be its chief claim for ownership.

Either in the woods or on the shores and bays, an oil-skin coat, such as is worn by sailors and others where rough wear is the rule, is far superior to a rubber one. It will outlast three of the latter, is cleaner, is of small cost and decidedly more comfortable. Those known as half coats, reaching just below the knees, are the most convenient when rubber boots are worn. Your guide or boatman will be very glad of it when you start for home.

The Cracker fly, as tied by Mills from the pattern of Dr. Geo. Trowbridge, is by far the most killing for Florida fishing that has yet been tested. It is too gay and complicated, however, for me to attempt to describe it with clearness.

Some want the earth—and don't get it. Others pretend to have something that is better than anything else on earth. Fishing tackle offers no exception to these claimants and still, somehow or other, there remain "as good fish in the sea as ever came out of it." BIG REEL.

THE NEPIGON.—In his address as president of the Board of Trade of Port Arthur, Ont., Mr. Geo. T. Marks suggests in view of the fact that the number of visitors to the far-famed Nepigon River increases annually since the completion of the Canadian Pacific Railway: "The Nepigon is certainly the king of American trout streams, and it is doubtful if the world has a stream in which disciples of Izaak Walton can find so much sport. The fishing on this river is good for all time if the necessary attention be given it; if not the next two years will see it badly depleted. At present American visitors only are charged a nominal fee for the privilege of fishing there. This is not right. If a fee be charged, it should be irrespective of nationality. I think it is clearly the duty of the Government to preserve the stream against the wanton slaughter which so often takes place. An overseer should be placed on the river during the season, who would travel up and down and prevent such practices as are bound to be injurious to the proper preservation of the sport. A thorough-going sportsman does no harm; he will not catch so many fish that they have of necessity to be left rotting on the banks, as has been the case so often in the past."

SUSQUEHANNA DACE.—About midsummer in 1873, according to Mr. Geo. W. Lung, there was great mortality among the white chubs or dace (*Semotilus atromaculatus*) in the North Branch of the Susquehanna River at Wyalusing, Pa. There was a freshet in the stream. The chubs were white and bloated; they were floating in sight constantly for six or seven hours in Mr. Lung's observation, and were said to have been seen for several days. It was a customary thing to catch more or less of these dace when fishing, but after this mortality for two or three years they were seldom taken, and the first of these years scarcely mentioned. The cause of their destruction was unknown. At the present time the species is abundant again in the river. Mr. Lung has caught white chub in Wyalusing Creek weighing 3lbs. These are the largest he has ever seen.

COSTLY CONNECTICUT TROUT.—Irvin W. Talbot, of East Granby, was brought before Justice Sidney E. Clarke, of this city, at Bloomfield yesterday, for a violation of the trout law. Talbot pleaded guilty, and his fines and costs averaged \$17.42 per trout—a luxury which but few can indulge in at these prices. President A. C. Collins of the Connecticut Association for the Protection of Game and Fish of this city appeared for the State. The association have had an eye on Talbot for some time, and at last they found him fishing in Griffin's Brook, in North Bloomfield, last month. Talbot is an old offender—just the kind of parties that the long-named society likes to tackle. The trout law is not off until April 1.—*Hartford (Conn.) Telegram-Record, March 8.*

THE SOUTH SIDE SPORTSMEN'S CLUB of Long Island held its annual meeting last Tuesday evening in Parlor 4 at the Hotel Brunswick and elected the following officers for the ensuing year: President, Roland Redmond; Vice-President, H. Duncan Wood; Treasurer, Geo. P. Slade; Secretary, Francis O. de Luze; Counsel, Geo. G. DeWitt, Jr.; Executive Committee for two years, H. I. Nicholls, F. O. de Luze, G. H. Redmond, John G. Heckscher.

INDIANAPOLIS, Ind., March 4.—There has been fishing in White Run off and on since Christmas, and numbers of our black bass which beat the world have been caught. A 7½ lb. channel catfish was taken from a troll line two or three weeks ago. As we have had no ice the season bids fair to open rich and at least a month earlier than usual. We are probably behind all other States in pisciculture, but are picking up.—*ENOS B. REED.*

THE SALMON OF ALASKA will be the subject of a lecture before the Scientific Societies of Washington, March 20, by Dr. Tarleton H. Bean.

NETS ARE A NUISANCE.

IN advance of its publication elsewhere we give to-day the full text of the recent decision rendered by the Court of Appeals of this State, declaring the constitutional integrity of the statute which declares nets unlawfully set to be nuisances, and as such subject to summary destruction:

GEORGE W. LAWTON and another, appellants, vs. **WILLIAM N. STEELE**, respondent. New York Court of Appeals, Feb. 23, 1890. E. C. Emerson for appellants; Elton R. Brown for respondent.

ANDREWS, J. The conclusions of the trial judge that Black River Bay is a part of Lake Ontario, within the meaning of Chap. 146, of the Laws of 1888, and that the nets set therein were set in violation of the act, Chap. 391, of the Laws of 1889, as amended by Chap. 317, of the Laws of 1883, were affirmed by the General Term. The trial judge, in his careful opinion, demonstrated the correctness of these conclusions, and nothing can be added to reinforce the argument by which they were sustained.

The point of difference between the trial court and the General Term relates to the constitutionality of the section of the act of 1889, as amended in 1883, which declares that any net found, or other means or device for taking or capturing fish, or whereby they may be taken or captured, set, put, floated, had, found, or maintained in or upon any of the waters of this State, or upon the shores or islands in any waters in this State, in violation of any existing or hereafter to be enacted statutes or laws for the protection of fish, is hereby declared to be, and is a public nuisance, and shall be abated or summarily destroyed by any person, and it shall be the duty of each and every (game and fish) protector aforesaid and of every game constable to seize and remove and forthwith destroy the same * * * and no action for damages shall be maintained against any person for or on account of any such seizure and destruction.

The defendant justified the seizure and destruction of the nets of the plaintiff in a game pond, under this statute, and established the justification, if the Legislature had the constitutional power to authorize the summary remedy provided by the section in question. The trial judge held the act in this respect to be unconstitutional, and ordered judgment in favor of the plaintiffs for the value of the nets. The General Term sustained the constitutionality of the statute and reversed the judgment. We concur with the General Term for reasons which will now be stated.

The legislative power of the State which by the constitution is vested in the Senate and Assembly (Sec. 1, Art. 3), covers every subject which in the distribution of the powers of government between the legislative, executive and judicial departments, belongs by practice or usage, in England or in this country, to the legislative department. The State declares the power to be withheld or limited by the constitution itself, and subject also to such restrictions upon its exercise as may be found in the constitution of the United States. From this grant of legislative power springs the right of the Legislature to enact a criminal code, to define what acts shall constitute a criminal offense, what penalty shall be inflicted upon offenders, and generally to enact all laws which the Legislature shall deem expedient for the protection of public and private rights, and the prevention and punishment of public wrongs. The Legislature may not declare that to be a crime which in its nature is and must be under all circumstances innocent, nor can it in defining crimes, or in declaring their punishment, transgress any fundamental right secured by the constitution. But it may, acting within these limits, make acts criminal which before were not so, and may extend the punishment in future cases where before none could have been inflicted. This in its nature is a legislative power which by the constitution of the State is committed to the discretion of the legislative body. (Barker vs. People, 3 Cow. 680; People vs. West, 106 N. Y. 293.)

The act in question declares that nets set in prohibited waters are public nuisances, and authorizes their summary destruction. The State declares that the setting of such nets is a public nuisance, not known to the common law, nor declared to be such by any prior statute. But we know of no limitation of legislative power which precludes the Legislature from enlarging the category of public nuisances, or from declaring places or property used to the detriment of public interests or to the injury of the health, morals or welfare of the community, public nuisances, although not so at common law. There are, of course, limitations upon the exercise of this power. The Legislature cannot use it as a cover for the withdrawing property from the protection of the law, or arbitrarily, where no public right or interest is involved, declare property a nuisance for the purpose of devoting it to destruction. If the court can judicially see that the statute is a mere evasion, or was framed for the purpose of individual oppression, it will set it aside as unconstitutional, but not otherwise. (In re Jacobs, 98 N. Y. 98; Harlan vs. Mugler v. Kansas, 123 U. S. 661.) There are numerous examples in recent legislation of the exercise of the legislative power to declare property held or used in violation of a particular statute, a public nuisance, although such possession and use before the statute was lawful. The prohibitory legislation relative to the manufacture or sale of intoxicating liquors in various States, defines the manufacture, sale or possession of such liquors as a public nuisance, and is accompanied by provisions declaring the place where liquor is unlawfully kept for sale, as well as the liquor itself, a common or public nuisance, and while the validity of prohibitory statutes in their operation upon liquors lawfully acquired or held before their passage, and in respect of the procedure authorized thereby, have been the subject of much contention in the courts, the right of the Legislature by a statute to impose upon property held or used in violation of law, the character of a public nuisance, is generally admitted. (See Wynehamer v. People, 13 N. Y. 578; Fisher v. McGirr, 1 Gray; Mugler v. Kansas, supra.) The law-making power is not exhausted by single exercise, nor limited to subjects covered by the common law.

The legislative power to regulate fishing in public waters has been exercised from the earliest period of the common law. The statute 2 H. 6, C. 15, prohibited the use of nets in the Thames if they obstruct navigation or the passage of fish. Lord Hale, in his treatise De Jure Maris, page 23, says that "the fishing which the subject has in this or any other public or private river, or creek, fresh or salt, is subject to the laws for the conservation of fish and fry, which are many." In this State many statutes have been enacted, commencing at an early period, regulating the

right of fishing in the waters of the State, prohibiting the use of nets or the taking of fish at certain seasons, and for the protection of certain kinds of fish. (I. Rev. St. Ed's Ed., 687, et seq. 4 id. pg. 96 et seq.) It has become a settled principle of public law that power resides in the several States to regulate and control the right of fishing in the public waters within their respective jurisdictions. (Smith v. Maryland, 18 How. U. S. 71; Hooker v. Cummings, 20 John. 101; Smith v. Levinus, 8 N. Y. 472; Kent. Com. 415.) We think it was competent for the Legislature, in exercising the power of regulation of this common and public right, to prohibit the taking of fish with nets in specified waters, and by its declaration to make the setting of nets for that purpose a public nuisance. The general definition of a nuisance given by Blackstone, 1 Vol. 3, pp. 215, is "anything that worketh hurt, inconvenience or damage." It is generally true, as stated by a recent writer (Wood on Nuisances, Sec. 1), that nuisances arise from the violation of the common law, and not from the violation of the public statutes. But this, we conceive, is true only where the statute creates a right or imposes an obligation and affixes a penalty for its violation, or gives a specific remedy which by the terms of the statute or by construction is exclusive. (See Bulbrook v. Goodere, 3 Burr. 1770.) But the principle stated has no application where the statute is declaratory of a pre-existing right or property used for a noxious purpose shall be deemed a nuisance.

The Legislature in the act in question, acting upon the theory and upon the fact (for so it must be assumed) that fishing with nets in prohibited waters is a public injury, have applied the doctrine of the common law to a case new in instance but not in principle, and made the doing of the prohibited act a nuisance. The act is not a declaration of a pre-existing right or property, but arises upon the provision in the second act of 1883, which authorizes any person, and makes it the duty of the game protector to abate the nuisance caused by nets set in violation of law, by their summary destruction. It insisted that the destruction of nets by an individual, or by an executive author so authorized, without any judicial proceeding, is a deprivation of the owner of the nets of this property, and is a denial of the right of private property. This question was referred to by Southard, J., in Harlow v. Mayor, etc. (9 Wend., 590). He said: "If this is a case in which the corporation or any other person had a right to summarily remove or abate this obstruction, then the objection that the appellants by this course of proceeding may be deprived of their property without due process of law, or trial by jury, has no application. In a summary proceeding, such as this, trial by jury are not appropriate, and have never been used in such cases." (See also opinion of Edmunds, Senator, in same case, p. 609.)

In the License Tax case (5 How. U. S. 504), Judge McLean speaking of this subject said: "The acknowledged police power of a State often extends to the destruction of property. A nuisance may be abated. Everything prejudicial to the health and morals of a city may be removed." In Kirkwell v. Newport (35 N. Y. 508) Porter speaking of the constitutional provision said: "There are many examples of summary proceedings which were recognized as due process of law at the date of the constitution and to them the prohibition has no application." Quarantine and health laws have been enacted from time to time from the organization of our state government, authorizing the summary destruction of infected cargo, clothing or other articles, by or on behalf of the state, and no doubt have been sustained by their constitutionality. In Harlow v. Mayor, etc. (supra), a question was raised as to the validity of a city ordinance, subjecting a float moored in the Albany Basin to summary seizure and sale upon failure of the owner to remove same after notice. The court held the ordinance to be void as not within the power conferred upon the city by its charter, but it was held that the common law right of abatement existed although the removal of the float in question involved its destruction. Van Wormer v. The Mayor (15 Wend. 203), sustained the right of the corporation to dig down a lot in the city, to abate a nuisance, although in the process of abatement buildings thereon were pulled down. In Meeker v. Van Rensselaer (15 Wend. 397), the court justified the act of the defendant, as an individual citizen, in tearing down a filthy tenement house which was a nuisance to prevent the spread of Asiatic cholera.

These authorities sufficiently establish the proposition that the constitutional guaranty does not take away the common law right of abatement of nuisances by summary proceeding without judicial trial or process. But in the process of abating a nuisance there are limitations, both in respect of the agencies which may be employed, and as to what may be done in execution of the remedy. The general proposition has been asserted in text books and especially in the treatise on public nuisances, that the right of public nuisances. But the best considered authorities in this country and England now hold that a public nuisance can only be abated by an individual where it obstructs his private right or interferes at the time with his enjoyment of a right common to many, as the right of passage upon the public highway, and he thereby sustains a special injury. (Brown v. Perkins, 12 Gray 89; Mayor of Winchester v. Smith, 10 Q. B. 219; Taylor v. The Mayor, 22 L. R. 278; Plain Bridge Co. v. Smith, 30 N. Y. 44; Harrower v. Ritsen, 37 Barb. 301.)

The public remedy is ordinarily by indictment for the punishment of the offender, wherein on judgment of conviction the removal or destruction of the thing constituting the nuisance, if physical and tangible, may be adjudged, or by bill in equity filed in behalf of the public, to remove the place, or to improve the public nuisances. But the best considered authorities in this country and England now hold that a public nuisance can only be abated by an individual where it obstructs his private right or interferes at the time with his enjoyment of a right common to many, as the right of passage upon the public highway, and he thereby sustains a special injury. (Brown v. Perkins, 12 Gray 89; Mayor of Winchester v. Smith, 10 Q. B. 219; Taylor v. The Mayor, 22 L. R. 278; Plain Bridge Co. v. Smith, 30 N. Y. 44; Harrower v. Ritsen, 37 Barb. 301.)

The infliction of punishment for crime is the prerogative of the court and cannot be usurped by the Legislature. The Legislature can only define the offense and prescribe the measure of the punishment where guilt shall have been judicially ascertained. But as the Legislature may declare nuisances, it may also, where the nuisance is physical and tangible, direct its summary abatement by executive officers, without the intervention of judicial proceedings, in cases analogous to those where the remedy by summary abatement existed at common law. Marvin, J., in his able opinion in Griffith v. McCullom (46 Barb. 561), speaking of the remedy for the abatement of nuisances, says: "That which is exclusively a common law for public nuisance cannot be abated by the private acts of individuals. The remedy is by indictment or criminal prosecution, unless the statute has provided some other remedy."

The cases of Hart v. The Mayor, etc. (supra), Van Wormer v. Albany (supra) and Meeker v. Van Rensselaer (supra) show that the public remedy is not in all cases confined to judicial prosecution. But the remedy by summary abatement cannot be extended beyond the purpose implied in the words, and must be confined to what is necessary to accomplish it, and here we think that the stress of the question now presented cannot be denied that in many cases a nuisance can only be abated by the destruction of the property in which it consists. The cases of infected cargo or clothing and of impure and unwholesome food are plainly of this description. They are nuisances *per se*, and their abatement is their destruction. So also there can be little doubt, as we conceive, that obnoxious signs, and implements only of this kind, may be destroyed as a nuisance, and that the process of abating the nuisance they create, if so directed by the statute. The keeping of a bawdy house, or a house for the resort of lewd and dissolute people, is a nuisance at common law. But the tearing down of the building so kept would not be justified as the exercise of the power of summary abatement, and it would add nothing, we think, to the reason, that a statute was produced which authorized the summary destruction of such a house as a remedy. The nuisance consists in the use of the property in the conduct of the owner or occupants of the house, in using or allowing it to be used for the immoral purpose, and the remedy would be to stop the use. This would be the only mode of abatement in such case known to the common law, and the destruction of the building for this purpose would be in the nature of a common law remedy. (See Barker v. The Mayor, 15 Barb. 508; Bely v. Commonwealth, 25 Pa. St. 503; Ely v. Supervisors, etc., 30 N. Y. 297.)

But where a public nuisance consists in the location or use of tangible, personal property, so as to interfere with or obstruct a public right or regulation, as in the case of the float in the Albany Basin (5 Wend. 571), or the nets in the present case, the Legislature may, we think, authorize its summary abatement by executive agencies without resort to judicial proceedings, and any injury or destruction of the property necessarily incident to the exercise of the summary jurisdiction interferes with no legal right of the owner. But the Legislature could not go further. It could not decree the destruction or forfeiture of property used so as to constitute a nuisance as a punishment of the wrong, nor even, we think, to prevent a future illegal use of the property, if

not being a nuisance *per se*, and appoint officers to execute its mandate. The plain reason is that due process of law requires a hearing and trial before punishment or before forfeiture of property can be adjudged for the owner's misconduct. Such legislation would be a plain usurpation by the Legislature of judicial powers and under guise of exercising the power of summary abatement of nuisances, the Legislature cannot take into its own hands the enforcement of the criminal or quasi-criminal law. (See opinion of Shaw, Ch. J. in Fisher v. McGirr, supra, and in Perkins v. Brown, 12 Gray 89.)

The inquiry in the present case comes to this, whether the destruction of the nets set in violation of law, authorized and required by the act of 1883, is simply a proper, reasonable and necessary regulation for the abatement of the nuisance, or transcends that purpose, and is to be regarded as the imposition and infliction of a forfeiture of the owner's right of property in the nets, in the nature of a punishment. We regard the case as very near the border line, but we think the legislation may be fairly sustained on the ground that the destruction of nets so placed is a reasonable incident of the power of the abatement of a nuisance. The owner of the nets is deprived of his property, but not as the direct object of the law, but as incident to the abatement of the nuisance. Where a private person is authorized to abate a public nuisance, as the case of a house built in a highway, or a gate across it, which obstructs a public right, the person so authorized is long ago held that he was not required to observe particular care in abating the nuisance, and that although the gate might have been opened without cutting it down, yet the cutting down would be lawful. (Lodie v. Arnold, 2 Salk. 458, and cases cited.) But the general rule undoubtedly is that the abatement must be limited by necessity, and no wanton and unnecessary injury must be committed. (3 Bl. pg. 6, note.) We think the Legislature may be fairly sustained with the use of care be removed without destroying them. But in view of their position, the difficulty attending their removal, the liability to injury in the process, their comparatively small value, we think the Legislature could adjudge their destruction as a reasonable means of abating the nuisance.

These views lead to an affirmation of the order of the General Term. The case of Wall v. Snow (42 N. J. Law R. 311), tends to sustain the conclusion we have reached. The action in that case was trespass, for entering the plaintiff's lands, bordering a non-navigable stream in New Jersey, and destroying a fish basket in the waters diverted therefrom, placed for the catching of fish, contrary to the statute. The court held the statute to be a justification. In the case of Williams v. Blackwell (5 Hurst, & Coll. 53), the order of an act of Parliament which authorized the summary destruction by fish wardens, of what is known as salmon engines, being fish nets set in violation of the act. The case is not an authority upon the power of one Legislature under the limitations of the State constitution, but the legislation upon which the action was founded shows that in a country governed by the principles of Magna Charta, such legislation is not deemed inconsistent with the fundamental doctrines of civil liberty. It is insisted that the provision in the act of 1883, authorizes the destruction of nets found on the land, on shores or islands adjacent to waters, where taking of fish by nets is prohibited, and that this part of the statute is in any view unconstitutional. Upon this premise it is insisted that the whole section must fall, as the statute, if unconstitutional as to one provision, is unconstitutional as a whole. This is not, we think, the general rule of law, where provisions of a statute are separable, one of which is only void. On the contrary the general rule requires the court to sustain the valid provisions, while rejecting the others. Where the void matter is so blended with the good that they cannot be separated, or where the court cannot judicially see that the Legislature only intended the statute to be enforced in its entirety, and that by rejecting part of the statute the main purpose of the statute, will not strive to save any part. (See Fisher v. McGirr, supra.)

The order granting a new trial should be affirmed and judgment absolute ordered for the defendant on the stipulation, with costs. All concur, except O'Brien, J., not sitting. (A copy. H. E. Sickels, Reporter, per C.)

ANGLING CATALOGUES.

AS the angling season approaches, so does literature of interest to the fly or bait-fisherman appear in the shape of profusely illustrated catalogues of the dealers in anglers' supplies.

One of the largest of those lately received is that issued by Thos. J. Conroy, New York city, who is still doing business at the old Fulton street stand. His catalogue is very complete, and a full index at the beginning of the book enables one to refer instantly to any desired feature in the catalogue, and one that will save both buyer and seller much troublesome calculation, is a table showing the capacity of various reels to hold lines of all sizes. By reference to this the purchaser can at once see what size reel is needed to carry any line. This catalogue will be sent on receipt of 25 cents.

THOS. H. CHUBB, the Fishing Rod Manufacturer, sends us his 1890 catalogue of his excellent fishing tackle and anglers' supplies. The pages are filled with illustrated descriptions and price lists, which will be studied with interest at this opportune season. They show a growing business at Post M. Jis. As a supplement to the business part of the book Mr. Chubb has collected a number of capital angling papers, written specially for the catalogue. They run all the way from the work of Mr. W. H. H. Murray to "Brother Gardner."

THE NORTON MANUFACTURING CO., of Bristol, Conn., tell us that the steel rod is in great demand this year. A new style, of which a few have been made to order, is a nickel-plated rod.

MESSRS. CHAS. PLATH & SON, No. 130 Canal street, N. Y., send us their price list of fishing tackle, much of which is intended for salt-water fishing, though the goods in it comprise all grades and tackle for all varieties of sport.

THE BEST FISHING TACKLE IN THE WORLD is to be found at the salesroom of Thos. J. Conroy, 63 Fulton street, N. Y. See advertisement opposite first page of reading matter.—*Adv.*

Fishculture.

SAWDUST IN ONTARIO STREAMS.

Editor Forest and Stream:

I have noticed in a late number of your journal a letter from "Anti-Sawdust" upon the sawdust question, and I must say that my experience with mill-refuse in Ontario leads me to believe that its presence in the rivers and streams is detrimental to the fish and other interests of that country.

Years ago, before any considerable amount of sawdust was thrown into the Otonabee River at Peterboro, magnificent black bass (large and small-mouth) fishing was to be had at many points upon that fine stream, particularly at Campbelltown and the east outlet, for it had three, into Rice Lake. At the last mentioned point Genio C. Scott had some of the finest bass fishing of his life, and in later years Gen. G. B. McClellan and Geo. Sheridan and many other persons have enjoyed themselves for hours fighting that people-hued tiger of the fresh waters, the small-mouthed black bass. The throwing of mill-rubbish into the Otonabee at Peterboro began years ago, but it required some time before it could get its work in upon the lower portion of the river. The Little Lake at Peterboro, which is about two miles long, and upon which the people of that town did all their boating, was filled up with the refuse from the saw-mills to such an extent that in 1880 and 1881 the steamers of Calcutt's line had to plow through acres of the stuff to get to the dock. While a steamer was being forced through the sawdust for many yards around it boiled and seethed, giving off vast quantities of gas, and that this gas was distasteful to the fish was abundantly attested by their almost entire absence from the vicinity. Gradually all the holes in the river were filled, and every spring, when the water was high and the current fast, the river became a boiling mass of water-soaked sawdust. In the course of time it reached the mouth, twenty-one miles from Peterboro, choking the three outlets so badly that the steamers could use but one. As the rubbish extended itself down the river the fish, maskinonge, small-mouth black bass, and even the large-mouthed gage way before it to such an extent as to cause the fishermen to almost entirely forsake the Otonabee. On the other hand the bass fishing of the upper Trent has

been improving. The water of the Upper Trent and of the Ottonabee are identical; there is quite as much, if not more, fishing done upon the former as upon the latter; the protective service is the same upon each, but the Trent is practically free from sawdust, and herein lies the cause of the difference in the fishing.

Most of us have an idea of how the small-mouth goes to work to propagate its species, how it scoops out a shallow basin in the gravel, in which it deposits its ova, how it watches over them, brushing away any dust that may happen to fall upon them, that they may not be smothered; how, when the fry come out they are led away to a safe place and taught how to pick up their living. How is it in those waters where sawdust has been thrown? The parent fish, feeling the excitement of the breeding season coming on, starts up the river, seeking a place in which to deposit her spawn; she passes over what were once deep holes, now filled with sawdust and mill refuse generally; the old gravel beds and sand banks, upon which so many millions of her ancestors had first seen the light of day, are covered, more or less, with the same stuff, and, as she forces her way through the water she has to meet a fierce storm that beats upon her eyes and face. She at last locates a spot and cleans it out, but finds that in spite of her greatest efforts she cannot keep it clear of dust; the eggs are laid, to be covered up immediately. She brushes the sawdust away, it is quickly replaced; many of the eggs are destroyed. Under cover of the sawdust, which is boiling and settling in every direction, perch, sunfish, etc., which are always near, rush in and carry off what they can snatch. The parent generally gives it up and goes away. In the event of some of the eggs turning out good, the fry are led away to find that food is scarce, the water plants upon which the little things usually find so much of their food have been smothered out of existence; the stones under which they like to snuggle for shelter from their enemies and from which they pick the minute insect food that is so well suited to their growth, are gone, covered up. Nothing is left but a mass of sawdust, upon which they can find neither food nor shelter. Crawfish, the favorite food of the bass, are driven out by sawdust, for it fills up all the holes that they so much delight to frequent. The large-mouth fares somewhat better, because it goes far up into the drowned lands and drops its spawn; but this forsaking the river and creek bottoms on account of the sawdust is the cause of the death of additional millions of the fry of this fish, which always takes place at the time of the subsidence of the water in the early summer, which leaves them stranded in the shallow holes where those that are not eaten by bitterns, herons, etc., are dried up by the sun.

I have often found sawdust in the stomachs and gills of maskinongie, large-mouthed bass and perch, that had evidently been taken in while they were in the act of capturing their prey. I have found it in the stomachs of fish together with the partially digested remains of other fish, frogs and insects; and in other cases, with the exception of a small quantity of mucus and the dust, the stomachs were empty. Whether its presence in their stomachs did the fish harm or not I cannot say with certainty, but I am sure that the lodgment of a substance of the nature of sawdust in the gills of a fish could not have been conducive to good health. I never found it in the stomachs or gills of suckers or sunfish, except when I have picked them from the surface of the water where they were lying dead or gasping from the effects of disease or a blow, and had perhaps absorbed the sawdust in their weakness. But again, it was possible that it was the sawdust that produced the disease, or caused the death of these fish. Many small creeks, at the heads of which sawmills have been run, have been almost entirely deserted by the maskinongie in the spawning season, because of the holes and ponds in which they were wont to carry on their courtship and drop their ova being entirely filled up.

I have you ever noticed the transformation that takes place in a stream after it has been used as a dumping ground for mill rubbish for a number of years? At first the rice beds grow along its edge, the small bays and mouths of creeks were filled with the same plant; beds of weeds and lilies grew everywhere that nature gave them a chance; watersoaked logs, sticks and brush could be seen lying upon the bottom; stones, large and small, roots, the short water grasses and dead leaves were there; upon all of these the young fry found the food so necessary to their existence. While they were picking insects, etc., from under the logs, the large leaves of the water lilies or the slender stem of the wild rice plant, they were comparatively safe from their enemies the sunfish and the perch, the bittern and the grebe, and others. Look into the same river after sawdust has been thrown into it for a number of years. The rice beds are gone, no more will the duck shooter paddle quietly along and cut down the black duck as it springs into the air with a loud quack; no more will he shove his canoe into the rice and wait for the wood duck as it comes flying along in the dusk of the evening, uttering its plaintive little whistle; neither will the dainty teal come hurtling by, just skimming the tops of the rice, to light a few yards further on, where in company with black ducks, wood ducks, marsh hens and other waterfowl, it will feed and grow fat upon the starchy grain of the wild rice plant. The weed and lily beds, under which lurked the large-mouthed black bass, while on top basked its favorite tidbit, "mo-rum," the frog; the sunken trunks of trees, in the shadow of which used to lie that tyrant, the maskinongie; the large rocks and stones and clean gravel beds, where the small-mouth could nearly always be found and taken in goodly numbers; all are gone. Where there is a little current the bottom looks clean and yellow; where the water is still it is dark and smooth; there is no cover for fish, no food for ducks. In the spring a constantly moving mass, after the water lowers, a desert of sawdust, unsightly to the tourist and naturalist, abhorred by the sportsman, cursed by the canoeist, and forsaken and shunned by the fish.

It is claimed that it would be unfair to compel the mill owners to dispose of the refuse of their mills in some other way than by throwing it into the water; that by preventing them from using this convenient and inexpensive mode of ridding themselves of their waste material, you would be handicapping, if not ruining, a large and constantly growing industry. It would certainly cost the owners of mills something additional to use up their sawdust, other than by allowing it to run into the water, but would it ruin them or even handicap them? If it would, the profits of lumbering have always been cut much finer than most people were aware of. I have known several mill owners in Ontario to build kilns and burn up all waste, and in other cases they had it all drawn out and deposited far above high water mark, and, strange to say, they seemed to get along about as well as their friends who allowed it to run into the water. I have known millmen to threaten that, if the law against sawdust were enforced, they would be compelled to move their plant elsewhere to avert bankruptcy. This happened years ago, but the law was enforced and last year those same mills, owned by the same men, were in operation upon their original sites, but the sawdust did not go into the water. So far as the millmen are concerned it narrows itself down to a simple question of larger or smaller profits.

The nation sells its timber lands to the lumberman, who is seldom overcharged. He quickly clears it of all its valuable wood, leaving it bare, the effects of which are shown in the violent freshets in the spring and the lessened volume of water in the summer and fall in our streams. He rushes the logs through to the mill, and to facilitate this "driving" dams are built to back up the water, drowning out the beaver and many thousands of acres of good timber and wood, and turning the land into vast swamps. But this

cannot be helped to any great extent and no one finds fault, but when it comes to the filling up of our lakes, rivers and creeks with mill rubbish, the question naturally occurs, has no one any rights except the lumberman? With every desire to be fair to him, and to acknowledge the benefits that accrue to the country from the lumbering industry, I submit that the rights of the camper, the shooter, the canoeist, the man who catches fish for a livelihood, as well as him who catches them for sport, and last but not the least, the rights of the taxpayer, who in the near future will have to pay for the dredging out of a great many of the rivers, should be respected, and the mill-owners should be compelled to keep their sawdust out of the water.

FIXTURES.

DOG SHOWS.

March 18 to 21.—First Annual Dog Show of the Maryland Kennel Club, at Baltimore, Md. W. Stewart Diffenderfer, 220 N. Charles street, Secretary. Entries close March 14.

April 1 to 4.—Sixth Annual Dog Show of the New England Kennel Club, at Boston, Mass. J. W. Newman, Secretary.

April 15 to 18.—Show of the Buffalo Kennel Club, Buffalo, N. Y. A. W. Smith, Secretary.

Oct. 6 to 11.—Ninth Annual Dog Show of the Danbury Agricultural Society, at Danbury, Conn. B. C. Lynes, Secretary.

FIELD TRIALS.

Nov. 17.—Twelfth Annual Field Trials of the Eastern Field Trials Club, at Otterburn Springs, Va. W. A. Coster, Saratoga Springs, N. Y., Secretary.

Dec. 1.—Second Annual Field Trials of the Central Field Trials Club, at Lexington, N. C. C. H. Odell, Mills Building, New York, Secretary.

1891.

Jan. 19.—Eighth Annual Field Trials of the Pacific Kennel Club, at Bakersfield, Cal. H. H. Briggs, Secretary.

Feb. 2.—Third Annual Field Trials of the Southern Field Trials Club. T. M. Brunby, Secretary, Marietta, Ga.

CHICAGO DOG SHOW.

THE second annual dog show given under the auspices of the Mascoutah Kennel Club was held in Chicago on March 4 and three following days. Battery "D" had been again selected as the exhibition building, but as the entries this year were nearly double last year's, it was impossible to accommodate all the dogs. Arrangements were therefore made with the proprietors of the adjacent armory and a covered connecting passage way was built between the buildings. This afforded ample floor space for benches and judging rings. The buildings are, however, not very well lighted, the armory being the worse off in this respect, while to make matters worse, the foxhound display was arranged along the northern side of the building and cut off the light on the only side any could enter except the small windows at the top of the high walls.

The weather, which up to the close of the preceding week had been very genial, took a sudden change, the mercury flopped to the neighborhood of zero and snow fell off and on all Wednesday and Thursday morning. Notwithstanding this, the attendance was excellent throughout the four days, and notwithstanding the extra outlay the club was put to there will yet be a good balance on the right side.

The management fell upon the shoulders of Mr. Geo. H. Goodrich, vice-president of the club, and good, broad, able shoulders they proved themselves to be. He was ably seconded by Mr. Geo. H. Hill, of Madeira, O., who acted as superintendent, and the only drawback we noted during our stay was the lack of a sufficient number of attendants to keep the rings full on the judging day. Mr. Mortimer's ring was particularly poorly served, as may be understood when he did not finish his class judging of about 300 dogs before 9 o'clock at night. When the judging rush was over everything went smoothly, the benches were kept clean and their occupants well attended to. It was, perhaps, owing to this apparent lack of help that three crates were overlooked and their occupants not benched in time for the judging. These were the English setter Chautauqua Belle and the wire-haired terriers Billet and Capsicum. In the former case Mr. Davidson rejudged the class, giving her third, but Mr. Belmont having left Chicago, he could not do the same with his classes. The committee, therefore, asked Mr. Mortimer to place the missing dogs, and not caring to disturb the awards already made, he gave extra first to each of them. It was unfortunate, for they were clear winners. To wind up the misfortunes, we regret to have to chronicle the death of Lady Miles, Mr. E. H. Moore's first prize St. Bernard bitch. She was noticed to be off her feed on Tuesday and every attention was paid to her, but she developed acute pneumonia and died on Friday. It is supposed she caught cold on the journey West.

And now for a bit of pleasanter news. The exhibitors could not fail to note to whom they owed so much attention and such excellent arrangements for the comfort of all, and words of casual comment of an appreciative nature gradually took shape into something more outspoken, and finally culminated in the signing of the following document by the exhibitors:

Geo. H. Goodrich, Esq., Vice-President and Manager: We, the undersigned, exhibitors at the second annual show of the Mascoutah Kennel Club, feel it is proper that we should express to you our appreciation of the manner in which you have conducted the show and the courteous treatment we have received from you. It is a source of great pleasure to us to know that the citizens of Chicago have appreciated your labors and have patronized the show so liberally. In bidding you adieu we carry with us pleasant reminiscences of you and the sincere hope that we shall meet again next year.

Resolutions of appreciation did not stop at Vice-President Goodrich, however, and Mr. Lang will convey to his German home an attested copy of the following resolution:

Appreciating the promptness and unselfishness with which Herr Gustav Lang, of Stuttgart, accepted the invitation of the Mascoutah and Great Dane clubs of Chicago, to attend the bench show, now being given under their joint auspices, the German Mastiff or Great Dane Club of America, cordially and emphatically express its entire approval of his services, and recognizes his eminent ability, independence and strict impartiality in rendering his awards to this special breed of dogs. It is with great satisfaction that we recognize in his judgments an endorsement of the rules and points established by this club of the typical Deutsche dogge.

W. E. HAGANS, Secretary.

To come, last of all, to the dogs, and give a general idea of the show. Its claim as the best given west of New York State will not be disputed when the prize list is looked at. In numbers it also holds a similar rank, but there was a noticeable number of absentees, they being much above the usual average. The non-sporting classes were good displays with the exception of some of the tail end catalogue breeds. Those particularly good were mastiffs, St. Bernards, great Danes and bull-terriers. The sporting breeds may be classed as excellent in nearly every case, and altogether "Chicago, 1890," may be set down as a credit alike to organizers, managers, exhibitors and the public. With that we will proceed to discuss the awards.

MASTIFFS.—(MR. MORTIMER).

Following the well-known path bestrewn with precedents the catalogue began with mastiffs, and in the challenge class Alonzo, Sears' Monarch and Moses were the

entries. The decision was in favor of Moses, and properly so, with Sears' Monarch second and Alonzo third. All three were shown in excellent condition. In challenge bitches Lady Coleus was alone and she subsequently won the bitch challenge cup. Ten of the dozen dogs entered in the open class were on hand, and Clifford Chancellor, first, and Melrose Prince, second, won their New York relative positions over again. Melrose Prince is so round in skull that, good dog as he otherwise is, he is bound to get set back when he meets a good headed one. For third we had a big brindle, Duke of Connaught. He was shown in the rough—bad enough in the case of a fawn, but still worse when a brindle is the subject of judicial decision—and too low in flesh. There is the making of a good dog here, for his head is on very true lines, and he has the proper mastiff expression; he is also well-built and he is but sixteen months old; we think he will have a future before him when matured. Philammon, a very good type of dog, was fourth; and then came a most indifferent lot. Bitches, as a class, were ahead of the dogs, and it was a close thing indeed between Countess of Dunsmore and Lady Dorothy. Mr. Mortimer fancied that Countess ranked a little higher, and for third picked out Lady Beatrice, one of Mr. Moore's own breeding. Adele, a big strapping bitch, by no means a bad one in type either, was fourth; and as she was catalogued at \$50 she ought to have found a purchaser. The cards were well distributed. In puppies the best dog got third, and there were no bitches shown.

ST. BERNARDS.—(MR. MORTIMER).

Ben Lomond beat Plinlimmon, Jr. as at New York, but in challenge bitches we had a change. Miss Whitney placed Lady Wellington and champion Miranda equal first at New York, but Mr. Mortimer gave the blue to Lady Wellington. Your correspondent is not qualified to speak as to the condition of the dogs when at New York, but on this occasion the award was undoubtedly correct. In the open dog class Hesper scored first of course and then came Valens. Like his sire Valentine, he is of an objectionable gray color, his expression is too severe for a St. Bernard, and he lacks depth of skull and muzzle. Head looks flattened out. A nice built dog otherwise. Marmion has a large well-formed head, but the expression is not quite right. He is straight behind and his tail, short of coat, he would persist in elevating into prominence. A nice colored dog. Casper has the long, plain, Plinlimmon head. He was shown in excellent condition, is a dog of good size, has lots of bone and is of a lovely color. The best of Chequasset II. is his head, for he is slack in bone and tucked up. The Baron is pinched and fine in muzzle and his eyes are too full. Monte is a heavy-boned dog, weak in muzzle and has a wild look about his eyes. Mac deserved his card. He is a nice dog, barring his crooked forelegs, the result probably of bad rearing. Another New York decision was reversed in the bitch class, Lady Miles this time gaining the verdict over Marion, and the award to our mind was correct. Lady Alice, third, is weak and plain in face, of good size and color and well built. Corrette was off her bench when we called. The dog puppies were a poor trio, but in bitches there were several above the average. Karemina has a wonderful head and expression for an eight months puppy, heavy bone, excellent legs and feet and the proper coat. Nymph's weak muzzle and wild look would have caused us to place her behind Guess Noble who is another wonderful puppy for her age.

Victor Joseph led off in the smooths—a walk over—and in bitches Thisbe beat Lola. Only three dogs turned up out of the six entered. First went to Mascot Royal, a large, well-made dog, but lacking in size of muzzle. Rex Maximus is good in coat, color and size, but his head is too short. Layman, boundy in ear, was shown too light. In color he is a dark brindle. Meadowthorpe Norah won very decidedly in bitches. Mascot Grace has remarkably small ears, a well-built bitch, white with a few brindle patches. Theo is a big, strong bitch, coat inclined to be wavy and of a dirty color; is also boundy in head. Blanca was the best of the other two.

The bloodhound classes were drawn blank, and Meadowthorpe Flora was the only Newfoundland.

GREAT DANES.—(MR. LANG).

The large pecuniary inducements offered by the Great Dane Club resulted in an entry of fifty-four in the six classes, of which the challenge classes had but one each. Mr. Gustav Lang, who is said to be an authority on the breed in Germany, was also engaged to judge, and much was expected in the way of educating our exhibitors as to the proper type of this much-named breed. What the result was, from an educational point of view, it is not easy to determine. All the exhibitors were Germans and discussed the awards in their native tongue, of which language your correspondent's knowledge is confined to a limited vocabulary of a bibulous nature. It was evident, however, that satisfaction did not reign supreme in that quarter; but it must be recognized that the most fortunate exhibitor, Mr. Ulrich, of Nuremberg, had a better knowledge of the style of dog Mr. Lang affected, and was, therefore, able to send over specimens more likely to catch the eye of the judge. Mr. Ulrich took first and second in open dogs with Helios and Hannibal, two well-grown, symmetrical dogs, though both showed defects in hindquarters. Bad behind seems to be a defect these dogs are liable to with great size. Helios shows a little more of this than Hannibal. Don, third, is cheeky and rather weak in muzzle. Pascha is good in body and tail, but strong in head. Altogether the dogs made a strong class, as the number of vhc. cards show. The winning bitch, Nevezel, we admired very much. Excellent in head, most symmetrical in outline and a rich brindle color. We looked for her getting the breed special, which, however, went to Helios. Irene, who got second, is a harlequin, a nice, active, good all-around typical bitch. Nitouche is strong and short in head, with good body, and especially good behind. Noniega is coarse at both ends and wide in front. Bella had probably her condition to blame for being passed over entirely. The challenge winners were quite outclassed when compared with the other winners.

DEERHOUNDS.—(MR. MORTIMER).

Robber Chieftain defeated Clansman in dogs, and in bitches Wanda beat Ramona, a decision we don't agree with. The latter is better in jaw, neck and back, and is a slightly bigger and longer bitch.

GREYHOUNDS.—(MR. MORTIMER).

Highland Chief had no opposition in the challenge class. In open dogs the New York awards were changed, Babazon taking first to the second of Master Rich. The judge dwelt a good deal over this decision, but the longer they were in the ring the more certain was it that the red must win, as he is so much better in neck, shoulders and hindquarters. At first sight he is a soft-looking dog. The new dog Conspirator came third. He is not what we expected to see, and was properly placed, and Blue Beauty was the only other one possessed of merit in the class. The bitches were a strong class, and we spotted fly as the winner. She would have got the blue undoubtedly but for a broken toe. Her build and outline are about perfection, but she is just a little bit on the small side. Miss Rare, the New York winner, got first, followed by Lady Olivia, also a good one. Then came the black Creole Belle and Gipsy in that order, with Melodrama reserve. The five bitches named made a strong class, and every one of the eight shown got a card.

POINTERS.—(MR. WINSLOW).

The judging of the pointers gave very general satisfaction, the only exception that we heard of or noted being in the case of Pride of Idstone, reserve in the large bitches, who might have been a little higher perhaps. Mr. Winslow,

however, gave her owner his reason for putting her back. The Western dogs were noticeable for their good legs and feet, but there was not the quality about them we have been accustomed to in the past few years at Eastern shows. When the winners were disposed of the remainder showed the objectionable slack loins and cheeky heads, formerly noticeable at all shows, but are being weeded out now. In the large challenge classes Mr. Heath had no opposition to Graphic and Revel III. in superb condition, as were all from this kennel. Luck of Idstone led off in open dogs. The worst part of this dog is his plain head, otherwise there is little fault to find. He has good bone, legs and feet, and is well put together. Graphite is wide in front, and his half-brother Lord Graphic has a flat head, which shows his character. Fourth was given to Sancho, in bad condition. Hornell Sam, reserve, is a big strong dog, lacking quality, as does Victor Meteor Croxteth. In the open bitch class a real gem turned up in Sal II., owned by Mr. T. Donoghue, without whose genial presence a Western show would lose half what makes life worth living. Sal II. is a nicely marked black and white, particularly good in head and expression, good shoulders, just the least bit overdone in muscle, straight legs, good feet, good barrel, well ribbed up, well turned quarters and good tail. She might perhaps have been improved in condition. Stella B. is an evenly-made one, somewhat light in bone. Lady Norrish we could not find. Fly is somewhat coarse, and we prefer Pride of Idstone already mentioned. Birdie was of quite a different caliber from her kennel companion Sal II.

In the small pointers the challenge winners were King of Kent and Mally, without opposition. In open dogs Laurelot (vbc. at New York) won easily, and it will therefore be understood that the class was not a strong one. Tamarack is weak in muzzle, good in body. Donald IV. is old-fashioned in head. Wonderful Lad is also devoid of character in head. Graphic V. wrong in shoulder and girth. Meadowthorpe Duke is weak and plain. In bitches Pan N. much resembled Sal II., being of a similar color and showing almost as much quality. She beat Sally Brass II., second at New York. Lady Prince is coarse in head. Phantom is too round in barrel, fair head, good legs and feet. The cards were well placed. None of the few puppies gave much promise of future excellence.

ENGLISH SETTERS—(MR. DAVIDSON).

No champion dogs, and in bitches Liddersdale, still well preserved, had a walkover. Monk of Furness scored another win in open dogs. Second went to Count Harry, faulty in front of eyes, coat wavy and short. Matane beats him in head, but is coarse in coat, high on the leg and is bad in carriage of tail. The well-known Locksley, shown better than the greater number of English setters, came next, and reserve went to the heavily marked Count John, who is weak in head. Don S. is a plain-looking dog, and was not in show condition. Budd is heavy in skull and a bit short; was well shown. Stice is a big, strong dog, wanting finish. Rey Roderigo is domed in skull and has a sour expression. This was a very fair class. Cambriana won in bitches. She is of the Laverack type, a little flat in skull and short of coat and feather. Chantauqua Belle was still in her box when the class was judged first, and the dogs were ordered in the ring again on Wednesday morning. She did not move with freedom, and was placed third, Canadian Lillie being put back to accommodate her. The latter is short and weak in head, and her ears are too large. Oskaloosa Belle is a well-built bitch on the small side, with a rather clumsy-looking head for her size. Flossie is weak in face and lacks bone. Natalie II. is leggy, short of coat, and shown too light. Davey & Richards carried off the honors in both puppy classes, the best of these five being Canadian Queen, a sweet little bitch with a future, if we mistake not.

IRISH SETTERS—(MR. DAVIDSON).

There was mourning in Chicago when Dick Swiveller went down before Elcho, Jr., and it was on everybody's tongue for the remainder of the day. They are both good dogs, but Dick has gone light since New York, and Elcho, Jr., was in the pink of condition. He also shows a little more substance, which probably carried weight. First in dogs came Max, a stylish dog of good color, standing on a rare set of legs. He was shown light. Ben C. loses in head to the winner, and is too high on the leg. Larry S., third, is well known, and there is but little to choose between him and Nelson, fourth, except in head. Donegal Boy, who got c., was last year placed higher. He has developed into too big a dog, like his sire Glencho, and runs to coarseness, with a light eye. Ruby Glenmore, the New York winner, was first in bitches. Nellie H. is plain in head, might be better in color, and her ears are set on wrong. Neno was out of condition from family duties. Flora H., who subsequently won in puppies, is a promising young bitch. Almost all of these shown got cards, the class being a very level one. Rancho, first in dog puppies, is flat-headed, and we fear will go coarse. In color he is excellent.

GORDON SETTERS—(MR. DAVIDSON).

Little Boy and Rose had no opponents in the challenge classes. The winners in both open classes are so well known and have been so often described that they do not call for extended remarks. The classes were small; six dogs, five bitches and two puppies.

AMERICAN FOXHOUNDS—(MR. DAVIDSON).

A complaint recently appeared in FOREST AND STREAM respecting the recent criticism on foxhounds, but the duty of reporting on dogs for which there is no standard framed and which are totally different from the recognized breed of that name, is one that cannot be performed with satisfaction by your correspondent. The dogs shown at Chicago were neither of the English type nor of the American type as seen where the American foxhound originated. They were light, speedy looking dogs, and their number and variety, together with the manner in which they were specially displayed, made a pleasing exhibit. There were about 25 couple on exhibition, and beyond saying that Mr. Davidson exercised good judgment in selecting the best-shaped dogs, criticism must cease.

CHESEAPEAKE BAY DOGS—(MR. DAVIDSON).

There was a little more uniformity about the specimens shown than is usually the case with dogs shown under this very elastic title. They did not, however, compare in size with those shown at New York. The Osceola Kennels were first both in dog and bitch classes with Dick and Miss Fortune. The second and third dogs being Chess II. and Roy, owned respectively by John M. Sellers and Geo. Oliver.

IRISH WATER SPANIELS—(MR. MORTIMER).

The noticeable feature of the Irish water spaniels was the departure from the correct type of coat. With the exception of Capt. Muldoon there was not a good-coated one shown. Some had loose curls, others wavy coats and a few were almost flat coated. Mr. Mortimer selected the largest and most useful looking dogs for the work they are called upon to do.

CLUMBER SPANIELS—(MR. MORTIMER).

Boss III. smothered Queter in the open dog class, and the moderate Bromine beat Lass of Beauty in bitches.

FIELD SPANIELS—(MR. MORTIMER).

Bridford Gladys, in poor shape, had the challenge class to herself. Baron had an easy win in open dogs, followed by the liver Newton Abbot Skipper with Napoleon third. These were fully criticised in connection with New York show. In bitches, Dorothy beat her kennel mate, Topsy, in length of body and quality of coat, and the better set of ears. Gyp is an oversized cocker.

COCKER SPANIELS—(MR. MORTIMER).

Bene Silk was alone in the challenge class. She was shown lighter than at New York, at least we thought so. Brantford Red Jacket, first in open dogs, also won the cocker special. We did not like him as a spaniel any better than at New York. Black Duke, second, is very timid and has a bitch head. Rabbi was third. We preferred him for first place, as he is full of spaniel character. Dandy W. is thick and coarse in head and was shown pounds too fat. The bitches were poor, Yarrow being fat and out of condition and Hornell Bertha is quite too leggy. Like the most of Hornell Silk's get, she has an excellent coat.

COLLIES—(MR. LONG).

This was, we believe, the initial trial of Mr. J. A. Long, of St. Louis, in the judging ring. We would like to have seen him have better support, but Eastern exhibitors do not care about chasing the Chestnut Hill Kennels all over the country. It was the knowledge of this that probably caused such a weak team to be sent on from there, and for once collie men were caught napping. Mr. Long was careful and thorough in his examination of the dogs, and may be regarded as an acquisition to the limited ranks of collie judges, though of course it yet remains to be seen what he can do with a hot class. Scotilla and Charleroi II., Flurry III. and Metchley Surprise was the order in the challenge classes. Then came The Squire's initial appearance before an American judge. As Scotilla II. was properly placed next to him, it will be seen that The Squire had an easy row to hoe. We fear his coat is gone, as he is now nearly seven years old, but he is still a grand dog in shape and style. Scotilla II., we said in our New York show report, should have been third instead of vbc., and thus placed over Fairlie and others. Here he beat Fairlie very easily, but it is only just to say that the Canadian dog has gone off very much since New York. Queechee got the reserve. If his head was as good as the rest of him he would be a hard nut to crack, as he is a strapping big fellow, with a coat we have not handled the equal of this season. Aberdeen Hero is a nice, rich-colored dog, with good quality of coat though scant. His head does not fine enough to the muzzle, and has a blocky appearance. The class was well handled. In bitches, Roslyn Clara led, but we don't think she is improving. She is now all but prick-eared and begins to look proppy behind. The puppy Marigold we thought beat her in collie character and expression. She has a nice outline, good length of head, but did not get her ears up. Scottish Beauty was decidedly third best, but her head shows too much of the Dublin Scot type. White Lily is an all white bitch barring an evenly marked head. She did not have any too much coat. Glen Rosa has gone thick in head since she made her successful debut at Boston two years ago. The dog puppies were poor. The winner, Marmion, we did not take to at all. He is a peacocky dog with a weak face. Between Bonnie Buscar and Felwyn Riley there was not much to choose, but we would have given the former second on account of better expression and quality of coat. In bitch puppies we also disagreed with Mr. Long, preferring Marigold decidedly to Roslyn Parole, who is showing chorea. Dot McGregor has his dam's (Glen Rosa) head faults.

POODLES—(MR. MORTIMER).

Zero, a very indifferent black, was given first, and second was withheld.

BULLDOGS—(MR. MORTIMER).

Rabagas was the only one in the challenge class, and the stall of Britomartis had an obituary card recording her death the previous week. Harper won in the dog class, with Monarch VI. a good second. Hodge was absent when we were note-taking at his stall. Joker and his brother Liscard Exile are not of the right stamp. Carisbrooke lacks stop, is short of bone and was shown too light. The bitch class contained three very moderate specimens. Dimple resembles one of the old-fashioned cuts of bulldogs.

BULL-TERRIERS—(MR. MORTIMER).

On the question of bull-terrier type we could not agree with Mr. Mortimer. Our notion is for a dog of more substance than the ones he favored. Jubilee and Marguerite had nothing to beat in the challenge classes. In open dogs we would have placed Harvester over Briton for the reason stated. Briton is a smart dog, with nice body and exceptionally good tail, but head a little too strong, and he is too light in bone. Harvester is of a better stamp. Dinksey, third, was the only other one of character. White Stubb has some good points, but his ears will yet give his owner a lot of trouble. Again in bitches My Queen was more of the proper sort than anything ahead of her, or else we must acknowledge that such bitches as her dam, Maggie May, Violet and Magnet were of the wrong type. Attraction is a very smart bitch, but there is not enough bone and she is leggy. Queen Bendigo is not quite the thing in front of the eyes. Dinah was in very bad condition and is stone deaf. In small dogs Dusty Miller is a smart customer, but his eye is not that of a bull-terrier. There was nothing for him to beat in his class, and second was withheld. In small bitches Luce should have won. Lady in White was in bad shape, and is deaf as a post, and Ellen Terry was also out of shape, suckling a litter; besides which she is fine in bone.

DACHSHUNDE—(MR. MORTIMER).

Two poor ones properly placed.

BEAGLES—(MR. DAVIDSON).

Frank Forest should have beaten Little Duke in challenge dogs. He has a better expression and much nicer ears. Little Duke is wide in front and his coat is very open. Lou had no opposition. In the dog class Racer, Jr., won well from Romeo K., but we could not follow Mr. Davidson in the bitches. Whisper is weak in face, light in bone and was out of condition. Ardsley Diana is wrong in head, with a sour expression and was not in condition. Beauty is too large and too long in the back. Yonnie W. we preferred to any of the others. It is possible she did not show well in the ring, for it took us some little time to get her to look her best. Hetty was far and away the best puppy.

FOX-TERRIERS—(MR. BELMONT).

Valet was given first over Baby Mixer. He certainly does not wear so well as Mr. Thayer's dog, who is but a year younger. Richmond Olive was absent. In the open class Veronese was properly first with Reckoner second; third was withheld, and so might fourth have been rather than give it to such a weed as Valers with his semi-pricked ears. The balance were very poor. Richmond Dazzle won in bitches, and then came a leggy, long-faced, heavy-eared one named Cony I in second place. Rosa (ania) should have been second, and the remainder might have been sent back to their benches, for they were a bad lot. First was withheld in dog puppies. Second was given to Vitellius, quite on the whippet order, and equal third to Hillside Mix and Gyp. The latter is more of a lady's pet, and Hillside Mix was, in our opinion, the best of the half dozen shown. He is certainly a terrier. The bitch puppies were away below par; in fact the whole exhibit was anything but a compliment to the judges, who should have been better supported by the Fox-terrier Club members.

There were more wire-haired terriers than we expected to see, but unfortunately the best two were not unboxed till after Mr. Belmont had left the city. The committee asked Mr. Mortimer to judge the classes, and he left the old awards alone, giving extra firsts to the new-comers. These were Biller and Cassium. As it was, Mr. Belmont did not seem quite at home with the wire-hairs, for his winner, Eskdale Broom, is awfully coarse and out of shape. Dart-

moor Dancer was more of a terrier than either Broom or Dartmoor Snorter. In bitches Dartmoor Sunbeam had every appearance of having been clipped on the sides. If that was so Lill ought to have won, as she is quite a nice headed bitch, though out of shape rearing a big litter of puppies. Domina is a smart puppy.

IRISH AND OTHER TERRIERS—(MR. MORTIMER).

Burnside beat Roslyn Dennis, both well known. The bitch decision was a bad one, Kathleen being worth a dozen Nevermore Geselas. It is unnecessary to sub-divide the remaining terrier classes, all judged by Mr. Mortimer. The entries were few and the majority of the prizes all taken by well known dogs, so that the prize list can speak for itself. The Yorkshires were numerous, but the only decent one was Mrs. Buhner's Flora, who is rather light in color.

PUGS—(MR. MORTIMER).

The owners of Kash and Dude were both too scared to risk defeat, so neither was entered. Bessie was alone in the bitch class. Lord Nelson was placed over Bob Ivy, but it was not right in our opinion. Bob Ivy is better in size, wrinkle, mask and color. In fact, with the exception of ears, we do not see where Lord Nelson beats Dr. Cryer's dog. Nan is leggy and the others were not anything great. The plain-faced Bo-Peep II. was placed over Myrtle and third went to Sateen, light in bone and monkey-faced. Sprake won in puppies and we certainly preferred him to Eberhart's Cashier, the big and coarse New York winner.

In each of toy spaniels there were but two entries and no room for dispute as to the way of placing them. Each of the Italian greyhounds got a prize and both of the Schipperkes. Mr. Mortimer turning the latter over to Mr. Lang. Miscellaneous found a poor whippet at the top, with a moderate bloodhound second and a mongrel Chihuahua third. An extra first was given to the bob-tailed Orson, which was not benched with the others and could not be found when the class was judged.

Siberian wolfhounds had a class to themselves. The most typical in the class were Zerry and Ivan Romanoff. The former equals the dog in size, and this should be taken into consideration when judging the dogs, as is done with deerhounds. Zerry might have been in better condition, but anyway, they should have had the money between them. Ivan is coarse in coat, and Czar is far too heavily built. Mr. Lang might have been given the class.

The list of awards follows:

AWARDS.

MASTIFFS.—CHALLENGE—Dogs: 1st, C. C. Cook's Moses; 2d, E. B. Sears's Sears Monarch. **Very high com., J. F. Stone's Alonzo.** **Bitches:** 1st, E. H. Moore's Lady Colons; **OPEN—Dogs:** E. H. Moore's Lifford Chancellor; 2d, Oakhurst Kennels' Melrose Prince; 3d, W. H. Turner's Duke of Connaught; 4th, J. F. Stone's Philammon. **High com., C. A. Altmansperger's Chancellor Bismark.** **Bitches:** 1st, E. B. Sears's Com. H. V. Sheppard's Mack Caesar. **Very high com., J. F. Stone's Countess of Dunsmore; 2d and 3d, E. H. Moore's Lady Dorothy and Lady Beatrice; 4th, R. T. Perine's Adle. Very high com., W. F. McWhinney's Telka. High com., T. P. Fitzgerald's Spear.** **Com., A. J. Richter's Renee. PUPPIES—Dogs:** 1st and 2d withheld; 3d, C. A. Altmansperger's Chancellor Bismark. **Bitches:** Absent.

ST. BERNARDS.—ROUGH-COATED—CHALLENGE—Dogs: 1st, E. B. Sears's Victor Joseph. **Bitches:** 1st, Wentworth Kennels' Thelma. **Very high com., W. F. Harn's Rex Alaxians; 2d, J. C. Hobart's Layman. Bitches:** 1st, Meadowthorpe Kennels' Meadowthorpe Nora; 2d, R. J. Sawyer's Mascot Grace; 3d, W. F. Harn's Theo; 4th, Herzog Bro.'s Blanca. **Very high com., E. S. Pinney's Jap. PUPPIES—Dogs:** 1st and 2d withheld; 3d, A. Jones's Vic. **Bitches:** No entry.

BLOODHOUNDS.—Absent.

NEWFOUNDLANDS.—Dogs: No entry. **Bitches:** 1st, Meadowthorpe Kennels' Meadowthorpe Flora.

GREAT DANES.—CHALLENGE—Dogs: 1st, A. Trinkle's Brock. **Bitches:** 1st, Osceola Kennels' Jujo. **OPEN—Dogs:** 1st and 2d, B. Ulrich's Helios and Hannibal; 3d, E. R. Bacon's Don; 4th, very high com. and com., W. F. Harn's Pascha, Nero and Harnas. **Very high com., G. Hock's Cesar, O. Reichel's Pluto and C. Heimer's Prinz. Com., A. Schultze's Cesar, B. Ulrich's Sander, W. F. Harn's Hector and J. J. Getz's Turk. Bitches:** 1st, 2d and 4th, B. Ulrich's Nevezel, Nitonche and Noni; 3d, C. Heimer's Irene. **High com., J. Zillingen's Flora Marr, J. Z. and O. Reichel's Nellie. Com., J. W. Elin's Lady Belle. PUPPIES—Dogs:** 1st, B. Ulrich's Malar; 2d, J. Zillingen's J. Schiller; 3d, A. Trinkle's Joe. **Bitches:** 1st, W. F. Harn's Mrs. J. J. Merrelles; 2d, A. Trinkle's Kate; 3d, withheld.

DEERHOUNDS.—Dogs: 1st and 2d, J. E. Thayer's Rob-er Chief and Clansman. **Bitches:** 1st and 2d, J. E. Thayer's Wanda and Ramona.

GREYHOUNDS.—CHALLENGE—1st, H. W. Huntington's Highland Chief. OPEN—Dogs: 1st and 2d, Rockwood Landseer Kennels' Rabazon and Master Rich; 3d, Devon Kennels' Conspirator; 4th, E. G. Howell's Blue Beauty. **High com., D. H. Stine's Middleton. Com., Miss Grace Alcott's Jon. Bitches:** 1st, 3d and reserve, Rockwood Landseer Kennels' Miss Rase, Orcole Belle and Melodrama; 2d, C. W. Sarr's Lady Olivia. **High com., C. G. Page's Belle P; 4th, Devon Kennels' Gipsy. Very high com., J. Murdoch's Fly. Com., W. Orr's Hub.**

POINTERS.—LARGE—CHALLENGE—Dogs: 1st, O. Heath's Graphic. **Bitches:** 1st, O. Heath's Revel III. **OPEN—Dogs:** 1st, Idstone Kennels' Luck of Idstone; 2d, E. R. Bellman's Graphite; 3d, J. R. Daniel's Lord Graphic; 4th, E. H. Morris's Sancho. **Reserve, Hornell Harmony Kennels' Hornell Sam. Very high com., E. Raimler's Victor Joseph. High com., C. W. De Pauw's Macoon and W. Parker's Rex. Bitches:** 1st and reserve, Geo. H. Donoghue's Sal II. and Birdie; 2d, E. R. Bellman's Stella B; 3d, Heath's Lady Norrish. **Reserve, Idstone Kennels' Pride of Idstone. SMALL—CHALLENGE—Dogs:** 1st, E. Duxier's King of Kent. **Bitches:** 1st, C. Heath's Mally. **OPEN—Dogs:** 1st, C. Heath's Laurelot; 2d, E. Billings's Tamarack; 3d, Elms Kennels' Donald IV.; 4th, Chantauqua Kennels' Wonderful Lad. **Reserve, J. D. Culligan's Graphic V. Very high com., Mendon Kennels' Meadowthorpe Duke. Bitches:** 1st, J. A. Heether's Pan N; 2d, C. Heath's Sally Brass II; 3d, Elms Kennels' Lady Price; 4th, Idstone Kennels' Phantom. **Reserve, O. F. Engle's Lady Trinker. Very high com., T. Donoghue's Lady Beniah and F. P. Kirby's Belle. High com., Meadowthorpe Kennels' Meadowthorpe Primrose. Com., W. Harn's Nellie V., Croxteth and F. King's Nellie. PUPPIES—Dogs:** 1st, Idstone Kennels' Bow of Idstone; 2d, Elms Kennels' Naso of the Elms; 3d, J. Flynn's Hark King Don. **Bitches:** 1st, Idstone Kennels' Lady Sterling; 2d, Dr. H. J. Thomas's Duchess Croxteth; 3d, H. Bradshaw's Gyp.

ENGLISH SETTERS.—CHALLENGE—Dogs: Absent. **Bitches:** 1st, Davey & Richards's Liddersdale. **OPEN—Dogs:** 1st, Elms Kennels' Monk of Furness; 2d and reserve, G. Waddington's Count Harry and Count John; 3d, W. B. Wells's Matane; 4th, Davey & Richards's Locksley. **Very high com., O. Stoppell's Don S. High com., T. B. Emerson's Budd and H. J. Davis's Sloc. Com., H. B. Jeffery's Blue Link and Bert Craue's Rey Roderigo. Bitches:** 1st, W. B. Wells's Cambriana; 2d, S. L. Boggs's Zoua; 3d, Peet & Lyon's Chantauqua Belle; 4th, Davey & Richards's Canadian Lillie. **Reserve, G. Waddington's Oskaloosa Belle. Very high com., G. G. Pabst's Flossie, Bert Craue's Natalie II. and J. A. Heether's Nellie. PUPPIES—Dogs:** 1st, Davey & Richards's Liddersdale II.; **PUPPIES—Dogs:** 1st, Davey & Richards's Canadian Knight and Canadian Ben; 2d, T. Donoghue's Noble Don. **Bitches:** 1st, 3d and reserve, Davey & Richards's Canadian Queen, Canadian Flor and Canadian Alice; 2d, Joe Lewis's Gwein. **Very high com., C. B. Van Nuoy's Bess Noble.**

IRISH SETTERS.—CHALLENGE—Dogs: 1st, Dr. Wm. Jarvis's Elcho, Jr.; 2d, G. H. Overt's Dick Swiveller. **Reserve, W. N. Kuhn's Mack N. Bitches:** No entry. **OPEN—Dogs:** 1st, A. V. Ar-

mour's Max; 2d, J. Crugan's Ben C.; 3d, E. Maher's Larry S.; 4th, J. E. Nash's Nelson. Reserve, S. W. Jenks's Don J. Very high com., F. H. Perry's Prince Nioun. High com., G. H. Cover's Garroven IV. and Meadowthorpe Kennels' Meadowthorpe Rover. Com., C. P. Dorr's Donegal Boy. *Bitches*: 1st, W. L. Washington's Ruby Glenmore; 2d and 4th, H. Schubert's Nellie H. and Flora; 3d, J. H. Perry's Nino. Reserve, G. E. Everett's Cornie. Very high com., R. K. Norton's Duke's Noreen and G. H. Cover's Kildare Ruby. Com., G. H. Cover's Lone Star Queen. *Puppies*: 1st, F. H. Perry's Ranelo; 2d, F. P. Kirby's Emerald Isle. *Bitches*: 1st and 2d, H. Schubert's Flora H. and Gypsy II.

GORDON SETTERS.—CHALLENGE—Dogs: 1st, S. G. Dixon's Little Boy. *Bitches*: 1st, W. S. Hammett's Rose. *OPEN—Dogs*: 1st and reserve, Meadowthorpe Kennels' Meadowthorpe Heather Roy and Meadowthorpe Laddie; 2d, F. E. Ashmead's Dixon; 3d, H. F. Smith's King Henr; 4th, Miss Jessie Grace Fritz. *Bitches*: 1st, G. Griffin's Jessie; 2d, H. F. Smith's Countess Roxie; 3d, F. P. Kirby's Daisy; 4th, H. R. Parker's Jessie. *Puppies*: 1st, Meadowthorpe Kennels' Meadowthorpe Rex. *Bitches*: 1st, Meadowthorpe Kennels' Meadowthorpe Sally.

FOXHOUNDS.—AMERICAN—CHALLENGE—Dogs: 1st, Cook Kennels' Brave. *Bitches*: No entry. *OPEN—Dogs*: 1st, 2d, 3d, reserve, very high com. (2), high com. and com., Cook Kennels' Dan, Vatch, Roderick, Drum H. L. Jolly Boy, Rover, Streak and V. H. Very high com., Bruce's Fur Club's Drive. High com., Henry & Poehlmann's Dan, Jr. and L. Bower's Dick II. *Bitches*: 1st, 3d, reserve, very high com., high com. and com. (2) Cook Kennels' Spotty, Bernhardt, Fly, Frances, Flying Kate, Fanny and Jewell; 2d, Brunswick Fur Club's Modest Girl. Very high com., Z. C. Wilson's Bell. High com., G. A. Shaw's Yum Yum. *Puppies*: 1st, Natural Gas Pack's Logan; 2d and com., A. T. Palmer's Drum and Color Schiller; 3d and reserve, Cook Kennels' Drum and John. Very high com., W. I. Hutchinson's Count H. High com., Z. C. Wilson's Rex W. *Bitches*: 1st, A. M. York's Lady Cook; 2d, Cook Kennels' Fire Fly.

CHESAPEAKE BAY DOGS.—OPEN—Dogs: 1st, Osceola Kennels' Dick; 2d, J. M. Sellers's Chess II.; 3d, G. Oliver's Roy. *Bitches*: 1st, Osceola Kennels' Miss Fortune.

IRISH WATER SPANIELS.—CHALLENGE—Dogs: 1st, J. R. Daniel's Patsy O'Connor. *Bitches*: No entries. *OPEN—Dogs*: 1st, Rodes & Fitzsimmon's Dennis O'Donoghue; 2d and reserve, Anderson & Kilpatrick's Mallard Drake and Ben Hur; 3d, James Delchewitz's Barry O'Donoghue. Very high com., Hornell-Harmony Kennels' Capt. Muldoon. *Bitches*: 1st and very high com., Anderson & Kilpatrick's Irish Flora and Mallard Duck; 2d, Jas. Delchewitz's Mollie; 3d, Rodes & Fitzsimmon's Nellie Marsh.

CLUMBER SPANIELS.—CHALLENGE—No entries. *OPEN—Dogs*: 1st and 2d, Ottawa Kennel Club's Boss III. and Queter. *Bitches*: 1st and 2d, Ottawa Kennel Club's Bromine and Lass of Beauty.

FIELD SPANIELS.—CHALLENGE—1st, Woodstock Spaniel Kennels' Bridford Gladys. *OPEN—Dogs*: 1st, G. W. Folsom's Baron; 2d, W. T. Payne's Newton Abbott Skipper; 3d, Woodstock Spaniel Kennels' Napoleon. Very high com., Cook Kennels' New York and Abby Farmer. *Bitches*: 1st and 2d, Woodstock Spaniel Kennels' Dorothy and Topsy; 3d, W. A. Pinkerton's Gyp. High com., Mrs. Arthur Ryerson's York.

COCKER SPANIELS.—CHALLENGE—1st, Lake Shore Kennels' Bene Silk. *OPEN—Dogs*: 1st, C. M. Nellie's Brantford Red Jacket; 2d, Woodland Kennels' Black Duke; 3d and high com., Woodstock Spaniel Kennels' Rabbie and Tora. Very high com., A. W. Pancoast's Dandy W. *Bitches*: 1st, Woodstock Spaniel Kennels' Yarow; 2d, Hornell-Harmony Kennels' Hornell Bertha. *Puppies*: 1st, Woodstock Spaniel Kennels' Spots; 2d, R. G. Grierland's Major Stubbs. Very high com., Hornell-Harmony Kennels' Hornell Rapp. *Bitches*: 1st, Woodstock Spaniel Kennels' Dorothy; 2d, Hornell-Harmony Kennels' Hornell Mary. Com., G. J. Hamlin's Dina.

COLLIES.—CHALLENGE—Dogs: 1st and 2d, Chestnut Hill Kennels' Scollia and Charleroi II. *Bitches*: 1st and 2d, Chestnut Hill Kennels' Flurry III. and Metchley Surprise. *OPEN—Dogs*: 1st and 2d, Chestnut Hill Kennels' The Squire and Scollia II.; 3d, McEwen & Gibson's Fairlie; 4th, A. J. Warner's Queequey. Very high com., C. W. Simpson's Aberdeen. High com., S. A. Crawford's Ben Lomond. *Bitches*: 1st, Chestnut Hill Kennels' Roslyn Clara; 2d, McEwen & Gibson's Marigold; 3d, D. L. Parrish's Scottish Beauty. Reserve, J. L. Lincoln, Jr.'s White Lily. High com., C. H. Baddeley's Glen Rosa. Com., G. W. Roberts' Lark. *Puppies*: 1st, McEwen & Gibson's Marmion; 2d, V. S. Keen's Bessie. *Bitches*: 1st, Chestnut Hill Kennels' Bonnie Bussie; 2d, V. S. Keen's Roslyn Parole; 3d, D. L. Parrish's Scottish Beauty. Reserve, C. H. Baddeley's Dot McGregor.

POODLES.—Dogs: 1st, C. E. Hill's Zero; 2d, withheld. *Bitches*: 1st and 2d, withheld; 3d, T. M. Alley's Lady Belle.

BULLDOGS.—CHALLENGE—Dogs: 1st, G. Raper's Rabagas. *Bitches*: Absent. *OPEN—Dogs: 1st, R. B. Sawyer's Harper; 2d, Retnor Kennels' Monarch VI.; 3d, H. P. McKean, Jr.'s Hodge. Reserve, Mohawk Kennels' Joker. Very high com., E. S. Porter's Car brooke. High com., J. W. Heitz's Dodo. Com., F. Gorman's Lisacree. *Bitches*: 1st, Retnor Kennels' Dimple and Lena Langtry; 3d, T. Patten's Hillside Queen.*

BULL-TERRIERS.—CHALLENGE—Dogs: H. A. Harris's Jubilee. *Bitches*: H. A. Harris's Marguerite. *OPEN—LARGE—Dogs: 1st, Retnor Kennels' Briton; 2d, W. Mariner's Harvester; 3d, Mrs. S. C. Payson's Dinksey. Very high com., F. P. Kirby's White Stubb. High com., W. J. Bryson's Dufferin. *Bitches*: 1st, W. Mariner's Attraction; 2d, F. F. Dole's Queen Bendigo; 3d, J. H. Naylor's Diah. Very high com., H. A. Harris's My Queen. *SMALL—Dogs: 1st, Retnor Kennels' Miller; 2d, J. H. Naylor's Diah. *Bitches*: 1st, E. Medill's Ellen Terry; 2d, J. Callahan's Lady in White; 3d, E. Lever's Luce. *Puppies*: 1st, F. P. Kirby's White Stubb; 2d, W. J. Bryson's Dufferin; 3d, J. Callahan's Milwaukee Ned. Very high com., H. A. Harris's Standard. High com., Campbell & Blake's Trouble. *Bitches*: 1st, E. Lever's Luce.**

DACHSHUNDE.—1st, Carl Klocke's Bessie K.; 2d, F. P. Kirby's Dach.

BEAGLES.—CHALLENGE—Dogs: 1st, C. F. Judson's Little Duke; 2d, A. Parry's Frank Forest. *Bitches*: 1st, W. D. Hughes's Lou. *OPEN—Dogs: 1st, C. F. Judson's Racer, Jr.; 2d, R. C. Smith's Romeo K. *Bitches*: 1st and very high com., R. A. Smith's Whisper and Blue Belle; 2d, C. F. Judson's Ardley Diana; 3d, A. McArthur's Beauty. Reserve, Middleton Kennels' Yonnie W. *Puppies*: 1st, A. McArthur's Hedy; 2d, Middleton Kennels' Princess. Reserve, C. F. Judson's Ardley Boy.*

FOX-TERRIERS.—CHALLENGE—Dogs: 1st, F. Hoey's Valet; 2d, J. E. Thayer's Ruby Mixer. *Bitches*: Absent. *OPEN—Dogs: 1st, F. Hoey's Veronesse and Valens; 2d, J. E. Thayer's Racket; 3d, withheld. Very high com., H. J. Linzen's Blanton Grumbler. High com., C. H. Williams's Trigger. *Bitches*: 1st and 3d, J. E. Thayer's Richmond Dazzle and Rosa Canina; 2d, J. M. Aubrey, Jr.'s Cony I.; 4th, G. Clupchase's Nettie. Very high com. and high com., J. Dupre, Jr.'s Tricket and Dinah. *Puppies*: 1st, withheld. *Bitches*: 1st, H. Moore's Vagabond; 2d, J. E. Thayer's Hillside Mix and T. M. Hunter's Gyp. High com., G. C. Ocala Kennels' The West. *Bitches*: 1st, J. M. Aubrey, Jr.'s Cony I.; 2d and 3d, withheld. Very high com., Davey & Richards's The Duchess. High com., Pitts & Giltinan's Takawa. Com., W. F. Rander's Daisy II. *WIRE-HAIRED—Dogs*: 1st, Hendrie & Miner's Eskdale Broom; extra 1st, Neuville Kennels' Billet; 2d and high com., Hartmann Kennels' Garmen's Snorer and Dartmoor Dancer. *Bitches*: 1st, Dartmoor Kennels' Dartmoor Sunbeam; extra 1st, Neuville Kennels' Capsicum; 2d, Mrs. Wm. Potter's Lill. *Puppies*: 1st, Davey & Richards' Domina; 2d, Dartmoor Kennels' Dartmoor Dancer.*

IRISH TERRIERS.—Dogs: 1st, Lewis & Jarrett's Burnside; 2d, Chestnut Hill Kennels' Roslyn Dennis. *Bitches*: 1st, Keystone Kennels' Nevermore Gessie; 2d, E. Lever's Kathleen.

SCOTCH TERRIERS.—Dogs: 1st, Meadowthorpe Kennels' Meadowthorpe Donald; 2d, withheld. *Bitches*: 1st, J. H. Naylor's Fanny Fern.

DANDIE DINMONT TERRIERS.—Dogs: 1st, Meadowthorpe Kennels' Meadowthorpe Belver; 2d, H. J. Linzen's Border Clunker II.; 3d, H. G. Nichols's Stanley. *Bitches*: 1st, J. H. Naylor's Pansy.

SKYE TERRIERS.—Dogs: 1st, C. A. Shinn's Sir Stafford. *Bitches*: 1st, M. H. York's Lady Countess.

BLACK AND TAN TERRIERS.—Dogs: 1st, A. W. Smith's Buffalo General; 2d, Campbell & Blake's Prince; 3d, R. Stucky's Sir Wallace. High com., F. P. Kirby's Beauty. *Bitches*: 1st, Rochelle Kennels' Meersbrook Maiden; 2d, Campbell & Blake's Nanon.

YORKSHIRE TERRIERS.—Dogs: 1st, Mrs. M. A. Goldsmith's Damaskare; 2d, J. Maddox's Victor; 3d, Lizzie Stanley's Damfion. High com., W. Pearce's Little Spot. Com., G. Snyder's Freddy. *Bitches*: 1st, Mrs. J. S. Bruher's Flora; 2d, E. N. Goldsmith's Calumet Bo-Peep; 3d, N. E. Oliver's Rough.

TOY TERRIERS.—Absent.

PUGS.—CHALLENGE—Dogs: No entry. *Bitches*: 1st, Dr. M. H. Cryer's Bessie. *OPEN—Dogs*: 1st, Acme Kennels' Lord Nelson II.

and 3d, Dr. M. H. Cryer's Bob Ivy and Nap. Very high com., Eberhart Pug Kennels' Bradford Ruby II. High com., Mrs. A. B. Van Horne's Dandy. Com., W. J. Bryson's Little Toots. *Bitches*: 1st, Mohawk Kennels' Bo-Peep II.; 2d, Dr. M. H. Cryer's Myrtle; 3d, J. A. Lawrence's Sateen. *Puppies*: 1st, Mrs. Sarah E. Davis's Sprake; 2d, Mrs. A. G. Eberhart's Eberhart's Cashier. Very high com., J. A. Lawrence's Sateen. Com., W. J. Bryson's Little Toots.

KING CHARLES SPANIELS.—Dogs: 1st, A. M. Goldsmith's Hylus; 2d, M. J. Nolan's Roy. *Bitches*: 1st, Acme Kennels' Nell Gwynne II.; 2d, Mrs. M. A. Goldsmith's Royal Floss.

BLLENHEIM SPANIELS.—Dogs: 1st, Holmes & Kittzenger's Milwaukee Duke; 2d, H. Jansen's Milwaukee Duke, Jr. *Bitches*: 1st, R. W. Holmes's Milwaukee Rose; 2d, H. Jansen's Milwaukee Belle.

ITALIAN GREYHOUNDS.—1st, Mrs. Chas. E. Allen's Dixie; 2d, Joe Lewis's Sprite; 3d, J. F. Ives's Belle.

SCHIPPERKES.—1st and 2d, Chestnut Hill Kennels' Othello and Mike.

CLYDESDALE TERRIERS.—Dogs: 1st, C. A. Shinn's Clydesdale Loris. *Bitches*: 1st and 2d, C. A. Shinn's Belle of Clyde and Clydesdale Lady.

SIBERIAN WOLFHOUNDS.—1st and reserve, P. H. Hacke's Ivan and Czar; 2d, W. N. King, Jr.'s Ivan Romanoff. Very high com., J. Getz's Zerry.

MISCELLANEOUS.—1st, Campbell & Blake's Nelly Gray (whisper); extra 1st, S. M. Cleaver's Orson (black-tailed sheepdog); 2d, Schuyler's Sport (bloodhound); 3d, R. Clement's Whitey (Chihuahua dog).

SPECIAL PRIZES.

Kennel sporting dogs, Cook Kennel. Mastiffs, kennel (2), E. H. Moore, American-bred, Melrose Prince. Mastiff Club, challenge cup, dog, Iford Chancellor; bitch, Lady Colons. St. Bernards, kennel, E. H. Moore, rough-coated, Hesper, puppy, Kaituma, St. Bernard Club medals. American-bred smooth-coated dog over 18 months, Mascot Royal; bitch, Mascot Grace; rough-coated bitch, Madchen; dog under 18 months, St. Hubert. Great Danes, kennel, B. Ulrich. Great Dane Club specials, best dog, Helios; bitch, Nevezal; American-bred dog, Don; bitch, Nellie; dog puppy, Nezac; bitch, Nig Merrilies; dog owned by member, Don. Skye dog, dog, Lady Cook; bitch, Lady Colons. Cocker spaniels, Damikare; bitch, Flora. Kennel pugs, Dr. M. H. Cryer; best, Bessie.

J. W.

ROCHESTER DOG SHOW.

THE dog show opened this morning with a rather meager attendance in the same building as last year—Washington Rink. The rink is well adapted for the purpose, being light and well ventilated. A drizzling rain dampens the ardor of the otherwise enthusiastic exhibitors and visitors. There are only 293 entries in 123 classes, which shows a falling off from last year. The quality is good. The judges are Major J. M. Taylor, for setters, pointers and foxhounds; Mr. A. C. Wilmerding, for spaniels; Mr. H. W. Lacy, for deerhounds, greyhounds, dachshunde, bengals, bassets and pugs, and Mr. James Mortimer for the remaining classes. "Billy" Tallman is on hand and superintending in his usual efficient manner, and Spratt's Patent benches and feeds. The absence of the superintendent and of all of the officers of the club was keenly felt in the early morning when the first arrivals presented themselves—a kind of go-as-you-please feeling taking possession of one and all, as each man led his dog through the doors, without any system of receiving and checking then apparent. There is no visible reason why any of the dogs could not have been led out again and spirited away without being interfered with in the least.

Toward the afternoon the attendance improves as the weather clears. Judging has progressed favorably, and it is expected will be entirely finished the first day. Among the prominent exhibitors are E. H. Moore, with his mastiffs and St. Bernards; E. B. Sears, the same breeds; the Hornell Kennel Club with their greyhounds, spaniels and beagles; the Westminster Kennel Club, pointers; Hempstead Farm Co., pointers and collies; J. P. and W. W. Gray, collies; Geo. H. Bush, spaniels; W. F. Hobbie, bull-terriers; Blanton Kennels, Fred Hoey and Clarence Rathbone, fox-terriers; Dr. Cryer, pugs, and Rochelle Kennels, black and tan terriers. The show seems to be well advertised, and it is to be hoped the local interest will grow as the weather improves, and the attendance increase. Following is a list of the

AWARDS.

MASTIFFS.—CHALLENGE—Dogs: 1st, E. B. Sears' Sears' Monarch. *Bitches*: 1st, E. H. Moore's Lady Colons. *OPEN—Dogs*: 1st, E. H. Moore's Iford Chancellor; 2d, J. W. Whitney's Horace. Very high com., L. D. Ely's Elm Fane Jumbo. High com., A. Clark's Turk. Com., A. Copey's Rex. *Bitches*: 1st, very high com. and high com., E. H. Moore's Cambrian Princess. Lady Dork and Lady Beatrice; 2d, E. B. Sears' Countess of Dunmore. High com., J. S. Reed's Alpha. Kennel prize, E. H. Moore; best, also Mastiff Club special and best bitch in open class, Cambrian Princess; dog in open class, Iford Chancellor.

ST. BERNARDS.—ROUGH-COATED—CHALLENGE—Dogs: 1st, E. H. Moore's Ben Lomond; 2d, E. B. Sears' Plinlimmon, Jr. *Bitches*: 1st, E. B. Sears' Lady Wellington; 2d, E. H. Moore's Miranda. *OPEN—Dogs: 1st, E. B. Sears' Hesper; 2d, E. H. Greiner's Tristan C. *Bitches*: 1st, Cruel & Co.'s Marion; 2d, E. H. Moore's Corvette. Very high com., E. B. Sears' Lady Madeline. Kennel prize, E. B. Sears. Best in open class, Hesper. *SMOOTH-COATED—CHALLENGE—Dogs: 1st, E. B. Sears' Victor Joseph. *Bitches*: 1st, Wentworth Kennels' Thisbe. *OPEN—Dogs*: 1st, T. H. Groves' Dud. *Bitches*: 1st, D. Mann's Cleopatra; 2d, E. B. Sears' Alpine Queen. *Puppies—Dogs*: 1st, T. H. Groves' Monarch. *Bitches*: 1st, T. H. Groves' Princess.**

NEWEOUNDLANDS.—1st and 2d very high com., J. Marshall's Prince George. Albany Lass and Troy Lass.

DEERHOUNDS.—Absent.

GREYHOUNDS.—CHALLENGE—Dogs: 1st, Hornell-Harmony Kennels' Mommom. *Bitches*: 1st, Hornell-Harmony Kennels' Harmony. *OPEN—Dogs: 1st, high com., Hornell-Harmony Kennels' Hazelhurst and Ingomar; 2d, Devon Kennels' Conspirator. *Bitches*: 1st, Hornell-Harmony Kennels' Fannie M.; 2d, Devon Kennels' Gipsy. *Puppies*: 1st and 2d, Hornell-Harmony Kennels' Imperator and Ingomar. Kennel prize, Hornell-Harmony Kennels' brace, Harmony and Hazelhurst.*

FOXHOUNDS.—1st and 2d, very high com., high com. (2) and com. (7), W. A. Wadsworth's Playfair. Driver, Judge, Grover, Loyal, Lucy, Poverty, Colonel, Nero, Ruler, Puzzle and Rustic. Pack (2), W. A. Wadsworth.

POINTER.—LARGE—CHALLENGE—Dogs: 1st, Hempstead Farm Kennels' Ebert, St. Diabie. *Bitches*: 1st, J. H. Winslow's Green Rod. *OPEN—Dogs: 1st, E. B. Bellman's Graphite; 2d, J. H. Winslow's Tempest. Very high com., E. H. Morris's Sancho, and Hempstead Farm Kennels' Tory White. High com., J. Roche's Kildeer. Com., Hornell-Harmony Kennels' Hornell Sam. *Bitches*: 1st, E. B. Bellman's Stella B. *SMALL—CHALLENGE—Dogs*: 1st, Hempstead Farm Kennels' Duke of Hesse; 2d, E. Dexter's King of Kents. *Bitches*: 1st, Hempstead Farm Kennels' Queen Fair. *OPEN—Dogs*: 1st, C. Heath's Lancelot; 2d, J. R. Fanning's S'anch (1st com., A. White's Jersey. *Bitches*: 1st, C. Heath's Sully Lass II.; 2d, Hempstead Farm Kennels' Stella. High com., O. B. Mitchell's Sylvia and C. Heath's Lady Norish. *Puppies*: Absent. Kennel, Hempstead Farm Kennels; brace, Lancelot and Sally*

Brass II.; best, Robert Le Diabie; dog owned by member of Pointer Club, the same; bitch, Queen Fan; large dog, open class, Graphite; yard-broken, the same.

ENGLISH SETTERS.—CHALLENGE—Dogs: No entry. *Bitches*: Absent. *OPEN—Dogs*: Prizes withheld. Com., C. Robertson's Guida. *Bitches*: 1st, Peet & Lyon's Chataqua Belle; 2d, J. P. & W. W. Gray's Thorndale. Very high com., Joe Lewis's Zoma. Com., C. J. Koch's Fannie. *Puppies*: No entry. *Bitches*: J. P. & W. W. Gray's Thorndale.

IRISH SETTERS.—CHALLENGE—Dogs: Dr. Wm. Jarvis's Elcho, Jr. *Bitches*: Absent. *OPEN—Dogs*: 1st, E. Maher's Larry S.; 2d, Sage Bros.' Paddy P. Very high com., D. Rhoads' Aldershot. Com., E. Shear's Grouse. *Bitches*: 1st, F. H. Perry's Nino; 2d, J. A. Logan's Jeannette. Very high com., W. L. Washington's Ruby Glenmore. High com., E. A. Pierpont's Countess Haidee. Com., Dr. A. Drinkwater's Mollie. *Puppies*: Absent. Brace, E. A. Pierpont's Elcho Fitz-Mary and Countess Haidee; best in open class, Larry S.; best, Elcho, Jr.

GORDON SETTERS.—CHALLENGE—Dogs: 1st, S. G. Dixon's Little Boy. *Bitches*: 1st, W. S. Hammett's Rose. *OPEN—Dogs*: 1st, F. E. Ashmead's Dixon. *Bitches*: 1st, G. Griffin's Jessie; 2d, J. Faulkner's Rhona. *Puppies*: No entry. Best, Little Boy.

FIELD SPANIELS.—CHALLENGE—1st, W. T. Payne's Newton Abbott Skipper. *OPEN—BLACK—Dogs*: 1st, E. Morris's Baron; 2d, withheld. High com., Bridford Kennels' Black Dwarf. *Bitches*: 1st, Bridford Kennels' Ace of Spades; 2d, R. P. Keasbey's Miss Bend Or. Very high com., A. Laidlaw's Topsy. *IVER—No entry.* *ANY OTHER COLOR—1st*, Hornell-Harmony Kennels' Hornell Rex; 2d, G. H. Bush's Adonis. Spaniel Club challenge cup, Baron.

COCKER SPANIEL.—CHALLENGE—Only entry not for competition. *OPEN—BLACK—Dogs*: 1st, A. Laidlaw's Rabbie. *Bitches*: 1st and 2d, G. H. Bush's Novel and Bessie W. Very high com., Hornell-Harmony Kennels' Hornell Bertha. *ANY OTHER COLOR—Dogs*: 1st, C. M. Nellie's Brantford Red Jacket. *Bitches*: 1st, G. H. Whitehead's La Tosca; 2d, Hornell-Harmony Kennels' Hornell Mary.

CLUMBER SPANIELS.—CHALLENGE—Not for competition. *OPEN—1st and 2d*, Bates & Geddes's Bromine and Boss III. Very high com. and high com., Mercer & Weston's Lass of Beauty and Queter.

IRISH WATER SPANIELS.—1st, Joe Lewis's Patsy O'Connor; 2d, Hornell-Harmony Kennels' Capt. Muldoon. *ANY VARIETY—Puppies*: Prize withheld. High com., Hornell-Harmony Kennels' Hornell Rapp.

COLLIES.—CHALLENGE—Dogs: Absent. *Bitches*: No entry. *OPEN—Dogs*: Hempstead Farm Kennel's Hempstead Zulu; 2d, W. D. Hughes's Nullamore. Reserve, J. A. Haskell's Tyke. Very high com., A. M. Cossitt's Gibson. High com., F. Ocmupaug's Sandy and J. P. & W. W. Gray's Colonel. *Bitches*: 1st, 2d, very high com. (2), high com. and com., J. P. & W. W. Gray's Bonnie's Baby, Bonnie Knowe, Cressie's Mint, Brenda and Albee. Reserve, E. A. Pierpont's Drumlin Moss. *Puppies—Dogs*: 1st, J. P. & W. W. Gray's Colonel. Reserve, E. A. Pierpont's Scipio. *Bitches*: 1st, reserve, very high com. and high com., J. P. & W. W. Gray's Bonnie's Baby, Gemma, Cressie's Mint and Brenda. Kennel, J. P. & W. W. Gray; best in open class, Hempstead Zulu; dog owned in Rochester, Gibson; bitch, Drumlin Moss. Collie Club special for best, not over two years, Hempstead Zulu puppy, Bonnie's Baby. A. K. C. Kennel special, J. P. & W. W. Gray.

BEAGLES.—CHALLENGE—Dogs: 1st, C. F. Judson's Little Duke. *Bitch*: 1st, W. D. Hughes's Lou. *OPEN—Dogs*: 1st, Hornell-Harmony Kennels' Royal Krueger; 2d, C. F. Judson's Racer, Jr. *Bitches*: 1st and 2d, Hornell-Harmony Kennels' Una and Joan W. Very high com., C. F. Judson's Ardley Diana. *UNDER 12 INCHES—Dogs*: 1st, Hornell-Harmony Kennels' Joan W. *Puppies—Dogs*: 1st, C. F. Judson's Ardley Merle. *Bitches*: 1st, Hornell-Harmony Kennels' Avon. Kennel prize, Hornell-Harmony Kennel; pair, Royal Krueger and Myrtle.

BULLDOGS.—CHALLENGE—Dogs: 1st, J. H. Mathews' Portswood Tiger. *OPEN—Dogs*: 1st, R. B. Sawyer's Harper, J. H. Mathews' Quasimodo. Reserve, H. P. McKean, Jr.'s Hodge. Very high com., E. S. Porter's Carisbrooke. High com., W. Whitney's Caesar. *Bitches*: 1st, J. H. Mathews' Thespian.

BULL-TERRIERS.—CHALLENGE—1st, W. F. Hobbie's Cairo; 2d, W. G. & H. A. Harris's Marguerite. *OPEN—Dogs*: 1st, E. D. Days's Chessie Flyer; 2d, W. F. Hobbie's Spotted Prince. *Bitches*: 1st, W. F. Hobbie's Enterprise; 2d, F. F. Dole's Queen Bendigo. Very high com., W. G. & H. A. Harris's Hiss Nore. High com., G. E. Potts's Miss Bendigo. *Puppies*: Withheld. Kennel prize, W. G. & H. A. Harris.

FOX-TERRIERS.—CHALLENGE—Dogs: 1st, Blanton Kennels' Blanton Rubicon. *Bitches*: 1st, Blanton Kennels' Rachel. *OPEN—Dogs*: 1st, F. Hoey's Veronesse; 2d, Blanton Kennels' Blanton Racket. Reserve, J. A. Logan, Jr.'s Blanton Volunteer. Very high com., C. Rathbone's Beverwyck Rebel. Com., H. P. Thompson's Zig Zag. *Bitches*: 1st, Blanton Kennels' Blanton Brilliant; 2d, J. A. Logan, Jr.'s Blanton Comely. High com. and com., J. P. & W. W. Gray's Coquette and Lady Belmont. *Puppies*: 1st, Blanton Kennels' Blanton Racket. Reserve, C. Rathbone's Beverwyck Rebel. Very high com., J. A. Logan, Jr.'s Blanton Comely. High com., H. P. Thompson's Elipse. Com., J. P. & W. W. Gray's Constellation. *WIRE-HAIRED—1st and 2d*, Neuville Kennels' Billet and Capsicum. Kennel prize, Blanton Kennels; second best, also Beverwyck Rebel. Fox-Terrier Club special for kennel, Blanton Kennels' Apollo Stakes, Blanton Racket.

BLACK AND TAN TERRIERS.—CHALLENGE—1st, Rochelle Kennels' Meersbrook Maiden; 2d, A. W. Smith's Buffalo General. *OPEN—Dogs*: Rochelle Kennels' Dick; 2d, W. B. Taylor's Buffalo Albert. *Bitches*: 1st, A. W. Smith's Gipsy Queen; 2d, Rochelle Kennels' Rochelle Grit.

IRISH TERRIERS.—Dogs: 1st, T. Pulvertaft's Adventurer; 2d, Lewis & Jarrett's Burnside. *Bitches*: 1st, T. Pulvertaft's Little Vixen; 2d, T. Wise, Jr.'s Gipsy Girl.

SCOTCH TERRIERS.—Absent.

SKYE TERRIERS.—1st, C. A. Shinn's Sir Stafford.

YORKSHIRE TERRIERS.—1st and 2d, reserve and very high com., C. N. Symond's Daisy, Fishpool, Gem, Toots Royal and Jenny. Com., E. Morris's Baron. Kennel prize, C. N. Symonds.

CLYDESDALE TERRIERS.—1st and 2d, C. A. Shinn's Clydesdale Loris and Belle of Clyde.

PUGS.—CHALLENGE—1st, Dr. M. H. Cryer's Bessie. *OPEN—Dogs*: 1st and reserve, Dr. M. H. Cryer's Bob Ivy and Nap; 2d, A. L. Wilson's Little Jewel. High com., W. PUNCH's Grover Cleveland. *Bitches*: 1st, Dr. M. H. Cryer's Myrtle; 2d and com., G. E. Peer's Lady Clover and Bessie Clover. *Puppies*: 1st and 2d, G. E. Peer's Lady Clover and Bessie Clover. Kennel prize, Dr. M. H. Cryer; best in open class, Bob Ivy; three shred by Lord Clover, G. E. Peer.

KING CHARLES SPANIELS.—Absent.

ITALIAN GREYHOUNDS.—1st, Joe Lewis's Sprite.

MISCELLANEOUS.—1st, S. M. Cleaver's Orson. **CHESTER.**

BOSTON DOG SHOW.

BOSTON, March 8.—*Editor Forest and Stream*: The following railroads have kindly consented to transport dogs to be exhibited at the bench show of the New England Kennel Club at Boston, April 1 to 4, free when accompanied by owner or care-taker, provided that not more than three dogs shall be transported for one person: Boston & Albany, Boston & Lowell, Boston & Maine, Eastern, Fitchburg, New York & New England, Boston and Providence, and Old Colony. The above does not apply to Sound lines between Boston and New York.

The following express companies will return dogs free that have paid double merchandise rates to the show: Earle & Prew, National Express Co., Wells, Fargo & Co., American, United States, New York & Boston Despatch, and Adams.

We shall do our own benching, and hope in this way to avoid distemper and contagion of all kinds that have followed our large shows of late, where the same benching has been used without proper disinfecting. Austin & Graves will feed with Austin's dog bread. Mr. R. F

A SINGULAR CASE.

BOONTON, N. J., Feb. 28.—*Editor Forest and Stream:* I send you the promised report of the veterinary surgeon who pulled the Gordon setters through. There was the most remarkable case of rapid sloughing that I have ever seen on any animal tissue. The dog was first noticed licking his foot on Tuesday, Jan. 28; at that time nothing more was observed than a pronounced redness between the toes. By the following noon necrosis of the bones of the foot had distinctly set in, and by Thursday morning the destruction of the tissues had involved the veins and the arteries to such an extent that serious hemorrhage supervened, and within twenty-four hours after the tissues had been severely cauterized to stop the bleeding, the same bleeding recurred from the progressive sloughing of the parts. Wherever the pus from the foot touched—on the nose, ear and several places on the other leg—the same rapid destruction of tissues set in, and the bitch (having been incautiously placed in the vicinity of the dog) was attacked in the same way; first on the foot and then on other parts of the body. What was it?

W. T. BARNARD.

REPORT.

On the 31st day of January last I was called in to see a dog (one of a pair of imported Gordon setters) belonging to Dr. Barnard, of Boonton, N. J. He had a peculiar condition of one foot, namely, a necrosis of the tissue between the digits and also of the phalanges themselves. The digital arteries and veins were exposed and continuous hemorrhage going on. The exudate was of a purulent form, also there were several spots on the opposite leg about the lower region of the tibia similar in character, evidently caused by contact with the other foot. I cauterized the arteries and dressed the foot with an antiseptic dressing. On calling the next day I found the necrosis had extended upward and violent hemorrhage was again going on. I again cauterized and applied a very strong antiseptic and was gratified the next day in finding very little hemorrhage. About this time its mate (a bitch) was noticed to have a small sore between the digits, which was at once dressed antiseptically, but the disease increased in severity and extended to two of the other feet, but after two weeks gradually succumbed to treatment. The dog in the meanwhile kept getting worse, high fever, necrosis rapid, accompanied with gangrene, but not extending upward; would not notice any one or eat anything, and the prognosis was very unfavorable. I stimulated the dog every four hours with milk punches, eggs, etc., and on the sixth day a change for the better took place, and ever since then he has been improving and is now nearly recovered, though minus three digits. The bitch is well. I used on the dog externally a solution of Hg. Cl. and flowers of sulphur, and internally calcium sulphate, following later with iron. The bitch was treated with a solution of creosote and flowers of sulphur externally, and jabarandi internally, but owing to her condition (heavy in pup) I stopped the jabarandi and gave calcium sulphate and iron. The exudate showed, under the microscope, an innumerable amount of bacilli, in character black rods of about equal size and length unbroken. The cells were very active and had great amoebic movement, in fact such progression is rarely or never seen. I diagnosed it as a case of pyemia, the external cause being some irritant, but as none could be accounted for I was and am still at a loss to account for such activity in the necrosis. I showed the case to several eminent veterinary surgeons in New York, who all agree with me that it was a very peculiar and interesting case. The dogs are an exceptionally fine pair and were imported by the owner at a great expense.

R. L. TRITTON, V. S., N. Y. V. C.

PHILADELPHIA K. C. SHOWS AND TRIALS.

Editor Forest and Stream:

Mr. Jas. Watson misquotes me in your valuable paper. He quotes me as saying that the Philadelphia Kennel Club "would henceforth eschew dog shows." If he had taken the trouble to refer to my article, which he should have done before quoting me, he would have seen that what I did state was "there will be no bench show held by the Philadelphia Kennel Club this year." I made this statement for the benefit of a number of exhibitors, who have made inquiry through the sporting journals. The statement that Mr. Watson would make me responsible for would be committing the club to a policy for which I have no authority. As I have said, bench shows held in Philadelphia have not proved a success financially. The club has now a largely increased membership, there has been an infusion of a new life, so to speak, in its ménage, and it would not greatly surprise me that when the matter of holding a rousing big show in this city next spring is taken up it would receive favorable consideration.

Much of the "Kennel Vendetta" business, which Mr. Watson himself so strongly condemns, might be largely avoided if writers of his ability were more careful in their statements. Dog men are proverbially contentious, and nothing so quickly incenses a dog man as to be misquoted. I fully agree with Mr. Watson that an improvement was to be desired in the field trials held several years ago. Each year marks an improvement in the club's trials. The improvement in last year's trials over those of two years ago gave to the club a decided impetus. This is due to the quality of the dogs run and the nature of the ground upon which the trials were held. Birds were more plentiful. The scarcity of birds has been the stumbling block.

The difficulty that the club has labored under in past years has been in securing grounds that were well stocked with game and within easy distance of Philadelphia. You see, the majority of the club's members are men in active business pursuits, who can allot to recreation of this sort just so many days. Now if this time which they hope to pass pleasantly in the field is materially shortened by several days railroading, they simply refuse to attend. Therefore, as it is upon the attendance of members and the number of dogs entered that the success of the meeting depends, it behooves the management to secure the best grounds possible within a radius of a given number of miles. The matter of securing new grounds was taken up and discussed at the meeting held March 4 in the club's new quarters; the result of the discussion was the appointment of a committee of four active members, with power to secure the most available grounds for the next trials. Widewater, Va., where the trials were held last November, is regarded very favorable; there are, however, objections to Widewater. It is doubtful whether Col. Waller, our kind and attentive host, can accommodate the large number that have expressed their intentions of being present this year; there is a limit to the capabilities of his roomy and hospitable mansion.

At Widewater the birds were not sufficiently plentiful, that the abilities of the puppies in running the Derby Stake might be thoroughly tested, while the fields are large and the cover plentiful, there are hills that have to be climbed. When running the Members' Stake the birds seemed fully alive to the fact that they were being hunted by tenderfoot sportsmen, and when flushed would go like cannon balls for cover on the hillside, and climbing the hills after the dogs cut the members' wind and started their profanity. If accommodations cannot be secured for an increased attendance at Widewater, most likely new grounds will be selected.

When the quality of the following dogs, who will all run this year, is taken into consideration, may we not look forward to a very successful meeting? Dogs like Gath's Mark, Breeze Gladstone, Tempest, Bob H., Katie Noble, Clipper W., Peaseverance, Rod-Gem, Ezra Noble, San Roy, Jr., et al., all field trial performers. These dogs have all been educated

by celebrated handlers in the South. In addition to those mentioned there are a number of young dogs of great promise. Dr. Davis has a very likely little bitch in List Noble (Count Noble—Fate Gladstone). Francis S. Brown, shortly after the death of the field trial winner Nora, was presented by the parents of the late I. Norris Cochrane, Esq., with two very promising puppies. One of these little aristocrats is a daughter of Nora, by Ben Hill; the other is a dog sired by Paul Gladstone out of the great Bohemian Girl. Dr. J. A. Hartman has a very promising entry in Rosa Gath (Gath's Joy—Rosa).

FRANCIS G. TAYLOR.

CALIFORNIA KENNEL CLUB.

Editor Forest and Stream:

A large meeting of the California Kennel Club was held in San Francisco, Cal., on Feb. 27, at which Hon. J. B. Lewis presided and Wm. G. Cue was secretary. The committee which was appointed to confer with the Pacific Kennel Club made a report, and stated the terms on which the Pacific Kennel Club desired to consolidate: That both clubs should unite under the name of the Pacific Kennel Club; that the present officers, constitution and by-laws of the Pacific Kennel Club, as they now are, should be accepted and govern the new club; that the California Club should assume half of the indebtedness of the Pacific Kennel Club, which is between \$400 and \$500 for unpaid prizes won at their last bench show in May, 1889.

On motion of James Sumner the report was received, and the committee, consisting of J. B. Lewis, A. B. Truman, J. B. Martin and John M. Crane, was discharged.

Thos. Higgs moved that the terms be not accepted, and the motion was seconded by W. G. O'Hara. All of the members present were opposed to the terms offered by the Pacific Club, and it appeared to be the unanimous opinion that the only terms which would be acceptable to the club were as follows: That the California Kennel Club should name first and third vice-presidents; that the executive committee should consist of sixteen members, eight from each club; that they should not assume any indebtedness of the Pacific Club; that the funds now in the treasury of the California Kennel Club should be placed in the hands of a responsible person and should be used for no purpose other than giving a bench show; that the name of the new club should be the California-Pacific Kennel Club, or a new name, and that the constitution and by-laws be revised to conform with the constitution and by-laws of the American Kennel Club.

W. G. CUE, Sec. C. K. C.

DOGS OF THE DAY.

THAT sterling good bull bitch Britomartis died on the Thursday after New York show, Heald finding her dead in her kennel on making his morning rounds. He tells me the cause must have been colic, judging from the way she was lying. Britomartis was bred by Mr. Lyell, of Dundee, Scotland, and was by that grand dog Monarch out of Penzie. I forget whether Mr. Benjamin, of London, showed her first or not, but it was in his name anyway that she made her fame. This was about the end of Mr. "Ulster" Benjamin's exhibiting career, for his business at Ulster House, coupled with some papers he was dabbling with, took up his time. I heard early of Britomartis being in the market, but that she was a non-breeder. I so advised Mr. Thayer, and for that reason he did not buy her when I could have got her for \$80. The Livingston Brothers bought her from Mr. Benjamin and showed her at Boston, where Mr. Thayer bought her, as she could beat anything he had. The price was a long one, but Mr. Thayer once refused an opportunity to get well out of the deal. The Boston gentleman who imported that sensational dog Tom Ball, offered \$1,000 for "Brit." I forget whether she was declined, as there were a lot of shows ahead. Tom Ball caught distemper the first time he was shown at Boston, and died from the disease, so the \$1,000 offer was never renewed. Her brother Robinson Crusoe will soon follow to the happy hunting grounds, and when he goes Mr. Thayer's connection with the breed will terminate, except as judge, in which capacity we are to have the pleasure of seeing him at Boston next month.

I am advised that the smooth-coated St. Bernard dog Watch has been purchased for America, from Mr. J. F. Smith, of Sheffield, Eng. The new home of Watch will be in Ohio and St. Bernard men can start guessing where he will be domiciled. This dog, from all that has appeared about him in print, is an uncommonly good one, and he comes at a good time for breeders with Hector and Victor Joseph bitches coming on.

Mr. E. H. Moore has had the misfortune to lose his St. Bernard bitch Lady Miles. She was off her feed on Tuesday at Chicago, and when Mr. Crowell and I were at her bench on Wednesday, talking over her position and that of his bitch Manon, she was a very sick dog. Later in the day I heard Mr. Moore's man in consultation with Dr. Glover about the patient, but their efforts proved unavailing and she succumbed to pneumonia on Friday. In speaking of the merits of the two bitches, Mr. Crowell said that it would always be a matter of opinion as to which should lead. Miss Whitney had placed them one way at New York and Mr. Mortimer another at Chicago. It is a pleasure to have an exhibitor talk that way when defeated in place of "kicking," and when he does win he gets congratulations which are worth having and are not mere lip service.

I commend to the attention of the editor of FOREST AND STREAM the letter of Mr. H. T. Payne, of Los Angeles, which appears in the *Breeder and Sportsman* of March 1. It is a letter which merits republication here so that all may understand the case of the Southern California Kennel Club as against the American Kennel Club. If the A. K. C. delegates get an opportunity of reading Mr. Payne's statement there will be an end to the objection to the recognition of awards at the Los Angeles show. The opposition had a very narrow majority last time a reconsideration was asked for, and when Mr. Payne's statements are substantiated at the next meeting they will have nothing to say. In the first place the decision of the A. K. C. was fundamentally wrong—the club erred, if any one did so, and the penalty of non-recognition is visited upon the offending exhibitors, while the club is not even reprimanded. Secondly, according to Mr. Payne's statement, the blame for non-compliance with the rules rests at 44 Broadway, and not Los Angeles. Thirdly, the head and front of the offending was the printing of the A. K. R. numbers, and it will puzzle any one to find a rule forbidding that. I think it was said that the committee passed such a rule, but it will be time enough to consider that rule when it has been shown that the body passing it had any legal right to do so. These points only require elucidation to gain a reversal of the former decision, and the Los Angeles is to blame for not placing the full facts before the A. K. C. The delegates decided upon the statements made to them, and if these were *ex parte* it was the fault of the California Club.

It is amusing to note how some kennel editors display their ignorance of the alphabet of the business. One of your contemporaries relieved itself of an editorial opinion that the title of champion was earned too easily, and goes on to say, "The small shows are becoming so numerous that it is easy for a second or third class dog, by being confined to competition at these shows, to win the three times necessary to have the right to wear the title," and then it makes a suggestion of surpassing brilliancy—that is for the man who

wrote it. Of course, any one who knows anything about dog shows knows that a dog has to win four open class firsts and then three challenge class firsts to get the prefix "champion." Another editor who ought to have known better patted number one on the back and quoted the article without noticing the blunders. If those theorists think it is easy to get a champion let them start in now with a second rate dog of a breed in which there is any competition and they will find that it is the toughest job they ever tried to get him a champion. It is odds of ten to one against the dog living long enough to be a champion. Take collies for instance. I doubt if there was more than one champion created last year. This year there has been one already and there is not likely to be another till 1891.

A leading victim of distemper contracted at the New York show was the Hempstead Farm's collie Hempstead Ben, winner of the trophy, sweepstakes and other prizes. This was a very promising puppy, and it was extremely hard luck to lose the best of the bunch. I understand that the others in the kennel that contracted the disease are all fully recovered, but it was doubtless the fact of distemper being in the kennel that kept the Hempstead exhibit away from Chicago.

Some time in September last a writer over the name of "Merlin" was guilty of gross plagiarism in cribbing, with neither credit nor quotation marks, from an article by "Ashmont." In the current number of the English *Kennel Gazette* appears this tardy acknowledgement of the exposure: "The omission to credit Dr. Perry with authorship was quite inadvertent, and I gladly tender him my sincere acknowledgments, not only for the one paragraph which I used, but for his many and valuable contributions to this journal, and to our literature generally." As the crib was a good deal more than "one paragraph," as shown by Mr. Wade's letter at the time, the above confession reminds one of the plea that the baby was only a very little one. Can it have been caused by the letter I wrote to the secretary of the Kennel Club, I wonder, and when am I to receive an acknowledgment of that epistle?

J. W.

EASTERN FIELD TRIALS CLUB.

At a meeting of the Eastern Field Trials Club, March 11, it was decided to increase the money in the Derby and All-Aged Stakes for 1890. The purse in the Derby will be \$900, with \$500 to first, \$250 to second and \$150 to third, with the \$100 cup to the breeder of the winner. There will be only one All-Aged Stake this year for all pointers and setters that have not won first in any open stakes run in this country. The purse is for the same amount and divided the same as the Derby. The Members and Champion Stakes will be the same as last year.

Messrs. Geo. W. Ewing, Fort Wayne, Ind. and W. Hay Boakes, Saratoga Springs were proposed as members. A letter from John White states, that he has drawn the new grounds of the club at Otterburn Springs, Va., and found birds fully as plentiful as they were in North Carolina. The committee on rules will have them ready for publication in a few days.

BALTIMORE DOG SHOW.

BALTIMORE, March 10.—*Editor Forest and Stream:* Herewith I send you a list of the entries for our coming dog show, 318 in all. Mastiffs 13, St. Bernards 26, Newfoundlands 1, great Danes 6, deerhounds 4, greyhounds 6, pointers 40, English setters 27, Irish setters 22, Gordon setters 12, foxhounds 20, Chesapeake Bay dogs 17, cocker spaniels 9, collies 51, poodles 1, bulldogs 7, bull-terriers 7, dachshunds 4, beagles 11, fox-terriers 22, Irish, Skye, Yorkshire and toy terriers 1 each, pugs 16, toy spaniels 2, Italian greyhound 1, Mexican hairless 3, Siberian wolfhound 1, miscellaneous 6. Express companies will return dogs free to original shippers when regular rate has been prepaid one way. Pennsylvania and Baltimore and Ohio: "Not more than three dogs carried free in baggage cars at owner's risk, when accompanied by owners or caretakers, on presentation of identification papers."—W. STEWART DIFFENDERFER, Sec'y.

SPAYING.

Editor Forest and Stream:

Apropos to the letters in regard to spaying, let me add a mite for both sides of the questions. I have in mind two beagle bitches on which the operation was performed when they were six months old. They are both A1 dogs, keen of scent, long-winded and good leaders. Also a cross-bred bitch which promised to be fine, but after she was spayed was irritable, spiritless and solitary in her habits. She was finally given to a man who thought he could cure her defects, but at last accounts she was just the same. It seems to me that it is a very two-sided question. For my part I would never have it done, as with a little care one can watch his dog while in season.

G. JATE.

SMITH'S MILLS, Pa., March 1.

DEATH OF ZORA.—Vineland, N. J., March 3.—*Editor Forest and Stream:* The lovers and breeders of St. Bernards in America will probably think me deserving of their sincere sympathy when told of the circumstances attending the loss of my bitch Zora (A.K.R. 6899) on Feb. 25 last. She was in whelp by Ben Hur (A.K.R. 6727) and her litter was due between Feb. 25 and March 5. She had been remarkably strong, active and well up to the afternoon of the 24th, not having known a sick day since her breeding, though the remarkable development of her size told me she must have an unusually large litter. On the day last mentioned she began to show difficulty in breathing, refused food and had a period of sharp distress, foaming slightly at the mouth after taking the last food she swallowed. I called in Dr. Elton, a veterinary surgeon residing here on that occasion, and he did what he could to relieve her. I thought at the time that the trouble was caused by the pressure of the litter, and was in hopes that labor would begin soon enough to relieve her. I do not think she was able to lie down that night at all, but she seemed easier and had no more foaming at the mouth and nothing approaching a fit. The next morning I thought her better and visited her at short intervals, remaining longer with her than I was absent from her. About 3 P. M. I had to go into the house. When I left her there was no sign of increased distress, but at about 3:30 we found her lying about four feet from her nest, dead. I sent for Dr. Elton immediately, and when certain that she could not be brought back to life, we made an autopsy. We took from her nineteen pups, perfectly formed, but all dead. Eleven were males and eight females: fourteen of them were beautifully marked, with blaze, collar, tip of tail, breast, belly and feet white and the rest that brownish black which ripens into rich mahogany or orange. Neither the surgeon nor myself have the slightest doubt that the pressure of this unexampled litter upon the thoracic cavity of the bitch had interfered with the action of the heart, causing death the instant it bore upon that organ. I may state finally that while Zora was in good flesh she was not fat nor overfed. Has a larger litter than this ever been known? It was her first litter and she was but two years of age on Feb. 11 last. Luckily for the state of our own feelings we had not become quite as much attracted to Zora as to our other female St. Bernards, but as it is there has been a gloom in the house that only the true lover of dogs knows anything about.—TRACY GOTTLIEB.

CARLIN.

BIRD.

WASSERMAN.

COHEN.

PRYOR.

A PROMISING PUPPY.—Beaver, Pa.—*Editor Forest and Stream:* I have an English setter puppy Rob Roy, that was less than six months old when the season opened for ruffed grouse. On his first day out he struck a trail and roamed up like an old dog, came to a dead point, with left hindleg up. Gun stepped in, flushed the bird and killed. The puppy like a graven image on point from which the bird had flown, had to be pushed on, and when once started found the bird and retrieved—I was going to say in fine style, which would be about right when we consider the age of puppy, the size of the bird (an old cock) and his first introduction to Mr. Grouse—but truth compels me to say that although he did retrieve to my feet, in a careful examination of the bird the veriest tyro would know that it had been pretty roughly handled, but what is a bird in comparison to his achievement? He closed the season with a record of seven grouse and two quail, all retrieved; flushed one that was not secured and broke shot but once. I am very proud of my puppy Rob Roy.—G. A. SCROGES.

SIMONIDES VS. ROWDY ROD.—We have received a communication from Mr. D. E. Rose, of Lawrenceburg, Tenn., in which he takes exception to the comments of our reporter in the Simonides-Rowdy Rod heat in the Inter-State field trials, and in order to show that the comments are incorrect, has made the following proposal to Mr. Ayant: "My proposition is for him to meet me at Florence, Ala., March 20, and I will run Simonides against Rowdy Rod for a five-hour race under rules of the Southern Club, the race to be run over the grounds where the American trials were run. Handlers to go on horseback. As for judges, there are twelve or fifteen gentlemen sportsmen in and around Florence that we can each select one from and the two select the third. Or if Mr. Ayant will agree I am willing that Mr. P. H. Bryson, of Memphis, judge the race, and the loser pay the judges' expenses. Mr. Ayant to wire me his acceptance of challenge by March 10.—D. E. ROSE."

LICE.—Appleton, Wis., March 3.—*Editor Forest and Stream:* You gave me a remedy for lice on dogs which may be very effective, but after trying another remedy I believe it to be superior. It is simply a strong infusion of tobacco screenings (to be had at any cigar factory); it seems to cause no discomfort to the dog, and is apparently sure death to lice. Followed with the carbolic soap wash as you recommend I have found it tip top. I have written this in hope it may be useful to some lover of the dog.—C. V. Y. [We discarded this remedy many years ago for the decoction of quassia wood, as the latter is more cleanly and just as effective, and it does not nauseate and make the dog sick as is often the case when tobacco is used.]

BUFFALO DOG SHOW.—Boston, N. Y., March 8.—*Editor Forest and Stream:* We have received the following special prizes for our first annual show next month in addition to those previously announced: Ten dollars for the best greyhound and \$10 for the best collie in the show. Other cash specials are promised, and will be announced later. Local interest in the show is strong and entries are coming in. Most of the large kennels have promised support.—A. W. SMITH, Sec'y.

MICHIGAN KENNEL CLUB.—The regular annual meeting of the Michigan Kennel Club was held at Detroit, Mich., March 4. Following is a list of officers elected for the ensuing year: Pres., Dr. L. Youngblood; Vice-Pres., Dr. E. T. Tappay; Sec., Dr. M. V. B. Saunders; Treas., Mr. J. C. Royce; Delegate, Mr. H. E. Cook. Executive committee, the above-named officers and Mr. F. H. Croul.

WORCESTER, Mass., March 10.—The Sportsmen's Club has voted to appropriate \$50 to be used toward stocking the streams about Worcester with trout, and O. A. Benoit, C. Harry Morse, A. R. Jacobs, William Lawrence and Dr. Charles E. Higgins were appointed a committee for that purpose and given power to act in the matter.

THE TAIL-HOLDING PROCESS.—We have it from a trustworthy source that the original inventor of the "tail-holding process" at dog shows is again in the ring, and that as soon as he can get hold of a few English setters of the right sort, he will show them for all they are worth.

AMERICAN GORDON SETTER CLUB.—Baltimore, Md., March 11.—A special meeting of the American Gordon Setter Club of America will be held at the Maryland Kennel Club bench show at Natatorium Hall, March 19, 8 o'clock P. M.—ISAAC T. NORRIS, Sec'y.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

Prepared Blanks sent free on application.

Topeka Boy. By F. M. Shelley, Sheridan, N. Y., for black, white and tan beagle dog, whelped Jan. 2, 1890, by Speculation (Ringwood—imported Faun) out of Velda W. (Cameron's Racket—Pussie).

BRED.

Prepared Blanks sent free on application.

Florence—Homer. J. E. R. Bondrean's (Brooklyn, N. Y.) mascot bitch Florence (Grim—Sallie Waters) to F. C. Phœbus's (Homer, Jan. 28)

Countess Wanda—Duke of Vernon. Van Heyde & Whiteley's

(Urbana, O.) pointer bitch Countess Wanda to L. Gardner's Duke of Vernon (Glendale—Spotless), Feb. 25.

Daisy S.—Don. T. F. Spencer's (Sandusky, O.) English setter bitch Daisy S. (Royal Lethair—Nonie) to Wm. Coles's Don (Count Rapiet—Queen Maud), Feb. 22.

Topsy Obo—Black Joe II. R. J. Miller's (Missouri Valley, Ia.) cocker spaniel bitch Topsy Obo (Black Obo—Jet Nelles) to his Black Joe II. (Jet—Bessie), Feb. 8.

Gypsy—Doc. H. Popban's spaniel bitch Gypsy (Black Prince—My Lady Betty) to A. C. Wilmerding's champion Doc, March 2.

WHELPES.

Prepared Blanks sent free on application.

King's Girl. Spencer & Butler's (Sandusky, O.) pointer bitch King's Girl (King's Boy—Dudley L.), Feb. 15, three (one dog), by E. Billings's Tamarack (Tam o' Shanter—Croixeth's Rival Queen).

My Doi. B. C. Van Heyde's (Urbana, O.) Irish setter bitch My Doi (Van de Capelle—Queen), Feb. 22, nine (five dogs), by J. C. Choppin's Michael Angelo (Lee Grouse—Della).

Bradford Lill. P. H. Coombs's (Bangor, Me.) Yorkshire terrier bitch Bradford Lill (Tickle—Judy), Feb. 27, three (two dogs), by his Bradford Harry (Crawshaw's Bruce—Beale's Lady).

SALES.

Prepared Blanks sent free on application.

Guss. Liver and white pointer bitch, whelped Aug. 1, 1887, by Don Juan out of Alameda, by W. S. Bidwell, Monterey, Mass., to Wm. Hawkins, Newark, N. J.

Black Prince—My Lady Betty whelp. Black spaniel dog, whelped Dec. 3, 1889, by Wilmerding & Kitchel, New York, to F. L. Mordant, same place.

Bess. Black cocker spaniel bitch, age not given, by champion Black Pete out of Doris, by Wm. F. Murphy, New Haven, Conn., to Chas. Heath, Newark, N. J.

Miss Bend Or. Black spaniel bitch, whelped June 5, 1886, by Young Obo out of Newton Abbot Lady, by Wilmerding & Kitchel, New York, to R. P. Keasbey, Newark, N. J.

KENNEL MANAGEMENT.

No Notice Taken of Anonymous Correspondents.

G. S. P., Stanley, N. J.—My deerhound (8 yrs.) has a dry cough, trying to expel phlegm after each spell; has fever and breathes rather hard. For some time he has been troubled with his hind-quarters from weakness. Ans. Give tablespoon of syrup of buckthorn each morning; also a quinine pill daily for a week. Put 5 drops of Fowler's solution of arsenic in the feed. Rubbing the hind-quarters with chloroform liniment or the application of electricity will benefit the weakness behind.

J. G., Newark.—My red setter, 12 years old, has been sick the last four or five days; appetite is gone, don't seem to be costive; kind of hoarse to touch; nose cold and snoring; weak in hind-quarters, though able to walk; drank a good deal up to yesterday; coughs a little once in awhile. About a week ago he broke through ice, and might have caught cold; bladder is loose; breathes a little hard, don't moan. The dog is quite fat, but always eager to hunt, and don't show his age much; will be able to stand an ordinary day's tramp. Ans. Reduce his weight. Do not feed much meat. Give 5-grain pill of quinine each day. Put 5 drops of Fowler's solution of arsenic in the food daily. The symptoms are those incident to age and obesity.

Rifle and Trap Shooting.

RANGE AND GALLERY.

REVOLVER SCORES.

THE shooting at the French target at Conlin's gallery, Broadway and Thirty-first street, has brought out some remarkable fine scores. Five of which are illustrated herewith. They were made by: 1.—W. E. Carlin, score 59; 2.—Geo. Bird, score 59; 3.—E. Wasserman, score 58; 4.—A. H. Cohen, score 47; 5.—Major W. R. Pryor, score 56, all in a possible 60. The conditions were 6 shots at 12 yds., position off-hand; the revolver used was the Smith & Wesson .44-cal. Russian model, using 6grs. of powder and round ball, excepting Mr. Bird, he using a S. & W. Frontier model and the plain half-shilling sight. The new target is giving a great deal of satisfaction.

N. Y. RIFLE CLUB.—The Executive Committee of the New York Rifle Club has allotted the following handicaps for their outdoor match this season: Dolan and Taintor scratch, Herrington and Case receive 1, Duane 2, Isbell 3, Todd 4, Shorley 5, Shepard 6, Barker, King, Uhler and O'Donnell 7, Kline and Strong 8, Mackey and Daly 9, Oshone, Hamilton and Seabury 10, Robbins 11. These allotments are subject to revision by the Executive Committee whenever, in the opinion of the committee, the shooting of any member has improved or deteriorated so as to demand a readjustment of his handicap. To-day's weather was well adapted to good shooting, the wind being light and steady, interfering very little, and the light being all that could be desired. The only drawback to an otherwise very pleasant meeting at the 20 yds. range in Cypress Park, Newton, L. I., was the small attendance, but five enthusiastic rifle shooters putting in an appearance. There was a noted improvement in the scores, and those present shot off a large number of strings at the American standard target, off-hand, 200 yds., and 15 yds. The string, the best score to count in the prize competition. Mr. T. J. Dolan and A. Isbell were tied on 87, Mr. Isbell's handicap giving him first place with 90 out of a possible 100. The scores:

T. J. Dolan (hdcp 0)..... 9 10 8 9 8 9 9 10 7 8—87
A. Isbell (hdcp 3)..... 6 9 7 10 9 10 9 10 10—90
M. Herrington (hdcp 1)..... 9 10 9 8 7 9 7 8 9—87
J. Duane (hdcp 2)..... 9 8 9 9 8 7 8 6 7—86
V. B. Daly (hdcp 9)..... 8 7 6 5 9 9 4 10 5—81
Referee, Mr. T. J. Dolan; scorer, Mr. J. Duane. The handicapping in the New York Rifle Club's indoor competition makes the contest not only very interesting, but gives the less experienced shooters as good a chance as the crack shots of the club. Two of the organization's best marksmen, T. J. Dolan and A. Isbell, have at present a handicap of 20 and 15 points respectively, the former have won the gold medal twice and the latter the gold and silver medal once. The member who will receive the leather medal at the end of the season will take home a very handsome souvenir. The medals are on exhibition at the meetings, which take place at Zettler's gallery, 12 St. Mark's place.

OROVILLE, Cal., Feb. 10.—Lillian F. Smith, the "California Girl," Champion Rifle Shot of the World, is making a very successful tour of California. At an exhibition given at this place Feb. 14, she succeeded in lowering all previous rifle records by breaking 50 balls in 45 seconds.—LEVI W. SMITH, Manager for Lillian F. Smith

BOSTON, March 8.—The regular weekly shoot of the Massachusetts Rifle Association was held to-day at their range with unfavorable weather conditions, there being a strong wind. Some fine off-hand scores were made. Mr. Foster wins the silver and gold military medal and Mr. Sydney wins the bronze and silver membership badges. Following are the scores made to-day, distance 200 yds., Standard American target:

Record Off-hand Match.
P. Fitz..... 87 C. H. Eastman..... 73 A. Maynard..... 70
J. B. Fellows..... 84 S. C. Sydney..... 71 S. T. George..... 68

Champion Off-hand Match.
W. Charles..... 74 P. Fitz..... 62
W. Charles..... 91 J. B. Fellows..... 85 P. Fitz..... 76
H. Severance..... 88

Record Rest Match.
J. Francis..... 106 S. P. George..... 99 P. Williams..... 65
Military Medal Match—10 shots, Creedmoor Target.
W. M. Foster..... 45 A. S. Field..... 42 F. B. Martin..... 40
W. Willard..... 45 W. F. Day..... 40 M. D. Hart..... 39
F. F. Lowell..... 44

Victory Medal Match.
C. F. Barstow..... 85 M. T. Day..... 78 A. S. Hunt..... 71
S. C. Sydney..... 79 A. Maynard..... 74 N. J. Cook..... 68
C. F. Brooks..... 73 J. B. Hobbs..... 72 T. Barker..... 64

600-Shot Off-Hand Match.
W. Charles..... 90 S. C. Sydney..... 78 M. T. Day..... 77
A. Maynard..... 85 P. Fitz..... 77 A. S. Hunt..... 70
T. Barker..... 80

All-Comers' Rest Match.
W. P. Thompson..... 106 T. Warren..... 101 D. F. Worcester..... 90
J. Francis..... 104 M. T. Day..... 99 A. S. Hunt..... 69
P. Williams..... 102 S. T. Hawley..... 92 J. B. Hobbs..... 88

All-Comers' Off-Hand Match.
W. Charles..... 90 C. H. Eastman..... 77 S. T. Webber..... 70
A. Maynard..... 85 F. Daniels..... 76 A. S. Hunt..... 68
S. T. Hawley..... 83 A. Sampson..... 73 M. T. Day..... 64
P. Fitz..... 79 F. W. Chester..... 73

Pistol Practice Match—50 yds.
J. B. Fellows..... 92 F. Bowman..... 86 P. Fitz..... 78
H. Severance..... 91 M. T. Day..... 85 N. North..... 72
F. Carter..... 87 J. B. Hobbs..... 84 C. F. Gray..... 69
W. Charles..... 86 A. S. Hunt..... 81

WILMINGTON, Del. March 3.—Owing to various delays the shooting at Headmoor Rifle Range was a little late beginning this afternoon, but after fairly starting everything worked smoothly and all the targets were kept busy until dark. There was a good turnout of local riflemen to have a farewell shoot with J. S. Newman, who leaves this week for Piedmont, Ala. He was given a good send off and goes with the best wishes of his fellow-sportsmen. The weather, with the exception of being very cold, was favorable for target shooting, especially toward evening, when it moderated considerably and the wind had calmed down. The scores in detail were as follows, Standard American targets, off-hand:

Pistol Match, 50 yds.
H. Simpson..... 10 9 6 10 10 9 9 10 8 10—91
E. J. Darlington..... 8 9 8 9 8 10 9 9 7 7—85
W. Johnson..... 6 9 6 9 10 7 10 9 8 8—81
E. Jackson..... 10 8 6 8 7 8 10 7 9 8—81

Revolver Match, 50 yds.

UNSER FRITZ.

MARION, N. J., March 6.—The Hudson River Club is erecting a magnificent club house about eight minutes walk from the Marion depot, and expect to be in their new quarters on or about March 15. At the last weekly shoot of the club, out of a possible 250 points, the following were some of the scores made: J. Rehban 231, H. L. Hansen 230, T. A. Reynolds 231, E. Hoesley 210, H. Hoersch 229, S. Middleton 218, M. R. H. 229, L. E. Brene 218, E. Ingram 237, R. Ingram 225, P. Schmitt 219, C. E. Bore 213, T. Reynolds 221, H. Zobel 190, M. Mahan 215, W. Evans 197, J. Logan 186.

ONTARIO, March 4.—The fourth of the Off-Hand Rifle Association match was shot to-day, 10 men p-r side firing each 10 shots at 200 and 300 yds., making a possible 1000. The totals were: Scarborough 768, Bradford 751, King City 729, Aurora 632, Newtonbrook 666.

WORCESTER, Mass., March 8.—The sixteenth annual meeting of the Worcester Sportsmen's Club was held this week, when the following were elected to membership, John Fuller, C. Forehand, A. G. Monroe and Frank N. Houghton. The election of officers resulted as follows: President, Gilbert J. Bagg; Vice-Presidents, A. B. F. Kenny and E. S. Knowles; Treasurer, M. D. Gilman; Secretary, Henry W. Weber. Executive Committee, W. R. Dean, V. F. Prentice, C. Harry Morse and William L. Davis. It was voted to adopt the rules of the American Association so far as the relate to their shooting at their matches and authorized the executive committee to purchase a sign and to place it at the range, stating that all matches are under American Association rules.

I must mention hurriedly one thing that has just transpired

Wheeler	13	Wightman	8	Fayette	13
Green	7	Hillman	13	Lindsley	12
North	14	Baker	10	Albee	8

North first, Fayette and Hillman second on shoot-off. Mezzetti

which the North End came out ahead.—J. C. SHALLGROSS, Sec'y
PORT ROWAN, Ont.—The Port Rowan Gun Club was organized
March 3 with these officers: Jonathan Becker, President;
D. V. Dwyer, President; R. B. Cowan, Captain; A. Denton,
Secretary-Treasurer.

PINE IRON WORKS, Pa., March 8.—Pine Gun Club match at
19 Keystone, 10yds., modified Chamberlain rules:
E. Moday, 10010111101011011—13 J. Boughton, 01111101101111011—15
M. Marquet, 000000000000000—2 J. Bailey, 0010010101101111011—10

RED BANK, N. J., March 8.—The Riverside Gun Club held its weekly shoot here to-day. The club-handicap at 8 live birds, \$3 entrance, Hurlingham rules, 3 moneys, was won by Albert Ivins with 7 out of 8 killed. E. M. Cooper, F. Beale and Jas. Cooper each got 6, and in shooting off E. M. Cooper and Jas. Cooper were tied, 10 boys killed. Dr. E. Throckmorton and M. F. Cornwall divided third with 5 killed. Dr. Ed. Field killed 4 and fired 5 saw 3. The next shoot was open to all, 6 live birds, \$2.50 entrance, 3 moneys: John Cooper won with a clean score. Ed. Field, Jas. Cooper and E. M. Cooper divided second with 5 each, F. Beale got third with 4, D. Belshaw 3 and Wm. Conover 2. Third event, 100 yds and out, \$1 entrance, 1 money: F. Beale and Jas. Cooper divided after killing 3 each. John Cooper and E. M. Cooper topped out on the first bird and Dr. Ed. Field, on the second, dropped one, 10 single shot birds, \$1 entrance, 3 moneys: John Cooper won with 6. E. M. Cooper second with 5, Albert Ivins third with 4, F. Beale, E. Throckmorton and A. Whynager got 3 each. Fourth, 4. Fifth event, walking match: F. Beale, Jas. Cooper, John Cooper and Al. Ivins divided.

DUCKYVILLE, N. J., March 7.—The weekly shoot of the Oceanic Club was held last Friday afternoon, and there was a large attendance. There were 15 teams entered, and 10 blue-rockers. The gold badge was won by Wm. A. Becerra, who broke 8. A. B. Stout was last, with 2, and he was presented with the leather medal. Following are the scores of the other contestants: Edward Nixon, F. Goodwin and G. Schack; 7; G. L. Hickey and L. C. Kowland; 6; J. C. Laird, A. T. Metzger and J. J. Wells; 5; W. Lawland, Geo. Van Note and C. Eulse; 4; Brown; 3.

PHILADELPHIA, March 8.—The Wayne Gun Club held its annual election of officers, also the monthly badge shoot at the club grounds near Wayne Junction to-day. The following were elected officers: Secy, J. W. Sides, Jr.; Treas., H. K. Kain; Capt., J. S. Merchant; Cor.-Sec., J. W. Sides. The club is in a flourishing condition. The grounds and equipments have just been put in first-class condition. New members are coming in, and there is a total absence of conflicting or jarring elements in the club. The score of the monthly shoot, at 18 birds each, which was for a gold and silver medal, follows. In the shoot-off the gold badge was won by J. W. Sides, and the silver one by H. Kain. W. Uleray not contesting for the badge. The shoot ended almost in darkness.

DAVENPORT, Ia., March 7.—C. M. Leonard and John Racester shot a 25-live-bird match here to-day for the championship cup of the Forester Gun Club. The cup was held by C. M. Leonard, who has won it twice, and Racester felt rather doubtful about tackling him, as he is looked upon as one of the very best live-bird shots in the club. The day was fine for the shoot and a large crowd had assembled to witness the fun. Leonard lost, only killing 18 birds, while Racester killed 22. The following is the score: Racester.....11111111111111111111—22 Leonard.....10111111011100110011—18 C. Dead out of bounds.

The members of the gun club are beginning to talk of the coming State tournament to be held in June, and which promises to be a big affair. The boys expect that 75 or 100 shooters will be in attendance.—W. M. PIERCE.

LARCHMONT, N. Y.—The Larchmont Y. C. wants to test its shooters against other experts, and it offers a silver trophy, value \$500, for teams of two, open to members of the Philadelphia, Rockaway, Southside, Westminster, Tuxedo, Riverton, Country, Carteret and Larchmont clubs. Trophy to be shot for on Friday, March 15, at Larchmont, upon arrival of train leaving Grand Central at 10 A. M. The conditions are 100 birds each to be shot, 30 yds. rise, 50 yds. boundary, L. Y. C. rules to govern, entrance \$100 each team, five teams to fill; should there be over five entries, second team to save stake, and any additional balance to go to first team; the shooter making the best straight score will receive a special prize of \$75; entries closed on Monday, March 10. Lunch will be provided on the grounds.

Canoeing.

The list of officers and directions for joining the A. C. A. and W. C. A. will be found in the first issue of each month.

1,500 MILES IN AN ADIRONDACK BOAT.

PART XI.

ST. LAWRENCE RIVER, Oct. 7.—Tuesday.—The day was clear, cold and cloudless, though it had stormed hard during the night. My sensitivities were averse to a ducking in this cold, frosty morning, but it must be done. I found a tough and grizzled, though very fine-looking, old chap, a French Canadian, who undertook to show me the way down. After breakfast I made everything fast in my boat, while he got into a rough dugout canoe with a paddle, and we went out together. He pointed the way, though an island some distance below obstructed the view, and after descending half a mile in the current, skillfully managing his boat, he bade me adieu and got ashore somehow below.

The bad part of the rapid was about 1 1/2 miles long, half a mile of this being very violent, though not looking so dangerous as the former ones to me; but in reality it is somewhat worse, if anything, on account of the rocks, which were very difficult to avoid. In the smooth water before the riff I could see the bottom and the rocks showing by with great velocity. I found the my boat just grazed a rock, the shock throwing her over until the water was up to my waist. After fighting I was exceedingly anxious for fear that she had been stove, but dared not stop to examine her, all my energies being directed to keeping her straight. If the water had been rough, or not so swift, I certainly should have capsized; but the very rapidity of the motion was in my favor. I struck the water with great velocity, and the boat was carried a long way out of my course. The river makes a sudden widening beyond the island below the rapids to the extent of 4 miles, then narrowing again in sight of Montreal, meanwhile changing its course to due north. It was shorter for me to go to the north of this island, but to do so it was necessary to cut across the current. After a hard pull I succeeded in doing this, barely clearing the rapids, the water being deep water and a stiff current, the channel beneath being shallow, full of rocks and reeds.

Finally I came to a large isolated boulder, on which several men were fishing, and shortly afterward sighted the great Victoria Bridge, 1 1/2 miles long, the only structure of the kind across the St. Lawrence. The middle span, under which I passed, is 330 ft. wide, all steamers and the huge rafts and other craft come through this space there being deep water and a stiff current here, while in the others lay dangerous rocks. The bridge is 90 ft. above the water and built upon 24 piers of granite; it is of the tubular type, a magnificent monument of engineering skill, and cost altogether \$7,000,000. After passing under the great bridge I made a straight course for Montreal, a full view of which burst upon me. A second very strange thing to come upon a large city, there being besides the bridge few evidences of such a community hereabouts. The current was strong, continuing thus until within 300 yds. of the wharves; then came the harbor with its tranquil waters, disturbed only by the passing of steamers and other craft. The sight of several vessels of the Allan line, loading for Liverpool, and other vessels of the largest class, reminded me that I was now on water directly navigable to all quarters of the globe.

Rowing down to where the Montreal steamers lay I found a large public bathhouse with a ship, and looking up the loquacious and blustering Frenchman in charge of it, I put my boat in a little house near by, and after storing away my traps took a cab to the Windsor Hotel, two miles from the river, stopping on the way for a few sandwiches. The Windsor Hotel is an enormous one, and very comfortable. Though the people here are not squeamish about the peculiarities of one's dress, and allow a stranger in knickerbockers to roam about unmolested, I nevertheless changed my clothes for a more civilized garb. From several streets of the city Montreal Mountain can be seen, and a fine sight it is, too. I fell to luxuriating right away, and had my clothes washed and mended, especially the latter, as I am in a sad plight, the experiences of the last ten days having been rough in the extreme.

After taking quite a walk I had a rousing dinner at 2 P. M., played on the hotel piano a little, and wrote until 5:30; then took the stage for the steamer for Quebec, which left at 6 o'clock. It was a cloudy evening and no pleasure on deck, so I played on the piano, and then went to bed. The next morning I awoke in a fine mood, read some of my interesting guide book, had a fine supper at 8, did a little talking with the funny little "Monsieur le Capitaine," and retired at 9 P. M., musing much over my altered circumstances since the morning, and especially on the contrast between the present mode of traveling and that of the last few days.

Montreal ended the third stage of my journey. I have made since morning to-day 15 miles rowing, and have come from Toronto altogether 371 miles, and from Albany 885 miles. My worst trials seemed likely to end here, the rest of the journey consisting of rivers mostly, and quieter waters. The official distance by water from Toronto to Montreal, as the steamers go, is 374 miles, but the log calls for 371 miles, which is a small estimate considering how taken I was with the river. The first course by following shore lines and in a great many other ways. My time from Toronto was 18 days, of which 24 days were void owing to delays and stoppages.

St. Lawrence River, Oct. 8, Wednesday.—The Montreal left last night one hour late, and thus did not arrive at Quebec until 7 A. M. Coming on dock when within six miles of the city, I enjoyed the grand view very much, though the air was extremely cold, and my summer clothes very thin. The Laurentian Mountains and the mountains of Maine were on either hand in the distance, while

the noble St. Lawrence wound around through the hills, flanked by well-wooded shores; and as the sun rose, lighting up the scene and bringing out the changing foliage of the trees, the grandeur and beauty of the prospect made a great impression on me. Soon we were in front of Point Levis, where the steamer stopped, and from which a full view of the Canadian citadel city, with its natural fortifications overlooking the country far and wide. Its natural fortifications are truly wonderful, ranking next to Gibraltar in strength and security. Everybody seems to be French, all the officers of the steamer are French, and the little captain is a great curiosity.

The first road the Quebec I took an omnibus for the St. Louis Hotel. The street ascended a remarkably steep hill, and was narrow in the extreme. Most of the thoroughfares were wound in and out of each other, very narrow, with French names and quaint old houses lining them. After partaking of a fair breakfast, I hired a cab with an Irishman to drive, and went about to see the town. My driver, Pat, was a good fellow, well versed in the history of Quebec, and he had a strong horse. I stopped first to buy a large basket of fruit from a pretty French girl, with whom I had some difficulty in making change, owing to my French, but I found the fruit very good company.

Then we drove to the Dufferin or Durham Terrace, the view from which was very fine. One could look directly down on "Lower Town," as the portion of the city is called which is built on the foot of the hill, and thence over to the Falls of the St. Lawrence, 7 miles from the city, passing through the French quarter, and a cross the St. Charles River on a drawbridge, thence through a beautiful country, over a macadamized road. This thoroughfare commanded a noble view of the river below and the ranges of mountains beyond. The houses had steep roofs and false chimneys, and were so placed as to corner on the highways, and children were all at play in the fields. After crossing the bridge over the Montmorenci River, and stopping at a small inn, I walked through some woods, mostly balsam trees, and on arriving at the verge of the precipice over which the river plunges, walked around to some precipitous stairs, descending a cliff opposite the falls.

As I stepped in these stairs, and while going down two or three steps, suddenly my feet slipped, where go the spray had wet the planks, and I pitched headlong under the railing, where is a drop of 180 ft. Very fortunately I caught my left arm around one of the posts which supported the railing, and so managed to pull myself up again. Excepting a badly barked pair of shins and a shaking up, I sustained no injury, but the merest chance alone prevented there being two big "falls" at Montmorenci to-day.

The fall itself was magnificent and the scenery on all sides imposing. Rejoining the carriage I drove back a mile, where I got out, and after walking for half a mile more through some fields, went down into a dark piece of woods consisting of cedar, balsam and birch trees, and following up the Montmorenci River came to the "Natural Stairs," curious formations of flat rock bordering the area, which here rushes through a narrow channel or flume between its high rocky banks, the dark water betokening the abode of trout.

The place was a wild gorge, and similar to the Au Sable Chasm, though on a much smaller scale.

Returning to the city I saw the remains of the old walls surrounding Quebec, with some of the ancient cannons guarding them on all sides. Afterward we drove to the plains of Abraham, where was Wolfe's monument with the inscription "Here lies Wolfe, victorious." Next I visited the Ursuline Convent, Government House, the Montmorenci Hotel, the Hotel de la Ville, the Parliament Buildings, Thistle Lacrosse Ground, the Hotel University, French Cathedral, and other places of interest; after "doing" which I was driven up to the citadel, where a private showed me around the fortifications, which are of the highest order. From the bastions one could look down on the city, 300 ft. below, with its narrow winding streets and the quaint peaked roofs of the houses, while the view of the river and harbor was simply grand. I went to the barracks and all over the citadel, and ground inside the main citadel wall. The place was bristling with cannons on all sides, many of which were quite interesting.

As it now began to rain, we made a direct dash for the hotel, where I had a cold lunch at 2 P. M. I saw many military swells about, with small round chapeaux stuck over their left ears. I then drove to the Dufferin Terrace, where I saw a fine view of the river and 300 ft. above the river. From this railing one could see a stone down some of the chimneys in Lower Town, and the promenade here on summer evenings must be thoroughly enjoyed by the residents. All the old gates through the wall have been removed, save that of St. Louis. Among the other sights one sees many strange vehicles and a pretty face or two; but these latter are in the way of the people who are generally fresh and full of life. The whole Quebec impresses one as a foreign city, with but few English names, or anything else as of an anglicized character; Rue St.—meets the gaze at every street corner.

I took the same steamer back from Montreal at 5 P. M., more-over enjoying the same stateroom as before. There was comparatively little sailing lying in the river, and due, I understand, to business depression. At the same time I saw a great deal of sailing and bailing from all parts of the world. It is 180 miles from Montreal to Quebec by water. Lake St. Pierre, which begins about 45 miles from Montreal, is 35 miles long and about 7 miles broad, while "Trois Rivières" is midway between the two cities. Lake St. Pierre is difficult to navigate, being very shallow except in one end, where the water comes through it and also subject to very violent squalls. Quebec is about 300 miles from the Atlantic Ocean.

St. Lawrence River, Oct. 9, Thursday.—A cold morning, the temperature below 32 Fahrenheit, the sky cloudy, and the sunrise clear and beautiful. When I had eaten some fruit Montreal again hove in sight and before long I was again in a cab, rattling away to the Windsor, where a good breakfast was in store. During the morning I was busy calling at Cartier's to replenish the exhausted exchequer, buying many necessities, such as blankets, cooking utensils, etc. The rougher portion of my voyage now being past, I stocked up with a good assortment of provisions, for the boat can carry 50 lbs. more cargo. Lunched at 1 P. M. and then repaired to the wharves, calling first at the express office to send my valise to Albany. This proved troublesome, as they make one sign a declaration and hunt up a notary to witness the same, to the effect that there is nothing dutiable in the baggage. These little services, together with the fees for notary, custom house, etc., make the expense of getting a trunk from New York to San Francisco. The difference between getting my valise to and from the Dominion was marked indeed.

The boat house man at the foot of Jacques Cartier street is a renowned character, Joe Vincent by name. Though a blustering fellow, he was really very attentive, the former accomplishment following from the fact that he had been spoiled by the wealthier people stopping here with their carriages, and his acquaintance was apparently large. I now took the upper part of my boat, it having been on since I left Lewiston, Niagara, many hundred miles back; and every available space on board was snugly packed with provisions, etc., the craft being loaded down well in the water.

A cold west wind was blowing and something of a current was also with me as I put off with a good heart, this being the turning point of my journey. Henceforth every stroke was to bring me nearer my goal, and not far below Montreal I was to turn southward. Bidding farewell to my friends gathered on the boat house ship, I rowed out between the piers under the criticizing eyes of about 200 people, and, passing under the stern of the huge Montreal in whose spacious cabin I had passed the last two nights, shot out into the St. Lawrence and after passing past St. Helen's Isle, opposite the city, shaped my course straight down the river, due north. Montreal soon disappeared from sight, and I felt once more alone in the world.

A stop was made 5 miles beyond at a little wharf on a projecting point, and going into a diminutive village I found a small store, where I had some food and French. I managed to buy some eggs, etc. I had suspicions of the eggs at the time, which my later experience fully verified; but not knowing how to say "fresh" in French, I was obliged to take whatever they gave me. Embarking once more, I continued on down the great river, endeavoring to keep in the channel by means of the occasional lighthouses and the buoys. The shores were generally rocky, with a few sandy beaches, and the country around was not very interesting, being quite level, with a few scattered trees here and there. Many islands blocked the channel, and at places shallows appeared and marshes, but frequently the river presented an expanse free from obstructions, and it was generally quite wide.

A cold west wind was blowing quite rough, with a nasty chop sea, in which it was not easy to row regularly. The water lengthwise down the river no land could be seen when there were no obstructing islands, and the St. Lawrence impresses one with its great size. Toward evening I kept within about a mile of the south, or rather the eastern shore, and after dark was considerably disturbed on account of the buoys. It is very startling when rowing quietly along, to suddenly see over the shoulder a great dark mass loom up in the night, and just grazing the boat, shoot as quickly as light out of sight. One heaves a long breath, ending

ina whistle, and thanks Heaven for another narrow escape from destruction.

At 7:30 o'clock I cruised along shore, keeping a sharp lookout for a place to land. Rowing thus for a mile or more and finding nothing better, I finally camped on a rocky beach exposed to the wind, now blowing furiously. I had been forced to stop, as the islands made the navigation very difficult, and besides the different lights in the distance were so confusing, as one cannot tell whether they are from lighthouses or vessels. Moreover I was nervous about the buoys, as to run into one would capsize me and probably smash the boat. Finding an old canoe on the desolate shore I made a windbreak of it, then went for some wood to a ghostly deserted house not far off, to roach which I had to mount a steep hill, ascending from the beach.

Making some tea and boiling some of the eggs bought near Montreal, I made a good meal and then wrote a little. It is exceedingly cold to-night, and I rolled in my three heavy blankets with much satisfaction. From Montreal I have rowed twenty miles this afternoon, to accomplish which I did some hard rowing, and kept it up steadily. The Montreal passed this evening on her way to Quebec, and as the channel is near this shore I could see her plainly in the dark.

PHILADELPHIA, Pa.

HERALD AND THE RICE LAKE CANOE.

DANIEL HERALD, the builder of the original Rice Lake canoe and the inventor of the Herald building process, whose fame as a canoe builder and designer is, it is no exaggeration to say, world wide, lost his life on the evening of Feb. 21 while attempting to cross the line of the Grand Trunk Railway at Cobourg in his canoe, built in this manner, and of no small importance one; to his skill and industry many of the good qualities are due, and to the last he enjoyed a reputation second to no other Canadian builder. Mr. Herald was an Irishman by birth, a native of Downpatrick, in the famous old County Down, where he was born about 1834; and in 1852, having thoroughly learned his trade he came to Canada and settled himself for life in the pleasant sunny little village of Gorra Landing. He built skiffs at first; I believe he was also the builder of several small steamers and yachts, but he was soon attracted by the undefinable charm of the canoe, and in 1857 he produced the first really satisfactorily-built canoe ever turned off the stocks in Canada. Mr. John Stephenson, of Peterboro, had several years before built a "Herald" canoe, taking his method of construction from the Rice Lake skiff, his model from the beautiful log canoes then used on the Trent chain, but it was not for five years after that a built canoe which combined enough of the advantages of the log with those of the skiff to make them popular with the gunners. was produced, and Herald was the builder.

During the years that he was experimenting with the canoe—Herald built his first canoe a short time after Stephenson built his—he built the assistance, financial and otherwise, of a keen sportsman and yachtsman, a gentleman named Macdonald, who ordered canoe after canoe from him, experimented with them all and suggested improvements for the next of the series. In 1871 Mr. Herald invented a system for building boats, but particularly canoes, of two thicknesses of cedar, one running athwart ship, the other lengthwise of the canoe, which he patented, and his canoe building in this manner, have been shipped by him all over the world. At the time of his death Mr. Herald was at work upon the lines of a canoe, adapted to the use of the modern canoeist, and several racing canoes were to have come from the moulds in his shop during this spring. He was in Cobourg, when he lost his life, to arrange the details of a canoe, which he was entering into to complete the 40 footer Alex. Chubbuck, who at work upon when he died. Mr. Herald was a skilful workman, an enthusiastic lover of his craft, and his ability as a designer was by no means small. His son, Mr. E. D. Herald, hopes to be able to carry on the business. If he does not I will not know where to go for a new canoe. RETAW.

CANVAS BOATS.

Editor Forest and Stream:

I have read with much interest the article of "Lancewood" in FOREST AND STREAM of Feb. 20, 1890, on folding canvas boats. I thank the people who know the many really good points of a well built canvas boat of good material. I have had much experience with them and have owned and used several of the best makes, and I think for all uses except as a family boat they are superior to one built of cedar. The idea prevails that they are frail, cranky and unsafe generally, while as a matter of fact none of these objections hold good in a well-built and well-modeled boat; they will resist snags and rocks, where a light cedar one would yield. I used one in the far West on rapid and crooked rivers, where I think a cedar boat would have gone to pieces, and I had not yet put a hole into one nor capsized it. The best one I have ever used is the one I now have, invented by Dr. C. M. Douglas and made by Mr. Henry C. Squires, 178 Broadway, New York. Last year I took this boat with me through the lake region of New York, and when I left there the last of December for Florida I took it with me on the Savannah steamer to Sanford, Fla., by way of the St. John River, and from there to Lake Weir, where I used it for a month, and then on here. I now have it on Alachua Lake, where I go (two miles) every day to look at my traps and fish and shoot. I have transported this boat over 3,000 miles, and have rowed and paddled hundreds of miles more, and with all its rough usage it is in perfect condition. The only expense I have been to was giving it a coat of the oil prepared for that purpose, at a cost of about 50 cents. This boat is 9 ft. long, carries two readily, and three when necessary; it is very stiff in calm as well as rough waters, in fact I take chances in it that I would not take in a cedar boat of same size. I wish to say that I have no reason to regret the manufacture of the Douglas boat, and no motive whatever in writing this article other than to put some brother sportsman in the way of getting a good boat, and I conclude to get a canvas one. There are no doubt other good canvas folding boats, but, as "Lancewood" says, one often hesitates about such a boat, because they don't want to jump in the dark. I can assure such as hesitate that they will not run any risk with this boat. ALBERT SMITH.

GAINESVILLE, Fla., March 4.

Editor Forest and Stream:

In your issue of March 6 "Subscriber" asks others who have used canvas boats to give their experience with them. I for another would be pleased to have readers of the FOREST AND STREAM know the many really good points of a well built canvas boat of good material. I have had much experience with them and have owned and used several of the best makes, and I think for all uses except as a family boat they are superior to one built of cedar. The idea prevails that they are frail, cranky and unsafe generally, while as a matter of fact none of these objections hold good in a well-built and well-modeled boat; they will resist snags and rocks, where a light cedar one would yield. I used one in the far West on rapid and crooked rivers, where I think a cedar boat would have gone to pieces, and I had not yet put a hole into one nor capsized it. The best one I have ever used is the one I now have, invented by Dr. C. M. Douglas and made by Mr. Henry C. Squires, 178 Broadway, New York. Last year I took this boat with me through the lake region of New York, and when I left there the last of December for Florida I took it with me on the Savannah steamer to Sanford, Fla., by way of the St. John River, and from there to Lake Weir, where I used it for a month, and then on here. I now have it on Alachua Lake, where I go (two miles) every day to look at my traps and fish and shoot. I have transported this boat over 3,000 miles, and have rowed and paddled hundreds of miles more, and with all its rough usage it is in perfect condition. The only expense I have been to was giving it a coat of the oil prepared for that purpose, at a cost of about 50 cents. This boat is 9 ft. long, carries two readily, and three when necessary; it is very stiff in calm as well as rough waters, in fact I take chances in it that I would not take in a cedar boat of same size. I wish to say that I have no reason to regret the manufacture of the Douglas boat, and no motive whatever in writing this article other than to put some brother sportsman in the way of getting a good boat, and I conclude to get a canvas one. There are no doubt other good canvas folding boats, but, as "Lancewood" says, one often hesitates about such a boat, because they don't want to jump in the dark. I can assure such as hesitate that they will not run any risk with this boat. ALBERT SMITH.

CLARION.

AN "UNK-TA-HEE" FOR ROCHESTER.—Captain Ruggles, of Rochester, the veteran canoe builder, whose craft has taken many prizes in the American Canoe Association regattas, is now at work on what is the largest canoe, without doubt, in the United States. It is for the Rochester C. C., and is modeled after Unk-ta-hee, the mammoth Toronto Club canoe. It is 30 ft. over all, 50 in. wide and 22 in. deep amidships. The bow and stern are pointed, of course, and 40 in. deep. The framework is largely of oak, and the planking is of California cedar. It will be finished in oil and shellac. Sixteen paddlers will man it, and it is calculated to comfortably hold 35 men. The canoe is so light that four men can easily propel it. The Rochester Club will use it in making extended excursions on Lake Ontario and Irondequoit Bay.—Exchange.

HARRISBURG C. C.—On March 7 the Harrisburg C. C. held its annual dinner at the residence of Mr. E. J. Jones. A number of ladies were present, and music and dancing followed the dinner. The club, though small in numbers, has a fine club house and a lot of 22 canoes. The officers are: President, E. J. Jones; Vice-Com., Geo. G. McFarland; Sec'y, Martin W. Packer; Treas., E. R. Disher. A lantern water parade will be held on July 1.

NEWBURGH C. AND B. A.—Officers 1890: Com., N. S. Smith; Vice-Com., Chas. S. Williams; Captain, Harry A. Marvick; Purser, Robt. Johnston; Member of Executive Committee, B. B. Moore; Member of Finance Committee, J. N. Dickey. The following new members were elected: H. Roddick French, Geo. W. Peck.

A. C. A. MEMBERSHIP.—Eastern Division: Henri Schaeffer, Frederick W. Taylor, Lowell, Mass. Atlantic Division: J. O. Massa, R. C. Alexander, New York.

MISSOURI RIVER.—A correspondent who proposes to cruise on the Missouri River this summer is desirous of obtaining information,

Yachting.

THE RACING CATBOAT OLIVETTE.

THE boat whose lines are here given was designed this winter by Mr. F. T. Wood, of Fall River, Mass., for Messrs. Fahey, and is now being built by Mr. Thos. Green at Fall River. She is of the same general type as the famous Cape Cod catboats, but with more deadrise than is usually given, and a narrow transom. Her dimensions are as follows:

Length over all	22ft.
L.W.L.	21ft. 7½in.
Beam, extreme	9ft. 9in.
L.W.L.	9ft. 4½in.
Draft, without board	2ft. 5in.
With board	2ft. 6in.
Least freeboard	1ft. 6in.
Displacement, long tons	4.00
Ballast, long tons, inside	1.25
Mast, deck to hounds	25ft. 6in.
from fore end of L.W.L.	1ft. 5½in.
Boom	23ft. 6in.
Gaff	18ft.
Mainsail area, sq. ft.	612.50
Corrected length, S. C. Y. C. rule	23.19ft.

The yacht is designed for racing under rules prohibiting shifting ballast, and will carry 2,800lbs. inside, partly lead and partly iron dross. At the same time she will have a snug cabin, with about 4ft. 2in. headroom and berths for four. The mast will be fitted with Haggerty's patent hoist, used on so many of the Eastern catboats.

THE COMING SEASON.

THOUGH spring is nearly here, and with every promise of an early season, the racing programme is very much in the clouds, and little is definitely settled. The usual spring crop of newspaper challenges for the America's Cup is now bursting into bloom, the New York *Herald* brings out Col. North, the "Nitrate King," with an "unknown"; a challenge is threatened by some papers from Thistle, the question as to whether Valkyrie's challenge of last year is still on is being discussed, while reports are rife of a challenge from the new Jameson boat. The only ways in which a challenge can come at this date are through the waiving by the New York Y. C. of the required ten months' notice and the acceptance of some special agreement; while on their side the challengers will have to recede completely from the position taken by British yachtsmen generally for the last two years. Though either of these are possible, they are not likely to happen, and the chances of a race are very small.

Looking at the yachts available for challenge, Thistle may be counted out, as Mr. Bell, now her sole owner, is not likely to try again with her. Lord Dunraven may still be as anxious as ever to be beaten by Volunteer, but as he will be provided with all the matches he can want with yachts of his size, it is hardly likely that he will seek a certain defeat from a yacht so much larger than Valkyrie. As to the new centerboard cutter, if Mr. Jameson was really building her for a cup race this year, he would before this have given some intimation of a challenge, instead of leaving it so late that it is almost certain to be refused. While it is possible that his new craft may be seen some day on this side, her length, 6ft. less than the size set for the Cup challenger, with his oft-repeated assertion that he would not challenge, must be taken as of more value than the indefinite rumors of her coming.

Whether or not the America's Cup is sailed for this year, there will be probably plenty of international racing, as it is just made public that Messrs. Auchincloss, on behalf of Katrina, and Mr. Maxwell for Shamrock, have arranged to challenge Lord Dunraven for a series of private races about New York. The negotiations are in the hands of Fleet Captain Stephen Peabody, of the New York Y. C., and the challenge will be sent very soon. The matches will be private, the expenses will be borne by the owners, and not the New York Y. C. Should Valkyrie cross, it is more than probable that she will challenge for the Paine cup, and that a series of trial races and the final matches will be sailed between the 70-footers in Eastern waters. Shamrock has already been lengthened and widened to bring her up to the limit of the class, and Katrina will be altered with a view to her improvement. After last season Thistle is in perfect condition, but as Captain Haff has returned to Volunteer, she has no one to sail her, and Mr. Iselin is now looking out for a skipper. The 90ft. class will see no racing save in the remote possibility of a Cup challenge, but Volunteer will be in commission during the latter part of the season, and will of course be available for the defense of the Cup. Should a larger yacht be deemed necessary at any time, Mr. Burgess has a new 90ft. design completed, which could quickly be built in steel.

A year ago New York held the lead in the 90ft. schooner class, but she has let it slip away, and now both Sea Fox and Mayflower are under the Eastern Y. C. flag, the former having just been sold to Com. Alanson Tucker. This leaves New York with only Grayling to oppose to the Boston fleet, Sea Fox, Mayflower, Alert and Merlin. True, Sachem is still owned in New York, but neither she nor Atlantic can be considered in the racing.

Of the smaller schooners, Marguerite is now on the sale list, but Quickstep and Genoa, the latter with Captain Watson, of Papoose, in charge, will race as usual. The new 60ft. keel cutter, as yet unnamed, will be practically alone, being too small for the seventies and too large for Clara. The latter will be refitted and newly canvased, but will have no worthy classmate this year. The 45ft. class in the East promises to be a lively one, with several new Burgess craft, both keel and board; but about New York there is now nothing between 40 and 53ft. The forties will have fully as exciting a season as the last; the new Burgess boats, especially the Adams craft, will try hard to retrieve the work of last season, while Liris will be in it with a new rig. The proposed Burgess 40 will not be built; Gorilla, Tomahawk and Xara are for sale, Banshee and Nymph have given up racing and, with Helen, have wrapped the mantle of a cruiser about them. Minerva, it is reported, will not enter the early races, but may be ready for a test of the new boats in the fall. Plenty of races are promised, one of the notable ones being that set for June 5, of the Seawan-haka C. Y. C., in which it is hoped to secure a very large entry.

Since the above was written, an interview with Lord Dunraven is reported by cable, in which he declines to send Valkyrie across unless to race for the Cup.

THE CLAPHAM SINGLEHANDERS.

Editor *Forest and Stream*:

As the boating readers of your paper are at the present time giving me a tough job to properly answer all their letters, will you permit me to briefly describe through your columns a kind of 20ft. cabin keel boat which can be built and rigged for \$150? The yacht is 20ft. in length over all, 17ft. on waterline, 2ft. depth of hull proper, 20in. draft of water, 8in. flare to sides, 5½ft. beam, 18in. freeboard at lowest point. Has a raking counter stern, 38in. inside height in a cabin 8ft. in length, and cockpit 3ft. in length. She is built throughout of the best cypress, oak, ash, etc., that can be bought, all fastenings of galvanized iron and brass. Has one triangular-shaped sail hoisting on a mast 23ft. in length and fitted with detachable mast hoops. The halliards lead aft to the cockpit, from which position sail can be easily hoisted, lowered, furled and reefed. Even with inside ballast this boat can be made uncapizable, and, if unusual stability is wanted it may be attained to any extent by running 200 to 400lbs. of lead in the keel. Such a yacht can be rigged either as a yawl, cat-yawl, or sloop by expending a few more dollars, as has been done in the case of a 20-footer we are now finishing for a New York gentleman, and which can be examined at my place any time during the next two months.

These boats are constructed in the strongest possible manner, and being planked with cypress—one of the most durable woods—will remain sound and water-tight for years after many of the "ten-thousand-dollar forty-footers" have twisted themselves into leaky baskets. The 20-ft. boat above described is, of course, a cruiser, perfectly safe to sail down to Nantucket in, but is not intended for match racing. She is seaworthy, weatherly and fast for a cruiser. If wanted for racing, more sail and a greater amount of ballast must be added.

In designing these boats I have aimed to produce at the lowest possible cost a thoroughly seaworthy little yacht, wasting no money on mere jimecrack work, and the result is a comfortable cruiser of light draft and infinitely safer, as well as handier, than any of the small sloops, cutters, etc., with their useless weight of top hamper and bewildering network of standing and running rigging.

THOMAS CLAPHAM.

ROSLYN, L. I., March 1.

ALICIA, ALMÉ.—These names have been selected for the large steel steam yachts building by the Harlan & Hollingsworth Co., at Wilmington, Del., for Messrs. Flagler and Gallatin. The former will be launched next month.

RACING CATBOAT "OLIVETTE."—DESIGNED BY MR. F. T. WOOD, 1890.

SAIL PLAN OF "OLIVETTE."

BODY PLAN.

MASSACHUSETTS Y. C.—At the monthly meeting on March 7 an invitation from the Portland Y. C. to visit Portland this summer, and to take part in a regatta for which cups were offered, was accepted, and the commodore was authorized to extend an invitation to the Portland Y. C. to cruise to Boston in the summer and to join the club in a race to Portland. The regatta committee announced a race for schooners for a cup valued at \$250, to take place about Aug. 14; a cup of \$150 for 40-footers, and one of \$100 for 30-footers. If Valkyrie comes over a prize of \$400 will be offered for 70-footers, and two prizes for schooners, and two for 40-footers for a race from Boston to Portland on the annual cruise July 19, to be open to yachts of both clubs. The new bye laws were adopted. The names of nine applicants for membership were published, including four yachts. A committee of three on bylaws was appointed. Resolutions were passed asking representatives in Congress to urge the passage of the naval militia bill now before the naval committee of the House.

CEDAR POINT Y. C.—At the meeting of this club on March 8 the following officers were elected: Com., Landon Hefehunn, yacht Hebe; Vice-Com., W. S. Meeker, yacht Ada; Sec'y, Edwin Horn, yacht Wa Wa; Treas., P. G. Sanford, yacht Rival; Meas., J. S. Dayton.

QUAKER CITY Y. C.—The monthly winter meeting on March was quite a success, a varied programme serving to amuse the large number present.

PORTLAND Y. C.—Editor *Forest and Stream*: The annual meeting of the Portland Y. C. was held on March 5. Cups were offered by Mr. E. B. Mullet, sloop Restless, for a joint regatta between the Portland and Massachusetts Clubs in July. It was voted to celebrate the twenty-first anniversary on April 26. The annual cruise was fixed for May 29 to June 1 inclusive, and the annual challenge cup regatta for June 16, at 10 A.M. Following are the officers and committees elected and appointed for the ensuing year: Com., Charles W. Bray; Vice-Com., George C. Owen; Fleet Captain, Ralph W. Miller; Sec'y, Chas. D. Smith; Treas., C. F. A. Weber; Meas., Joseph H. Dyer; Fleet Surgeon, Walter Woodman, M.D.; Trustees, the Commodore, ex-officio, William Senter, J. Hall Boyd and B. W. Jones. Membership Committee, T. H. Chase, C. J. Farrington, E. H. York and the Secretary, ex-officio. Regatta Committee, the Commodore, ex-officio, E. H. Little, R. S. Rand, W. E. Carter and H. A. Woodward. House Committee, W. W. Gould and C. E. Rolfe.

CRUIS' SING.—Peerless steam yacht, better known as Cramp's 246, arrived at St. Kitts on Feb. 3 from St. Croix, and sailed next day for Guadalupe. On Feb. 13 she sailed from Barbados to Trinidad, and on Feb. 25 arrived at Kingston, Ja., from Curacao.

NEW YORK STATE NAVAL RESERVE.—Efforts are now being made to secure a suitable vessel for the New York Battalion. Arms, equipments, books, etc., have been promised by the Navy Department.

CORINTHIAN NAVY.—At a meeting of the Corinthian Navy, held at the Hotel Marlborough on March 6 the racing rules and regulations were adopted. The salient features are a classification on L.W.L., with four classes to wit: Over 20 and not over 23, 17 and not over 20, 14 and not over 17, and under 14ft. measurement on L.W.L.; and sail area for cabin boats as follows: L. W. L. + $\frac{1}{2}$ Sail Area = racing length for open boat, L.W.L. measurement only. Time allowance is based on a 50 per cent. scale. Crews are limited as follows: Class A, 4 men; Class B, 4 men; Class C, 3 men; Class D, 2 men. No shifting ballast, no sliding seats. The system of victory burgees has also been adopted, as follows: A blue burgee $\frac{1}{2}$ in. to foot length of first boat; a like burgee of red to second where more than two start. Boats can carry these signals under the U. S. yacht ensign at peak of main-sail, one burgee for each victory. A committee of three was appointed to look over the constitution and by-laws to see if any corrections were necessary. The following appointments were announced: Regatta Committee—J. W. Gibson, A. Daum-Petersen, Richard Outwater. Committee on Education—Chas. M. Conolly, Robt. Center, Wm. Whitlock. Fleet Captain, F. Bowne Jones. The spring regatta will be a pennant regatta. Com. Center's lecture on March 14, at the Marlborough Hotel, will be on plain sailing and dead reckoning. The following gentlemen are proposed for membership: E. Prentiss, Philip C. Stus, Geo. W. Easiman, H. P. Allen, John A. Cameron, Geo. W. Collard, J. Graham Fraser, Wm. B. Guernsey, Robt. H. Peebles.

ALTERATIONS.—The New York idea of progress is very well exemplified by the amount of yacht building that is not being done about that important yachting center. Not a new keel has been laid this winter, two of the finest schooners in the country have gone begging until purchased by Boston yachtsmen, while the sum total of work about New York is to patch and plaster up the old fleet. The famous Pocahontas is now being converted into a yacht so far as is possible by the addition of a Burgess stern; the schooner Sylph is being taken apart and put together again at Port Jefferson; the sloop Nirvana is also being lengthened, while the sloop Espirito and the well-known old schooner Ray are also to be pulled out at the ends. While Boston is frittering away her time and money on new models and light construction, New York depends on economy and conservatism in judicious proportions to maintain the supremacy she boasts of.

CORINTHIAN Y. C. OF NEW YORK.—At the annual meeting on March 3, Admiral Tweed and Measurer Clarke were re-elected, and Secretary Schuyler was reappointed. The committees are as follows: Committee on Seamanship and Navigation, Admiral Tweed, C. W. Chapin, Seymour H. Lusted, Jr. and Chas. A. Stevenson. Committee on Measurement and Architecture, Admiral Tweed, J. Beaver Webb, J. C. Soley and Wm. Gardner. Sailing Committee, Admiral Tweed, Measurer Clarke, W. H. Plummer, Wm. Gardner and J. W. Wilson. Committee on Admissions, Admiral Tweed, W. C. Hall, E. M. Padelford, H. A. Sanderson, M. Roosevelt Schuyler and J. Bruce Ismay. Law Committee, J. Murray Mitchell and Albert Gallup. House Committee, E. M. Padelford, Schuyler N. Warren and George Bell. The club is now in a prosperous condition. It will continue to class by corrected length.

NEWARK Y. C.—The following officers have been elected for 1890: Com., J. M. Foot; Vice-Com., David Coburn; Treas., E. L. Grover; Sec., Frank Long; Fin. Sec., Thomas Luff. The board of five trustees includes Chairman Charles E. Cameron, Hardy Bush, William Murray, Lyssander Wright and T. J. Kache. At the meeting the annual dinner was held. The outgoing commodore, Mr. Murray, was presented with a handsome compass, and two other officers with gold fountain pens. During the evening \$1,000 was subscribed toward a wharf at the new club house, Bayonne. It is proposed to run a steam launch between Newark and Bayonne every day during the season.

JERSEY CITY Y. C.—Officers 1890 are: Com., Leon Abbett, Jr.; Vice-Com., J. M. Tappen; Pres., John A. Hilton; Sec., Henry Platt; Treas., P. W. Fiquet; Meas., Alexander E. Roe; Directors, Garrett Van Horne, H. B. Pearson, J. M. Tappen, A. B. Reynolds, C. Ockerhausen, J. F. Klumpf, P. A. Figueroa, John A. Nugent, Leon Abbett Jr., Alexander E. Roe, and J. A. Hilton; Executive Com., Alexander E. Roe, C. H. Benson and Charles Miller; Finance Com., Messrs. Van Horne, Ockerhausen and Reynolds; Regatta Com., Messrs. J. A. Love, Gus Bennett and C. A. Smith.

ESSEX Y. C.—The new officers are: Com., William Walker; Vice-Com., P. McKeon; Rear Com., William Garrison; Fleet Captain, Harry Kerris Musc, Lewis Hartung; Rec. Sec., E. Goldsmith; Fin. Sec., William Arthor; Treas., Fred Hartung; Trustees, Lewis Hartung, Joseph Somers, Joseph Somers, Esq., Esq. A new club house will be built at West Bergen on the Hackensack River, near the Newark and New York R. R. bridge, thus saving the long and tedious trip up river.

ATLANTIC Y. C.—The plans for the new club house have been accepted, the architect being Mr. John G. Frigate, and the contract has been awarded to Geo. Merz's Sons, of Rochester, N. Y., who will get out the frame there, shipping it to New York. The house will be 75x100ft., two stories high, with wide piazzas. At each corner on the water side will be a circular tower.

BOSTON YACHT AGENCY.—We have received a new and very neat catalogue of yachts for sale by the Boston Yacht Agency, including all classes of yachts. Besides its yacht brokerage business, the firm is engaged in designing and building, having every facility for turning out fine work.

SEAWANHAKA Y. C.—The third lecture of the winter course will be delivered on March 15 at the club house, by Lieut.-Commander S. M. Ackley, U. S. N., the subject being "Tides."

NEW YORK Y. C.—A syndicate of members has purchased the wharf and house of the New York Y. C. at Newport.

Answers to Correspondents.

CHANCE, Montreal.—You will find recipes for waterproofing in the *FOREST AND STREAM* of Jan. 16 and in the present issue.

R. D. S., Lowell, Mich.—If the tail has not been injured it will probably come right with age. Kindness and taking care that the puppy has no cause for fright will perhaps overcome the timidity.

H. A. C. B., who inquired in issue of Feb. 21, for farm in Virginia where he could get good land, should write to R. Stewart Latrobe, 207 St. Paul street, Baltimore, Md.; or T. M. Skiles, Klains, Va.

R. H. P., Baltimore.—Where is it possible for me to buy black bass of either variety for stocking purposes? Upon application to both the U. S. and Maryland Fish Commissioners, I find that neither now have them on hand. Ans. Hugo Mulert, 641 De Kalb avenue, Brooklyn, N. Y., advertises black bass at 25 cents each, and large quantities at special rates.

L. E. K., Brooklyn.—As the trout season is about to open, will you kindly inform me where are troutling places in close vicinity to New York, where fishing is allowed either free or by paying a nominal fee for the privilege? Being comparatively a stranger to this vicinity and confined quite closely to business (having but one or two free days a week), I would like to know of a few places (say on Long Island or near by) where we can go early and return the same day. Ans. See our angling columns.

NEW PUBLICATIONS.

A HANDBOOK OF FLORIDA. By Charles Ledyard Norton, Part I. The Atlantic Coast. With forty-nine maps and plans. New York: Longmans, Green & Co. 1890. Paper, 60 cents; cloth, 75 cents. The plan of this work is admirably conceived. It gives briefly general descriptions of the several counties. These are followed by routes of travel with a comprehensive store of information, which the compiler appears to have honestly endeavored to make accurate; and in this he has succeeded in a commendable degree. The form of the handbook is convenient; it is small and convenient (it can be slipped into the pocket), and its business-like air inspires confidence. Mr. Norton's work is likely to be accepted as providing just such a reference book as Florida tourists have long been asking for.

By "SENECA."

A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 98 pages. Price \$1.00.

When a sportsman finds anything which adds to his pleasure, without increasing his labor, he wants all his brother hunters and anglers to know of it and share with him the newly discovered "helper."

WHAT WE CLAIM FOR

The Automatic Reel.

FIRST.—It will wind up the line a hundred times as fast as any other reel in the world.

SECOND.—It will wind up the line slowly if the angler chooses.

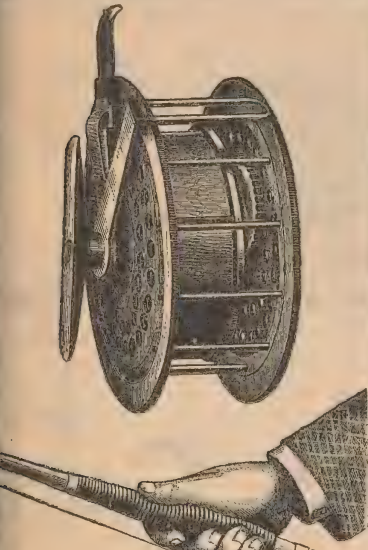

THIRD.—No fish can ever get slack line with it.

FOURTH.—It will save more fish than any other reel.

FIFTH.—It will prevent tips, lines and snells from being broken by large fish.

SIXTH.—It enables the angler, and makes it desirable, to use lighter tackle.

These claims have been substantiated by the most skillful fishermen in America and Europe.

The reel is manipulated entirely by the hand that holds the rod.

The Kosmic Rod

The Most Perfect SPLIT BAMBOO Rod Ever Made.

THE FERRULES ARE ABSOLUTELY WATERPROOF. This most desirable result is obtained by a new and ingenious device NEVER BEFORE USED IN THE CONSTRUCTION OF A ROD. The Ferrules also are PRACTICALLY DOUBLE, and fitted OVER the bamboo is a WATERPROOF cushion of ZYLONITE, while over that are set the ferrules, thus adding MATERIAL STRENGTH AT THE JOINTS. The mountings are of GERMAN SILVER and HAND-MADE IN EVERY PARTICULAR. In short this is the rod anglers have long wished for. Examine it at any of our stores and satisfy yourself.

Hotels and Routes for Sportsmen.

THE FINEST

Black Bass

AND

Brook Trout

Waters within easy reach of sportsmen are the streams along the line of the

Baltimore and Ohio Railroad.

On the eastern slope of the Alleghany Mountains are the Potomac, the Shenandoah and their tributaries, all famous for Bass, while across the divide are the Cheat, the Youghiogheny and the Monongahela. The Cheat and the headwaters of the last two named are celebrated for Brook Trout. The fishing grounds are in most cases within gunshot of the railroad stations, and sportsmen are saved the expense and trouble of carrying their outfits long distances.

BIRD PORTRAITS.

Some Native Birds for Little Folks.
BY **W. VAN FLEET, M.D.**

A handsome imperial octavo volume of untechnical descriptions of the lives and ways of fourteen American birds. The list comprises:

Robin, Chickadee, Kingfisher, Great Horned Owl, Bobolink, Blue-jay, Woodcock, Nuthatches, Meadowlark, Ruffed Grouse, Cedar Bird, Kildeer, Summer Duck and Crossbills.

Each of these birds is beautifully illustrated by the photogravure process from drawings by Howard H. Darnell. The paper is substantial, and the 147 pages of large, clear, handsome type contain just the sort of information necessary to make little folks better acquainted with the birds described, and to awaken a taste for extended study. Everything has been done to make the volume one of the most handsome gift books of the year. Price, postpaid, \$3.00. **FOREST AND STREAM PUBLISHING CO., 315 Broadway, New York.**

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices \$1.00 per line.

SUBSCRIPTIONS.

May begin at any time. Subscription price, \$4 per year; \$2 for six months; to a club of three annual subscribers, three copies for \$10; five copies for \$16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, and Brentano's, 430 Strand, London. General subscription agents for Great Britain, Messrs. Davies & Co., Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, and Brentano's, 430 Strand, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, \$5 per year; \$2.50 for six months.

ANSWERS TO CORRESPONDENTS.

PRACTICE THAT TELLS.

SOME beginners in the use of the shotgun are fortunate enough to have an abundant supply of game to practice on from the first, but most novices are compelled to acquire the rudiments of the art of "shooting-flying" by diligent practice at inanimate targets, resorting to actual field work for the finishing touches. Holding the gun just right on the object aimed at is of course the only end to be attained, and this can be learned only by practice. No theory as to holding ahead or "dead on" is worth a rap. Practice and practice only will enable one to do the trick. Some there are who will never become experts, even with constant practice, while others seem to get on in a short time. Trap-shooting, while not to be compared to the actual shooting at birds in the field, will in a measure prepare one for the latter, and the novice who can make a fair score at the trap can soon "get the hang" of the work on birds, if it is in him.

The very best practice that can be had is to set the trap at the edge of a shallow pond and so arrange it as to throw the targets low down, just over the water, and to shoot from different positions to learn the various angles. The charge of shot striking the water will show just how much the target was missed, and it will be a pretty poor scholar who cannot soon learn to make the proper connection. The most objectionable feature of ordinary practice at the trap is that there is nothing whatever to give the new beginner the remotest idea as to how and why the target was missed. Shooting over the water tells the whole story so plainly that the veriest tyro will never be in doubt as to how he was off the mark.

This kind of practice may be had in perfection without the aid of the trap by securing the assistance of a second party to throw for one, at different ranges, the larger pieces of broken clay-pigeons that can be found at the shooting grounds of any club. We mention this material as it is much better than stones or bits of wood, as

the shooter can readily see when the former are hit, while if the latter are used he will often be in doubt as to the result even when the charge apparently went just in the right place.

RECORDS OF SHOTS.

WHEN a fisherman is seen to load himself with a multitudinous outfit of tackle, he is at once put down as a novice; for the fly-book of the veteran contains a choice and far more limited assortment which experience has tested and approved. There is no surer test of one's record than the outfit he provides when going into the woods. The more expert the hunter, the more simple his needs. The greenhorn imagines that arms and ammunition make a successful sportsman; the old hand knows perfectly well that more solid satisfaction is to be had from a few careful shots than from a score of wild ones. The entertaining "Record of Twenty-Seven Shots," by Col. Cecil Clay, affords a capital illustration of this; and we commend it to the careful reading of those who are prone to squander ammunition by recklessly blazing away, hit or miss. There is a certain satisfaction in preserving for subsequent review a record of the shots fired on such a trip as that described by our correspondent. Obviously the record can be kept only by one accustomed to husband his resources. The man who goes out with a repeater and "pumps lead" into a band of elk will find no special satisfaction in subsequently studying his score.

SNAP SHOTS.

A CORRESPONDENT reporting a trap-shooting meeting explains, "The execrable weather this morning promised a wet blanket to all outdoor sports, and some regular attendants at the Saturday shoot left their guns at home when they started for business, and therefore were not prepared to enjoy the bright beautiful latter half of the day." Which means that trap-shooters are business men. In fact the average sportsman in this country is a worker. The use of rod or gun is his recreation. He works hard and plays between times. And so it happens that the FOREST AND STREAM, as a journal of recreation, finds its support among the busy classes. There are hosts of people in the United States who have nothing else to do, save to engage in sport, think sport, talk sport, write sport and read sport, but that class is not large enough to sustain a publication of sport, confined to the limited field of their interests. A "weekly journal of the rod and gun" can be made acceptable to the public only in so far as it is supported by the classes of society made up of the brain workers and the hand workers. Fishing and shooting lose their zest, when resorted to by idle persons to kill time and dissipate ennui; and what is written about them under such circumstances is equally without zest, salt that has lost its savor, insipidity.

Surely the highest office of sport of whatever kind is as recreation. It is in this character that the pleasures of field and stream are annually assuming a larger place in popular estimation. If an accurate census could be taken of the members of any one profession, that of the law for example, who go fishing, the proportion would be found to be decidedly on the increase. And if there were to be a still deeper investigation into the comparative success of the professional men who seek such open-air recreation and of those who do not, the showing would be on the side of the anglers and sportsmen. It was only the other day that a case came to our notice which illustrates this. A gentleman who had occasion for legal advice in a city near New York, sought out the leading member of the bar, and accidentally discovered first that he was a reader and admirer of Mr. Robinson's "Uncle Lisha's Shop," and then that he was a devoted angler, making an annual pilgrimage to the Maine wilderness, camping and fishing; and finally that he considered himself a more successful lawyer for his summer outings. There was a time when, if a lawyer wanted to go fishing, he took good care to keep his angling proclivities from coming to the notice of his clients. A better day is coming, when under a more worthy popular appreciation of the brain-clearing effects of a wildwoods outing, clients will flock to attorneys who are known as anglers; and when a lawyer sets out for his play-day in the woods he will boldly post on his office outer wall the notice, "Gone fishing. Back in a month."

Much interest attaches to the enterprise undertaken by Mr. Austin Corbin, who has laid out on an extensive scale a preserve for big game in New England. A tract of country has been secured forty miles north of Concord, amid the Croydon and Grantham Mountains in New Hampshire. The range covers many thousands of acres. Mr. Corbin proposes to inclose the territory, police it, and maintain it strictly as a private game preserve. The species of big game to be put out upon it will include buffalo, elk, antelope, moose, caribou and deer, white-tailed and black-tailed. While this is further northeast than the recorded native range of the buffalo, there is no reason why they should not do well in New Hampshire. The region is the native home of the moose, caribou and the white-tailed deer; and the black-tail might thrive there. We seriously question, however, the success of the experiment with antelope. The climate is dry as compared with that of the West, and the probability is that the species will not live in New England. It is sincerely to be hoped that Mr. Corbin's enterprise in establishing such a preserve for the noble game of America may be successful.

One of the myths kept in stock by the advocates of Adirondack deer bounding is that of the peculiarly constituted deer dog of the North Woods, which in season chases the game with an abandon and perseverance born of a consciousness that "the law is off," but in winter mortifies the flesh, curbs his carnal instincts, and not only refuses to run off deer hunting on his own hook, but actually refrains from barking out loud lest he should frighten a deer chancing to be in the neighborhood. To this myth the hounders cling, undismayed by the long record of deer run down and killed by dogs in the Adirondack woods every winter. Game Protector Leonard has brought this subject to the attention of the Commissioners. He advises them that the running of deer by dogs in winter is a decided evil. Of course it is. Everybody familiar with the Adirondacks in winter knows it to be. The very men who claim the contrary know better. They deceive neither themselves nor other people by their myth of the law-abiding, home-staying dogs of a North Woods winter. If hounding is to be permitted in a season prescribed for it, some way should be devised to stop the ravages of the deer dogs in winter. How can it be done?

Every one who has had much experience in night shooting will be aware that in pale moonlight or bright starlight the back sight of the gun and the object aimed at may be seen fairly distinct, while the fore sight is absolutely invisible. The difficulty has been met by touching the foresight with phosphorus to render it luminous, and diamond foresights have been suggested; but these appliances are not always available when needed, and as the difficulty can be easily overcome without any artificial adjuncts, it is well for the sportsman to know how to do it. If you bring your gun to your shoulder, and looking through the back sight are able to see the object, you may be holding dead on or aiming low, but it is certain that you are not aiming high; now elevate the muzzle of your weapon until the object just disappears, and then slowly lower it, firing as soon as the object becomes visible again. A little experimenting in daylight will give confidence in the method.

We gladly second Mr. J. B. Harrison's suggestion that those who are interested in seeing the problems connected with the Adirondack forests wisely determined, should contribute to the discussion of the subject. The year intervening between the present and the time when this subject will come up again at Albany should be improved to the full for a thorough consideration of the points involved.

We shall publish next week a letter from Commissioner J. Henry Phair, of Fredericton, New Brunswick, relating the long fight he and his associates made in the courts of the Province to make good their fishing rights as riparian proprietors. This bears on the question of the fishing leases in Canada, and supplements the letter we published last week from Mr. Henry P. Wells.

The triumphal progress of the Iolanthe's troupe of expert shooters has already stimulated interest in the sport of trap-shooting, and the coming season, it may be predicted with confidence, will be one of unprecedented activity.

The Sportsman Tourist.

BOYHOOD RECOLLECTIONS.

I.—OF JIM INJUN.

Editor Forest and Stream:

For a number of years from my earliest recollection there lived for much of the time at my home in W., in northeastern Connecticut, an old Indian named Jim Wamsley, or Jim Injun, as the folks at home and the people in that neighborhood called him. He was one of the very best of the Narragansett tribe; like nearly all of his race was very partial to rum and cider; and when under the influence of drink was about as cross and quarrelsome as any human being could possibly be; but when sober he was, to me, as much and sometimes even more of a companion than was any of the boys of my own age. He was quite a lover of nature and a tiptop woodsman; I have yet to see an Indian that was not. Besides he was no mean herbalist, knowing the properties and uses of the barks, roots and leaves of about every medicinal plant growing in that section. If some good old lady or an invalid had use for any herb, Jim was sure to know exactly where to get it. Whether he got his knowledge of plants from others of the tribe, or from white persons with whom he came in contact, I never knew. But by all odds, fishing was his forte, either for trout or pickerel. He seemed to know of every place in all the ponds and streams where a fish would be likely to hide, and almost always brought home a good-sized string of them. As I grew older I often accompanied him in his fishing excursions, sometimes with and often without the consent of the folks at home. He would very frequently go on Sundays, especially if pleasant; and sometimes when I was sent alone to church or to Sabbath school I would skulk off behind walls or hills to meet him at some place agreed on, then we would have a jolly good day of it. I was not setting a very good example surely. Once in a while on Sunday evening after coming home I would catch something else besides fish, that was not quite so agreeable. Well, through life we all have to take the bitter with the sweet.

In fishing for trout Jim never appeared to have any particular system, but would follow it in a kind of a haphazard style, with a common pole cut in the woods, peeled and of considerable length. For bait he would use worms, grasshoppers, flies, millers or any insect that he could readily find; but whatever he made use of was, in his hands, effective.

Sometimes when hungry he would clean a goodly number of the fish, and having built a fire on the bank of the stream or in the forest, he would lay them on the live coals and broil them to a nice brown color or fry them on nice flat stones; then what a splendid feast we would have! Query: Is one's appetite better or the sense of taste more acute in boyhood than in later years? It seems to be so. Since then, scores of times, when on fishing trips, I have eaten trout cooked in all styles, broiled, browned nicely in a frying pan, or made into a chowder, but somehow they never seemed to have that double extra good taste of those prepared near the brookside by old Jim Injun.

Being at my former home during a short vacation last year, I concluded to try for trout on what was once the best stream for them in that section, so one morning I started very early and fished the streams thoroughly during the forenoon, but all that I could catch were two little fingerlings some 5 or 6 in. in length. Nothing more. I threw them back again. Whether the brook had been whipped by parties without number in season and out of season, or whether most of the trout had left, or whether they did not care to rise that day, I could form no opinion; but I have found that a stream which was once good for trout fishing will sometimes become very poor in that respect in after years.

From boyhood to the present time I have made it a practice each year to have at least one good fishing excursion, and often more than one when time and circumstances would permit; sometimes for only one day, at others two, three, or more, camping out during the time; and I have always considered it to be the height of enjoyment. Of course, every angler likes to have good luck in getting a well-filled creel or a big string of fish, and always feels proud of such a catch; yet we all know, aside from that, there is a certain pleasure in listening to the murmuring of the stream, the singing of birds or the sighing of the winds through the forest, besides enjoying the beauty of the landscape—all these together form a picture for the mind to dwell upon for weeks, months and years afterward; and what one of her children, in the long run, ever became much poorer in pocket or in health or was ever made worse in morals by communing with our great Mother Nature?

A. L. L.

II.—NIC AND HORACE.

A notice the other day in one of our local papers referring to Nicholas D., set a host of old recollections stirring in my mind; for years ago this man used to work in my father's shop, and I knew him well. I was only a boy then, but Nic, who was a German, knew all about fishing and shooting and trapping; and many a "pointer" would he give me as to the likeliest place for muskrats and mink; and, again, he would loan me his old shotgun—with father's consent—and I would scour the hills for squirrels and grouse, always limiting my load to eighteen No. 6 shot.

There was another man working for father named Horace and he and Nic were great cronies, hunting, fishing and—I am sorry to say—drinking together with the greatest unanimity. It came about one June morning twenty-five years ago that Nic and Horace got father to let me take a day with them fishing. Work was slack, and, according to Nic's calendar, the sign was just right for trout. At an early hour we three (I only a boy of twelve) set out for the Perkinsville swamp, some four miles away. The swamp was then a great forest, through which the creek wound sinuously, abounding in fair-sized black, rather sluggish trout. We reached the ground in good season and fished faithfully until noon, capturing a nice lot. Then emerging on the Wayland road we came to a German tavern kept by one G. Bill. Here Nic and Horace purchased a loaf of rye bread, a milk pan full of sauerkraut and a gallon of beer. I remember well how my boyish taste revolted at the bitter, but took kindly to the kraut and bread; and while I made the

solids disappear rapidly, my companions were not less assiduous in their attention to the liquids. By the time I had said "enough," the gallon measure had been emptied a second time; and so it came about that later a very full boy and two very full men might have been seen taking their way cross lots to Mill Creek, which they proposed to fish down to the corporation line and so end the day's sport. As is apt to be the case, the fumes of the beer made the men quarrelsome, and Horace being detected in "swiping" the best trout of the day from Nic's pocket, a struggle ensued of which I was a rather frightened witness; but Nic getting his trout back again and easing his mind by calling Horace a thief, good feeling was restored and the procession moved hilariously down a country road. Some German children playing about a puddle in front of a cabin were unceremoniously dipped into the middle of the dirty water, and their wails bringing out the "mutter," armed with a mop, we all took to our heels and never stopped until the fringe of hemlock bordering the Mill Creek gorge was just before us.

By this time the beer had so far evaporated that the men were in fair fishing trim again, and descending to the creek we began taking them—not the logy, thickset fellows of the swamp, but those lithe, active, beautiful creatures, for which Mill Creek is still famous. Going down the gorge the footing began to get precarious and difficult, and being almost tired out I decided to cease fishing and ascend to the top of the bank and follow down that way. We carried no creels, using our pocket-handkerchiefs and crocheted twigs for carrying the trout, but we had a fine lot, and when we divided I was given the lion's share. "Now H.," said Nic as we parted, "tell your pa that we didn't get very drunk, won't you?"

The old swamp is all gone now. When the Lackawanna Railway made its western extension it went directly along the stream, so the trees have all been cut away and the ditches along the line carry the waters once abounding in trout. Mill Creek is still intact, and many a good day's fishing have I had along its tide; but that is fast deteriorating; my boy will hardly arrive at the fishing age in time to get more than a fingerling trout from its waters; but so be it. Our game and fish may disappear, but the years cannot tear from us our happy recollections; they need no propagation or yearly planting, but are as lasting as life itself.

DANSVILLE, N. Y.

DUNGENESS—A WINTER HOME.—IV.

FIVE O'CLOCK one morning Will and I awoke half-way to Ferdinandina, having slept aboard the yacht. Dr. P. and Mr. P. met us there with Jim, the dinky driver, and a comfortable Victoria. To shoot from a Victoria was indeed a variety in the hunting line, but as the day advanced I grew to appreciate its comforts tenfold.

We stepped swiftly out of town, crossed the wide marsh I had looked out upon the night in December as the car bore us all to Ferdinandina, and before many miles had been traversed we were in the pine woods. Then we let the two dogs out and told Jim to keep a sharp eye for points. Not until we had dismounted at a cleared field did we get up a covey of quail, but out of it we got three. Jim drove on, while Mr. P. and I left Will and the doctor, each pair taking a different direction. We managed to get up another small bunch, out of which two fell. By dint of much calling and whistling, for in a pine woods one is so easily lost, the little party was again assembled at the carriage. Although the dogs several times led us to believe they were on hot trails, we did not flush any more birds until we reached a farm some ten miles back in the woods and bordering Nassau River. The fields were well over-grown with grass, such a perfect cover for birds I never saw equaled; and space—why, there were acres and acres.

Will and I were anxious to shoot against Doctor and Mr. P., so they left us near the carriage and walked to the other end of the field, over a mile away. First two together, then far apart we rounded our given portion twice, failing in the turns to flush but one bird. To add to our grievance we counted their shots, twenty-one in all. Feeling at last we had been fooled into having the part given us where there were no birds, in rather a bad humor we went to the carriage, having made up our minds that if we could not get any birds we would get some lunch. Shot followed shot until we could stand it no longer; so shouldering our guns we set off in the direction they had taken. We made rather a roundabout tour, meeting them just as the circle was completed. For twenty-one shots what do you think they had to show? They ought to have been ashamed of themselves, and I think they did look a trifle sheepish, as only four birds composed their bag. In the face of such luck we did not have the heart to guy them. Before leaving the field we got up another bunch, from which Will took two birds and I one.

Once in the middle of the woods, with pine trees on every side, both dogs got on a very stiff point, as seen by Jim from his elevated seat. While walking over to them we kept calling all the time, "Steady, sir! Steady!" but just as we were about ready to flush the birds, the younger dog, no longer able to control himself, jumped forward, making the birds rise straight up, instead of on a gradual slant. All four barrels went off and two birds fell, one to each pair. Marking their resting places, we divided and succeeded in getting two more from the covey before Jim drove up.

Near a swamp our dinky called, "They is pinting," and both dogs sure enough were standing side by side, heads forward, legs firm, and tails straight out and hard as iron. We were terribly fooled. I never knew dogs to act so before. Nothing was there at all. It must have been a spot hardly vacated a minute by a bunch we flushed in a near-by field. As the birds we jumped passed Will and the Doctor, they each got a bird; and seeing them settle on the border of a swamp, we proceeded cautiously. One got up by me and I knocked him over; then Doctor wiped Will's eye first and mine twice as we each missed birds, but Mr. P. got his. Will shot the next two that got up, besides losing another that fell out in the water. I shot one a minute after and got wet to the knees wading for it. Some doubt was expressed as to who got the next bird, but I guess the Doctor killed it. From one covey we had done all this shooting, and in much better spirits we entered the carriage homeward bound.

Toward the end of our last shooting we had missed Mr. P.'s dog, but when on our way about 50 yds. we found him seated by a tree quietly waiting for us. He had grown weary standing point, so sat down to it, and when the Doctor flushed and killed the bird, he seemed mighty pleased, wagging his tail as much as to say, "I knew you would come and so I waited." Only one more stop was made and that was as night was falling rapidly. The covey we flushed was quite large, but the light being bad only one bird parted company with its fellows and the Doctor claimed that. I don't doubt it was his, but the claim would have been hard to establish.

Darkness had settled over the marsh when we came to the road which led across, and far away were the shining lights of town or the occasional gleaming ray which shot from the revolving lighthouse tower.

When at last aboard the boat which plied between Ferdinandina and Brunswick, unmindful of luxurious comfort, Will and I fell asleep upon chairs in the cabin, not needing the songs of the dinkies who were loading cotton below to lull us into dreamland. When I awoke the boat was far on toward the island.

G. F. BLANDY.

A TEXT TO FIT THE OCCASION.

REV. DR. C., a clergyman of the Episcopal church, and brother of one of its greatest bishops, has a true note of the apostolical succession in his character of fisherman. In this character he became acquainted many years ago with Paul Smith, the well-known landlord of the Adirondacks, who was then only a humble guide in the depths of our northern wilderness. Now, Paul was christened Apollos, and had been known during all his early life as "Pol" Smith. It was only when he became famous as a hotel proprietor that this abbreviation was changed to the more dignified name of the Apostle to the Gentiles.

At another visit in later years, after exchanging delightful reminiscences of monster trout and big catches with his clerical friend, Paul showed him a chapel which he had just built for the use of his guests. The proper sentiment for the occasion was duly expressed, "And now," continued the witty divine, "can you tell me what text I should take if I were asked to preach at the dedication of that chapel?" As the selection of scripture texts was not one of the many offices he had been forced to qualify himself for in the course of his varied experience the ex-guide gave it up. "You will find it," said his interlocutor, assuming his pulpit voice and manner, "at the fifth verse of the third chapter of the first epistle of Paul to the Corinthians, in these words: 'Who then is Paul, and who is Apollos?'"

THE ADIRONDACK PARK PROJECT.

FRANKLIN FALLS, N. H., March 14.—*Editor Forest and Stream:* I am very glad to see your wise and excellent editorial article in this week's paper. We shall need the full year for the presentation and discussion of all the interests, theories and plans connected with the problems of the North Woods. I am specially interested in having all classes of people who value the wilderness on any account take part in the discussion, so that they can bear their part in influencing public opinion and in shaping the policy which shall be finally adopted. I hope the fishermen, hunters, camping people and all lovers of the wilds will speak through your paper. Let us begin at once. The paper has just come, and Mrs. Harrison—it always goes to her first—has just read aloud to me, with merry laughter, the letter from Antoine Bisette. We earnestly hope we are to have a new series of messages from our old friends, and trust that after they have been married a year or so Hudly will be willing to have Sam go fishing, and that he will be glad to go.

J. B. HARRISON, Cor.-Sec.
N. Y. State Forestry Association.

THE NATIONAL PARK BILL.

FROM present indications it seems probable that the bill changing the Park boundary may be defeated at this session of Congress, and the miners of Cooke be deprived for another two years of the legitimate fruits of their investments and labor during the past decade. And all through the efforts of a coterie of schemers who are attempting to secure a right of way through the Park for the manifestly selfish purpose of disposing of their franchise as a speculation. It should have become evident to these parties long ago that no railroad will be granted permission to enter the confines of the nation's pleasure ground, but that in the interest of this national reservoir, shall pass the House, to change the Park boundaries to permit a railroad to reach that camp along the natural water route of the Yellowstone River and Soda Butte Creek. That the necessary change in the boundary would be secured was almost a foregone conclusion until the right of way bill through the Park was urged. As an evidence of this we clip the following from the FOREST AND STREAM, a journal that has zealously fought against any invasion of the nation's pleasure ground by railroads:

"The opposition to a Park bill in the House of Representatives has come from people who desired to obtain a franchise for a railway to run through the Park. A strong lobby has long fought for this grant, and the lobby declares that without some provision of the kind no bill for the protection of the Park forests, and the preservation of this national reservoir, shall pass the House. Up to the present session the railroad lobby have professed to be governed only by a consideration for the public welfare. Ignoring other available railway routes from Cooke City, they have professed to desire the privilege of building a road down the Yellowstone river, so that the miners of Cooke City could get their ore out of the mountains to a trunk line. Now, this does not satisfy them. In order to facilitate the opposition and to hasten the progress of the bill through Congress, the friends of the Park have intimated to the railway people their willingness to so amend the Vest bill that the Yellowstone and Lamar rivers and Soda Butte Creek should form in part the boundary of the Park on the north. This would give an opportunity for a railway lying wholly without the Park to be built from Cooke City to Gardiner. Thus Cooke would have her outlet, and the integrity of the Park would be preserved."

"When this compromise was offered to the speculators by the friends of the Park, it was refused."

The FOREST AND STREAM should understand that it is not in the interest of speculators that legislation is asked for the purpose of securing a railroad to Cooke, and no compromise with this class of lobby is required. The people of the Park are in earnest in their efforts to prevent it, and see no more effective way of disposing of it than by supporting the proposed bill for the segregation of that small portion requested by the true friends of Cooke City. —Livingston (Mont.) Enterprise, March 8.

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-Tales," giving a table of contents and specimen illustrations from the volume.—Adm.

Natural History.

ILLINOIS BIRDS.*

THE thirty-fourth General Assembly of the State of Illinois authorized the publication, under the direction of the Natural History Survey of the State, of a series of volumes on the zoology and cryptogamic botany. Of these the one before us is the first to appear. This report, authorized by the State laws of 1885, should have appeared nearly three years ago, but the whole edition, together with the plates, was destroyed by fire. The volume as it now appears was largely reset from a set of the proof sheets which had fortunately been preserved, and now makes its appearance in very creditable shape.

The work of the Illinois State Laboratory of Natural History, as carried on during the past twelve years, has been directed mainly toward supplying the more important deficiencies in the knowledge of the botany and zoology of the State. The mammals and birds and the flowering plants of that region have been fairly well studied, and it has seemed more important to deal with the lower forms of life, the reptiles, amphibians, fishes and the lower plants. Especial care has been given to the economic relations of the most important groups of animals, as shown by Prof. Forbes's studies on the food of birds and fishes.

In issuing the series of volumes, of which this one of Mr. Ridgway's is the first, it is the main final object of the Survey to furnish the material for an accurate picture of the native plant and animal life of the State, but still having in view the bringing into especial prominence those parts of the subject which have an educational or economic importance.

The basis of any knowledge of natural history is classification and description, and we may presume that, as with the birds, it is to this that the first volumes on each subject will be devoted.

It may be said with confidence that no writer is so competent to prepare a report on the birds of Illinois as is Mr. Ridgway. A native of that State, and for years a student of its birds in their homes, his publications have made the locality where he worked one of the most interesting, ornithologically, in the State. It is unnecessary to speak of his standing as an ornithologist, since every one knows what that is. In his work Mr. Ridgway has had the assistance of a number of local ornithologists, whose observations, covering various limited sections of the State, have been close and careful. Such are the late Robert Kennicott, E. W. Nelson, Mr. H. K. Coale, C. K. Worthen, the late Samuel Turner and some others.

The volume now at hand includes, besides its introduction, the birds of Illinois to and including the order *Columbeæ*. In saying this it must be explained that the author has not arranged his groups in the order followed by the A. O. U. Check List, but has adopted the more familiar method which begins with passerine birds, placing the thrushes first. This will not seem strange when we remember that the preface is dated July 2, 1885, the same year that the A. O. U. committee on revision of nomenclature and classification presented their report. The A. O. U. Check List was not printed until the following year.

Especially interesting features of the present work are the introduction and a vernacular synonymy. The former, although it contains only about thirty-six pages, gives an admirably clear notion of the physical features of the State, and of the three natural areas into which it may be divided. These are the lake shore district, the prairies and the southern bottom lands. These are well described. Following this are remarks upon the climate, with some interesting comparisons of mean annual temperature and rainfall for different localities. The second section of the introduction, "Characteristic Features of the Avifauna of the State," is devoted to a number of lists treating of the distribution of various species, to the State's position with regard to faunal provinces or districts, and to migrations. The concluding portion of the introduction is bibliographical, and gives the titles of all the publications actually consulted by the author. These run from 1853-54 to June, 1885.

The portion of the work treating immediately of the birds opens with an analysis of the higher groups, and throughout the family and generic characters are very fully treated. Although the present volume is termed a catalogue, it is one which contains under each heading a list of popular synonyms, a more or less full technical synonymy, a description of the species and a biography usually short, though occasionally running to two or three pages. These biographies, although so short, always mention the more important and characteristic habits of the species. The vernacular synonymy already alluded to is an interesting and very useful feature of this work, and it has an especial appropriateness in a volume printed, as this is, especially for circulation largely among those who are by no means experts in ornithology.

Thirty-two plates end this volume, of which twenty are devoted to outline drawings of wings, tails, bills and feet of various species, and the remainder to figures of Illinois birds, mainly owls and hawks. These plates are printed from cuts loaned the State Survey by the Smithsonian Institution by Professor Baird's direction. The figures in the first twenty plates are admirable, but the cuts of birds are not. A few typographical errors may be noted in the book, due to the fact that the author never saw a proof of the reprint.

The volume just issued will awaken an added interest in the work of the State Natural History Survey, and that which is to follow from Mr. Ridgway's pen, which will contain the game and water birds, will be eagerly looked for by sportsmen as well as ornithologists.

*Natural History Survey of Illinois. [State Laboratory of Natural History.] S. A. Forbes, Director. [The Ornithology of Illinois.] [Part I., Descriptive Catalogue,] By Robert Ridgway. [Part II., Economic Ornithology,] By S. A. Forbes. [Volume I.] [Published by Authority of the State Legislature.] [Springfield, Ill.: H. W. Rokker, Printer and Binder,] 1889. Pp. 520. Plates XXXII.

WILDCATS IN CONNECTICUT.—Granby, Conn., March 11.—A few days ago Ervin Beaman, of West Granby, Conn., took his dog and gun and started for wildcats. The dog soon started one from under a pile of brush, and soon Mr. Beaman got a shot at it and killed it. He afterward found another track which his dog took and soon

ran the wildcat into a large. Mr. Beaman cut an ash pole, and with a long cord he had in his pocket tied a sharp hook on the end of the pole, not cutting off the cord, of which there was enough left to reach to end of pole, which proved very fortunate, for Mr. B. ran the pole in and finally hooked in to one foreleg of the growling and spitting cat, and she immediately with one bite took off the end of the pole, so Mr. B. took hold of the cord and carefully pulled her so he could partly see her, and shot several times at her with a revolver, but did not kill her until he got her so far out he could use his gun, which finished her. The two cats weighed 40 lbs., and Mr. B., who has killed many of them, says one was the darkest and handsomest marked cat that he ever saw. His dog started the third cat, and it came so near that Mr. B. thinks he would have killed it if he had shot, but hoping to get a shot at closer range he let it pass, and it proved a lost opportunity, as he did not see her again.—N. ELMORE.

A CURIOSITY OF MIGRATION.—Perth Amboy, March 10.—Will the editor please note statement (as to swans carrying warblers and flycatchers on their backs) in *Harper's Weekly*, page 167, fourth column, and comment thereon in next week's issue of *FOREST AND STREAM*?—SUBSCRIBER. [This subject is one that has been several times discussed in *FOREST AND STREAM* within the past eight or ten years, and "Subscriber" is referred to our files. See "Avian Riders," *FOREST AND STREAM*, XVI., p. 203, and "The Cranesback," *FOREST AND STREAM*, XVI., p. 105, XXIV., p. 268, and XXX., p. 268. That certain small birds do perform all or a part of their migration by resting on the backs of large birds appears to be fairly well established. The birds which have been credited with "furnishing transportation" include geese, swans, cranes, storks, and even owls.]

EVENING GROSBREAK IN MASSACHUSETTS.—Worcester, Mass., March 14.—We had an adult male specimen of the evening grosbeak taken in Brimfield this State by C. A. Jones, one of a flock of five that had been flying about the apple trees near his house on Feb. 1. Not recognizing the bird he shot one and sent it to us for identification. We have mounted the bird and placed it in our collection.—E. H. FORBUSH (President, Worcester Natural History Society). Mr. Daniel Parham reports the capture of an evening grosbeak at Tyngsborough, Mass., on Feb. 24.

Game Bag and Gun.

"FOREST AND STREAM" GUN TESTS.

THE following guns have been tested at the *FOREST AND STREAM* Range, and reported upon in the issues named. Copies of any date will be sent on receipt of price, ten cents:

COLT 12, July 25.	PARKER 12, hammerless, June 6.
COLT 10 and 12, Oct. 24.	REMINGTON 16, May 30.
FOLSON 10 and 12, Sept. 26.	REMINGTON 12, Dec. 5, Feb. 6.
FRANCOTTE 12, Dec. 12.	REMINGTON 10, Dec. 26.
GREENER 12, Aug. 1.	SCOTT 10, Sept. 5.
GREENER 10, Sept. 12, Sept. 19.	L. C. SMITH 12, Oct. 10.
HOLLIS 10, Nov. 7.	WHITNEY SAFETY 12, March 6.
LEFEVER 12, March 18.	WINCHESTER 10 and 12, Oct. 3.
PARKER 10, hammer, June 6.	

A RECORD OF TWENTY-SEVEN SHOTS.

[Concluded from Last Week.]

IT was now the 28th of September, and I was due in Washington, D. C., Oct. 1, but evidently I could not reach there that day because it would take two hard days' work to go from our camp to Gabriel's cabin, two from there to civilization, and two more thence by rail home. We had only about one day's provisions left—apart from tea, of which we had plenty—if we depended upon that stock alone, without adding game or fish to it, so after breakfast I decided to start home, and we began packing up. Several meat birds, as Gabriel called the Canada jays, were flying about us picking up scraps and carrying them off to convenient places, and as he told John, "If you don't hurt dem dey get right tame, so dey'll eat out of your hand bye and bye," the latter began feeding them, and sure enough in half an hour one was taking scraps of meat from his hand. On our way down stream we picked up the mink trap, which had caught nothing, but later on I shot a mink that was running along the bank; this was the tenth shot. We stopped for dinner at the same place where we dined on our way up from the deserted cabin pond, and the day having turned cloudy with the air thick and hazy, our spirits fell as we thought of the giving up of our free life in camp and a return to civilization without the moose I had confidently expected to kill, or the beavers, the skins of which John had said he would carry home to his mother and sister. We ate in silence until Gabriel remarked—stirred, perhaps, by some such thought as ours—"Dere might be beavers at dis little lake over here," indicating vaguely by a jerk of his head, a direction back of him and away from the side of the creek where we sat.

"How far is it from here?"

"About a mile and a half. Dere's a good portage."

John was on the alert now, the word beavers had roused him.

Presently Gabriel added in an encouraging sort of tone, "Maybe we see moose dere; pretty good place for moose, too."

"Burnt country?"

"All burnt, same as dis. Well, dere's one little place right close to the lake dat's green bush, we could camp dere."

It was plain we were all thinking about the same thing, a trip to this pond, but what about provisions?

"Well, Johnnie, what you goin' to do?" Gabriel said in reply to a question of John's. "Dere's all we got to eat"—pointing to a diminutive piece of bacon and an apparently empty bread bag—"plenty tea and sugar, but you eat all dat bread and bacon in one meal. What you think your father going to do and me? Kill moose maybe or roast beaver and shoot partridge for you?"

John would not eat moose meat, having taken an aversion to it from the time he first saw a moose cleaned and cut up. Thin slices of crisp breakfast bacon, fried trout or broiled grouse, he could dispose of rapidly and in quantity. Gabriel and I could eat anything down to well-cooked muskrat. The result of our deliberations

was that we decided to leave some of our things where we were; to portage over to the pond our canoe, one tent, the blankets and provisions; to stay over night, and the next morning come back and resume our journey home.

We reached the pond late in the afternoon, striking it from the west at the head of a small bay. Before paddling all the way to the east shore, where we were to camp, we saw a beaver, and our spirits rose. We established our camp in a small strip of green timber, some three hundred yards long by fifty wide, which by some freak of the wind or other chance had escaped the fire that had devastated the country for miles around.

After sundown we went out in the canoe to look for beavers. Presently we saw one swimming, and as we were to the east of it I could see to shoot as it crossed the reflection of the still yellow western sky in the water. It was not over thirty yards off, and as I fired I thought to myself "one beaver." I missed it. None of us seemed to know where the ball struck. When the gun went off there was a splash of water where the beaver's head had been, but I had not killed the beaver. Why? I confess I could not tell. Gabriel was astonished; John said,

"Oh, papa!" he exclaimed, "how could you miss that beaver; I thought you were a good shot!"

"I don't know, John; I expected to kill it. I ought to kill one at such a shot. Never mind, better luck again, may be."

Before it became too dark to shoot at all I had shot at three more beavers and missed them; had killed one muskrat. These were the eleventh to the fifteenth shots inclusive. I was surprised and annoyed, having never done such work before in any four consecutive shots I could remember, at anything! John was disgusted. "We might have had four beaver skins to take home to mamma," was the burden of his discourse.

I woke early in the morning and we went out in the chilly fog to look for beavers again. At the lower end of the pond I got a shot at one at about forty yards and—missed it. What was the matter? None of us knew. I was to blame apparently. We cruised quietly about until the sun seemed about to break through the fog, when we turned the canoe toward camp. I was stiff from sitting so long in a cramped position and my hand was numb with cold. We were abreast of the end of the green timber furthest from camp when a slight "snap" brought a low "hist!" from me and the canoe to a stop. "Sounds like deer comin'," whispered Gabriel, turning the bow of the canoe silently until it faced the shore. There was another faint crack of a twig. "Bear," I said, noiselessly cocking my gun and holding it across my arm. We listened intently as the barely audible snapping and rustling drew a little nearer, until suddenly there was a bear close to the edge of the water, I suppose about a three or four years old animal. Just as we saw it, it rose on its hindfeet and reached for some limbs in a small cherry sapling. We were about seventy-five or eighty yards off, and as the bear straightened up I brought the gun to my shoulder, fired and—missed! The bear was gone in an instant. "Dat's not my fault," Gabriel said, "you shoot too quick. When we see the bear if you wait den I paddle right close to him. He was too far off." "Too far off! H-m! I can kill a bear there as well as closer. I'm not in the habit of waiting for people to tell me when to shoot." We were all disgusted and disappointed. (Sixteenth and seventeenth shots.) "Only think," John said, as we ate almost the last of our provisions for breakfast, "we ought to have had five beaver skins and a bear skin."

"Dat bear look pretty black," put in Gabriel; "so cold skin pretty good now, I guess."

We sat around and pottered over our meal, which, although frugal, with the last night's supper almost made an end of our eatables. We hated to begin packing up to go home empty-handed. Presently Gabriel rose, after filling his pipe, picked up a tin pail, and after muttering something about getting water to wash the dishes, started for the landing, only a few steps off. As he did so I said to John: "If we had a pheasant (grouse) now, or something you could eat, I believe I would risk staying here another night and not start home until to-morrow morning; but what food we have will not last over to-day." Just as I said this Gabriel, who had only gotten a pace or two beyond the other end of the tent, said: "If you want to kill a partridge, dere's one right behind de tent." In a moment I had reached inside the tent and seized my Winchester, and in another moment had knocked the head off a fine cock grouse; (a big fat one). Shot No. 18.

This decided me. It seemed a Providential dispensation that this grouse should have appeared just when it did. It would make John two good meals, and like as not I might get more of them before we reached Gabriel's. The latter and I could get along well enough, being old hands, but the boy was not quite as strong as we and had to be looked after. The packing up was put off, therefore, until the next morning. Gabriel said he knew of another pond not far away, so we went over there and looked about until dinner time, but saw no game.

Of what happened after dinner my note book says: "In the afternoon I missed another beaver and killed a mink." (The 19th and 20th shots). I had been at this little pond, not over a half or three-quarters of a mile long, just twenty-four hours, and in that time missed six beavers and a bear, and killed a muskrat and a mink. After dark we heard moose and put out in the canoe to look for them. They seemed to be coming so close to the pond that we paddled over to the side on which they were and waited, some 30 yds. off shore. From the racket they made we judged there were two bulls and a cow. Sure enough, in a little while we could make out three black objects marching along the beach, stepping over logs, trees and brush with great care and little noise. It was too dark to see to sight at all or make out anything of the animals more than three moving objects a little darker than the background of bank and brush. I fired at the last one, and with the flash of the gun there was a mad rush and a smashing of sticks and dead timber, in the midst of which I banged away at the same moose just about disappearing in the dense growth of a thick clump of brush into which the others had turned. (Twenty-first and twenty-second shots).

"Which one you shoot at?" whispered Gabriel.

"The last one."

"You ought to shoot de front one, den the others don't go away."

"Why, the front one was the cow, of course; I would not shoot a cow."

"You think you hit him?"

"Hit him! Yes, of course I hit him. I don't think he's a very big one though."

"I don't think it. Too dark to see very good."

Just then we heard the moose cough and it was evidently hard hit. To the left of the dark thicket was rather higher ground, on which the moose seemed, from the sound it made, to be standing. Gabriel at last thought he saw it, and after looking awhile I thought maybe I saw it too, so holding the gun to my shoulder but without attempting to look at the sights I fired four shots (the twenty-third to twenty-sixth) at the supposed moose, which never stirred. That it did not was not to be wondered at, for we discovered afterward that the dark object was the charred stump of a huge white pine, and the moose had been standing beyond it where we could not see it from the canoe. Two reasons prompted us to go ashore; one because I did not like to leave the poor animal to suffer for I could not tell how long, the other because, as Gabriel suggested, there were other moose about; the country was all burned and covered with thick brush, and if the moose wandered off in the night it might be hard to find it in the morning, as he put it, "better you knock him down."

We landed, therefore, and started after the moose, but I soon found that I had done so without reflecting. Gabriel could get along all right, for he had two hands and no gun to carry; but I, with but one hand, and obliged to carry my gun in that, had no way to protect my face and eyes from the thick brush through which we plunged, so I stopped, gave Gabriel the gun and told him to knock the moose down so we would not have far to go after it in the morning. He overtook it in a few yards and shot it down, and in a little while we were back at camp. That this was a wise precaution, was shown the next day when he, a first-rate tracker, and I, not a bad one, hunted for an hour before we found that moose, although it lay such a little way from where I first shot it. Other moose had been all about there, and the dry sandy soil was all tracked up by them. We saw two other moose while looking for the dead one, but I would not shoot at them. When we found our game it proved to be a three-year-old bull in prime order. My first shot had been too low, and had struck the left foreleg about half way up from the knee to the shoulder. The second shot, fired as the moose turned to the right, had entered the left side far back and ranged forward clear through to the right side, so that the wonder was the animal had been able to go as far as it did.

Before we skinned and cut up the moose I took several photographs of it. After the butchering was over we dined and at once began portaging our things to the creek; this took us until nearly dark, for we had heavy loads to carry and several trips to make. It began to rain a little in the afternoon and we had rather a wet night of it, but as I had killed "another providential pheasant," as my notebook has it (shot number 27), we did not care. The Indian and I feasted on moose meat, while John regaled himself with roasted grouse, eating half of one saved from morning for his supper. We had a good deal heavier load for our canoe now than before we killed the moose, and although we worked hard all day Saturday and had the current with us down stream, at 6:45 P.M. when we stopped to camp, we found ourselves only at the lower end of the thirteenth portage—the thirteenth from Gabriel's cabin that is, we were counting downward now on our way home—we had still twelve portages to cross. It was dark long before our camp was in order and supper ready. We had worked very hard all day, most of the time in the rain, but the latter stopped when we did and the night was warm and comfortable and we slept soundly. The next day was Sunday, but concluding under the circumstances that I was warranted in breaking my rule in regard to that day, I ordered the tent to be struck and we set out on as hard a day's work as we ever did on that stream. The portages are nearly all short and we pushed over them with our packs at our best pace, fairly running when we went back empty-handed for our next loads. We took little time for breath or anything else on the water or crossing the portages, and were tired enough when we pulled up at the landing before Gabriel's cabin at six in the evening. Although there was a sort of feeling that we had returned to our base when we had reached this point, we were not by any means at the end of our journey. It took us all the next day to get our things over the river, although we did not have very much in the way of provisions, taking only enough to last us until Tuesday afternoon. We left all the moose at Gabriel's but the horns, so that with only our tents, blankets and cooking utensils for cargo, our canoe sat well in the water, and on Tuesday starting at 7:30 in the morning, we paddled straight ahead—barring a ten-minute halt to talk to Peter White Duck who was camped on the bank, an hour for dinner and the short time occupied in crossing the three portages—until 4:30 in the afternoon, when we reached the railroad and finished our canoe journey and expeditions to the woods with a day's trip of twenty-seven miles. I had fired twenty-seven shots, of which fourteen were misses, made as follows: Three shots in succession at a grouse walking with its head stuck out in front, six shots at a beaver and one at a bear, and four fired at a dark stub instead of a moose.

Why did I miss any at all? I will tell you. When about to cross a portage on our way up the north prong I stood my Winchester on top of the bank against a small spruce while I shouldered my pack. Gabriel, after he had his pack on, carrying it with a "tump line," could not raise his head very high, and did not see my gun; so that as he put his hand around the spruce to haul himself up the bank he knocked it over, and it fell muzzle first on the rocks near the water's edge. I picked it up, and seeing it had struck nearly fair on its muzzle and that the front sight had not moved nor been knocked loose in its seat, I thought no more of it.

When at Gabriel's cabin, on our way home, I wiped my gun out Monday morning before I left, and seeing a white birch across the pond, about the size through of the bear I had shot at some days before, I put my gun to my shoulder and glanced through the sights. One look surprised me, but after a moment I saw what was the matter, and called, "John! John! come here a minute." When he came I showed him what was wrong. It was this: The figure eight band clamping the barrel and magazine at the muzzle had been knocked loose by the fall on the rocks, so that the magazine could be pushed out of place to either side, throwing the front sight to the right or left by the consequent partial revolution of the

upper part of the band, on top of which the sight was, around the barrel. Since 1874 I have used a Winchester with a 20in. barrel; this makes the distance between the sights so short, that a slight movement of either of them makes a great difference in the result of a shot directed by them.

We all looked at the gun and twisted the band from side to side. Gabriel could now believe what had been told him, since he saw where the fault lay; John regained his faith in my shooting, and I was glad to have explained what puzzled me. All the same, we regretted the loss of the six beaver skins and the bear skin.

If I thought I could get such another lot of shots, at that or any other pond, I would travel a good way to try what I could do with them. As I look up from my seat by my library table, where I am scribbling this, I see hanging on the wall a photograph of John and the three-year-old moose.

I hope we shall both live to take more trips to the woods and to write to you about them. CECIL CLAY.

WASHINGTON, D. C.

[In the part of this record given last week, page 144, end of third paragraph, for "the deer was 'almost a year old,'" read "was 'a three-year old.'"]

WOMAN IN THE FIELD.—II.

I BEGAN my second year's shooting feeling very much encouraged and sure that I was going to make a very good record. When I came in at the end of the first day I felt like throwing my gun in the river, for I had not been able to come within 6yds. of anything—either sitting or on the wing. That is another discouragement that beginners must expect. You leave off at the end of the season feeling very proud of your progress, and sure that at last you are on the road to becoming a fine shot; your gun is not out of its case until the following rail season, except possibly for a day at snipe in spring, and for the first two or three days you cannot hit a thing, and make up your mind that it is only time wasted to try to learn to shoot. But persevere, and your reward will come—the knack will return and you will make rapid progress. And there is another warning that I would give my fellow sportswoman—do not take too long a tramp the first day. To the average woman, accustomed only to walking on city pavements or on smooth roads, and to doing very little even of that, tramping after birds is pretty severe exercise. It does you no good to walk so far the first day that you feel the next morning as though you had been beaten from head to foot, and as if you could not move a muscle. But if by chance you do reach that unpleasant condition the only thing to do is to force yourself to go out again at once and take another tramp, even if it is only across a few fields. It will not do to yield to that feeling of lameness and think you can cure it by rest, for if you do the battle will all have to be fought over again the next tramp you take.

My second season's shooting began with what we called a day on the meadows. It was just before the law was off for rail and the Doctor wanted me to get my hand in a little before trying them. So we started off, wearing our ordinary hunting clothes and long rubber boots.

I suppose that it really takes a moderately enthusiastic sportsman to find any great degree of pleasure in stumbling over salt marshes, every now and then plunging nearly knee deep into a treacherous hole filled with vile black mud, having the hot August sun beat down mercilessly on your head and being devoured by mosquitoes. But for some reason or other I always look back to those days with pleasure. Meadow larks, green herons and swallows formed the game, and now and then we would have a shot at the little long-legged, speckle-breasted sandpipers that ran along in big flocks at the edge of the water.

I remember with great distinctness one experience that we had. The meadows were nearly divided by quite a broad creek, easily fordable at low water, but quite deep at high or even half tide. We had been strolling along the shore, not paying much attention to the tide, and when we reached the creek we discovered that the tide was nearly high. The Lawyer was with us that day, and we three sat on the sand, like the children of Israel by the waters of Babylon, and gazed at each other in dismay. We must get across in some way, and finally the Doctor, who had hip rubber boots on, volunteered to try to wade across, and if he found it practicable, he would carry me over first and then the guns. But when he tried, he found the water was nearly up to his waist. Then followed another discussion, when suddenly I said, "What is the use of talking? We have simply got to get wet, that is all;" and I marched boldly into the water. I had intended to simply wade across, but once in, the desire to swim became too strong for me, and to the uproarious amusement of the men I threw myself forward and began to swim. But I did not prolong the exercise. Swimming in a canvas costume and with heavy rubber boots on is not the most enjoyable thing in the world, and as I trudged along the sand afterward, dripping from head to toe and feeling that each foot was weighted with lead, I began to suspect that I had been foolish.

The next day the rail season began. I suppose that the rail is the easiest to hit of any bird that flies, but there is a great deal of satisfaction to a young sportsman in seeing them fall to his gun. And what picturesque sport it is, and how musical the swish, swish of the corn grass as the boat is pushed through it in the mellow light of a September morning.

They brought a chair for me and I began by trying to shoot sitting in it, but I think that is a mistake. You can't shoot nearly as well; and if you have a moderately steady shover there is no difficulty in standing. Put your feet tolerably well apart, the left foot a little in advance of the right and rest a little against the thwart. Bend your knees a trifle and hold your body loosely, so that it will yield to the motion of the boat. When the bird gets up, take your time, and don't grow nervous. Rail fly very slowly, and unless the bird is just on the edge of some bulrushes, you will probably have plenty of time. But if he gets into the weeds don't waste time trying to get him out, for you won't be able to.

Rail shooting is very good practice, and is apt to encourage one. I know that when I came in on the last day, having fired twelve shots and secured nine birds, I felt that I had done very well. But there was greater glory than that before me. I had yet to shoot my first partridge.

The occasion on which that never-to-be-forgotten event

took place was a very gloomy day in November. The Doctor and myself drove "over Huntington way" early in the morning, and met Joe at a little farmhouse. How plainly I can see Joe, as he drove up in his square box wagon, with two dogs curled up in the straw behind, their heads hanging out on either side, and Joe's dear, honest face all abeam with welcome. Would there were more like him.

We hunted all the morning, with varying luck, seeing several birds, but unable to get a shot at most. About noon we came to a fine willow run, and almost at once Joe flushed a partridge. The run was arrow-shaped, and the bird, rising at the broad end, lit somewhere near the point. When he had located the spot to his satisfaction Joe proceeded to organize the party. The Doctor was placed in the path at the right side of the run, about half way down; I was stationed on a flat rock exactly at the point, with open space all around me, and Joe started in to get up the bird. For a few moments there was intense silence, broken only by the patter of the dog's feet and the cracking of dead twigs as they broke under Joe's weight. Then in an instant there was a mad whirl and buzz, and I saw a brown flash rise from the point in front of me, and make for the woods beyond. How I did it I do not know to this day, for my heart was beating so hard that it fairly shook me, but I got my gun up and fired—and the bird fell. For a second there was silence, then my self-control vanished, and the woman in me came to the fore. I clasped my gun to my breast and jumping up and down, shouted, "I've killed it! I've killed it! Come quick! I've killed it!" which was answered by stentorian shouts as the Doctor and Joe came hurrying up, the former greatly excited and delighted and Joe exclaiming, "Well, that's worth a hundred dollars any day." And then the dog brought the bird in and we took it over and laid it on the ground before us, while we three sat on a fence rail and talked it all over. Oh, halcyon days! What mattered it that presently it began to rain so that we were forced to give up shooting and had to walk two wet, weary miles to the wagons? The recollection of that brown bundle of feathers securely tucked into my big game pocket was a panacea for all ills, and the mere thought of it sent a glow over all my chilled frame. We had it for dinner the following night, and I know well that never on Olympus did the gods partake of any ambrosia that could be compared to that dear, delicious partridge. N. B.

MORE QUAIL FOR MASSACHUSETTS.

THE good work of restocking old Massachusetts with game is making excellent progress. The fourth consignment of live quail from Tennessee was received on Monday by the committee of the Fish and Game Protective Association. There were 300 birds in the lot, and only three or four had died during the shipment; though they were packed in boxes or cages altogether too small; as, for instance, 20 or 30 birds in a box no more than 18in. square by 6in. deep. The whole of the 1,100 birds the committee has thus far received has come in remarkably good condition, the number of dead birds being very small. The quail have been all distributed except the above lot, and have generally been set at liberty. This last lot will be held in confinement for a few days, till the snow is off the ground and there is a change from the very severe winter weather that has been a feature of March thus far. The birds are being gladly received by all to whom the committee grants the favor. They go to applicants who can make the committee feel that they are the proper persons to receive them and that they will do their best to properly distribute them and see that they are properly cared for after distribution. They are going to nearly every town in the State, and the names of those who have received them show that they are generally falling into good hands. Prominent sportsmen and game protectors are, of course, the first to receive birds, and all applicants are questioned very closely and are made to promise all that is needed for the life and propagation of the birds, in the way of scattering grain for them to feed on the balance of this season and then the sowing of it in the spring in localities where they will feed on it another year. There is but one dangerous feature, and that is, that the temptation will be too great to hunt them to excess too early after they have begun to multiply. But the receivers promise all that the committee can ask for.

The birds are being sent out in pairs as near as possible, and the stock received thus far has been pretty evenly matched up. Bob White is easily distinguished from his mistress by his white throat, while that of his partner is of a yellowish color. Some rather curious instances are already cited concerning the liberation of these quail. The committee recommends, in every instance, that they be scattered as little as possible when liberated. The box is taken to a good location in the woods. It is rested on the ground, and considerable grain is scattered close up to where the opening is made and then a little further away. The liberators remove a slat or side of the box, already loosened, from the side of the box away from the operator, and then every person should run away. The quail are not alarmed. They soon work their way quietly out of the box, pick up the grain, and whistling and chirping betake themselves to the trees in bodies, instead of scattering wildly, as they would if the box was opened quickly at the top and the operators stood around to frighten them.

In proof of the admirable working of the plan, Mr. John Fottler, Jr., one of the workers of the committee, tells this good story. From one of the first bunches of quail received by the committee, a nice little clump was given to a careful gentleman for distribution in the neighborhood of Wareham. He took the birds some days ago to a good location, opened the box, after scattering grain, according to the above plan. The birds were not frightened, but staid in the vicinity, as was amply proven by the fact of the grain being eaten which was scattered almost every day in the vicinity of the box, left on nearly the spot where the quail were first liberated. The recent snow came, and the gentleman, with a friend, went out just at nightfall to see how the birds were getting along. Everything was quiet, only there were evidences of considerable scratching, with marks of quail in close proximity to the old box. The gentleman stepped up to the box and hit it a careless kick, when, much to the surprise of both, the whole bevy of quail beat a retreat out of the box. The little fellows had found it so comfortable that they had made a winter home out of the box in which they had been shipped all the way from Tennessee. An-

other gentleman has the quota of quail for his location still in confinement in a large room. They have become very tame, eating grain freely from his hands. These quail he will liberate as soon as he deems the weather to be suitable.

Still more quail are to be received by the committee, the contributions toward the good work having been quite free, in addition to the money furnished by the association as a body. They also expect some pinnated grouse, and some sharptail grouse they have already engaged. It is also hoped that other forms of game may fall to their lot. The committee feels much encouraged by the way their work is being appreciated. They are beset with applications, not only for quail free of cost, but respectable parties desire to purchase them, to restock localities in which they take an interest.

SPECIAL.

The regular monthly meeting of the Massachusetts Fish and Game Protective Association was held March 13 at Hotel Thorndike, Boston, President E. A. Samuels presiding, and 125 members present. The following were elected members: Jos. B. Locke, Cecil M. Caverly, Edw. Brooks, Allen Danforth, Hon. Edward D. Hayden, Wm. O. Blake, Philip Little, Wm. P. Lawrence, Samuel A. Hopkins, A. A. H. Meredith, Wm. Minot, Jr., S. M. Weld, Howard Stockton, Francis B. Greene, Loren G. Du Bois, Fred. Dodge, David M. Williams, Chas. F. Munroe, H. E. Smith, Wilnot R. Evans, Walter S. Brewer, William J. Wright, W. W. Davis, Chas. H. Tinter, W. C. Prescott, Prof. B. M. Watson, Jr., and A. W. Dexter. Twenty-six more were proposed for membership. Mr. Henry J. Thayer, secretary of the committee on the importation of game, gave a very interesting report of the work of the committee in the procuring and distribution of game; 700 quail have been liberated in different localities. Other shipments are expected soon and will be sent to persons applying for them, who will see that they are properly cared for and protected. Owing to the open season having already closed, the work of securing pinnated grouse, sharptail grouse, California quail Virginia quail and wild turkeys, must be largely preparatory for the coming summer and autumn, when we hope to be able to procure plenty of these varieties. However, the committee expect quite a number of pinnated grouse, providing a fair amount of snow comes in States in which they can be obtained.

The success of this new undertaking has exceeded the most sanguine expectations. Not only has the committee been helped in its labors by the members of the Association, but also through the general interest displayed by sportsmen and clubs throughout the State. Offers, one upon another, have been received, to pay for and take care of any birds intrusted to their care; and also unsolicited offers of financial aid from persons neither members of the Association nor asking for birds. The membership list of the Association also shows names of genuine sportsmen, added from this action alone.

Dr. John T. Stetson, Messrs. John Fottler, Jr., and James Russell Reed, also gave some very interesting accounts of how the work of distributing and feeding the birds was being done.

RICHARD O. HARDING, Secretary.

NOTES FROM THE GAME FIELDS.

West Virginia.

HUNTINGTON, West Virginia, March 10.—Sportsmen in this part of the country have become quite numerous, and the hunting season is anticipated with much eagerness. Twelve years ago I brought a breech-loader here, and it was regarded as quite a curiosity; but now the use of the muzzleloader is looked upon as old-foggyish and unsportsmanlike.

The last quail season was excellent in amount of game, and there need be no fear that Bob White will not hold his own if the laws are obeyed. I regard it as a mistake to prohibit shooting for several successive years that the game may increase, especially quail, because at the end of the term the game will be pursued with redoubled vigor and the number of birds at once brought down to the old standard. As it is the shooting season is short—and that is right—and the law forbids trapping at any time. Therefore I am happily able to say that better shooting has not been had for ten years than we had last fall. I suppose all the towns along the Ohio witness, as does Huntington, the occasional I may say yearly, visit of quail in the midst of them. In the fall one may wake up in the morning to hear the whistle of Bob White and see him perched upon the house tops. Then it is that the hoodlums of the streets and unprincipled men pelt and otherwise persecute them. At first I wondered how they came to get into the city; but after a little reasoning I am certain as to the cause or causes. They are first found in the city in the morning, and are so bewildered as not to know how to get out. I presume they are flushed in the night by boys or wild animals, or it may be the innocent hare in his nocturnal gambols, and fly in the darkness they know not where. I have no doubt that great numbers perish in the Ohio by being flushed at night, especially when fogs are dense, for I have noticed that during the time of fall fogs they are found scattered about the city.

Last year there seemed to be more woodcock than usual; indeed they seem to be on the increase, though still very scarce. As to grouse, they are indeed a *rara avis*, and not only that, they seem much wilder than those in New York, being seldom found outside the close timber. However, a strange thing happened one day that I could hardly believe had another told it to me. I was hunting quail in the timber when Mack came to a "dead stand," and looking I saw perhaps not 10 yds. from me a pheasant squatting close, and upon ground as bare of cover as the sidewalk of Broadway. It was the only grouse I have shot in the western part of West Virginia. I have shot a considerable number of snipe, though they may not be considered plentiful. N. D. E.

Missouri.

SENECA, Mo.—I am glad to note the fact that the shooting season closed this year with fine weather, and the effect is that the market-hunters have been badly set back and we have an abundant supply of quail left for next season. If they increase as rapidly this year as they did last, this part of the country will be abundantly supplied with them. We had some fine quail shooting last

season; some of our town sportsmen were out and killed from 15 to 60 in one day's shooting. We did not have any duck shooting last fall; the weather was so fine that when they started south they took through trains and did not stop on their way. We have had a cold wave and the ducks are coming in in great numbers, and we are having fine sport. Four of our sportsmen came in Monday evening with 144, which is the largest kill of the season. The writer was out last Thursday, the day the blizzard struck us, and downed 15 ducks as fine as I ever saw.

I would like to meet some of the Eastern sportsmen and have a good camp-out for a week or two, and let them enjoy a hunt in the South-west. Some of the finest sport in the land can be had very near this place. I hope it will not be many years before we can have some of the field trials run on our fine prairies, where there is no brush to interfere with the dogs or their handlers and where there are plenty of birds, and all dogs could have equal chances.

I would like to see a company formed and a sportsman's club organized here, and then we could lease some of the Territory land on the Neosho River, where there are some fine lakes, good fishing and fine duck shooting in fall and spring, with snipe and plover; and then when the season opens chickens and quail are in abundance. Think of this, fellow sportsmen, and when you want to have good sport and plenty of good pure air and as fine water as ever flowed from the earth, just come to this part of the vineyard. R. H. FESPERMAN.

Arkansas Wild Turkeys.

ARKADELPHIA, Ark., March 7.—The close season on quail has begun, and we must give them a little respite and allow them to "be fruitful and multiply." We can, however, further "divert" by gathering our wits to out-general the wily old gobbler. The gobbling season is just coming upon us, and the State game law does not draw its protecting folds about this noble bird until May 1; so we have full six weeks before us for the enjoyment of this splendid sport. A brother hunter from the country reported to me a few days ago that he had found or located several fine bunches in the Terre Noir bottom, and, to use his language, "they were gobbling to beat Johnson!" They are easily found now wherever there is a sufficiency of mast to feed upon—pin oak and white oak acorns and especially hickory nuts. Do your readers know that wild turkeys eat hickory nuts, and that they are never so fat as when they can feed on them? My friend told me that on the trip mentioned he called up a very fine gobbler, and that he came to him strutting and gobbling while a considerable rain was falling. This is quite a rare occurrence. GEOMBECK.

Connecticut.

HADDAM, Conn., Feb. 27.—The quail and partridge in this section have wintered finely, and there were more left over from last fall's shooting than I had expected, and as there were no tracking snows during the late fall and winter, the boys and pot hunters could not trail them to their cover and slaughter them. While driving through the country my dog flushed several partridges and one woodcock. I saw no quail, but learned from others that quite a number survived last season's fusillade. One man told me he saw a bevy of about a dozen cross a road on which he was driving about the first of the month; these by singularly good luck must have escaped the hunter's gun entirely. On my last tramp during last season I left from four to six birds in four different bevs from which I shot, and I learned that two of the bevs had not been disturbed after I left them. This gives a fair outlook for next season's shooting. "May we be there to see." A.

WATERPROOFING TENTS.

Editor Forest and Stream:

Several items have recently appeared in relation to waterproofing garments and tents with alum and sugar of lead. Not only will that compound waterproof, but I am satisfied it tends to prevent the fabric becoming rotten. Tents will frequently leak when there is a hot fire in them, heavy fabric more readily than lighter.

In 1861 I had a Sibley tent of 12 oz. duck in use on the plains and mountains. At the close of that season I had another made of 10 oz. duck; both of them would leak when there was a hot fire in them, commencing 3 or 4 ft. from the ground.

In 1867 or 68 I treated the latter tent and a small old tent made of drilling with 6 lbs. alum and same amount of sugar of lead. Those tents have seen much service since that time, and so far as I can see the fabric is as strong as when thus treated and turns rain as well.

I have a large wall tent of 10 in. duck which would leak sometimes, fire or no fire. I had it in use in 1888, and on one occasion when standing broad-side to a driving rain it leaked very badly; so much so that had it not been for a plenty of rubber blankets on hand, we who occupied that side of the tent would have passed an uncomfortable night.

Last summer I treated the latter tent with 5 lbs. alum and 6 lbs. sugar of lead, putting the tent into the liquid when hot, let the tent lay in soak two or three days. Last fall I had that tent in use, the same side exposed to driving rains, and it did not leak.

Tents thus treated let the light through the fabric more readily than when not thus treated. There is a marked effect in that regard. H. L.

PERHAPS A VERMONT DEER.—Saratoga Springs, N. Y.—Morris M. Jones, an employee of a slate quarry at Pawlet, was recently arrested and fined for the killing of a deer in the town of Granville, Washington county, N. Y. The deer is supposed to have been one of a number turned loose by the Rutland (Vt.) Fish and Game Association, and had probably strayed from the others. Jones says he was so surprised at seeing the deer, that law was forgotten.—DON RICARDO.

GUN TEST.—The 12-gauge Lefever gun reported in last week's FOREST AND STREAM, appeared in the heading as of gauge 10. The gauge given in the detailed reports was correct.

QUAIL NEAR NEW YORK CITY.—I spent several weeks at Lakewood, N. J., in November and December this last season, and one day with a borrowed gun and a hired man with his two dogs, I went in search of quail. We flushed six coveys, one being the largest I have ever seen, and four partridges, besides kicking up a number of rabbits. We shot only three quail and one partridge, owing in a measure to the poor quality of the cartridges. The man said he had bought a lot for 1½ cents apiece. Time and time again I would knock the feathers out of a bird, but he would quickly recover and fly on. I had no idea that birds were so plenty in such an accessible locality, and I send you this line thinking that some of your city readers, who have a day now and then to spare from their business, would like to make a note of this for next fall.—F. LIN.

THAT NORTH CAROLINA TRIP.—Editor Forest and Stream: An examination of the contents of my letter in the FOREST AND STREAM of the 6th inst. will show that it does not contain any remark as to my having found six coveys on precisely the same ground as "H. W. K." would lead us to believe. "H. W. K." does not note that the fifty birds killed in three hours had been done by four persons and eight barrels, not by two persons and four barrels, as in his case. I did not have two companions with me on the day of my little unpleasantness with the litigious Sherril, as I do not consider a paid guide my companion; and the other was merely a ringer-in.—P. K.

Camp-Fire Flickerings.

"That reminds me."

300.

THE yarn was spun by my old-time trapping chum Jim Morehead, the whitest man who ever wore a No. 13 boot. Said he, "I was down to R's (a new arrival from Maine) the other day, and when I met him out by the woodpile, says he, 'Jim, did you ever eat coon?' 'Many a time,' says I. 'When I heard folks talk about eatin' coon,' says he, 'I thought they weren't fit for food; but I killed a big fat one the other day and my wife baked it nicely in the oven, and I tell you Jim we all liked it, it was just tip-top, there's the skin of it,' and he pointed up toward the gable end of the house. I looked up where he was pointing, 'an' thar was the onhuman-liest badger skin I ever seed.'" ORIN BELKNAP.

301.

In the progress of our survey along Red River we have had some good quail shooting, and the character of our operations afford an occasional opportunity for some members of the party to indulge in the sport.

We have in the party a German engineer, Kotzbue, who affords us much amusement by assuming the airs and mien of a sportsman, while betraying a wonderful degree of innocence of any knowledge of the craft. "Kotz" had a breechloader of which he was very proud, having brought it over from the Faderland. He usually carried it slung across his back, needle gun fashion, and making a very imposing appearance.

I asked him if he was fond of quail shooting. "No," he replied, "dey ar-re doo easy to szhoot. I can gill dem efery time." During the first part of the trip Kotzbue generally hunted alone, and most of the birds he claimed to have killed "fell into the veeds" and couldn't be found. On his return from a hunt the following colloquy usually ensued:

"How many birds did you kill, Kotz?"
"Seven or eight, but dey vall in de veeds. I would not waste my time looking for dem."
"Hoy many did you find?"
"Two."

Charley A. went out with Kotz one day, and found out how his birds "fell in de veeds." When he fired at one, the smoke, together with his nearsightedness, prevented his seeing the bird fly off. "I kill dat bird," says Kotz. "No you didn't," says Charley, "I saw him fly away." Nevertheless Kotz would look for his dead bird several minutes, and then say, "An! you cannot find dem in de veeds. If dey have de least bit life dey gonceal dem-selves."

I ran across Kotz one day with a covey of birds scattered all around him. I asked what he had killed. He said he was shooting No. 8 shot, which were too small; he had wounded three birds, but "could not get dem." Pretty soon a bird was flushed and Kotz fired at him a hundred yards off, just as he was about to alight. The bird was too far off to be frightened by the shot, so sailed gently to the ground.

"Ah!" said Kotz, "you see dat! I am shooting shot No. 8. Dey ar-re too small. Dey joost deessaple de-pirds, so dey ar-re joost apble to vly on. Ven dey hit de ground dey r-run like fe-e-fly, and you can't find dem any more." He now shoots "shot number four" altogether at quail. He says: "Ven dey hit dem, dey come down."

Kotzbue had a pointer. Poor Sam was whipped on every occasion. I saw Kotz one day shoot at a rabbit. A few minutes after Sam got up another and gave chase. "Dat vas a r-rabbit," said he, "but he vas doo quick for me. I could not git a shot. Come here, Sam. You know you must not r-run dem!" And Sam was duly thrashed. For a while after, whenever Sam no-ed a bush Kotz would say: "Dat is a r-rabbit! You know you must not!" And Sam would catch it again. On one occasion Sam got up a rabbit too far from Kotz for a shot, but it ran near Charley. "Catch Sam and vip him for me! He must not run r-rabbits!" But Charley shot the rabbit and let Sam go in peace. "Oh! you got him Charley?" said Kotz as he came puffing up. "Dat is nice. Come, Sam, old fellow: good dog!" and Sam was fondly caressed.

One of the party relates the following: "I was walking by a thicket when some one fired from the opposite side and sprinkled me with bird shot. I cursed the fellow and told him he would find it to his interest to look where he was shooting next time. I received no reply, so went to an opening and looked through to see who had shot me. I saw Mr. Kotzbue with shouldered gun, walking off briskly but quietly down a cotton row, and occasionally casting an anxious glance over his shoulder."

When Kotz tells how many birds he killed now, we ask if they are two-legged birds. He replies very seriously: "Yes; you know pirds all have two legs."

TRIPOD.

MISSISSIPPI.

Sea and River Fishing.

THAT TEXAS GAR.

DID you ever catch a gar? Do they flourish up your way? I have fished in the waters of the States of Michigan and New York and Ohio, but I never saw one there, and when in my youthful days I used to coax the finny tribe in the Old Dominion I never caught sight of one there. But we have a few down here in southwestern Texas, and I can say from experience that "for ways that are dark and tricks that are vain, the Texas garfish is peculiar."

Webster defines the gar as of the genus *Lepidosteus*, a fish of the pike or *Esox* family, of the genus *Belone*, having a long pointed head with rhombic scales. He further says that gar means dart, spear or lance, and the name is applied to the fish on account of its long and slender body and pointed head. This is all as clear as mud to an average Texan accustomed to the ways of this fish of fishes, but the only part of the definition that we can unreservedly subscribe to is that describing the shape, and I am certain that father Noah, before he got up that big spelling book, had never made himself familiar with the gar of Texas, or he would have described him perhaps somewhat after this fashion:

A long, slim, impudent, predatory fish of the genus *Xiphias gladius*, with eyes that never wink, courage that never quails, ways that are always exasperating, and above all the especial delight (speaking in a mildly ironical strain) of the fisherman. With a skin and scales that bird shot at 40 yds. will not penetrate, a bold disregard of all hooks, a fiendish delight in taking the bait of the black bass fisherman, the appetite of an ostrich, and the strength of a two horse power steamboat, when in his native element; with short, sharp teeth the full length of the long snout or bill, sharp as a cross-cut saw, and on both the upper and lower jaw, the lower teeth fitting into the indentations of the upper, and the proudest trophy of the successful fisherman, because so difficult to catch and keep, and so utterly reckless of danger.

When out gunning no sportsman will allow a large hawk to escape, and upon the same principle we make war on the gar, because he is so destructive of the small fish, and further because he is so exceedingly difficult to capture with hook and line. And then there is as rare sport in taking one as can be gotten out of the most exciting game fish killing. One grows to admire the scamp in a way. He is annoying sometimes, it is true; but when a particularly bold fellow has cut half a dozen lines for you, or broken half a dozen hooks, or in a rush snapped your rod in the second joint and derisively switched up his tail, lashing the water as he darted off, leaving you defeated and disheartened, you begin to feel as if life as a fisherman was not worth living, so long as that fellow could thus defy you; and thoughts of vengeance fill your mind, and resolves that promise trouble for your foe.

Now to tell my tale, I will have to circumnavigate somewhat, and don't be impatient if I have to weave the web so as to make you appreciate my story.

When I was a boy and a particularly unsavory dish was to be described, it would be said (the Lord knows where the saying came from). "It is as mean as gar broth thickened with tadpoles." I never saw nor heard of one being cooked, but my acquaintance with them leads me to believe that hawk soup would be a dainty dish beside stewed gar. It goes without saying, therefore, that no one angles for them for food. Some do for revenge, as witness my tale.

The game fish *par excellence* of Victoria county is the black bass, which grows to 5 lbs. or 6 lbs. in size sometimes. I am going to keep within the strict limits of the truth as to the size, even if I am a fisherman. This fish is in some places in our county found in great abundance, and the average weight is from 4 lb. to the above-mentioned limit. Annanias, the president of our club, was around the other day, and said that he had caught an 8 lb. bass, but, between ourselves, I did not believe him. So abundant is this fish in our favored creeks and bayous, that a short time since a lot of New Orleans, Galveston and Fort Worth lawyers, being in our little city of Victoria, and having an off day in court, after a day spent in pursuit of these toothsome beauties of the waters, having taken them until they were tired; having at midnight spouted poetry upon the bridge that spanned the bayou; been bathed in the moonshine, bright as day; having exhausted their eloquence and the liquid inspiration; having hunted all night in vain for a single mosquito, and having brought home, like the little Bo-Peep black sheep, three bags full, yea, six bags full, unanimously voted, resolved and declared, that there was not another spot in the United States where as many and as fine fish could be caught in the same length of time; and one venerable, asthmatic but enthusiastic New Orleans fisherman and lawyer, who loves "God's first temple" with a genuine devotion, affirmed that "in the North that stream would be worth thousands of dollars, and a club house would be forthwith erected on its banks." I am sure if it were near New Orleans he would invest, because he declared that in New Orleans he could not take off his coat without a spell of asthma, but here he had slept on the ground out in the open air without any ill result. For myself I don't want to see this stream become the private property of any corporation, even of the kindly guild of fishermen, because hundreds of our citizens now enjoy a day on its green and shady banks, who might be cut off from their sport if a club were to appropriate. The present generous owner, a wealthy stockman, welcomes every one, and loves to have his friends come and enjoy the sport.

It is on this bayou that the scene of my gar adventure is laid. In the fishing season parties frequently go there to fish, as may be presumed, and being a lover of the sport, as often as consistent with business engagements, I go, too. I am not easily tired out. I love to hunt the bass and to overcome his shyness and take advantage of his curiosity, and in fair contest, take him unto myself. I have hunted him with the phantom minnow, that cheat and delusion; I have dazzled his quick sharp sight with the gay and festive fly; I have coaxed him with the more solid and real temptation of a live perch, or more plebian still, a section taken from the side of one. I have taken him with all these baits, finding generally the live minnow the best bait, but have caught him in abundance with the cut bait, and have had him jump and catch and

run with the one as gamely as with the other, and have fought his frantic and vigorous attempts to escape in all kinds of places and under all sorts of difficulties, and have been defeated, too, by him many a time, as he would whirl around a clump of lilies or dart under a fallen snag, or shake himself free of the hook as he turned when being held in with limber pole, and for a moment got a slack line. But upon this bayou there was one pool dear to my heart, where I have caught as many as seven or eight fine large game shiny ones in half an hour. I am not going to tell where it is, cannot "give it away," you know. It is my particular hunting ground, away from the haunts of men, away down in the bend of the bayou, large moss-hung live oaks spreading their arms over the green grass of the dry bank; full clear sweep for rod and line; wide clear water lying still and black in the shadows; stream so wide and clear of bushes, fallen timber and snags, that with perfect freedom one could sweep a phantom minnow the full length of the line in one cast, or tip a fly almost a dozen rods away without entangling line or hook, a place where the trees gave you a delicious shade and the mocking birds sported and sang in the boughs, and so far away from the prairie through the open glades of the woods that even through the long vista's of trees, no glimpse of waving grass or long-horned cattle could be caught, and so retired that the black ducks swam fearlessly and contentedly within 50 yds. of where on a high-lying twisted root I sat as I threw my line. The ducks were secure. I never hunt when I fish. When I hunt I hunt, and when I fish I fish, and never encumber myself with both gun and tackle at the same time. This particular spot then was and is dear to my heart, and though it takes an eighteen-mile journey to reach it, and generally involves a camp bed and a fish supper, I never regret a trip to its sequestered banks.

One more word of description of its charms. It was literally alive also with perch, with a sprinkling of the strawberry bass and goggle-eye. Once a party of ten of us went down there to the bayou and fished for perch as well as bass, and when we got home we had 1,200 fish. I would not tell the story for fear that I would be immediately run for president of our Annanias Club, but avoided the statement and got our banker, who was one of the party, who is an elder in the church, and whose six-year-old son caught 100, to state the number, and it was only after he had put it at 1,200 actual count and calculation that I backed him up.

Well, to this favored spot one day I found had been attracted one of the aforesaid *Xiphias gladius*, a veritable gladiator of the waves, and I fancied the first time I saw him that he was sleek and fat on the blood of the innocent perch, and horrible to conceive, had perhaps made more than one pass at the smaller bass as they slipped past him, mayhap leaving the scar of his stroke on side or back. He seemed about 8 ft. long. I am cautious now. His glassy eye annoyed me; his lazy floating skim of the water as he turned this way and that in full sight of me exasperated me. He was not at all annoyed at my being there; in fact in a sort of triumphant way he seemed to enjoy that fact. Perhaps it was in anticipation of the contest with me and cruel defeats and the many defeats he was to give me. He seemed to be rather interested in my proceedings, too, and in his own leisurely way began to investigate matters. I had a fine string of bass in the water near my feet, all alive. First they seemed to interest him. With my line far out I had a strike and a dive from a fine bass, and was giving my attention to him, when I saw out of the corner of my eye his lordship turn swiftly with a whisk of his strong tail to see the cause of the disturbance, and then he disappeared. I had captured my fish, and was about to put him on the string, when I caught a glimpse of my enemy approaching my fish, and quick as a flash he made a pass at them, when my near approach frightened him away. I lifted the string and found the lowest one on it wounded. After this I had to watch my fish to prevent his again attacking them. Toward the latter part of the morning I found that he had sunk to deeper water and was interested in my bait, and I felt inclined to give him a tussle, so that I allowed it to remain still for awhile, and he pecked away at it, dancing the bob up and down like a perch giving a strong nibble. At last he slowly sunk the float and began lazily to go off with the bait. When I thought he had fast hold I gave a sharp quick stroke and landed my hook, I suppose, in the hard bony bill somewhere. It was a long-shanked Carlisle hook, double-gutted and a strong silk line.

As soon as he felt the point of the hook, all his sluggishness was at an end, and he made a furious rush, which tested both the strength of my line and the temper of my rod, but both came through the test safely, and having succeeded in turning him away he went on the other tack, and I could feel the pressure of his jaws on the gut as he sought to cut the line, a favorite maneuver of a gar when caught, but the gut was too tough for him, and on the second turn he swung himself around, apparently trying to stand on his head, and at once my line flew out of the water. He had broken the hook short off at the turn.

I put on a new hook, and now considerably roused I determined to try and catch him. He seemed vary for a while and shy, but soon came again with his pecking nibble, and after some time ducked the bob under and away he went, this time with more life than before. I gave him full play for a while, knowing that the only way to take him was in getting the hook fast in his mouth low down in the corner, where it is not protected by the hard bony formation of the snout, and where it could be sunk deep enough to hold him. Once more I stopped him with a jerk. Again we had a hard fight of it, and in his writhings he flashed his tail out of the water and I saw that on the upper side a part of the tail fin had been cut away. He was marked, if not branded. I wanted to take him greatly. I fought harder to get him out than I ever did for a 4 lb. bass. I got him near to shore, and had his head clear of the water, when again he gave a furious contortion of the body, and as ill luck would have it, he managed to cut or break the gut close to the hook, and away he went once more, leaving me baffled and defeated. I saw him no more that day, but did not forget him all the way home. I wished I had a gun. I thought of carrying one the next time I went, and hugged myself as I thought how he would look with a shot hole through him; but gradually brighter thoughts took possession of me, and before I went again I had forgotten him entirely, never expecting to see him again.

In a week or two, however, I went to the same place again. Now, I have said that I did not expect to see him again, because I had often seen them elsewhere in other fine fishing streams in our county; and while I had seen gars before in the same streams twice in succession, I had never been able to identify them. But this particular gar. Shades of my ancestors! not long after I arrived at my favorite place, and almost as soon as my line had touched the water, here came the robber and murderer, sailing lazily along in the clear water, and to my surprise I recognized that notched tail and knew that he was here again. I avoided him for some time. I trolled my bait, avoiding letting it remain still for any length of time, and then I fished with a fly. He seemed more alert and active this morning than I had ever noticed him. He even attempted a strike at my fly. When I put on a bob and fished deeper, he struck viciously at the bob, allowing the line to slip through his mouth as I drew it away. I had one or two trials of his prowess that day, ending always in defeat and disaster for me. Once he ran my line far across the stream and fastened it at the end of many yards of line (perforce let off the reel to save it and him) in a fallen tree, and then triumphantly broke away, and I lost sinkers, hook and several feet of line and my bob.

From this time on that beast of a fish became a regular *bête noire* to me. I never went to that pool that I did not see him or fancy I saw him. Often and often I tried to land him and failed. He was the ghost at the feast, the sword of Damocles ever hanging over me and spoiling my sport there. I came to watch for him and to anticipate his coming, and sometimes, too, to speed his going with the sharp point of my hook. But he always got the advantage of me, and to me seemed to be larger and stronger each time that I watched him and hated him. Impudent and bold and courageous, he appeared to my excited fancy to defy me and to glory over my repeated defeats, and it came to a pass where I could no longer dismiss him from my fancy or my thoughts. I looked for him every trip, and felt as if it had come to this, that either I must surrender the pool to him or he to me. Must I surrender this choice and lonely and lovely pool to a vile gar? It was not to be thought of. I would kill him with a rifle. I would take my place on that shore, rifle in hand and finger on trigger, and when he was in the act of taking some tempting bait left on the surface of the water for him I would blow his vile head off, even if I had to take a whole day for it.

But upon reflection I concluded that that would not do. It was doubtful if I could ever get a shot, and then it was taking an unfair advantage of him. Let me meet him on, or in, his own element, and vanquish him there or not at all. But how? I at last resolved upon a campaign having him in view and nothing else. My friends could catch the other fish. I announced to them my determination to conquer or go dinnerless. I wanted no company. I entreated them to steer clear of this particular spot for the day and give me a fair chance, and if I did not get him this time I would give it up finally and forever and acknowledge my defeat.

I provided myself with three or four of the strongest catfish hooks I could find, and whetted them sharp as needles. To the hook I fastened about two feet of pike wire-wound line, warranted to resist the operation of a cross-cut tenon-saw for three minutes. I got the heaviest bamboo rod I could find, an old one I had laid aside, and sawed off three feet of the limber end, so that I could lift him right out of the water as soon as I had fastened him. I took this rig and my ordinary line and rod. When I arrived at the fishing place I fastened the rod securely to the bank, threw out the bait, a small perch, and waited. For some time he did not appear, and I went on fishing with my ordinary line and rod, catching a few fish, until at last he did come. He swam along low down in the water, very near the bait set for him; and I thought it would attract him, but he seemed not to notice it, at least there was no indication by the line that he had touched the bait. But as usual he became interested in my bait, and soon began to make efforts to peck it off. He got one or two baits from my hook without making much effort, beyond nibbling, and I was unable to touch him with the point of my hook. Tired of this at last I laid aside my bass rod and line, and taking the heavier line and pole began to fish with all my might for that gar. More than once I thought the decisive moment had come, to find that just as I was ready to fasten him, as I thought, the bob would float up serenely to the top of the water, again showing that he had released his hold. Then I began to tantalize him. I would allow a few nibbles and then pull the bait away from him. He would follow and repeat his nibbles, and I would repeat my tantalizing tactics. He seemed to become slightly aggravated at the way the bait continued to elude his grasp, and his nibbles became more pronounced, and I smiled. Fate, thought I, is at last approaching you, oh my enemy! More tantalizing, more indignation on his part, more wariness on my part, more boldness on his. At last he seemed to have fully determined to have that little fish, now half torn to pieces with his sharp bill, or die. The time had come for the decisive assault, and with a rush he has caught it and sails away, almost with the lightning rapidity of a bass. But now came the moment for which I had waited and watched so long. A sharper, heavier jerk than usual, and I had him, and now without a moment's delay I swung him, heavy as he was, clear of the water and ten feet on the other side of me on land.

Well, as he laid there writhing with that hook sunk in the corner of his mouth and his long pointed mouth champing that wire line, I think the acme of delight was reached by the lone fisherman, and I suppose David did not look upon the headless body of his Goliath with feelings much different from mine when I realized that I had at last conquered in that long strife. He was 4 ft. long from tip of that notched tail to the end of that pointed mouth, and those unwinking eyes stared at me still while I put him to death with a well-aimed thrust at the base of the crafty brain that had defied me so long. He was rather heavy, but I carried him to camp to attest my triumph, and as I recounted my long contest with him and his repeated victories over me, we drank my health and peace to his departed manes, standing, with mint and the best old Saratoga to be had in the party's supplies.

And this is the true story of that gar.
"But," quoth Williams, reflectively, as he pushed the dead fish with the toe of his boot, "It is very doubtful after all if the catch was worth the trouble and effort

made." The extract of mint had warmed the cockles of my heart, had "ministered to a mind diseased, the pride of conquest, the lust for revenge was all gone." "Verily O! my friend, I believe you are right," said I. TEXAS.

ANGLING NOTES.

THE majority of the anglers who are in the habit of visiting the Adirondack region in the spring for the purpose of catching lake trout, expect to make an early start this season; some even look forward to going in April. Usually the 10th to the 15th of May is about the right time, though the regular visitors depend on their guides to send them a telegram the moment the ice breaks up in the lakes and streams, and they are always prepared to start on the next train. The lake trout are near the surface and in shallow water where the ice disappears, and are eager for food. The result is that during the first few days there of the angling fraternity who are so fortunate as to be on hand enjoy great sport. Last spring the number of large fish killed was unusually great, though the big lakers are always very shy and hard to catch.

The open season for speckled trout in New York begins May 1, and they generally commence to take the fly about May 20. This season they will probably rise well by the first of May, unless another severe cold snap sets in.

One reason why experienced anglers like to make an early visit to the North Woods is the fact that the black flies do not, as a rule, put in an appearance till the early part of June, thus leaving about two weeks of the best part of the fishing season free from these pests. But this year there is no telling when they will begin to annoy people. It is seldom, however, that they are found in the woods after the first week in July.

Dr. Ward, of Albany, will, as usual, pilot a party of friends to the famous Saranac Inn, which, we believe, is now controlled by a club, but where all honest anglers are welcome and well treated. Dr. Romeyn, of Keeseville, another famous lake trout fisherman, will also be one of the first to tackle the big ones. And then there are Messrs. Johnson, Cottrell, O'Donahue and many other famous anglers, who are regular visitors to the North Woods, and are now eagerly waiting for the word to start. Almost all the larger lakes in the Adirondacks contain lake trout, and the novice who wishes to try the sport can hardly go amiss. With patience and the proper tackle he will be pretty sure to meet with success.

Those who are in the habit of visiting Maine and Canadian waters will also have to be prepared to start at least two weeks earlier than usual. How this warm season will influence the movements of salmon it is hard to tell; but they should be heard from at Bangor as soon as the snow water is out of the river. Other anglers who are in the habit of visiting the Penobscot for salmon fishing should keep well posted, or else the Bangor gentlemen will get ahead of them again.

A CHAPTER ON LAKE TROUT.

I CANNOT say that I am particularly fond of fishing for lake trout, but when in camp up in the North Woods, we always count on a "laker" to help us out with our bill of fare, for they are excellent on the table, either boiled or baked. So we keep a buoy well-baited out on the lake in about 60ft. of water and can always count on a sure supply. Being an early riser, I would generally row out to the buoy and spend an hour there getting up a remarkably fine appetite and killing enough salmon-trout to supply our party for the next twenty-four hours. In order to get all the sport out of it that I could, I fished with my fly-rod, holding the line in my hand until I felt the fish, but as soon as hooked I would pick up my rod and kill him in good style. They seldom run over 3lbs. in weight, but one morning I struck a good one, as I discovered as soon as I began to reel in, or rather tried to, for the rascal at first would not budge an inch. When at last I managed gradually to wind him up near the surface, he only gave a flirt with his tail and was down to the bottom again in a moment, carrying my tip under water and almost smashing my rod. My friend came out and called me to breakfast, but I told him I had an engagement that I did not wish to break. It took thirty-five minutes before I got that trout into the boat and he weighed just 7½lbs.

In this style of fishing a 4-0 or 5-0 sproat hook is the best, no matter what the guides say. I have tried all sizes and styles and this hook fastens the greatest percentage of fish. Half a minnow in sufficient bait, and if a leader is used it should be a heavy double one.

Trotting for lake trout is rather slow work, still many enjoy it. The great secret of success in trotting is to fish at the proper depth. There is no use of fishing on the surface when the warm weather has driven them to the bottom, or vice versa. A close observer (and a good angler must be one who studies the habits of the fish and the "why" and "wherefore") will quickly find out by the temperature of the water where they are. In the spring they like to keep near the surface and enjoy the sunshine; they will then be found near the shores and on the reefs. In the summer they gradually retire to the deeper and cooler water, which they find at the bottom of the lake. But when the nights get frosty in September they will again be found in their spring haunts. Often in the spring and fall the angler will be able to tempt the smaller lake trout with the fly, and will have excellent sport; but the fish so taken rarely run over 3lbs. in weight. When in deep water the best bait is a nice bright minnow or sucker on a St. Lawrence or regular gang; but when in shallow water the "fairly" minnow (an artificial minnow made of sole skin) will kill more than anything else I have ever seen tried—not excepting the live minnow. The best rig for deep trotting is a short stiff rod and multiplying reel that will carry 100yds. of braided silk line. The line should be attached to a three ring swivel; to the second ring fasten a weaker piece of line 8ft. long, ending with a heavy swivel dipsey sinker; to the last ring fasten a heavy 9ft. leader, ending with the gang. Use plenty of swivels, and if the line still persists in twisting attach a little centerboard made from a thin piece of tin or other metal, about the size of a silver half-dollar, folding the straight edges over the line. Now if in trotting the sinker should get fast on the

bottom, the angler need not lose his expensive rig, but the weaker line breaks, and he only leaves the sinker fast. Often, by rowing back, the sinker will unfasten without breaking the line. When a fish is hooked keep the line taut, but do not try to force a big one, or the leader will part. Troll with about 150ft. of line and row very slow. A friend of mine, Hon. J. U. Gregory, of Quebec, killed a salmon trout in Canada weighing 35lbs., which had just swallowed a 2lb. speckled trout. Both the "laker" and his victim are on exhibition at the St. James Club, of this city.

While on a trip to northern Idaho, two years ago, we caught several Dolly Varden trout (*Salvelinus malma*). This rather rare specimen of the trout family resembles our lake trout, but is handsomer in shape and color. The spots are large and of a bright orange, while all the fins are tipped with a salmon-colored band. We killed several running in weight from 3 to 10lbs., but as they were then spawning (September) we did not care to disturb them. They were taken on a mottled pearl spoon.

Anglers differ very much about the size of gangs for salmon trout trolling. Seth Green was very successful with a very small gang made up with two small treble hooks and a lip hook, dressed on single gut and attached to a 12ft. single gut leader. On the other hand, Dr. Romeyn, a noted angler, uses a very large gang made with five large treble hooks, dressed on heavy twisted gut. One of the largest fish taken last season was killed on a small fluted spoon attached directly to the line. So the angler must decide for himself which to use.

There is one mistake people generally make in baiting a lury for lake trout, and that is they put out too much chum. Half a dozen small minnows cut up small will suffice, and the pieces should be well scattered around the buoy. If too much is used, it is apt to spoil and drive away the fish instead of attracting them.

W. HOLBERTON.

ABOUT TARPON FISHING.

Editor Forest and Stream:

I have read "Big Reel's" sarcastic notes on the sport of tarpon fishing. They hardly call for any retort. Tarpon fishing is undoubtedly a sport unlike any other kind of fishing, and those who have once experienced the pleasure of feeling and seeing the big fish at the other end of a small line will not care how severe are the strictures of "Big Reel" or of other enthusiastic fly-fishermen. There is, however, a germ of truth in the article, for it is undoubtedly true that the great majority of tarpon fishermen do use just such tackle as he describes. With a heavy stout rod and a 21-thread line on a big reel, tarpon fishing is not the sport that it ought to be. If, however, the fisherman uses a 15-thread line with a light flexible rod he will find that the fish will have many chances to get away. Indeed I saw one of my friends last April lose three fine tarpon in one hour. I inclose a slip from last year's Pine Island pamphlet, which seems to me to partially justify "Big Reel." It reads:

Mr. Wood considers the tarpon the coming king of all game for sportsmen; his taking the still bait, his response to being hooked by immediately leaping out of the water, his swift running between leaps, his beautiful shape and superb metallic lustre added to his magnificent proportions, make him a delight to the fortunate sportsman. The following is a score made by Mr. Wood on one of his trips:

No.	Length.	Weight.	Time Catching.
1.....	5 feet 9 inches.....	93 pounds.....	20½ minutes.
2.....	5 feet 7 inches.....	81 pounds.....	21¼ minutes.
3.....	6 feet.....	111 pounds.....	33 minutes.
4.....	5 feet 11 inches.....	105 pounds.....	5 minutes.
5.....	6 feet 1 inch.....	117 pounds.....	45 minutes.

Mr. Wood's average time was 26 minutes and the average weight of fish was 101lbs. I do not wish to criticize so well known a fisherman as Mr. Wood, but I will confess that fishing of this kind has very little attraction for me. Last November I caught an 85lbs. tarpon on a 15oz. flexible rod, with an 18-thread line, and had one hour and fifty minutes of most exciting sport. Our party of three last April hooked fifteen tarpon, but only killed eight, seven of them getting away, owing to lack of skill on our part; and in only one instance did the line break. The six others all disgorged the hook. If I go down to Pine Island this April I will use even lighter tackle and expect to lose more fish; but at the same time I will be sure of having more sport with those that I do kill.

I am therefore, as you see, partially in sympathy with "Big Reel," and am willing to forgive him his unjust criticism, for the sake of the good contained in it. If there were more like him, with the courage to express their convictions, the use of big tackle would soon become unpopular.

J. V. I.

SOME KENTUCKY STREAMS.

LA GRANGE, Ky., March 12.—Oldham county is bounded on the north by the Ohio River, and its principal streams are Harrod's Creek and Floyd's Fork, both named for noted Kentucky pioneers. As the fishing has not yet opened, little is heard on the subject; but the winter has been the mildest and with the greatest rainfall known for many years, and it is expected that angling will be good in all the streams named, in April and May. It is well settled that the early fisherman, after warm weather sets in, is sure of a good catch.

All modes of killing fish, except angling or trot-line fishing, are prohibited by law, except that seining may be done after spawning season. Trouble has occurred from the use of dynamite, but the officials are vigilant, being urged thereto by the Kentucky Fish and Game Club, and that sneaking practice may not be looked for much hereafter. It is exceedingly destructive, as it kills every living thing for many yards from the point of explosion. The principal fish in the smaller streams are common perch, catfish, suckers and some few bass, and a certain perch called newlights or calico perch; but as the streams get very low in summer, all kinds of fish are small and scarce. The Ohio River, of course, furnishes many kinds of fine fish, such as salmon, white and black perch, buffalo, and at the Falls of the Ohio, twenty-seven miles west of this place, there is caught, by angling in swift water, a species called jack salmon, a small fish from 6 to 8in. long, with round body—a very fine table fish.

There are a few fine packs of hounds here, and I have frequently been regaled in my room by the sounds of the chase within half a mile of the village. Red foxes are numerous with a few gray. Interest in all regular sports is increasing, and it is expected that the present Legislature will pass some salutary laws for better protection of game and fish. I shall give you items as to other parts of the country as I pass around.

J. S. MORRIS.

RANDOM CASTS.—V.

THE absence of heavy ice in the Hudson River for the past two winters should bear good fruit in the increased number of striped bass that will in all probability be found along our coast this coming summer. The netter has been unable to do much damage, the conditions necessary for his methods of seining under the ice having been generally unfavorable.

To prevent the depletion of certain favorite, but little known, fishing resorts, it is no doubt right and proper to withhold the locations from the multitude; but why information that would often benefit others and not harm you should be considered as so much personal property is hard to understand. "Don't tell what you know," is an expression often heard; it is neither generous nor sportsmanlike.

Cheap tackle is a delusion and a snare, and if you do not know what you need for an outfit, get the name of a dealer who is known for fair dealing, state to him about what you wish to invest and the particular kind of fishing you expect to have, and leave the rest to him. You will fare far better than by experimenting with Tom, Dick and Harry. Most of the prominent tackle stores have some specialty to which they give particular attention; find this out, when possible, and buy of the one who makes a leader of what you need. Some keep better fly tackle, others are better versed in the needs of the bait-fishermen. Those who pretend to have the best of everything generally lack the best in any one. It is quality and not quantity that tells.

In handling striped bass, be careful that the sharp edges of the gill-plates do not cut you and that the spines of the fins do not penetrate the hand or foot; they make painful wounds.

BIG REEL.

UNDER THE ICE AND OVER IT.—Haddam, Conn., Feb. 27.—I had expected to kill a few black bass and pickerel through the ice, but as no ice came, and having my minnows in a vat, I did the next best thing to get a mess of fish, viz., launched a boat on the pond one evening, setting a few hooks to float, taking out a 2lb. pickerel before I had got all my lines set, which broiled, gave me a good breakfast next morning, after which I drove out and took up my lines, finding three more pickerel about the same size and one perch. I found several of my lines minus the hooks; the snells evidently having been ground in two by the teeth of fish that had become hooked; and one poor fellow had gone down with the float in deep water, and probably got entangled in the grass or roots on the bottom of the pond, for the float was nowhere to be found. I am sorry for him, and wish he had not touched the tempting minnow, or rather, that I had not set it before that particular fish. I can only add, I hope it was not a black bass. On the 22d of February I borrowed a pair of old-fashioned skates, tied them on with strings (as some of the straps were gone), and with my boy skated a couple of miles or more on an overflow meadow, where I had skated many a time fifty years ago, and did not take a single tumble. How is that for an old fellow who has seen four more than his three score years? Outdoor sports have never done me any harm, surely.—A.

VIRGINIA BEACH.—The Norfolk (Va.) Landmark of March 9, reports from the Princess Anne Hotel, at Virginia Beach: "Last Wednesday the guests of the hotel enjoyed the novelty of seeing a school of whales close in shore and as playful as kittens. They broke the water and made quite a commotion. As a general thing whales do not move in school; so close to shore. Hunting parties go out daily from Norfolk to the sand bridges. The snipe are very plentiful, and on toward Curruck other waterfowl flock in myriads. The season for deer is over, and most of the land in the vicinity of the hotel is posted, as a matter of protection to the guests who enjoy the exhilarating amusement with zeal and energy. The lake is filled with fine club and black bass, which are captured daily by those fond of fishing.

FISHING FOR SUCKERS.—Suckers will take a baited hook when the water rises in the early spring. They never bite unless the worms come to the surface of the ground. They are found in abundance along banks where earth worms are crawling on the bottom in goodly numbers. The river washes and undermines the bank in some places, throwing the worms into the water, and then they try to crawl ashore. I know a locality at the mouth of an old creek channel—a little lagoon, between which and the river plenty of worms had collected. When the river rose this ground was covered and the worms tried to escape from the water. The suckers were attracted here in immense numbers. I knew of the capture of one hundred in a single day, some of them very large.—G. W. L.

UNUSUAL CAPTURE OF STURGEON.—At Cox'stown, near Dauphin, Pa., during the eel-fishing season, about the month of November, forty-six years ago, two Germans were tending a fish rack and caught what they supposed to be the devil. One of the men after hearing the tremendous splashing was sure it proceeded from nothing less frightful than his satanic majesty, got into his boat hurriedly and started for the shore. The other one hit the thing with a club, stunned it and then called to his comrade to return. The fish, for it was a fish, although none of the kind had ever been seen there before, proved to be a sturgeon of very large size. It was soon afterward taken to Harrisburg and other places, and exhibited to admiring audiences at six cents admission.—G. W. L.

FEEDING HABITS OF EELS.—In the North Branch of the Susquehanna River, during the time of freshets, eels can sometimes be caught by means of a hook on which large masses of worms are fastened. They can be captured most readily in rocky places, wherein they hide. In fishing for eels in clear water in October, Mr. Geo. W. Lung informs us that he has seen them stand on their heads and gyrate in a twisted form to get at their food under stones. The same habit has been observed in cod-fish both in their natural habitat and when confined in the well of a vessel.

SEINES, Nets of every description. American Net & Twine Co., Mrs. 34 Commercial st. Boston, or 199 Fulton st., N. Y.—Adv.

HERE'S A PRETTY STATE OF THINGS.—Appleton, Wis., March 8.—Shortly after draining some liquor from the vats at the Kaukana Fiber Company's, at Kaukana, into the tail race, last Thursday, fish began to rise to the top of the water, dead, and dozens of them were soon floating about. This accounts for the diminution of fish in our river. Time was, not so many years ago, when we had excellent fishing in the lower Fox; but the U. S. Government has erected a number of dams along the stream with no provision for fishways; illegal netters carry on operations openly; and the paper and pulp mills (which are growing more numerous all the time) make a sewer of the river. No great wonder fish are scarcer year by year. Is there no remedy?—C. V. Y.

WISCONSIN FISH LAWS.—Beloit, Wis.—I note in one of your recent numbers that some one gives it that we have no laws protective of our game fish. Wisconsin is one of the grandest States in the Union for the lover of the rod, and while we may be careless of enforcing the laws that we have, and might have better, still we have fish laws, and I believe in this locality they are generally observed and respected. For the information of your readers, that they need none of them transgress because of ignorance, I inclose same.—G. L. W. [The open seasons are: For brook, rainbow and mountain trout, April 15 to Sept. 1; Mackinaw (lake) trout, Dec. 1 to Oct. 1; pike (wall-eyed pike), May 1 to April 1; pickerel, May 1 to March 1, black bass, June 1 to March 1.]

MASSACHUSETTS FISH LAWS.—An act to amend an act to protect the fisheries in the tributaries of Plum Island Bay.—Section two of chapter one hundred and five of the acts of the year eighteen hundred and eighty-seven is hereby amended so as to read as follows: Section 2. The catching of smelts in the waters mentioned in section one, between the fifteenth day of March and the first day of June is hereby prohibited, and whoever sells or offers or exposes for sale or has in his possession a smelt so taken in these waters within said season shall be subject to the same penalties as are provided in section fifty-seven of chapter ninety-one of the Public Statutes. [Approved Feb. 18, 1890.]

ONONDAGA COUNTY ASSOCIATION.—March 11.—The Anglers' Association of Onondaga, an organization having for its object the protection of fish in the waters of Onondaga county from illegal fishing, was organized on March 6, 1890, by the election of Richard W. Jones, President; John N. Babcock, Vice-President; Walter S. MacGregor, Secretary; Charles W. Phelps, Treasurer. The association starts with forty-five members and with flattering prospects for a large increase in numbers. Great interest has been manifested in the matter by local fishermen, and the association hopes to show substantial results in suppressing the operations of the fish pirates.—W. S. MACGREGOR, Sec.

CANADIAN SALMON LEASES.—East Orange, N. J., March 14.—Editor *Forest and Stream*: The information that I have been able to obtain as bearing on the recent leases of fisheries made by the Province of Quebec, is to the effect that in the action taken by the Dominion Government, they appear to be trying to do what in the Province of New Brunswick proved unsuccessful. Riparian ownership in the latter Province was fought out years ago, and the Dominion Government was beaten on all points. So it will again be if the present dispute is brought to an issue, but no one believes it ever will be.—BIG REEL.

ONEIDA COUNTY, N. Y., has a law forbidding the taking of more than 10 lbs. of trout by one person at one time. The trout season in certain waters is from May 1 to July 1. It is forbidden to market woodcock or grouse killed in the county. The full text of the law is published by the Utica Fish and Game Protective Association, John D. Collins, Secretary.

SURF FISHING FOR STRIPED BASS ON THE JERSEY COAST is the theme of an instructive paper which will be printed in our issue of April 3.

THE BEST FISHING TACKLE IN THE WORLD is to be found at the salesroom of F. J. Conroy, 65 Fulton street, N. Y. See advertisement opposite first page of reading matter.—Advt.

Fishculture.

INDIANA PROTECTIVE EFFORT.

COL. W. T. DENNIS, State Fish Commissioner of Indiana, was in New Albany several days last week, the guest of the Southern Indiana Fish Protective Association, and on Wednesday evening was given a reception by the Association at its headquarters. He made a brief address to the many shooters and anglers present, and made a review of the work done during the past year in the interest of the protection of fish throughout the State. In the past twelve months 130 fish ladders have been placed at the mill dams in various streams, and arrangements have been completed to place additional ones wherever needed. These fish ladders are the invention of Col. Dennis, are simple in construction and cost but \$1 per lineal foot.

Col. Dennis has broken up in a great degree the numerous violations of the law in seining streams, etc., which was at one time so detrimental to the increase of the fish, many fine angling streams having been almost entirely cleared. Arrangements have been made with U. S. Fish Commissioner McDonald by which all the streams not stocked with small fish last fall will be filled this summer by many car loads, which will be brought from the station at Quincy, Ill.

On Thursday Col. Dennis went to Seymour and there organized a fish and game protective association, composed of representative citizens. The club starts out under the most favorable auspices.

The Indiana State Fish Association, which has Col. Dennis as its leader, will hold its summer meeting at Turkey Lake, in Kosciusko county, commencing June 25, and continuing three days. From the enthusiasm now manifested it is probable that all the anglers of Indiana will be in attendance.

At a meeting of the Southern Indiana Fish Protective Association, held last week at New Albany, Mr. Henry

R. W. Meyer, clerk of the Floyd Circuit Court, was presented with a fine lancewood fishing rod as a prize for having secured the greatest number of members to that organization. The prize is doubly valuable from the fact that it was given by the Hon. J. P. Applegate, editor of the *Daily Ledger*, and an enthusiastic angler, and was the work of the skillful fingers of Mr. George Lyman, the veteran fisherman, who has a summer's record of trout caught in the streams of Wisconsin that has never been beaten.

The Southern Indiana Fish Protective Association, although of but recent organization, has already accomplished a great work in interesting the people in protecting and caring for the fish that inhabit the streams. By the efforts of this club two car loads of small fish have been furnished by the U. S. Fish Commission and have been placed in the streams near New Albany, insuring fine sport for the angler next season. It is expected that during the coming summer several more car loads will be deposited in Silver, Knob and Indian creeks and in Blue River. By this means within two or three years the anglers of the three cities at the Ohio Falls can find sport within a few miles of their homes.

An important move taken by this Association is that it has made every road supervisor of southern Indiana an honorary member of the organization. The statute of the Hoosier State provides a strict penalty for the violation of the fish and game laws, and the supervisors will immediately report every instance in which the law is ignored.

C. A. D.

LOUISVILLE, March 17.

HERRING FISHERY OF SWEDEN.

OUR Minister at Stockholm, Hon. W. W. Thomas, Jr., has made a brief but comprehensive report on the herring fishery of Sweden, which was revived in 1878 after a period of inaction lasting sixty-eight years. The Province of Bohus, which embraces all the Swedish coast facing the Skagerrak, is once more the animated scene of an industry which furnished employment last season to 5,466 men, and yielded over a million barrels of herring, valued at \$289,079.

The history of this herring fishery has without doubt a useful lesson for us. The fish have always been periodical visitors to this former abode of the vikings. They have come in the autumn for a limited number of years in a period. Their numbers have fluctuated greatly from year to year, and their arrival and departure have been sudden and unexplained, although a formidable array of theories may be found tabulated in the accounts of the herring fisheries translated for the U. S. Fish Commission Report of 1878 and published in 1880. We commend these translations to certain American writers on current fishery methods and ask their studious attention also to the following paragraphs from Minister Thomas:

"How long will this fishing continue? That no man can say. It may cease any year; the last herring period lasted for only eighteen years. The fish appeared on the coast in 1793 and continued to return every year up to and including 1811. Then they vanished, not appearing again, as we have seen, till after a lapse of sixty-eight years. There is, however, this import in circumstance to be taken into consideration. In the former epoch the herring were more abundant than at present. This may indicate that the present period will be of shorter duration than the last.

"All accounts from the King's tour of inspection, however, agree that the herring are now being taken in large numbers, and that this bounty of the sea is being cast without stint into the fishers' nets.

"There is one fact connected with the herring fisheries of Sweden that may be interesting and instructive to the fishermen of the United States, and that is, that a migratory fish may reappear in vast schools in his old haunts and along once frequented shores after he has utterly disappeared and been absent for years. It is well known that the menhaden have vanished from many waters on the coast of New England, where once they were so abundant that fleets of small steamers were employed to seine them and transport them to the factories on shore, where they were reduced to oil and fish-cum.

"The schools of mackerel swimming along the coast of the United States, from Cape Hatteras to Maine, are decreasing each year with alarming rapidity. The diminution of mackerel in American waters is so great that at least one Yankee skipper has fitted out his fishing smack to pursue the mackerel on the coast of Africa.

"The parallel to be drawn, therefore, from the fisheries of Sweden is pertinent and encouraging. It shows that the decrease or total disappearance of the menhaden or mackerel on our coast may not indicate that the number of these fish in the sea is materially lessened, or that they have forever forsaken our shores, but that in due time, and in obedience to laws that we, as yet, know nothing of, these migratory fish may reappear and swim along our coast in the vast schools of the good old times."

LOBSTER CULTURE.

IN the New York *Sun* of March 2 we find the following account of lobster culture in Newfoundland:

"The superintendent of the codfish hatchery at Dido, Newfoundland, says that he met with great success in breeding lobsters. During the months of August, September and October he hatched out 5,000,000 lobster eggs, and liberated the young lobsters in Trinity Bay. This success will doubtless impart great energy to the Fish Commissioners of the New England States, where, until its accomplishment at Dido, the artificial breeding of lobsters was not considered entirely feasible."

It is only fair to state that the United States Government demonstrated the practicability of developing lobster eggs in hatching jars four years ago and deposited one million young lobsters in Vineyard Sound and adjacent waters from its station at Wood's Hole, Mass. From 1886 to 1889, inclusive, more than six millions of eggs were collected at the Wood's Hole station, and the loss in hatching was almost nothing. It is, therefore, untrue that the recent success in Newfoundland has just established the feasibility of artificial breeding of lobsters; nor was this the first extensive undertaking of the kind. Methods of hatching lobster eggs have been applied for many years by embryologists and fish-culturists in Norway and the United States, and the Government entered into a practical and satisfactory demonstration of the problem as soon as its permanent marine laboratory was completed.

There is no great difficulty in hatching lobster eggs, but there is serious trouble in rearing the young, because suitable food cannot always be obtained, and the little lobsters are cannibals of the worst type, destroying one another even when living food is furnished them in abundance.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Bird Shooting," which will be mailed free on request. The book is pronounced by "Nan," "Joan," "Dick Swiveller," "Sybilene" and other competent authorities to be the best treatise on the subject extant.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 230 pages, price \$2.50. For sale by **FOREST AND STREAM**.

The Kennel.

FIXTURES.

DOG SHOWS.

March 18 to 21.—First Annual Dog Show of the Maryland Kennel Club, at Baltimore, Md. W. Stewart Diffenderfer, 220 N. Charles street, Secretary. Entries close March 4.

April 1 to 4.—Sixth Annual Dog Show of the New England Kennel Club, at Boston, Mass. J. W. Newman, Secretary.

April 15 to 18.—Show of the Buffalo Kennel Club, Buffalo, N. Y. A. W. Smith, Secretary.

May 6 to 9.—Second Annual Dog Show of the Southern California Kennel Club, at Los Angeles, Cal. H. W. Wilson, Superintendent.

Oct. 8 to 11.—Ninth Annual Dog Show of the Danbury Agricultural Society, at Danbury, Conn. B. C. Lynes, Secretary.

FIELD TRIALS.

Nov. 17.—Twelfth Annual Field Trials of the Eastern Field Trials Club, at Otterburn Springs, Va. W. A. Coster, Saratoga Springs, N. Y., Secretary.

Dec. 1.—Second Annual Field Trials of the Central Field Trials Club, at Lexington, N. C. C. H. Odell, Mills Building, New York, Secretary.

1891.

Jan. 19.—Eighth Annual Field Trials of the Pacific Kennel Club, at Bakersfield, Cal. H. H. Briggs, Secretary.

Feb. 2.—Third Annual Field Trials of the Southern Field Trials Club, at Marietta, Ga. T. M. Brunby, Secretary, Marietta, Ga.

ROCHESTER DOG SHOW.

[Special Report.]

THE second annual bench show of the Rochester Kennel Club was held on March 11 to 14, at the Washington Rink, in that city. A miserable week of rainy weather must have assuredly made the books balance on the wrong side when reckoning time came, and if this is the case the hearty sympathy of the dog men at large will be extended to that genial and gentlemanly crowd of good fellows that compose the club, for their courtesy and hospitality to visitors and exhibitors will long be remembered by those who were fortunate enough to be there.

The total number of entries footed up 293, against 317 last year, while a heavy list of absentees brought this year's catalogue down to 239 dogs actually present. Many of these absentees were also entered at the Chicago show, and probably having suffered defeat there, were withdrawn by their owners no doubt, rather than risk defeat again under perhaps the same judge.

Mr. E. H. Moore's rough St. Bernard bitch Lady Miles was among the absent ones, having died at the Chicago show, and Mr. Watson's crack collie Clipper would have been returned a winner in the challenge class had he not been delayed on the road, he being a whole day overdue.

We would call the attention of bench show managers to the fact that dogs of an ugly temperament, when on exhibition, should be securely barred in on their benches and labeled "dangerous," and every precaution taken for the public safety, so as to preclude any possibility of these all too frequent cases of dog bites at the shows. At this exhibition the rough-coated St. Bernard Hesper repeated his New York exploits by biting a small boy badly through the hand. Those who saw it say that he first caught the boy somewhere about the body and pulled him in, and then when he got him near enough he took a better "bolt." This was painful and unpleasant for the small boy, but under Dr. Gray's good care he came to the show again soon, and was a frequent visitor under the "dead-head" system. It is a question in our mind whether the management could not be held amenable for damages in an instance of this nature; if so it would be a sad thing for dog shows, and we would advocate every precaution being taken in the future. Hesper, while a grand dog physically, is mentally unreliable and untrustworthy.

The judging was commenced promptly at 10:10 in the morning and was entirely finished the first day. The following judges officiated as advertised: Major J. M. Taylor, setters, pointers and foxhounds; Mr. H. W. Lacy, deerhounds, greyhounds, basset hounds and pugs; Mr. A. C. Wiemerding, all sporting spaniels, Mr. James Mortimer the remaining breeds. Veterinarian, Dr. Albert Drinkwater.

MASTIFFS.

Sears' Monarch and Lady Coleus, both quite up to their New York form, were alone in their respective challenge classes, and of course won. In the open class Ilford Chancellor, somewhat throaty, but a large dog of good proportions, won handsly from Horace and Jumbo. In the bitches Cambrian Princess with her grand head and body, was not hard pushed for first place. Second went to Countess of Dunsmore.

ST. BERNARDS.

In the challenge dog class for rough St. Bernards Plinlimmon, Jr. and Ben Lomond faced the judge and were again placed as at New York under Miss Whitney, the latter receiving first and the former second. They require no further comments. In the challenge bitch class the New York fight was again renewed, Lady Wellington and Miranda coming into the ring once more together, and as at Chicago, the former won. The open dog class brought out but three entries, and Hesper was far and away the best. In bitches Mr. Crowell's good bitch was rightly placed first, with Corvette second and Lady Madeline vth.

In the challenge smooth-coat class Victor Joseph had a walkover for dogs, and in the corresponding bitch class Thisbe had the same, she being transferred from Class 8, where she was erroneously entered. In the open dog and bitch classes there were but three entries all told, a poor showing indeed for this handsome breed of dogs, and at one of the prominent shows, too. Cleopatra won rightly in her class.

NEWFOUNDLANDS.

Prince George was again on top, with a young dog which will have a chance to improve with time, second.

BLOODHOUNDS AND GREAT DANES.

Although these breeds were liberally provided for in the regular classes and with specials, yet not a single entry was recorded.

DEERHOUNDS.

For some reason the only entries in these classes, Mr. Thayer's, did not put in an appearance.

GREYHOUNDS.

Old Memnon, gray in muzzle, gone in mouth, and one whose long show career and many honors should win him rest and a place on the retired list, was on hand to claim the prize. Fate and the judge were generous, and the prize was awarded. Harmony was alone in the corresponding bitch class. In open dogs, Hazelhurst won over the English dog Conspirator with some points to spare. In bitches and puppies the Hornell Club showed up again with the winners; in fact they had things just about their own way all through these classes.

FOXHOUNDS.

This was an even lot of dogs of the heavy English style. They looked like workers from the word go. Major Taylor had an unenviable task in selecting the winners, but his efforts were crowned with success apparently, as the owner of the pack came to him afterward and informed him that the winner was the fastest dog and the longest winded of the lot.

POINTERS.

Challenge dogs over 55lbs. saw Robert le Diable as bright as a dollar, looking for the blue. He was alone. Golden Rod, in the bitch class, also got her ribbon. In open dogs Graphite, the vho. winner at New York, was to the fore. Tempest was out of his stall when we called. Torg White we thought well enough of for a better place, and Mr. Morris's "yard-broken" Sancho got all he was entitled to. Stella B. was alone in the bitch class, and was awarded the prize. In the light-weight challenge dog class was Duke of Hessen and King of Kent. The Duke looked thin and tucked up, but won for all that. Queen Fan was without competition in her class. Light-weight open dogs saw Launcelot to the fore; he is not first-rate in head, but good in body, chest, legs and feet. Donald IV. was absent. Jersey C. has a poor head and lacks pointer attributes generally. Sally Brass II., Mr. Heath's exhibit, having been transferred from the heavy-weight class, won without much difficulty from Stella Sylvia and Lady Norrish. She is a bit light in muzzle. Pointer puppies were all absent.

ENGLISH SETTERS.

There were six classes provided for this breed, but ten entries, four of which were absent, and in one class the prizes had to be withheld. In the open bitch class Chantauqua Belle, winner of second at New York, was easily into the money. Why these classes did not fill better is a mystery.

IRISH SETTERS.

Twenty-five entries, with seven that did not put in their appearance, was not so bad as in the previous classes. Elcho, Jr., was alone in the challenge class, and looked fit to fight any and all aspirants for the blue ribbon. The dog and bitch classes were well filled. Larry S. and Paddy P. got into the money. The latter is too lean in face and narrow in chest. Dash is coarse and leggy; Lathrop weedy and light in color. Elcho Fitz-Maur, ears high and eyes light. In bitches Wino, good with head but lacking in bone and substance, was first with Jeannette second, and the New York winner Ruby Glenmore, vho. The latter is a very catchy bitch, and liable to win under any judge giving but a superficial examination, but her very badly formed stifles should always peg her back.

GORDON SETTERS.

Five classes provided and a total of five entries, all well known.

SPANIELS.

Thirty-two entries with eight absentees. Newton Abbot Skipper had a clear win over the crooked fronted Bridford Gladys in the challenge field class. Baron was virtually alone in his class, as he easily distanced his only competitor. Ace of Spades is lanky and short of coat, while Miss Bend'Or, second, is well furnished, but light of eye and short in head. Hornell Rex was more on the field spaniel order than Adonis, and so won on this point, we suppose. Rabbi was alone in the cocker dog class and was looking well. In bitches Novel and Bessie W. occupied the same relative positions as at New York. Brantford Red Jacket has not improved since I saw him last. He is a catchy dog, but lacks in head and action, and has too much length. La Tosca is a pretty bitch with head rather on the toy spaniel order. In Clumbers Bromine was placed at the head with Boss III. second. Patsy O'Connor added another scalp to his belt in the Irish water spaniel class.

COLLIES.

Clipper was a day late, which lost him an opportunity to score in the challenge class. In challenge bitches there were no entries. Hempstead Zulu won in open dogs over Nullamore, second. He is a good white and black, with nice head and coat and plenty of substance. In bitches, Messrs. J. P. & W. W. Gray swept everything before them, taking first and second and most all of the "mentions." The puppy classes did not fill very well. Bonnie Baby, in the bitches, is a promising young one.

BEAGLES.

The Hornell-Harmony Kennels here, as in the greyhound classes, won nearly everything. Their pack of little dogs proved a great attraction to the show.

BULLDOGS.

Portwood Tiger was alone in the champion class and scored. In the open class, of course, the great Harper won, second being awarded to Quasimodo. After the judging a protest was lodged against the latter for physical defects, and the protest being sustained, the reserve dog, Hodge, was moved up to second place.

BULL-TERRIERS.

Cairo had the challenge class pretty well in hand and won. In open dogs Spotless Prince had to lower his colors to Chessett's Flyer. This is a decision that we hardly indorse. The winner is a good, compact little dog on the small order, while the Prince is a nice clean dog of the "30lbs. and over" type, good head, body a bit long, nice legs and feet, and apparently a strong dog of great staying power. In bitches Enterprise received first and Queen Bendigo second, a reverse of the New York awards. The puppies were not up to type and the prizes were withheld.

FOX-TERRIERS.

The Blemton Kennels had nearly everything their own way in these classes, and their dogs have been often described. In the smaller terriers there was nothing new and the classes did not fill well.

PUGS.

Dr. Cryer's Bessie, Bob Ivy and Myrtle got into the money and have all been described before.

In the miscellaneous and remaining small classes there were but two or three more entries, nothing worth mentioning.

Corrections.—In the open bulldog class Quasimodo was disqualified and Hodge (reserve card) moved up to second place. The field spaniel Baron should be in the name of his owner, Geo. W. Folsom, N. Y., not E. H. Morris. CHESTER.

LOS ANGELES DOG SHOW.—Los Angeles, Cal., March 11.—*Editor Forest and Stream:* The Southern California Kennel Club will hold their second annual bench show in this city May 6, 7, 8 and 9, 1890. This was decided upon at a meeting of the club held on Saturday evening last, when a committee was appointed to carry out the necessary arrangements, and at a meeting of this committee held last evening among other necessary details in connection therewith, Mr. H. W. Wilson was appointed Superintendent. It has been decided to offer diplomas as regular prizes and to also offer a good list of specials. Work will begin on the premium list immediately and it will be issued as soon as possible. We expect to have a good number of entries from Frisco and the northern part of the State, and also expect a great improvement in the number and quality of the local dogs, as a great interest has been manifest in dog matters since our last show.—LOS.

DEATH OF SIR LORIS.—Cincinnati, O., March 13.—*Editor Forest and Stream:* Pneumonia has added another victim to its list. Our imported pug dog Sir Loris (champion Loris—May Queen) died at our branch kennels at Louisville, Ky., March 9. We were fortunate, however, in having bred to him our best blood bitch, East Lake Virgie, and with good luck hope to thus retain his valuable blood in our kennels.—EBERHART PUG KENNELS.

DOGS OF THE DAY.

FROM the exchanges to hand this week it is learned that Roslyn Sensation, one of the collies Mr. Mitchell Harrison sold to Mr. W. H. Charles, from whom he got The Squire, won third prize in the over-two-years class at the Collie Club display held in connection with Mr. Cruft's terrier show. Mr. Wake-Walker was the judge, and he always manages to distinguish himself somehow. Last time he was before the public in the capacity of ribbon distributor he placed Maney Trefoil over Metchley Wonder, and now he puts Christopher over Metchley Wonder and then gives the Collie Club trophy to the eleven-year-old Charlemagne. None will regret the grand old dog getting his name engraved on the cup, but sympathy is out of place in the judge's ring.

My experience with Christopher was pretty tough. Eighteen months ago I decided to breed Mavis to him and sent her across to Mr. Stretch. I got word of her arrival and nothing more until about six weeks later a letter announced that she had been returned because she had malignant eczema, which she had given to another puppy. A "vet" had been called in, prescribed for her and advised Mr. Stretch not to allow Christopher to serve her. It was annoying, and I expected to see a horrible sight on her arrival. Judge of my astonishment to find her skin as soft and clean as an infant's. I asked what had been done to her and her custodian said she arrived without any word, but a letter reached him at the last moment explaining the reason of her return. It was then too late to send her ashore and he had to bring her back. She was scratching a little two days after, and the ship's doctor applied one dressing of lard and a little tannic acid. When I wrote Mr. Stretch I gave him a pretty forcible piece of my mind about the ignoramus who couldn't tell steamer surfeit from infectious eczema and made me miss the opportunity. Well, all things come to him who waits. Mr. Mitchell Harrison, who arrived home last Thursday, has bought Christopher for \$2,500 and there is no need for me now to go to the expense of sending to England and running the risk of encountering the sapient veterinarian of Liverpool.

We have all had the wretched experience of arriving at home to receive a message that "a gentleman called and was very anxious to see you, but wouldn't leave his name," and then sit and vainly cudgel one's brains for half an hour and cussing the unknown for calling if he wouldn't say who he was. Mr. Wade was up to the same trick last week in one of his letters, telling that Boston was going to spring a surprise upon those who went to the show. Is this surprise to be the children from the blind school examining the dogs? The children have been invited and a number of perfectly reliable specimens of the different breeds will be turned over to the children to examine. By the way, will exhibitors please note that the kennel prizes at Boston are for three or more American-bred dogs. I would like to see plenty of competition for these specials for the reason that I believe I am responsible in a great measure for their being given. It was not intended to give any this year, and at New York I talked Messrs. Blackwood Fay and Moore into the idea of catering a bit for home production in place of long purses.

There is a dog tax bill before the Ohio Legislature, with the antediluvian idea of a heavier impost on the bitch than the dog. When will the gentlemen who cultivate hayseed in their whiskers learn that bitches average not over a dozen pups a year, whereas a dog may produce two or three hundred, also that the male, not the female, is the sheep killer. The Ohio tax is not excessive, \$2 and \$1, but the dog men ought to have the subject explained to the committee in charge of the bill.

The *Stock-Keeper* announces that at the Collie Club meeting in England four Americans were elected honorary members. Mr. Van Schaick, Mr. Mitchell Harrison and—such is fame—Mr. Stockwell, a miss for Shotwell. The fourth is not named, but he ought to be Mr. Terry. Here is another collie item from abroad. Miss Minnie Palmer, the actress, now sports a sheepdog, Lord Clavering having presented to her the dog Sir Rupert, which he purchased at the Edinburgh dog show.

The Item Kennels are no more. Mr. Pharo has left Bethlehem for Reading, Pa., and Mr. Weiss has sent the dogs out to a large farm in the country. The kennel will hereafter be known as the East End Kennel Club of Freemansburg, Pa. Mr. Weiss advises me that his collie bitch Flirt had the large litter of twelve, by Prince Charlie (Sefton-Mavis); sexes equally divided. Two have since died. All have wide collars and blaze faces like their sire.

Since my return from Chicago I learn that there was a fair amount of dog trading done before the doors were closed. Young Mr. Armour bought the bull-terrier puppy Luce, entered by Ed Lever, of this city, price something over \$100. W. H. S. Smith, of Chicago, is said to have given \$400 for the Great Dane Harras, who was only commended, but if he did his opinion and Herr Lang's must be at variance. Two of the imported prize winners were also sold. Nevezel going to G. Hansen, of Osceola Mills, Wis., and Noniega to Charles Fuernan, of Watertown, Wis. Fred Kirby also acted as auctioneer, and disposed of a dozen dogs at from \$10 to \$25. At the latter figure went the collie Fairlie, reserve in open and third in novice class, New York, and third Chicago.

While at the city of the future fair I met Mr. Bruette, of the Bull-Bruette combination. He has taken Scotch Baillie's place at the Meadowthorpe Kennels, and his dogs were in nice condition.

Early notice was given in this column of the fact that Watch had been bought from Mr. J. F. Smith, of Leeds, England, by an Ohio gentleman. I was not at liberty to mention the name, but as I see it has since been published elsewhere, there is no necessity for me to withhold it. The purchaser is Mr. John Poag, of Toledo. The price is said to have been \$4,500. It is a big lot of money, but then Watch is a good dog, and scales up to 220lbs. in tip top condition. Watch is to be at the Boston show if all goes well with him.

One of the most extraordinary disquisitions on dog show rules appears in a Western dog paper anent the rejudging of four classes at Chicago. The rejudging was rendered necessary by negligence on the part of the club, through its employees, in benching three dogs in the show building at the time of the judging, and bringing a fourth into the ring which was not benching close to the others in its class. This Western editor says it was all wrong and contrary to rule; in other words he attempts to prove by quoting rules which have no bearing on the case that the innocent exhibitors must suffer for the negligence of the club employees. He also says that "extra first" is an unauthorized award; so is vhc., hc. and c., if it comes to that, but a judge is monarch of all he surveys in such cases. "The multiplication of firsts in an irregular manner tend to depreciate the value of the regular awards." Why was criticism not applied to the multiplication of firsts at New York? If these awards were submitted to the A. K. C., as is suggested, that body would advise the person taking the trouble that it was something the A. K. C. had nothing to do with. On the other hand the Chicago people, if they had not acted as they

did, would, upon application of the exhibitors to the A. K. C., have been ordered to refund the exhibitors all their expenses.

The Philadelphia K. C. treasurer pays my note much attention. I beg to thank him for his comments, but I regret that business of more pressing nature prevents my entering into a discussion with him on a subject of very little interest to the general public.

Mr. C. G. Hinckley, of Lee, Mass., has lost his young collie bitch Thistle Blossom, second, New York, puppy class. She got out of her kennel one cold night, and when found was nearly dead. She was not well at the time and failed to recover. J. W.

DOGS OF ANY DAY.

Editor Forest and Stream:

Some touching up I have received as to my having become a convert to the short face in mastiffs from my unqualified praise of Beaufort, suggests to me an explanation, defense, or whatever readers may choose to call it. Fact is I dislike extra short face as much as ever I did, and Beaufort measures as short as any, but it is a fact that this shortness never impressed me. I suppose if I had concentrated my attention on this, it would have fixed itself in my memory; but the simple truth is that the dog is so superlatively excellent everywhere, in such true and harmonious proportion all over, that this quality catches the eye and no one characteristic becomes predominant. I suppose it will be said I am "crabbing," etc., but fire away, I don't care. As long as short-faced mastiffs are like Beaufort I am not going to growl, but I do most everlastingly despise the rot about "grand head" when it is a cloak to cover every other possible deformity.

I am glad that J. W. draws attention to the unfortunate episode of "A Kennel Vendetta," although I cannot take the same view of Mr. Millais that J. W. does. I do not think that Mr. Millais "poses" in any form. The trouble is that he brings social position, club etiquette, *noblesse oblige*, etc., into kennel matters. In his eyes an attack on a gentleman of established position in society, is a much more grievous offense than the same attack on a plebeian who makes his living by dogs. This was clearly shown by his furious resenting of the intimation that he might be "Merlin," when he never censured "Merlin's" steal from Dr. Perry, never deemed it of sufficient weight for criticism. In this I am not attacking Mr. Millais, but I sincerely regret his mistaken course. It may be the correct thing in England, but it is not outlandish under our tariff regulations. Let me say this much in defense of Mr. Millais personally. His hostility to Mr. Krehl is well known, yet it was from Mr. Millais that I learned the most noble attribute of Mr. Krehl, and with all his bitterness he is always most ready and anxious to extend a helping hand to any one in need. Such honest candor goes a long way in expiation of other faults.

The "Alice Demarest" article is exquisite; under what bushel has that light been hidden so long? Truly I would like to subscribe to a paper to which this unknown and the "Humbog" of the old *Vinton's Gazette* were the sole contributors. The ruthless trampling my toes got by the aspersions on the Russian dogs was fully salved by the continual amusement afforded by the trampler. However, I must defend my latest fad. It is unquestionable that the Russian dogs of the greyhound family have been and are used for wolf hunting. That they have the speed to catch a wolf seems unquestionable, and the way Mr. Hacke's Czar, at Pittsburgh show, tackled and threw a mastiff of 30lbs. greater weight than himself, the ferocity and lightning activity he displayed in doing it, and his snapping, cutting way of fighting, conclusively demonstrated his ability to cope with a wolf. The greater size of Mr. Hacke's Ivan, or Mr. Lord's dog of the same name (litter brothers) should make them superior to Czar at such work. Be it remembered, however, I am not advocating the Russian dogs as wolf-catchers; employing a dog worth \$100 as a weaned puppy for that work, would be a bit foolish when dogs at a quarter of the price will answer the purpose. The use of the Russian dogs is for "no use," simply as ornamental dogs, and for this I maintain that no other dog is their peer. That they are full fledged "fancy" articles is shown by the prices they are held at. Mr. A. J. Rosseau strongly advised an inquirer to purchase a particular dog at \$500, or another one, slightly lame, at \$100, saying that but for his very slight lameness the latter dog would be priced at \$300, adding the undoubted truism that first cost should be no object to a fancier, the best being the cheapest in the end.

"A Dog Murder" is very many degrees above the stupid inanities of "A Brutal and Cowardly Act," containing no such stupid suggestions as a perambulating dog show monument nor suggestions to shoot a man for shooting a dog, etc., etc.; but I fail to see where the judicial officer was so very stupid. Doubtless the intent of his decision was that, while "cruelty" had occurred, there was no intent of perpetrating it. It is all very well to go on about "the poor dog," etc., etc.; but has a householder no protection from vagrant dogs? Is it to be held that "his house is his castle, the rain may enter but the king may not," but he is to be cursed by stray dogs rampaging over his place, defiling his ice (doubtless for drinking water), and he is to be denied a remedy? What good is it to him to drive the dogs off? They will come right back. Too many dog owners fail to remember that if they choose to love dogs, enjoy having them, lavish affection on them, etc., they thereby incur a responsibility to the public to prevent their pets becoming their neighbors' annoyance. Take the case of "A Brutal and Cowardly Act." As Mr. Goodrich well said in *Sports Afield*, "Mr. Mills was a trespasser" (I don't swallow that "Mr. Otis was a brute") and that many land owners respect Mr. Otis's act, and if the stupidities of newspaper drivels on the subject go much further, the number of Mr. Otis's respecters will increase. Do not forget that a pestered farmer, with a horde of city "sportlets" rampaging over his farm, scaring his stock, firing his fences, etc., has some rights, and shooting a dog is a much more tolerable way of exercising them than shooting a man. One actually makes Mr. Otis's descent from Harrison Gray Otis a reflection on him! That is too characteristic of the hysterics for anything.

I know nothing of Mr. Addison R. Strong, but on "the face of the returns" he has my respect and congratulations. I wish he would become doggy, he has shown nerve and sense to qualify him for a first-rate accession to the ranks of "fancy." For Mr. Murphy I would suggest cool deliberation and a course of "putting himself in another's position," and I think he will arrive at wiser conclusions.

As to show attendants, it has often struck me that those at New York got and stood a good deal of cussing, and doubtless deserved more than they got; but a man who will stand being d—d is not the variety for anything higher than a sweeper. These are the beasts that look out for chairs round the ring when the trick dog performance is coming off, with a view of selling the seats out to desirous visitors, and I have several times noted Mr. Mortimer scouting round the rings to head off this dirty game, but neither he nor any man can stop this gouging if dirty dogs are employed as show attendants. W. WADE.

HULTON, Pa., March 11.

DEATH OF AN OLD DOG.—Boston, Mass., March 16.—Mr. Wm. J. Wright, of Duxbury, Mass., has informed me of the death on March 6 of his valuable Gordon setter Marquis (Don-Lady). This dog lived to the remarkable age of 20 years, 5 months and 14 days, and slowly died of old age.—R. O. H.

DISINFECTION OF DOG SHOW BENCHES.

At the annual meeting of the English Kennel Club in January, Mr. Everett Millais moved the following resolution which was unanimously carried: "That the committee be requested to see that no benching be accepted by the Kennel Club which, if previously used, shall not have been efficiently disinfected under the management of a competent authority." In moving the resolution Mr. Millais said:

MR. CHAIRMAN AND GENTLEMEN—The question which it is my duty now to bring before you is one of the deepest importance that can possibly be deliberated upon—not only to the Kennel Club, but to every owner of a dog who supports the club shows by exhibiting at them. I therefore ask you to give me your full attention, and to come to a decision whether the rule I ask you to place upon your statutes is a necessary one or a troublesome innovation.

I have been an exhibitor at the Kennel Club shows since 1875, and, like many others, I have been a severe loser from supporting them. I trust that this statement will justify the consideration of the question, and the necessity of such a rule as I am about to propose.

As I take it, the great fundamental object of the Kennel Club is to promote the breeding of a high class of dog, and to further this object it holds two yearly shows. Before a man can exhibit a dog he has not only to register it, but he has to pay a somewhat heavy entrance fee. For this expenditure he has the chance of winning, his animal is received by careful attendants, fed, comfortably benched, and returned at the close of the show.

I have never heard a single complaint against the Kennel Club on this account, and I have had considerable experience. But there is a complaint, and one which not only members of the Kennel Club but all exhibitors without exception do make, and that is the risk of contracting disease at the shows.

Only one of these diseases will I mention, as precautions against distemper—properly undertaken—would obviate the possibility of the others.

The primary object the Kennel Club has in view is the production of good stock. I ask in all fairness what is the rationale of breeding good stock, incurring heavy expenses in stud fees, and raising that stock if it is to be ruthlessly destroyed after being exhibited once? A few survive, and the varieties of the dog benefit in consequence, but nothing like to the extent that they would if there was no distemper. The few that do come to the front become the sires of future generations, but, being the few, inbreeding takes place to an enormous extent, which could be avoided if a larger proportion of good animals were raised; and inbreeding tends to make animals, as well as human beings, more difficult to rear.

In other words, if they do get distemper they have it worse than those not so inbred, and among inbred dogs the mortality is large compared with those bred on more diverse lines. Not only does distemper keep back all classes on this account, but, I say it advisedly, it stops many a would-be exhibitor from showing at all.

Having referred briefly to the proposal to abolish puppy classes, which he thought would make no material difference to the mortality from distemper, Mr. Millais said that the idea that every dog must have distemper is quite a mistake, although the risk was, of course, largely increased by a system which fostered the disease, as he proposed to show. He then said:

I need scarcely point out to you that if a dog suffering from the disease is allowed to come into the presence of those non-suffering they will all become affected. You know this just as well as I do, consequently I need not enlarge upon such an example, but if you require an illustration I will give it. In 1887 I showed two puppies at the Crystal Palace Show. In the same class a puppy was exhibited that either developed the disease at that show—and by this I mean that the symptoms appeared there, though the puppy must have contracted it several days previous to the show, or else it had lately had distemper and had a relapse. At any rate there was a puppy with distemper. As a result I lost £23. It is rare nowadays where a competent veterinary surgeon is present that a dog with distemper is allowed to be benched, or if symptoms appear the dog is almost always removed. At the same time there is just as much distemper after a kennel club show as if dogs suffering from distemper were allowed to be present, and this is a point to which I am desirous of drawing your careful attention.

At the commencement of this year—having very carefully studied the question—I made certain that the actual cause of distemper was the state of the benches, and to prove my theory I passed spills of wood up the nose of a puppy that had the disease, and a considerable time afterward placed these in a puppy kennel.

Now, gentlemen, every puppy in that kennel developed distemper.

Months afterward, when I had succeeded in determining the actual cause of distemper from a bacteriological point of view, I split a flask of the virus on wood, and succeeded without any trouble whatever in growing it again from the wood on which it had been split, after many days had elapsed.

Proof such as this will, I think, suffice to satisfy the most ignorant man that distemper can be contracted by the dog from an infected bench just as easily as from an infected dog.

I remember the time when I could show puppies without running any risk at all. Those were the days when committees made their own benches and broke them up afterward. Nowadays it is different, and the same benches are used for one show after another. At many shows what are termed hon. veterinary surgeons have appointments, men who do not receive the entries as they come, and in some cases do not even enter the show.

What is the result? You get the virus of disease on the benches, and when they are erected at a kennel club show, or elsewhere, although Mr. Sewell rigidly excludes even a suspicion of distemper, our dogs are down with that disease immediately after.

Mr. Millais then referred to a correspondence which had been published in the *Fanciers' Gazette* on the subject of disinfecting the benches after a show, adding: I am not here to argue which of the disinfectants used is the best, whether it be Sanitas, Jeyes' Fluid, or any other, but I will say this, that it is absolutely impossible to disinfect such an enormous mass of woodwork as is needed for a kennel club show with the very small amount of disinfectant used, let alone the benches that are sent all over the country.

I allow that almost up to this year very little was known of the germ that causes distemper, but that microbe is known to a few of us now just as well as I know many of your faces, and so pure have we now grown it, that I have never yet inoculated a dog that I have not given that dog distemper within a week, and I say considering the size of that life form, less than the 5,000th part of an inch in length, that whatever disinfectant you use, unless applied in the most careful manner and many times there is ample space in the cracks and crevices of a show bench to escape the sanitary action of such disinfectants.

I say, up to this present year there was some excuse for no thorough disinfection, because no one knew what distemper was, or what had to be destroyed. But now that we do know, I say it is not only the duty of all concerned to make use of the greater knowledge we have of the disease, and disinfect most thoroughly, but I make bold to state that it is the duty of the kennel club, and a paramount duty it is,

as organizers of these shows, to demand a guarantee that the disinfecting shall be done thoroughly.

A number of you here present may differ from me and point to the fact that at every Kennel Club show as also at shows held under Kennel Club rules, large placards are to be seen everywhere, "This show is disinfected by so and so."

I ask you—what do you understand by such an advertisement? I certainly was under the impression, at least it conveyed to my mind, that the firm undertook the disinfecting of the benches before they were put up.

On inquiry, however, I find that they have nothing to do with the benches, and that the whole disinfection that they do is to deodorize the show while it lasts, with a watering pot or some such utensil. In other words, all the disinfection they do is to keep away disagreeable smells during the show. I most emphatically state that this is not disinfection, and it is high time that some proper understanding should be come to. That the work is efficiently carried out no man who has any knowledge of these questions can believe. Disinfectants are all very well for use in kennels, and are most useful adjuncts to kennel hygiene, but to disinfect benches in the manner they should be we require a disinfection of a more thorough character, and if contractors want to know how this could be done I shall be pleased to inform them.

In the meantime I consider that the question of disinfection is one on which the Kennel Club should decide.

COURSING GOSSIP.

Editor Forest and Stream:

I have to thank "J. W." for directing my attention to the article on "The Waterloo Cup," by Hugh Dalziel, and published in the current number of *Outing*. Laws-a-massy, but the E. C. A. would have enjoyed a judge with "an eye like a hawk, as deaf as a post, and who rode like the devil." This judge did fill the end of the bill, though, didn't he?

The article is fairly right, though the author should have said that a "cote" was an alternative, venerable though somewhat disused, for the "go-by," and explain that "on the outer circle" the dog that scores made the point before and is both outfooting and outworking the other one. Again, he gives no standard of demerits for faults.

But, out of nine pictures, three are portraits of dogs, the fourth one dog and hare, one represents a "Webster" making tracks, and another a man with a bag being "knocked out" into a drain by a man with field glasses slung to his side. In another picture you can see men with "Jerry Hawthorn" beavers, homeguard helmets and extra-up-in-the-air hats, these being the distinctive marks of various book-makers, to which I heretofore made reference in your columns. The picture showing the slipper gripping the dogs is perfectly correct, and I have kicked in air when the pole stuck in the mud my own self.

The best of it all is that this article puts into words what was in the air. Col. North, who has made a lot of money out of nitrate manures, is spending it right, left and center in England, and goes in for sport. There was a report that he was going to put in a yacht for the America cup, and it is quite likely. Now the Waterloo cup ranks with the Derby, and Col. North bought Fullerton to win it. He paid £850, that is \$4,550, for him, and the dog was winner from the time the sale was announced. His owner went off to South America, but if ever a field was pulled so that the favorite should win, it was done at Altcar, when Troughend and Fullerton divided. There was no kennel money on the dog, and though coursing is the most uncertain of sports, it was Lombard street to a china orange on the Colonel's entry. Mind you, Fullerton is a good dog, and so is Troughend, but do you read over Mr. Dalziel's story, how "Dear Belle was drawn by arrangement, thus saving Fullerton a course," and how Hershill met him "at a great disadvantage" in the course before the final, and draw your own conclusions. As Mr. Dalziel says, "there have been once and again objectionable men creep into coursing circles." Seems to me somebody suggested something to that effect apropos of box-coursing down on Long Island, and the consequences of perseverance thereof.

My regards to J. W. I asked for him when I was at the dog show, and hope to meet him some day. By the way, what a splendid dog that was that arrived too late—Conspirator, I think, was his name. He was a dog and in proper shape. What depth and width of chest, and what shapely wealth of hard muscle. There was not a grue within sight of him, and if ever there is a fair open meeting, and that dog is in, I'll back him at even money against the field.

GRAY JOHN.

BEAGLES CATCHING RABBITS.

Editor Forest and Stream:

Some time back one of your correspondents expressed an opinion that few if any beagle dogs could catch a rabbit in a fair race. Perhaps this may be true, but I know of a pack in Frederick county, Md., which I saw run down and catch two full-grown rabbits in possession of all their faculties, run another to a standstill, and one other took to a hollow log, leaving its tail between the teeth of the lead dog, all this during a morning's hunt and being the only ones started. It was in this way. I wanted to buy a dog, some officious or offensive individual having poisoned four of my old dogs. I visited Mr. Pottinger Dorsey, a breeder of beagles, and was taken out to have an exhibition of their abilities in the field.

The first rabbit started was in a stubble field; it ran out into a woods, through into a wheat field where it doubled, but the dogs were so close that it headed for the woods again and ran into a hollow log just in time to save its life, Lee II. grabbing it at twice, the third time just catching its tail. Leaving this one until an ax could be procured, the dogs were put into a grassfield, where Wanderer struck a trail and in a short time routed the rabbit out of a briar patch, whence it scudded for a large swamp, about 40 yds. in front of it, the dogs close to it and running by sight. The wily rabbit knew the paths among a dense mass of green briars all over the swamp through which no dog could go, but unfortunately for him went right through and out across a grassfield leading for a hay barrick. In the meantime Wanderer, finding it impossible to get through, went around and sighted the rabbit, gave one cry which brought the pack around to him, and before the rabbit could gain the haven which would preserve its life the little dog's jaws snapped it up, with Lee II. and Chimer close behind him. It was the prettiest race I ever saw, in full cry from start to finish, the gallant little dogs displaying not only the gameness of their race but true dog sense. We now crossed another wheat field with little groups of scrub oak all over it; from one of these I started a rabbit which was unseen by the dogs. Calling Chimer he took the trail, the others packing with him at his voice, and in full cry they took the rabbit across a chestnut grove and a county road into a garden, out of this through a grassfield, where it doubled back into the garden, and from there through the grove again and back to the scrub oak field, and from there passed back over the same ground, and back in the grove again and squatted. The pack soon coming up in full cry, poor Mollie started again in full sight of the dogs, and after a sight race of a few hundred yards the dogs were catching at her, and through the excitement of the dogs was overrun, by her squating (dead bent); and was picked up by Mr. Dorsey just in time to save her life. This was a very exciting race, and I was considerably heated up, as it was a general hurrah from start to finish.

On our way to the house we met a gentleman who said he

had started a rabbit a mile or so back, and had flagged the place. We took the dogs back, and instantly they picked up the trail leading toward a swamp, and entered it a few yards from its head hot on trail. For a few minutes they were at fault, but presently they all went off together down the east side of the swamp, the rabbit coming out two hundred yards below where it went in, and hardly a minute afterward Boston appeared followed by the pack, and away they went in full cry across the field to a pike road. Here again they were at fault for a short time, but Boston found the trail, which went down the pike for five hundred yards, and following it crossed the road into a wide grass field, where they struck the rabbit by sight. Then for a race, side by side like horses at the start they swept over the field, gradually tapering out into a diagonal line, until Wanderer let out a link and went to the front, picking up the rabbit and turning a somersault in the air as he did so, coming up on his legs again with the others all around him. The dogs taking part in these races were Boston, imported Chimer, Lee II., Wanderer, Fancy, Annie Bell, Music, Fairy, Weannanau and Blue Dick. I purchased Blue Dick, and returned home fully convinced that beagles could catch full-grown rabbits.

J. RANDOLPH GROVES.

ELLICOTT CITY, Md.

BALTIMORE DOG SHOW.

[Special to Forest and Stream, March 19.]

THE first annual dog show of the Maryland Kennel Club opened to-day under favorable auspices. The weather is fine and the attendance has been good for opening day. The judging at this writing, 10:45 P. M., is not quite finished. Below is a list of the

AWARDS.

MASTIFFS—CHALLENGE—1st. E. B. Sears's *Sears' Monarch*.—**OPEN—Dogs:** 1st and 2d, withheld; 3d, T. D. Riggs's *The Moor*. **High com.** E. C. Ebert's *Duke*. **Com.** J. Thompson's *Linkwood Chief*. **Bitches:** 1st, E. B. Sears's *Countess of Dunsore*; 2d, withheld; 3d, Brunt & Lindsay's *Duchess*. **Com.** J. Thompson's *Linkwood Maid* and *Linkwood Lady Margaret*.

MASTIFFS AT THE CHICAGO SHOW.—*Editor Forest and Stream:* Although I did not go to the Chicago show, I find much of interest in the mastiffs shown there. First I note No. 7, Ormonde, with a mistake in his pedigree; he is by Victor Hugo and out of Cambrian Princess, not Nichol's Boomah, she was dam of Victor Hugo. This dog was absent probably from not having recovered from a very rough passage over the Atlantic. No. 10, Duke of Connaught, introduced a hitherto unknown sire in Ashmont Nero, that sensational puppy bred by Dr. Perry, who weighed 190lbs. at a year old and was strong and active at that; there can be no mistake as to this, for Mr. Jas. Watson weighed him and tested the scales himself. Ashmont Nero was by Hero II (Salisbury—Exley's Venus) dam of Bosco, and was out of Lorna Doone by Crown Prince out of that unequalled bitch Ilford Baroness, so the breeding there was good enough for anything. The dam of Duke of Connaught is an unknown quantity named Kinloch. If I remember aright, both Ashmont Nero and his scarcely less distinguished sister, Lorna Doone II, are dead. No. 15, Royal George, by Gladstone, bred by N. P. Boyer & Co., is just immense. Gladstone must be the hero of the "Corsair, Gladstone, King" litter, "imported" and with "thoroughly authenticated pedigree," which pedigree became famous as just the very biggest—well let us say romance, that ever was seen. I feel convinced, however, that at least Corsair really had a pedigree, and that he was by Du Vernat's Lion and out of Dr. Sawtelle's Venus, and with that pedigree rightfully belonging to him why he should have a bogus one stuck to him, passes comprehension. However, the Stud Book indorses it. The "bad spells" are unusually numerous in the mastiff entries. I find eleven within my own knowledge, some such as "E'Laine" being funny; wonder if it was for D'Laine, or is there any distinction between the Arthurian heroine, a certain brand of kerosene, and the staple of a dry goods store?—W. WADE (Hulton, Pa., March 10).

BUFFALO DOG SHOW.—Buffalo, N. Y., March 15.—*Editor Forest and Stream:* The following classes have been added to our premium list: Class 98a, Yorkshire terriers, challenge dogs and bitches, first prize \$10. Class 108, wire-haired fox-terriers, open dogs and bitches, first prize \$5, second prize \$3. The American Fox-Terrier Club offers \$25 for the best exhibit of fox-terriers. The \$10 special for best greyhound has been changed to the best kennel of four. The Buffalo Kennel Club offers \$10 for the best kennel of four collies. A friend of the club offers \$5 for the best American bred collie bitch. The Buffalo Kennel Club offers \$10 for the best kennel of four beagles. Four extra classes have been added for pointers. Classes 29, 30, 31 and 32 in premium list will be for dogs 55lbs. and over, and bitches 50lbs. and over; 29½, 30½, 31½ and 32½ will be for dogs under 55lbs. and bitches under 50lbs.—A. W. SMITH, Sec'y.

BLACK AND TAN TERRIERS AT CHICAGO.—New Rochelle, N. Y., March 17.—*Editor Forest and Stream:* I wish to correct your record of winnings in the black and tan terrier class at Chicago. Rochelle Ooolah received the credit of winning third prize in the dog class. It should have been Dick. Ooolah was not there, and Dick, having been wrongly placed by the management in the toy class, was transferred to Ooolah's bench, shown in his proper class and wore his correct number. After receiving my identification ticket, I suspected that Dick had been placed in the toy class and did everything possible to prevent confusion, by notifying the management and my agent.—H. T. FOOTE.

BULLDOG MEN AT BOSTON.—We, the undersigned, believing that concerted action by the friends of the English bulldog is alone needed to win the great popularity merited by the breed, would invite all bulldog men and all others in any degree interested to meet at the coming Boston dog show, at noon of the first day, April 1, for the purpose of forming a bulldog specialty club. In the mean time we would request that any suggestions or expressions of a willingness to join such an organization, be sent to H. D. Kendall, Lowell, Mass.—E. SHEFFIELD PORTER, R. B. SAWYER, JOHN H. MATHEWS, H. D. KENDALL.

A NEW KENNEL CLUB AT ST. LOUIS.—St. Louis, March 14.—*Editor Forest and Stream:* There is a prospect that St. Louis will soon have a kennel club. Several gentlemen who own fine field dogs are agitating the question, and a preliminary meeting is to be held shortly to see what can be done toward organizing a club. One of the principal objects, so the projectors say, is to hold a dog show here some time next fall or winter. There are many fine dogs here, both sporting and others, and there is no reason why, if such a scheme is properly handled, it should not prove a success.—UNSER FRITZ.

ROCHESTER DOG SHOW.—Hornellsville, N. Y., March 17.—*Editor Forest and Stream:* Your correspondent, "Chester," does not state the actual facts in his report of the Rochester show. I got there from Chicago Monday A. M., and found Messrs. Tallman and Yates there. I admit that it was easy to get the dogs in the building, but you could not get them out. I know this to be a fact as the vet. sent one of my dogs out that he thought looked sick, and the door-keeper would not let me out until Mr. Tallman gave him orders to do so.—J. OTIS FELLOWS.

FOX-TERRIER CLUB MEETING.—New York, March 15.—*Editor Forest and Stream:* Owing to the illness of some of the officers of the American Fox-Terrier Club, it was impossible to hold the annual meeting of the club at the spring show of the Westminster Kennel Club. It was, therefore, resolved to hold said meeting the first day of the New England Kennel Club show at Boston, April 1, the hour to be fixed later.—H. P. FROTHINGHAM, Sec.

IRISH SETTER IMPORTATION.—*Editor Forest and Stream:* On the steamer City of Chicago, which arrived March 10, there came consigned to me the Irish setter dog Shamrock from the kennel of Mr. J. G. Hawkes, Park-riffe, county Kerry, Ireland. The dog is a very handsome one and he was forwarded to his owner, Mr. F. L. Cheney, of the Onota Kennels, Pittsfield, Mass.—E. B. GOLDSMITH.

SNOW.—The Clumber spaniel bitch by champion John O' Gaunt out of Foxley Beauty, winner of first, Birmingham, 1886 and 1887; first, Barn Elms, etc., that was purchased last November by Mr. F. H. F. Mercer, of Ottawa, Can., is to be left at Mr. Bulled's kennels in Witheridge, England, to be exhibited at the principal shows there. She will be bred when in season and then sent to her owner.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

Prepared Blanks sent free on application.

Bonnie Obo and her whelp. Black cocker spaniel bitch, age not given, by Pete Obo out of Floss B. (one-half interest) by A. S. Aborn, Wakefield, Mass., to H. A. Simonds, same place.

Gipsy Queen. Black and tan terrier bitch, whelped Oct. 11, 1889, by Fortigern out of Fortune, by A. W. Smith, Buffalo, N. Y., to J. G. Burns, same place.

Spice Cake. White, black markings, fox-terrier dog, whelped Nov. 12, 1889, by Ginger out of Nell, by C. H. Jackson, Brooklyn, N. Y., to Fred Wood, same place.

Rifle and Trap Shooting.

RANGE AND GALLERY.

BOSTON, March 15.—The regular monthly shoot of the Massachusetts Rifle Association was held at its range to-day. A thick snowstorm continued most of the day, making it almost impossible to see the bullseye, but under such conditions some fine scores were made. Following are the best scores made to-day, distance 200yds., Standard American target.

J B Fellows.....87	P Fitz.....74	S T George.....70
W G Hussey.....80	S F Hawley.....72	C Eaton.....69

UNITED BULLETS.—New Haven, Feb. 16.—Last year I picked up two bullets on our range which are quite a curiosity; and

(Thinking it would interest other rifle shooters I send you a drawing of them in three different positions. They are as perfectly put together as if done by hand.—A. ALLEN.)

NEW YORK RIFLE DRILL.—The orders for 1890 from the Albany militia headquarters for rifle practice upset all previous methods and make material changes in the classification of those participating, which will hereafter consist of third, second and first class shots, marksmen and sharpshooters. The third class consists of all who do not appear on a range for practice. The second class consists of all present for practice, without reference to qualifications in previous years, and the practice in this class will be at 100yds., standing, on a No. 3 target. The third class consists of those who make a score of 15 points or upward in the second class, and the practice in this class will be at 200yds., kneeling or sitting, and 300yds., prone, each upon a target 4ft. wide and 6ft. high. A score of 30 points or upward in the first class constitutes a marksman and entitles the maker to receive the State decoration. What amounts essentially to a handicap is imposed upon sharpshooters. This class consists of marksmen who at 500 and 600yds., prone, on a No. 2 target, 6ft. sq., make an aggregate score of 35 points or upward, in recognition of which achievement the State will present them with a silver bar. On ranges where 600yds. cannot be obtained, a score of 42 points or upward in ten consecutive shots at 500yds. will be required to constitute a sharpshooter. Marksmen who fail to make 18 points at 500yds. will not be permitted to shoot at 600yds. for the sharpshooter's decoration. At the first distance of either of the lower classes—that is, at 100 or 200yds.—a score of 15 points or upward will qualify. No third practice shooting will be allowed. Commanding officers of companies will see that the enlisted men of their commands receive the necessary preliminary instruction, and, where possible, that they have gallery practice before they are sent to the ranges. They are to be exercised in sighting by the use of the sand bag, taught the difference between a fine sight, a full sight and a half sight, and exercised in position drill until they acquire the habit of aiming quickly and correctly from the shoulder.

BARRY RIFLE CLUB.—The Barry Rifle Club, which has its range at 2,072 Third avenue, near 114th street, will not give its usual spring festival this year. They will instead hold a grand prize shooting, the fourth since the club's existence, on their range on Wednesday and Thursday, March 26 and 27. The shooting will be open to all comers, entry \$1 for three shots, re-entries unlimited. Twenty cash prizes, from \$40 to \$3, will be distributed, the entire amount aggregating \$226. The three best tickets of each shooter will count. Ties will divide money. The length of the range is 55ft. The target—the German ring target—25 rings, bullseye 2in. Any rifles of 22cal., with any sights except magnifying sights, will be allowed. Shooting will begin on Wednesday at 10 A. M., and continue all day and evening. On Thursday shooting will begin at 9 A. M. and continue until midnight, when all prizes will be distributed immediately.

THE NEW WIMBLEDON.—Work on the new ranges of the National Rifle Association on Bisleys Common, is going steadily forward, the military from Aldershot, under Lieut.-Gen. Sir Evelyn Wood, rendering valuable assistance. A range of twenty-four long-range targets, of which sixteen will be available to 1,000yds.; a range of ninety targets available to 500yds., a range of twenty-four targets available to 200yds., a range of twenty-four targets available to 100yds., and two running deer or man ranges. Sporting rifle and revolver ranges will also be provided for, as may be found necessary. Should it be desired for special purposes, long ranges up to 2,000yds. or more could at any time be laid out. Generally speaking, the new site is in every way answering to, and in some respects exceeding, the favorable anticipations that have been formed of it; and the committee are satisfied that, in spite of the difficulties involved in recasting the whole of the organization which has grown up at Wimbledon during so many years, the meeting of 1890 at Bisleys Common will establish the new site as a confirmed success.

THE TRAP.

As this journal is the only one having a representative with the East and West team tourists, our readers will be given the best, brightest, fullest, most accurate and most satisfactory reports of the progress of the enterprise.

FIXTURES.

April 19.—Tolley's Trap-Shooting Contest. Grand all-day shoot; opening new grounds, at Catskill, N. Y. Geo. F. Tolley, Sec'y.
April 30-May 2.—A. S. A. Tournament, Columbus, O.
May 7-9.—A. S. A. Tournament, Lafayette, Ind.
May 14-16.—A. S. A. Tournament, St. Louis, Mo.
May 21-23.—A. S. A. Tournament, Racine City, Mo.
May 23-30.—A. S. A. Tournament, Minneapolis, Minn.

AMERICAN SHOOTING ASSOCIATION DATES.—Office of the American Shooting Association, Room 184 Stewart Building, New York, March 15.—Owing to a conflict of dates for our tournaments, as arranged at present, with race meetings and other localities and make following changes, viz.: Columbus, O., April 30 and May 1 and 2; Lafayette, Ind., May 7, 8 and 9; St. Louis, Mo., May 14, 15 and 16; Kansas City, Mo., May 21, 22 and 23; Minneapolis, Minn., May 28, 29 and 30.—THE AMERICAN SHOOTING ASSOCIATION (Limited), J. M. Taylor, Manager.

NEW HAVEN, CT.—A tournament will be held on Good Friday, April 4, by the Elm City Gun Club at New Haven. An attractive program has been arranged for the day, and a \$50 guarantee purse will be one of the prizes shot for.

THE U. S. CARTRIDGE CO.'S SHOOT.

[From Our Own Representative.]

DES MOINES, Ia., March 7.—We arrived at this thrifty and pretty little city at midnight Thursday. Snow was still falling at that hour, and on the following morning the white covering was several inches deep. The temperature rose, however, and thaw set in, and the day became mild and pleasant. The boys were taken in hand here by the big-hearted Des Moines fraternalists, and the morning passed so pleasantly that we were interested in the visit of the Iolanthe here by reason of the fact that this is Charlie Budd's home; for here, as well as everywhere else, Charlie Budd is known and respected as no other one shooter of America is known, and is a prophet full of honor in his own country. At once upon our arrival Charlie hurried off to his home and family, and we saw little of him till shooting time next day. His friends, however, thronged the car, and we were obliged to approve of the treatment accorded their Western captain during his travels. Being residents of a red hot prohibition city, they looked with curiosity at the decanter of ruby color which is kept on the Iolanthe's sideboard against a case of sickness, and many of the Des Moines produced physician's prescriptions advising the use of Spts. fl., and freely off-red Robert, the head porter, a premium on drugs' list, and would fill him sum. The being no necessity for a premium, as many of the prescriptions were filled as came to hand, and a peaceful smile suffused itself temporarily over that portion of Des Moines adjoining the Rock Island depot.

The shooting to-day was at the baseball park, down near the creek bottoms, and the grounds were very good indeed for shooting purposes, barring the glare arising from the white snow. It rained on the day of the afternoon, but in spite of the winter day a very fair crowd came out, numbering between 400 and 500 probably. The race began early, since it was announced that a team of five Des Moines gentlemen would shoot against the score made by the Eastern team in the regular championship race. Thus the day was of more than ordinary interest to our boys as well as to the spectators. Of course, the local men got beaten—that is, as far as the score is concerned, the nature of the shot during the trip, but the way they led out rather scared our folks at first, although in the long race the heavier averages of the touring shooters began to tell and won the victory with much to spare.

To-day the East and West shot for the six yearly subscriptions to FOREST AND STREAM offered by this paper, and these were secured by the desire of the Editor, who seems to have a mortgage on every thing of the sort that comes up. This puts the East five matches ahead. In the total number of birds shot at (3,800) by the Eastern team, 3,255 have been broken, giving a team average of 85.4. Out of the same number the West have broken 3,242, at an average of 85.1. There is a difference of only 13 birds between the two teams, and these 13 cover the five victories of the East. That is certainly pretty close shooting. There was only a 4 birds difference to-day.

Captain McMurchy put in his substitute, Mr. Fred Quimby, to shoot in W. S. Perry's place to-day. It was Fred's misfortune to strike another blinding, glaring day, but his score beats many made heretofore on both teams, and he certainly did not beat his team. Budd, of the West, seems to be gaining rapidly. He was away out of sorts when he began to-day, but he was in a good mood when he began to-day. Stice was on to 'em pretty fair. Rolla Heikes was near by. Cahoon's 81 was thankfully received by the Western team. It is thought he is gaining a little. There is no earthly hope for the West, unless he gains materially and rapidly, for there are three men on the Eastern team trotting mighty high in the 90 class, and another following close, while so much cannot be said for the West. The race to-day belonged to the West, so far as good and carefully weighed indications go. Rolla Heikes ought to have got about one more bird, anyhow, and Ruble ought to have got three or four more, on his average, and that would have tied or won the race.

On the East, McMurchy shot finely, and so did his three regular men. It should be borne in mind that when the beautiful Clabrough & Golcher trophy (won at San Francisco by the Eastern team) was presented to the Eastern team, it was by the donors that it should be won individually by the shooter of the winning team who made the best average in the four shoots next following. These shoots were Sacramento, Salt Lake City, Denver and Omaha, and on these four shoots Wolstencroft and Whitney were a tie. It was decided to shoot off this tie in the next four regular shoots, of which, therefore, Des Moines would be the first. It will be remembered that McMurchy did not shoot at Denver, so one shoot was gun, and he counted on Des Moines shoot as his fourth. If he had made 38 instead of 37 he would also have been in the tie. As it is he now falls out. Wolstencroft and Whitney have, then, three races to shoot, and Wolstencroft is one bird ahead for the trophy.

Mr. Dimick refereed to-day; Mr. A. C. Miller, of Des Moines, pulled. Following is the score, regular race, 30 single bluebirds and 5 pairs:

Eastern Team.

In the evening the members of the traveling party were the guests of the Des Moines Gun Club, who had prepared at the Kirkwood House an elegant and tasteful banquet, which was served at 8 o'clock. The appointments were admirable in every regard, and the conversation was of the most pleasant and agreeable. The boys that they beg to have it appended, and it is given below:

Complimentary Banquet tendered U. S. Cartridge Co. by Des Moines Gun Club.

Blue Points.		Blue Points.	
Tomato, aux Croutons.	Consommé, à la Royal.	Olives.	
Lettuce.	Baked Lake Trout, Herb Sauce.	Ox Tongue, Sauce Tomat.	
Chicken, Oyster Sauce.	Baked Mashed Potatoes.	Spinach.	
Horseradish.	Pickles.	Beets.	
Roast Beef.	Leg of Lamb.	Ham, Wine Sauce.	
French Peas.	Brown Sweet Potatoes.	Prairie Chicken, Currant Jelly.	
Chicken Salad.	Asparagus.	Punch, à la Roman.	
Fancy Cake.	Vanilla Ice Cream.	Shrimp Salad.	
Oranges.	Crackers with Cheese.	Shrimp Salad.	
	Bananas.	Apples.	
	Coffee.		

Following the cigars, Mr. Nelson Royal, chairman of the board, made a felicitous little speech of welcome, which was carried along by Mr. W. L. Reed, of Des Moines, to further his purpose therein, which the latter did with taste and good feeling. Mr. Dimick replied tersely and neatly, explaining the purposes of the trip and the method of its conception and carrying out. His remarks were received with applause. Mr. G. E. Converse was called upon and spoke briefly and well, and the chair then called upon Mr. W. Fred Quimby, who is generally known as the "big" one, and who convulsed his audience as usual, and then sat down in Jim Stice's lap, musing up the corner of Jim's pink silk handkerchief, which he always leaves sticking out of his pocket on Sunday occasions like this. Mr. Chan. Smith (better known as the grapevine of the club) was then asked to respond to the toast, "The Coon." (A very fine specimen of a coon was presented to Mr. Dimick by W. Smith, and has been duly installed as Mr. Dimick's pet coon of poor Tex in the mascot business.) Mr. Smith thought the coon ought to be given to the Western team, as it might change their luck to have a mascot of that sort. Dr. M. Thornton, Mr. E. Taylor and Mr. A. J. Zwart all added happy remarks, and FOREST AND STREAM was called upon to declare whether or not the teams were always as sober as they had been in Des Moines. In this connection it should be said publicly that the conduct of this menagerie is really remarkably praiseworthy. Poker chips are not legal tender on the car; nothing stronger than the Youth's Companion is allowed to be read, and Mr. Dimick has even established a "swear box," into which every man who says a "cuss word" is forced to drop a dime. This savings bank is gradually monopolizing the capital of the crowd.

It was late when the party finally adjourned, and far past midnight when the Iolanthe finally became quiet. Before this the boys had bade farewell to the hearty and courteous sportsmen of Des Moines, for the start was to be made before business hours on the following morning.

En Route, Iowa, March 8.—We pulled out of Des Moines at 6:30 A. M. and are now speeding through a snow-laden landscape toward Kansas City to meet on Monday next the victorious legions returning from Chicago with the laurels of that hard-fought field. The boys are not scared yet, and Kansas City will see a shooting match if she beats the U. S. teams. Charlie Budd remains behind with his family for a day, but will join the party Mr. Tucker, who left the car at Omaha on Thursday and went on to Davenport, which is his home, spending a few days with his family.

Kansas City, March 8, 9:30 P. M.—We are at the gala city of the West, and the boys have scattered for a stroll. There has come to the car from the express office a box from Omaha, which contains a present to Mr. Dimick from some Omaha friend, whose name at this writing is unknown. At 9 o'clock to-morrow morning there will be a reception committee at the car to begin the hostilities at this city.

March 9.—At 9 o'clock in the morning the Iolanthe was invaded by a friendly army of Kansas City shooters, whose names included the names of the boys who were present on the trip. The latter had not yet been home, but stepped from their train and hunted up the car of the tourists. The following gentlemen were present: Messrs. D. Underwood, J. E. Riley, J. K. Guinotte, J. A. R. Elliott, J. H. McGee, Jas. Whitfield, Louis Kunz, Ed. Cadman, W. B. Cosby, Ed. Hickman, A. E. Thomas, Geo. B. Orr, L. H. Vories, Jos. Underwood, Sam Underwood, N. H. Vincent, J. Schmelzer, W. T. Tucker, J. E. Smith, E. F. Stice, F. E. Stice, F. E. Stice, F. E. Stice, Fred Allan, Ed. Bingham, J. P. Callahan, Geo. Youmans, W. B. Twitchell, Frank H. Kump, W. Anderson, C. F. Holmes, C. R. Lockridge, F. Barrett, Col. J. T. Crisp, Geo. Schraeder.

Speeches of welcome were responded to by Mr. Dimick, who said that if he could now only beat Kansas City and Chicago he would be willing to walk back to Boston. The members of the teams were then presented with a set of scores of the trip, in the form of a lithographed programme, inscribed upon the front "Welcome to the East and West Champions." The programme was indited as follows within:

First page: "The sportsmen of Kansas City would be pleased to receive the East and West Champions as their guests at their car at 9 o'clock Monday morning, for a drive and sight seeing, returning at 12 o'clock in the afternoon." Monday evening, the boys desire to meet you again, as a body, at 7:30 P. M., to attend a performance to be given at the Coates' Opera House." Third page: "Tuesday, P. M., a live bird contest between the Champions and ten representative trap shots of Kansas City has been arranged for 1 P. M. conditions 15 live birds per man for a handsome silver trophy, offered by J. F. Schmelzer & Sons." Fourth page: "The programme of the trip was from Union depot to Omaha, with C. E. Cahoon and W. S. Perry; fifth carriage, Mr. Ed. N. H. Vincent, with R. O. Heikes and H. B. Whitney; the seventh carriage was to have been occupied by Captains McMurchy and Budd, but the former was confined at home by a severe attack of rheumatism and the latter had not yet arrived from his visit in Des Moines. The eighth carriage was occupied by Capt. W. B. Barnett and the ninth by Capt. Rolla Heikes. On the tenth to Grandview and south on Seventh to Penn street, thence on Tenth to Summit, overlooking the grand scene presented from the river bluff, thence to Jefferson, Fourteenth and Broadway, east on Fourteenth to Main, south to Fifteenth, east to Frost avenue, south to Springfield, thence to Ninth and west to Grand avenue, thence south to Eleventh, thence on Eleventh to Fourth, west to Wyandotte and the street to the Iolanthe to Fourth, west to Grandview and 6 links, as per the field notes." After a hurried lunch, the boys took the green car to Elliott's Park, nearly floundering in the fathomless mud, which hedges that sidewalkless neighborhood on a rainy day. The attendance was very fair, in view of the abominable weather, about 300 being present. The weather remained cloudy, but no rain fell.

The scores to-day were high for the most part. The work of this day was a necessity from the nature of the ground, which slopes very sharply back and to the left of the traps. What with the high angle, erratic pulling and careless trapping, the flight of the birds was picturesque and exciting at times to an extent which would have caused a copy of the new American rules to blush with shame. Mr. Dimick is again down with the rheumatism, and Mr. Quimby took his place. Fred is not in practice, and it is hardly fair to ask him to shoot full scores under the circumstances. The West showed the East under to-day. Budd dusted his last double hard enough, many thought, to give him 40 straight. Stice did no better on his seventh double, but a vigorous kick in time saved him his bird and his shot. Rolla Heikes, on the other hand, the boys can't get the start of his 40 all right. "Cooney the Box" wasn't hit. On the East nothing extra was done. Wolstencroft to-night leads Whitney one bird with the two shoots to go on the Clabrough & Golcher trophy. Mr. Dimick refereed, regular race, 30 single bluebirds and 5 pairs. Score:

miles.3. At a hurried lunch, the boys took the green car to Elliott's Park, nearly floundering in the fathomless mud, which hedges that sidewalkless neighborhood on a rainy day. The attendant was very fair, in view of the abominable weather, about 300 being present. The weather revealed the birds, but the birds were not so good as the scores to date are high for the nest part, but much of this is due to the fact that the birds were thrown very high. This was a necessity from the nature of the ground, which slopes very sharply back and to the left of the traps. What with the high angle, the high wind, and the high clouds, the birds were not so good as the picture was and exciting at times to an extent which would have caused a copy of the new American rules to blush with shame.

McMurcay is again down with the rheumatism, and Mr. Quimby is again down with the rheumatism,

The lead of the East is now cut down to four races. The West is far ahead in number of birds smashed. To-night the pleasant little theatre party was carried out as per programme. It is worthy of record that this is the only city offering the tourists a regular printed programme of entertainment, or such other good things as those already named.

On Monday our folks will join issues with the triumphant team from the Chicago battle. This is the event of the trip. The shoot will be at Mr. Elliott's sidehill, the same grounds that Bob White bathed with his perspiration on the day when Elliott gave him 25 and won the 100 bird race. If the teams shoot their California tag to-morrow they will win. It is doubtful if 130 out of 150 is made by either team. So much for a guess.

En Route, Wisconsin, March 11, 8 P. M.—We are leaving Kansas City and are on the way to St. Paul. There is no roof on the Iolanthe now. Things are pulled wide open, and we are running under no limit but the blue sky. If anybody on this car wants anything, and it isn't on the car, the train is stopped and Mr. Dimick gets it.

now clap hands and whoop it up over the victory achieved against the common foe. All race lines are obliterated, and only one incident has occurred to mar the bliss of perfect harmony. Capt. Budd thought Johnnie Ruble ought to kiss Jimmie Stice, to show that they were perfect friends again, but Johnnie said he'd die first, and Jimmie said he'd kill him if he did, so the penalty was commuted to shaking hands.

Until this shoot, the two teams had been successful in every contest offered them by local shooters, whether in individual or team races, and whether at targets or live birds. They had done this under Mr. Dimick's offer at certain towns to pay a stated sum for a score equal to that of the man or men he would name. The great California match was a friendly race, and it was known that the Kansas City match was to be shot in just the same way. But even after winning in the California contest, the teams, confident as they were in themselves, had a very wholesome respect and perhaps a little fear for the Kansas City boys, whom they knew to be in constant practice at live-bird shooting, while they themselves had had really little or no practice during the tour, and while a few of them did not claim to be live-bird shots at all. This respect was much increased when the result of the great Kansas City-Chicago match was learned, and such was the fame of the Kansas City team that some of our boys felt that all they could do would be to take their defeat gracefully and cut down the odds as closely as possible. It was even suggested that the least Kansas City could do would be to exchange race for race, and shoot a test match to settle the matter of live-bird shooting. Very well, Kansas City didn't shoot the target race. She shot a live-bird race, choosing her own conditions throughout, and even making it a 10-bird race instead of 15, which latter would have thrown a larger per cent. in favor of the visitors, who were strangers to the peculiarities of grounds with which the Kansas City shooters were familiar. On her own terms and on her own ground, Kansas City made it a very hard race, and left her no loopholes of escape.

Mr. Hickman, one of the team that won against Chicago, was shot on the team to-day, and the Kansas City folks said a word or two about this. But even supposing Mr. Hickman had killed his ten straight, the race would have been lost by three birds. Mr. Hickman did not lose the race for Kansas City. It was the steady, unflinching, and unflinching of the team that gave the victory to her, and other explanations would not be in order if offered. They were not offered, however. Kansas City took her defeat with the best of grace, and her team gave three hearty cheers for the victors, which were returned with equal heartiness by the visitors, already so much her debtors in the way of hospitality and continuous courtesy extended throughout the two days' stay at the great Gate City. Just what it was that gave the victory to the U. S. teams would be hard to say. The race was shot in two squads, and in the first squad the Kansas City men had it just the better of it in the birds. In the last squad it was just the other way. It was not all luck, therefore. Upon the other hand it would be folly to think that these two teams have all the shooting ability in the country, and in a return match under the same conditions Kansas City might give them a better shot. There is something in the fellowship, the inter-confidence, the esprit de corps of these two teams that make them very hard to beat. They can be relied upon to be quick and steady, and to shoot their best closely clear to the end of any sort of a match. They won't "go to pieces" if the odds are against them. In the last squad of Kansas City's team there was just the first suspicion of demoralization, and the first suspicion of demoralization was found to have come out the better in the little flurry of exchanging misses, which took place in the second half of the race.

But it becomes any one on this car to say the first word of criticism, or indeed of analysis, about the shooting of the Kansas City team. They shot a screaming hot race, and the plain truth is that their opponents are already glad they are out of it. Next to every man on the teams is saying to-night that luck is with this crowd, and it was never so lucky as it was to-day. Mr. Dimick is certainly to be congratulated on his luck and on his teams. There will never be another team got up which will win the victories these men have won on a circuit taking in the whole country in this way.

Most of the grounds of FOREST AND STREAM know the nature of the grounds at Elliott's Park. They lie on a sharp sidehill. The traps and club house lie pretty well down toward the foot of the hill. The pigeon coops and sheds are directly on top of the hill, and many of the birds make for the coops either direct or on a quick curve, offering a very rapidly rising shot. Between the gate and the terminus of the cable line there lies, in weather such as has been met to-day, a varying and a very treacherous ground, one of the most abominable and absolutely boundless and beastly mud that ever lay out on the face of earth. If Mr. Elliott would build a suspension bridge, establish a line of balloons, or even supply adventurers in that country with serviceable life preservers, he would confer a boon upon suffering humanity that would deserve to be spelled with a big B. No one knows how many persons are in the habit of visiting the grounds of the U. S. team, counting only those who got across, and didn't save a half dollar by peeping over the fence from the opposite hill, there must have been 500 or 600 people within the gates at 1:30, at about which time the match began. The spectators were favored after all by the weather, for no rain fell from the cloudy sky, and the day was a good one for shooting.

Mr. R. B. O'Connell, who was in town on his way to California, where he and his wife will make a short visit, was at once pounced upon for a referee, and fulfilled the duties of that position as no one else could have done better, embellishing his decisions with that rich flow of language which has made him famous. The match was shot under the revised American rules, mutual agreement having been made in advance in regard to the construction of the traps, and the gathering of the traps was in the shape of a memorandum of objection of any sort. The match was one between gentlemen, and nothing marred its pleasantness in any way.

The birds were above an average lot, and were on the whole a harder lot than those shot in the California match. In the last few birds of the first squad there were a few weak and slow ones, but there were not many. The last 100 were nearly all prompt starters, and very few duffers among them.

The match was of interest in one regard especially; it was one of American guns against English, and of American ammunition against English. With one exception—that of Mr. Riley, who usually shoots a Greener—all the guns used by the Kansas City men were Greeners. (On the night before, at the opera, Mr. Tucker was observed to be talking earnestly with the U. S. team, and he had him bound with the baleful spell of his glittering eyes. It is thought that he sold Mr. Riley that Parker gun right there, in spite of the counter attractions of a soulful ballet and of the warbling of Jessie Bartlett Davis and Marie Stone of the "Bostonians.") The Kansas City team used for the most part the Kynoch shells. In the haste to catch the train after the close of the shoot it became impossible to get a table of the results used by the Kansas City team, but it is very near correct to say that they all shot Schultze powder, in both barrels, and that their shells were a special lot ordered from VonLunzerke & Detmold, of New York. The full tables of loads for the U. S. team is given below the score. It goes without saying that they all used the Climax shell of the U. S. Company, and it will be seen that they all shot the Climax shell. Score, 10 live birds per man, new American rules. Referee, R. B. O'Connell; official scorer, FOREST AND STREAM.

Dead out of bounds. Mr. Budd captured the East and West team; Mr. J. H. McGee, not shooting, captured Kansas City.

Following are the loads and the methods of loading employed by the members of the East and West team:

H. McMurchy, right barrel, 34s. American wood (12-bore trap), 14s. No. 10 Chicago shot, 34s. Wadding, one 12-gauge and three 11-gauge black edge on powder, 12-gauge card on shot. Left barrel, 34s. Laffin & Rand FFGF, 14s. No. 1, chilled. W. H. Wolstencroft, both barrels, 34s. Schultze, 14s. Clinch.

nates, chilled. Mr. Wolstencroft loads his own Schultze shells always, and uses on the powder one 12-gauge card and two 11-gauge black edge. He sends the wads lightly, using no pressure, and declares he can load his shells with his finger for a rammer. This is the load with which he has done all his target shooting of the tour. He usually shoots 34drs. No. 7s in left barrel at live birds.

W. E. Perry: Left barrel (used first) shells loaded by Selby Smeltz and Lead Co., of San Francisco, 4drs. of Schultze, with 10-gauge card and three 9-gauge black-edge, powder not rammed but loaded light, 14oz. Selby No. 8 chilled. Right barrel 4drs. American Rifle Cartridge, No. 4 grain, three 9-gauge black-edge wads, 14oz No. 7 Tatham chilled.

W. S. Perry: Right barrel, 34drs. Schultze, 3 black-edge No. 11 wads, powder loaded light and not rammed, 14oz No. 7 Tatham soft. Left barrel, 34 Laffin & Rand FFG, card and 3 black-edge No. 11, 14oz No. 7 Tatham soft.

H. B. Whitney: Right barrel, Selby load, same as that of W. E. Perry's first barrel. Left barrel, 34drs. L. & R. FFG, one 10-gauge card, three 9-gauge pink-edge, 14oz. No. 7 Tatham soft.

WEST.

C. W. Budd: Right barrel, 34drs. American Wood, "12-bore trap," one 12-gauge card and three 11-gauge black-edge, powder loaded loose and not rammed hard, 14oz. No. 7 Chicago chilled. Mr. Budd uses this load also in his left barrel, and it was this load that Mr. McMurphy used in his right barrel.

J. R. Stice: Right and left barrels same, shells loaded by M. F. Lindsay, of the American Wood Powder Co., 34drs. "12-bore trap," one 12-gauge card and three 11-gauge black-edge, 14oz. Tatham Trap No. 7, chilled. (Pressure on powder is not known.)

R. O. Heikes: Right barrel, see right barrel of W. S. Perry, who shot shells loaded by Mr. Heikes. Left barrel, 34drs. Laffin & Rand, 14oz. No. 7 New York soft.

J. A. Ruble: Right barrel, 34drs. American wood, "12-bore trap," one 12-gauge card, three 11-gauge black edge wads, 14oz No. 7 Chicago soft. Mr. Ruble uses heavy pressure on the wood powder. Left barrel, 34drs. FFG Laffin & Rand, card and two black edge, 14oz No. 7 Chicago soft.

S. A. Tucker: Right barrel, Selby load, same as first barrel load described for W. E. Perry. Left barrel, 34 FFG Dupont, one card 10-gauge, three black edge 9-gauge, 14oz. No. 7 Chicago soft.

In the above race the different styles of shooting were to be observed. The Kansas City team is hard after the "quick second" business. This is often very taking "grand stand" work, and it takes the birds if the second happens to be pointed right. Mr. Riley did pretty work at this, but on three different birds missed altogether with his second. On his last bird he also went "spat-spat!" but right when he needed his second he wasn't on, and the bird went off. Elliott shot very nicely, and kept up the big reputation he has lately been making. Karl Guttmann used his second so much because, probably, he was hot under the collar. He certainly did not need it so much. The quick second seems to be the Kansas City theory. The East and West teams were much more deliberate, but equally good. Heikes graced a big slate-colored bird, probably the swiftest bird that was trapped, with a 45yd. second on the right quarry. McMurphy caught a screamer with his second at nearly 50yds., after everybody had bid it good-by. Ruble also got a long driver with his second. Ruble's first barrel is of no apparent use to him. Whitney lost his bird, a walker, through bad judgment in not calling for another bird. Stice lost his by not shooting it severely enough in its anatomy. Wolstencroft snapped at his first bird, and it went off very serenely. Budd is shooting live birds something the way he used to, and that is enough to say about Charlie. Tucker shot a remarkably clean, swift gait, quite different from his work on targets. W. S. Perry had not shot live birds for years, but proved fears for him groundless. His style of shooting is much better for live birds than for targets.

The victory to-day added another to the beautiful trophies now on board the Iolanthe. Messrs. J. F. Schmelzer & Sons, sporting

put in a good deal of time at figuring of averages, some results of which may be seen below in the table of individual averages, which includes twenty shots, counting Kansas City:

	1. Wolstencroft, average.....	92% per cent.
2. Stice, ".....	92	"
3. Whitney, ".....	90 28	"
4. McMurphy, ".....	90 12	"
5. Heikes, ".....	89 12	"
6. Budd, ".....	89	"
7. W. E. Perry, ".....	86 34	"
8. Ruble, ".....	86 14	"
9. Cahoon, ".....	74 38	"
10. W. S. Perry, ".....	72 28	"

Wolstencroft is only 5 birds ahead of Stice. Stice is top man on the doubles. Heikes is only 1 bird ahead of Budd. It may be interesting to note that in two live-bird races, California and Kansas City, nine men, namely, Budd, McMurphy, Wolstencroft, Stice, W. E. Perry, Heikes, Ruble, Whitney and Tucker, have only lost 13 birds out of 125 they shot at. That is very strong team shooting indeed.

A trifle further in the way of statistics has developed the following facts as to the age and weight of the different members of this party, and the appended table may be of interest to the curious:

Eastern Team.			Western Team.		
	Age, years.	Weight, pounds.		Age, years.	Weight, pounds.
McMurphy.....	38	183	Budd.....	30	187
Wolstencroft.....	27	159	Stice.....	37	208
W. E. Perry.....	40	189	Heikes.....	41	130
W. S. Perry.....	40	155	Cahoon.....	41	180
Whitney.....	21	150	Ruble.....	30	220
Quimby.....	38	178	Tucker.....	42	209
	202	1010		219	1195

Thus it will be seen that the Western team is older and heavier than the Eastern. It may be seen also that Mr. Dimick is carrying along 2,205lbs.—more than a ton—of live stock on this trip. Mr. Dimick himself is 31 years old and weighs 200lbs. ordinarily. Since yesterday he weighs a little over 1,500.

Further statistics show us that the man with the largest foot is either Tucker or Jim Stice. The hungriest man is either Ruble or Mitchell, the property man. The wisest man (for the one that knows the most) is either Tucker, W. S. Perry or Mitchell. Mr. Horace Briggs, of San Francisco, said during our visit to that city that no man on earth ever did or could know as much as Mitchell look d as if he knew. The fattest man is Tucker and the leanest W. S. Perry. The crossiest man didn't come along, and the best-natured man is everybody, as near as can be determined.

Minnesota, 5 P. M.—Mr. Dimick is just in receipt of the following telegram from St. Paul, which city we are now approaching: "Mr. F. D. Ponsonby, president St. Paul Gun Club, says his club desires to entertain your party at the theater to-night, and will you be pleased to join them. If so, get through with your supper before reaching here. Answer.—E. A. WHITAKER."

St. Paul and Minneapolis, Minn., March 13.—The teams were handsomely entertained last night in the theater party planned by the St. Paul Gun Club and announced in the message of yesterday. Festivities of one sort and another were prolonged until late in the dark, and some of the party having friends near whom they wished to visit before morning found the party somewhat scattered. Later in the morning the boys began to make their way out to the shooting grounds, and by noon the Iolanthe was left over to the tender mercies of the Pullman car cleaners, who

The least said about this score the better. It is probable that by this time readers of FOREST AND STREAM have given up all attempts at predicting, prophesying and explaining anything in regard to these matches. You can't tell much about it. The only thing to be said for anybody to-day is for McMurphy, who is a sick man and still afflicted with rheumatism. Wolstencroft and Whitney are a tie to-night for the Chabrough & Golcher trophy. Stice fell down to 33 and we never speak as we pass by now. A few more such breaks as to-day's work and the whole car will be in mourning. The East is again five races ahead.

We pull out at 6:30 this evening for Milwaukee. At this writing the car is crowded with visitors. Many very pleasant acquaintanceships have been formed here and now comes the constant regret of saying good-by to them. If only the Iolanthe were big enough to take them all along. We would have half of shooting America at Boston a couple of weeks from now.

These two cities—practically only one in features and in interests, and without doubt bound to be municipally one in no remote future—are one of the unique features in the civilization of this country. They have shown to the world how much the tremendous latent powers of the West can do and how much can be done. Their rapid development has brought wealth and energy here in abundance, and where those factors are present we always find what is known, for want of a better phrase, a "good sporting town." These two cities are of high rank in all genuine sportsmanlike features, and are full of gentlemen who are sportsmen. The sportsman of the West would find no better proof of this than lies in the hold FOREST AND STREAM and the sportsman communities. The old paper is very generally known and admired here, and it is common knowledge that FOREST AND STREAM finds its readers among the very best.

As we shoot every day now and usually start out early the same evening, the time available for writing is necessarily very short. It is sometimes impossible to write to any great extent, but it is in motion at night. The only regret about reporting the trip is the fear that something of the constantly occurring interesting events will be left out, or that sufficient mention and credit may not be given to the unending brotherhood of sportsmen who have made this trip so memorable to every member of the party. But we must leave the sports cities with this.

To-night the wicked Eastern men are propounding a toast which runs somewhat as follows: "No East, no West, to-night! It's all East!"

Milwaukee, Wis., March 14.—The fast mail over the Milwaukee road rushed the party into this city early in the morning. Breakfast was ordered for an early hour, and at 9 o'clock the boys were taken in charge by the reception committee of Milwaukee sportsmen, made up largely from the South Side Gun Club, the main organization of this city. The first number on the programme was a carriage drive through the city, in which the main points of interest were visited, including some of the mammoth temples of Gambrinus, for which this burg is somewhat celebrated. An elaborate lunch was served at midday at the Schlitz hotel, and about this time the hosts and guests gathered at a late start for the shooting grounds was necessitated. Mr. Tucker's plans required his presence in Chicago, and therefore took an afternoon train down, leaving the teams to the management of his able lieutenants. The gentlemen of the South Side Club conveyed the party to the grounds in carriages, and left nothing undone to insure their comfort.

The grounds to-day were those of the South Side Club at National Park, and presided over by the jovial old gentleman, Mr. F. G. C. Brand, well known to all the attenders of the past South Side tournaments. By 2 P. M. a jolly crowd, numbering perhaps 250 to 300 persons, had gathered, all of whom were glad to avail themselves of the hardworking stove in the comfortable and spacious club house. This club house has been illustrated in the FOREST AND STREAM in the course of the report of the last South Side meet, and among the friends of the past South Side meet were to be seen to-day Mr. Holz, Mr. Milbranth, Mr. Manu, Mr. Meunier, Mr. Friese, Mr. Stannard and very many others. Numbers of shooters were present from adjacent cities, Madison, Waukesha, Janesville, etc.

The traps were set directly in front of the club house, and when not called to the score the boys lugged the stove, for the weather was extremely cold, the thermometer ranging well below zero and a driving snow blizzard blowing part of the time. Under such circumstances shooting was an uncomfortable business, and those whose duties kept them out to the wind until the close of the match were chilled through and nearly frozen. The traps were crowded down low, the birds being barely over the lowest limit of the rules. This made the work very difficult, especially in the doubles. The ground in front of the traps was covered with a glare of smooth ice.

A local team of five gentlemen shot in with the teams in friendly competition, and Mr. Stannard, who headed the list for that team, also shot in a similar manner against the score to be made by Mr. Stice of the Western team. The local team failed to equal the score of either team, but Mr. Stannard made the top score of the shoot, and for the first time on the trip showed the boys a man who could tie or beat them at any kind of a shooting game. Mr. Stannard's score is given at 39, but should really be 38, the referee by mistake giving him the last bird in his doubles, which he did not break. Nothing should be said in the least derogatory to Mr. Stannard's shooting, however, for it was well high perfect, and equal to any he has ever made. The same score under favorable conditions. The result of this little interesting episode was received with tumultuous delight by the Milwaukee boys, who thereupon wished to back their man against any one man of the teams. There are five or six men, or may be ten, on the teams who would probably accommodate the Milwaukee boys in a matter of that sort, no matter who the shooter was, under ordinary circumstances. The weather was too cold and late this evening to think of further shooting, it being by this time 3 o'clock and 4 P. M. Mr. A. W. Friese acted as referee, Mr. Quimby and Mr. Tucker alternating at the pulling-stand in periods of semi-frozenness. Score, 30 single bluebirds and 5 pairs:

Immediately upon the conclusion of the shoot, the half-frozen crowd adjourned to the hotel at the top of the hill, where, at about 8 o'clock in the evening, an elaborate and elegant affair was spread, given in honor of the teams by their hosts and entertainers, the gentlemen of the South Side Club. Toasts, speeches and all the other good things of like occasions were enjoyed, and the festivities were prolonged until a late hour. In this, as in all other examinations of their careful conduct and courtesy here, the members of this large and large-hearted organization were fully gratified and heartily upon their success as entertainers. They are due them right thing in the right place every time, and thank you are due them from each and every man of the teams.

In view of the royal welcome accorded the boys here, it is to be regretted that they gave no better an exhibition; but, after all, the only wonder is that they did as well as they did, for the hours they have kept lately would kill a horse. They are due to go into the details of the race, or to explain why or how the West shot better in the singles than in the doubles. The East in the doubles out down a lead of three birds and went out three ahead. The West has been very generally called by the beautiful Chabrough & Golcher trophy, of which mention has from time to time been made. As will be seen by the score, Whitney came out ahead by three birds, "Woolsen," for some reason or other, happening to strike a bad break, and the "Little Cuss," as Whitney is com- better favored of the sickle goddess.

11 P. M.—The name of this car ought to be changed to "High-ol-an-the." The boys have just got in and they and their friends are raising Cain. Jim Stice has gone to bed, but it looks as if he would have to get up and play the fiddle. Everything goes. At 8:45 in the morning the fast mail takes us down to Chicago. We

goods dealers of Kansas City, had prepared an elegant prize for the winners of this race, in the form of an elaborately finished oxidized silver cigar case, 10x14in. in size and 10in. high. The lid of this case bears a cut has been duly forwarded to FOREST AND STREAM, which will show the trophy better than description. To-night after dinner, by request of Captains Budd and McMurphy, Rev. Fred Quimby presented this trophy in the name of the team to Mr. Dimick, making a neat speech, to which the latter replied by saying that when he and these teams parted, it would be to meet again.

PRESENTED BY
J. F. SCHMELZER & SONS,
March 11th, 1890—Kansas City, Mo.

Upon the opposite lid is the following:

KANSAS CITY
VS.
U. S. CARTRIDGE CO. TEAM.

The frame of the case is surrounded by a richly-chased frieze of floral and sporting design. The entire trophy is elaborate and worthy of the donors. A cut has been duly forwarded to FOREST AND STREAM, which will show the trophy better than description. To-night after dinner, by request of Captains Budd and McMurphy, Rev. Fred Quimby presented this trophy in the name of the team to Mr. Dimick, making a neat speech, to which the latter replied by saying that when he and these teams parted, it would be to meet again.

This race was full of interest, and scanty as space is in the itinerary of so long a tour, it would be pleasant to describe it more fully if one dared. But as we had to leave Kansas City and all its royal good fellows, good-by to them and their hard-fought battle. FOREST AND STREAM should not do this without acknowledging many courtesies, professional and otherwise, extended to it by Mr. James Whitfield, editor of that vigorous young sister journal, the Referee. Mr. Whitfield assisted largely in the planning and execution of the organized hospitality of this city.

At 9:15 we reached Cameron Junction, Mo., and were there boarded by Mr. "Yank" Watson, President of the Missouri State Fish and Game Protective Association. Mr. Watson congratulated the boys heartily on their victory, but it must be confessed he looked a little sad as he gazed at the beautiful trophy they were taking out of Missouri with them. But that is just the way it will be with any other trophies put up. There is a mascot on the Iolanthe, and it's no rare to shoot against luck.

Just what the mascot is no one knows. It may be the remains of our beloved Tex, now re-stuffed and looking much better; it may be the big cat, which we now know was sent on by Mr. Evans, of Salt Lake City, being one he killed in the city limits; or it may be the new pet, "Nellie Coon," who now rules the car. Whatever it is, let all local teams beware of it.

En Route, Iowa, March 13.—The boys are beginning to quiet down from the high old time of last night. To-day, by request, Mr. Ruble sang his celebrated song, "Castles in the Air." Then the wicked crowd all got up and went out into the other end of the car. They don't seem to be more than half appreciate each other, sometimes, on this car. Barring more serious work, the gang has

J. B. Baldwin. Regular prize shoots of the club, the first and third Tuesday in each month, at their grounds at head of High street, at 8 P. M.—A. W. DUNHAM, Sec'y.

SEAWANHAKA CORINTHIAN Y. C.

THE following circular has been sent out, giving notice of an unusually complete series of spring races, the fortunes coming in for a generous allowance, as the size and importance of the class deserves:

Races will be open to yachts of the Atlantic, Beverly, Corinthian of Marblehead, Corinthian of New York, Massachusetts, Eastern, Knickerbocker, Larchmont, New Haven, New York and Oyster Bay yacht clubs and Royal Nova Scotia Y. S., and will be governed by the racing rules and time allowances, and under the direction of the race committee of the Seawanhaka Corinthian Y. C. There will be three days of racing, namely: Thursday, June 5.—Special race for the 40ft. class of sloops, cutters and yawls. To be sailed over the regular club course for that class. For this race the club offers a cup of the value of \$200, and if five boats start, a second prize of the value of \$100.

Saturday, June 21.—The annual Corinthian race for all classes. To be sailed over the regular club course. In addition to the regular class prizes offered by the club, the Leland challenge cup, open for competition to members of the club only, is put up for contest in the 40ft. class, and the club, in accordance with the terms attaching to the cup, will give a special prize to the winner. A prize of the value of \$50 is offered by Com. Robert Center to the helmsman of the schooner, sloop or cutter, irrespective of class, making the best time for the Scotland Lighthouse course, schooners to receive their allowance for rig. A special prize of the value of \$50 is offered by Mr. W. B. Ogden in the 30ft. class. As usual individual prizes will be given to the Corinthian members of crews on winning yachts.

Monday, June 23.—A special race for the 40ft. class and 30ft. class. To be sailed over the regular club course for the stated class. The prizes, which are a silver cup, entrance fee \$25 each for the 40ft. class and \$15 for the 30ft. class, will be given to the boats start the second boat in that class will save her entrance money. In addition the cup given last year by Mr. Royal Phelps Carroll and won by him with Gorilla and re-donated to the club is offered in the 40ft. class. A special cup of the value of \$50 is offered by Mr. Wm. Whitlock in the 30ft. class. In the races of June 5 and 23 the rule as to being manned by Corinthian crews will be waived, except in the case of the 30ft. class, which must be an amateur. The rule prohibiting the use of clubtopsails will also be waived.

Leland challenge cup.—Contests for the possession of this cup are open only to members of the Seawanhaka Corinthian Y. C. Under the rules attached to the cup it is to be held subject to challenge during the yachting season in the class in which it is first won in each year, and the winner in each contest will be given a prize by the club. The winner of three successive races in the same season will be entitled to hold it for the remainder of that season, not subject to challenge. Wm. B. Simonds, chairman, 18 South William street; Walter C. Kerr, M. M. Howland, J. Langdon Ward, Wm. A. Haines, Race committee, S. C. Y. C.

THE NEW FIFE CUTTER.

THE drawings and specifications for the new Fife cutter for Mr. Allen Ames, of Oswego, have been received, and the contract has been given to Mr. Winttingham, at Mumm's old yard, Bay Ridge. The new yacht is a reduced Minerva in proportions and appearance, but with a few alterations. The keel is of the sternpost has a very strong rake, and the greatest depth of the keel, the line of keel running up straight to the forefoot. The specifications call for a style of construction very far ahead of anything we have yet seen in New York or Boston. Mr. Fife sent out the drawings of full size, while in the specifications almost every nail and screw is specially described. The scantling throughout is very light, but the best of material is called for, while the distribution and fastening of the parts is most carefully planned. The construction is similar to Minerva, but much lighter, as no voyage across the Atlantic is necessary in this case. The wood keel is wide, with a keelson for the main keel bolts, with additional diagonal bolts through part of the floor knees. The frames are double sawn, of natural crooks, with two intermediate bent frames between each, the planking is shingle. All fastenings are of copper or yellow metal, the only iron allowed being in the iron floors and oak keel. The room is very well divided, a good fore-cabin and galley, pantry, toilet room and w. c., then a roomy main cabin, with two lockers, two folding berths and 5ft. 9in. under beams, and then an after cabin with two fixed berths. The yacht is to be completed by the middle of May, and will then be towed to Oswego. She will be built under a shed specially erected for the purpose.

THE CHALLENGE TO VALKYRIE.

ON March 15 a letter was mailed to Lord Dunsen, owner of Valkyrie, by Fleet Captain Stephen Peabody, of the New York Y. C., inviting him on behalf of the owners of the American 70-footers, to visit America and sail a series of matches with these yachts. The gentlemen interested are Messrs. Auchincloss, owner of Katrina; Mr. C. O. Iselin, owner of Titania; Mr. J. R. Maxwell, owner of Shamrock, and Mr. J. P. Earle, owner of Gracie. In the letter the challenge is made in the following terms: "So far as the New York Y. C. is concerned, and the races, if sailed, will be similar to those between Katrina, Shamrock and Titania last year. Mr. Peabody has been busy for some time in the effort to bring about an international race, and it now remains to be seen whether Lord Dunsen is really willing to cross for a series of good races with boats of his class, unincumbered by such prohibitory legislation as now protects the America's Cup, or whether he will still insist on his rights to be unmatched and out-sailed in a contest with Volunteer. If he crosses now in answer to this challenge, it will at least dispose of the statement so generally made and believed here last year, that the objections to the new deed of gift on the part of the R. Y. S. were not founded on principle, but were made only after it was discovered that Valkyrie was to meet the America's Cup. The challenge is a consideration of the miserable tangle in which the Cup is now involved, the only hope for a satisfactory resumption of international racing lies in shelving the whole dispute and in the substitution of other prizes such as the Paine cup and those now offered by the owners of the American 70-footers.

BISCAYNE BAY Y. C. Feb. 22.—The first regatta of the season of 1890 was that the Biscayne Bay Y. C., of Biscayne, Fla., on Feb. 22. The race was 6½ miles to windward and return; the wind being fresh S.E. The summary was:

CLASS B—SLOOPS.			
Moccasin, D. T. Sweeney.....	2 54 18	2 52 58	
Glance, Capt. Hudson.....	2 57 17	2 57 17	
CLASS B—SCHOONERS.			
Nethia, T. A. Hine.....	2 51 53	2 51 52	
Presto, R. M. Munroe.....	2 58 47	2 51 54½	
CLASS C—SCHOONERS.			
Nicketti, J. De Hedoville.....	3 32 01	3 30 19	
Daisy, J. Frow.....	3 32 48	3 32 48	
Egret, R. M. Munroe.....	4 00 47	4 00 47	
CLASS D—SLOOPS AND CUTS.			
Florence W. R. Carney.....	3 54 10	3 48 35	
Trouble, Capt. Kent.....	3 54 40	3 54 40	
Volunteer, J. Peacock.....	4 14 00	4 08 25	
Pierce, L. W. Pierce.....			
Florence Rocks, Capt. Curry.....			Did not finish.
Rafaela, C. Peacock.....			

The winners were Moccasin, Nethia, Nicketti and Florence W. A dance and distribution of prizes ended the day very pleasantly.

NEW YORK Y. R. A.—A meeting of the New York Y. R. A. was held on March 14, at which Article IV. of the constitution in reference to the election of delegates was amended to as to read at the end, "And each club shall elect such delegates at its meeting in January in each year." The following sailing rules were also changed: Class 3, open sloops, 23ft. and under; Class 4, cabin cat-rigged yachts over 23ft. and under; Class 5, cabin cat-rigged yachts 23ft. and under; Class 6, open cat-rigged 17ft. and under; Class 7, 10ft. open cat-rigged, 17ft. and under. The Harlem River Y. C. announced the date for the regatta as May 30, the Hudson River Y. C. as June 9, the Pavana Y. C. as June 16, the Columbia Y. C. as June 18 and the Yonkers Corinthian Y. C. June 21. R. Pullman, J. H. Styles, G. Parkhill, E. M. Grover and T. E. Booth were appointed a committee to make arrangements for the cat-rigged regatta, which will be held on Labor Day over last year's course in New York Bay. The annual cruise of the Association will take place in July or August, and the committee of arrangements are, President Prime and Messrs. Parkhill and Pullman. The executive committee reported that the Indian Harbor Y. C. had been elected to membership, making 17 clubs now in the Association.

THISTLE.—The changes now being made in Thistle include a reduction of spars and also of weight, which will bring her down from 14 to 12½ tons, the mainmast being reduced 3ft. She will probably be sailed much nearer her designed load than when in New York country. Captain Duncan will be in command, and she will sail in the early races about the Thames.

CAPTAIN JOHN BARR.—On March 14 Captain John Barr arrived at Boston on the steamer Prussian with his family, having permanently left his home in Gourock, Scotland, to settle at Marblehead. Captain Barr first visited America in 1855, when he came out to sail Clara for Mr. Sweet. At the same time his younger brother, Charles Barr, came as one of the crew, making the passage across the Atlantic in the yacht. Next year Captain Barr made an American reputation both for himself and Clara by a long string of victories without a single defeat. The same season the Watson 1-tonner Shona was brought out by Mr. Chas. H. Tweed, and Charles Barr was installed as skipper, with his nephew, John Jr., as crew. In 1887 Captain John Barr brought Thistle across and sailed her in the international races, and in 1888 he commanded the cutter Thora in Scotch waters, doing very well in the races which she entered, as she was only a cruiser. When Clara was sold to Dr. J. C. Barron last spring Captain Barr was engaged to sail her, and was in her all the season, doing very good work, though there was little competition in the 53ft. class. When he returned home in October it was with the intention of bringing his family out this year to a snug little home that he had purchased at Marblehead. When Minerva was completed in 1888, Captain Charles Barr brought her from Fairlie, Scotland, to Marblehead, and has since commanded her. Captain John Barr will sail Clara again this year, though he has had an offer from Mr. J. S. Bell to take his old berth on Thistle for a term of two years. Clara will have a new outfit of Laphorne sails, besides new copper and a complete overhaul. Captain Barr has made many friends among American yachtsmen, and is generally admired for his sterling qualities as well as for his skill as a sailor.

DIXON KEMP.—The issue of *Invention* for Feb. 22 contains a large plate of portraits of the members of the Institution of Naval Architects, including Mr. Dixon Kemp, the well known editor of the *Field*, who is mentioned as follows: Dixon Kemp was born at Ryde, Isle of Wight, in 1839, and is the son of Mr. Edward Kemp, architect. He was educated for the same profession, but never followed it, and spent a large portion of his time in the boat saloon. In 1868 he was editor of the *Isle of Wight Observer*. In 1863 he went to London as yacht editor of the *Field*, and has been so ever since. In 1871 he went to New York in the yacht *Cambria* and Livonia with Mr. James Ashbury for the international yacht matches. In 1875, in conjunction with Count (now Prince) Bathynany, and Captain J. W. Hughes, he started the Yacht Racing Association. In 1876 he published "Yacht Designing," a mainly sentimental work, in inducing Lloyd's to start the well-known "Yacht Register." In 1878 he published "Yacht and Boat Sailing." It has already been through six editions, and the Lords of the Admiralty in 1880 ordered the book to be supplied to the libraries of the ships of the Royal Navy. It has been translated into Swedish, German and French. In 1885 he published "Yacht Architecture," which is a second and revised edition of "Yacht Designing." Besides this work Mr. Dixon Kemp followed the profession of a naval architect, and has designed a large number of steam and sailing yachts. He is also secretary of the Yacht Racing Association, and member of the Council of the Institution of Naval Architects.

LAPHORNE SAILS.—The Boston *Herold* tells the following story, the yacht in question being the new 40 for the Adams Bros. "A letter received from Laphorne, the great English sailmaker, in reply to an order for head sails, says: 'Excuse me, but I can't fill your order,' and the leading American sailmakers will now be able to have a laugh at the expense of one of our leading amateur yachtsmen, who went out to Laphorne for a set of sails for his new boat. The writer asked Mr. Laphorne why he was not to sell the silk for the Volunteer's spinaker when asked. It is evident that Laphorne does not intend to give away the fine points of his business. If Laphorne refused to make the sails for the amateur above referred to, he certainly did not refuse Mr. William Gardner, for the latter is having a suit made for the *Liris*. Laphorne, no doubt, would have made a complete suit, but evidently would not have himself making head sails. There is an advantage in having English sails the *Liris* has it over the Boston forty." Mr. Laphorne is making sails for *Liris*, *Kathleen* and *Clara*, but in each case a full outfit has been ordered. Like some of the leading American sailmakers, he refuses to make the two head sails only when the rest of the outfit is made by another maker. This composite plan of canvas was tried on a forty last year by one very crafty designer, the silk being made by Laphorne, the jibs by one American maker, and the mainsails and topsails by another. The result, it is needless to say, was unsatisfactory to all parties.

HAS NO USE FOR THE MANTLE.—FOREST AND STREAM makes an unkind fling at the Helen when it says: "Hansbee and Nymph have given up racing, and, with Helen, have wrapped the mantle of a cruiser about them. This is especially unkind when it is remembered that the Helen is the dearest of the owners, who said that if his yacht should not prove speedy 'the mantle of a cruiser' would never cover her." Nor is the New York journal correct in its assumption that the Helen has been relegated to the ranks of a cruiser. Far from it. She has been "Minervized" above and below, and next year she will fly as high as the best of them. Four feet has been cut off her ordnance aft, and the stern post has been cut down to the deck level. The deck has been lowered, and it is expected that she will come under the 40ft. class limit. Two tons and a half of lead have been taken from her inside, cast in forms to fit alongside the outside lead keel, and throughout to the old lead. These side pieces are shinned away to nothing at the top, and the thickest part of the additions is at the bottom of the keel. A brand-new suit of copper covers her entire underbody. Copper keels will have a new and longer stow with an "English" rake at a lower angle, and a longer mainboom, two feet cut off the gaff, a lighter topmast and a general lightning of top-weight throughout. A brand-new suit of sails, larger than the old ones, will complete an ensemble which FOREST AND STREAM'S "mantle of a cruiser" would be wholly inadequate to cover.—*Boston Globe*.

CORINTHIAN NAVY.—The following fixtures are announced by the Corinthian Navy: May 31, opening sail; June 28, spring regatta at New Rochelle; July 5, regatta of New York Bay Squadron; July 26, regatta of East River Squadron; July 27, regatta of Hudson River Squadron; Aug. 2 to 9, cruiser; Aug. 23, regatta of West Long Island Sound Squadron. The Staten Island Sound Squadron is now being formed, with Mr. Chas. A. Desmond, of Rahway, N. J., in charge. Com. Center's lecture on March 14 was attended by over sixty members, and it was extremely gratifying to see the interest manifested. The commodore took the boys into the primary class of seamanship, fully analyzing his lecture dealing with winds, tacks, reaching, etc.; from this the use of nautical instruments was explained, as well as chart reading and the direction of the compass. After the lecture Com. Center held an informal talk with those present, and imparted many useful hints on boating. An informal reception was given by the East River Squadron on Tuesday at Vice-Com. Day's residence. The committee on education and seamanship fully analyzed the second lecture, which will take place during the month of April. The following named gentlemen are proposed for membership: Washington Connolly, G. van A. de Vere, Charles Desmond, H. W. Desmond, R. H. Desmond, Louis Berg, Charles T. E. William Davis, Charles Davis, Alfred White, Paul E. Vallum, William C. Leiber, Joseph Fournier, George Rae.

KNICKERBOCKER Y. C. This club will hold a regatta on Decoration Day. An iron steamboat will accompany the boats. Mr. A. Morrison has sold his cat Fannie, and will purchase a larger boat. Mr. John Loebel's Marvel is being changed to a keel boat. She will meet the Nautila, Roamer and Janie on equal bottom. G. G. Tyson's Varant has joined the Y. Y. C. fleet. Mr. Harrison has commenced work on Yolande. She will be in commission early. Rear Com. Coughtry will put a cabin house and new suit of sails on Nautila. The Breeze is being rebuilt above decks to make a new house. Commodore Ralph Laing, of the S. S. Treas, Edgar Hicks, Messrs. Lewis Morris, Elmer Surge, Wm. C. Walser, M. D. Regatta Committee, E. M. Post, chairman; R. K. McMurray, Phillip C. She, R. L. Lipsett, Edgar Hicks. The date of the annual regatta will be June 28. The club has replaced its old black and yellow flag by a very striking design; a sea dragon, to coin an appropriate term, in red on a blue field.

CORINTHIAN MOSQUITO FLEET.—Proposals for membership: Messrs. W. B. Morse, L. Jacob, Jr., A. P. Oakley, J. B. Milver, Walter H. Brown, Jr., S. P. King, W. T. Lawson, J. R. Steers, Jr., all of New York.

ATRIANA.—This yacht has been towed from the Atlantic Basin to Oyster Bay where Mr. Piegras will make some alterations. The principal change will be the addition of about 9in. to the forefoot.

CRUISING.—Troquois, sloop, Rear-Com. Ellis, S. C. Y. C., arrived at New York on March 15, with owner on board after a winter cruise among the West India islands. Rambler, naphtha launch, reached Charleston on March 16 after a rough and dangerous passage, going out from New York to Norfolk. She is a cabin launch about 30ft. long, the largest naphtha launch yet built. Capt. Thos. L. Miller has taken her down the beach, her owner, Mr. Biddle of Philadelphia, intending to use her in Florida.

CHANGES OF OWNERSHIP.—Vixen, the famous old sloop, once owned by Mr. F. S. Lawrence, and later by Mr. W. C. Lighthouses, of Boston, has been sold to Mr. Leonard F. Eckwith, of New York. Widgeon, sloop, has been sold by Mr. A. S. Wattles to Com. E. A. Cook, Great Head Y. C. Ocean Gem, steam yacht, has been sold by Col. C. H. Taylor to Mr. W. H. Starbuck, owner of Tillie.

NEW HAVEN Y. C.—Officers 1890: Com., H. A. Seymour; Vice-Com., Wm. A. Harris; Rear-Com., Myron Durham; Sec., Wm. H. Chamberlain; Treas., Chas. W. Scranton; Fleet Surgeon, W. H. Hawkes; Messrs. E. F. Andrews.

MASSACHUSETTS Y. C.—On Nov. 15 the Massachusetts Y. C. listened to a very interesting letter or lecture on "Lights and Lighthouses," delivered by Lieut. A. V. Wadsworth, U. S. N.

WEST END Y. C.—Officers 1890: Com., O. J. Tierney; Vice-Com., E. A. Meany; Fleet Captain, J. J. Murphy; Messrs. J. Q. McCormack, Sec., J. H. Sheridan; Treas., T. E. McCormack.

CONSTITUTION.—This large steel schooner, designed by Mr. Burgess and built last year by Piegras, is advertised for sale by her owner, Mr. E. D. Morzan, Jr.

WAYWARD.—This well-worn and commonplace name has been bestowed on the new Sears 60-footer, now nearly completed at Lawley's yard.

Canoeing.

The list of officers and directions for joining the A. C. A. and W. C. A. will be found in the first issue of each month.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and requests for a canoe to a canoeist in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

1,500 MILES IN AN ADIRONDACK BOAT.

PART XII.

ST. LAWRENCE RIVER, Oct. 10, Friday.—I woke at 6 to-day and left the warm blankets reluctantly, as it was bitterly cold. While dressing a little dog came along to see what was up, and following him back I came to a curious old French farmhouse, where, after much "en Francais," I succeeded in getting a vile breakfast. The people were dirty in the extreme, but what they lacked in means they made up in hospitality. In addition to the moccasins, all the people wear a kind of buckskin leggings, and from the looks of the outfit it is doubtful if they are clean off for a year at a time. From the farmhouse I had a rather fine view over a flat region of the Beloit Mountains in the southwest, which also could be seen from the river during the morning. There were numbers of ducks, plover and a loon or two about, and with a gun some sport would have been possible.

Keeping in the channel of the St. Lawrence by following the Beloit and Lighthouse, I moved steadily all the morning till 11 o'clock, when a lunch was indulged in while floating along the middle of the river. There was quite a current, but the wind was very disagreeable, kicking up a nasty sea when it had a good sweep, and for three miles after passing a group of low islands the waves ran up to no mean size. Taking advantage of the open well and the deeper immersion of the boat, many of the white caps flopped over, drenching the baggage and giving me some bailing to do. The country was very flat, and the water was much smaller than I had expected, and loomed like an insignificant stream, its channel being narrow and flowing out between two lines of sandy shoals until it lost itself in the St. Lawrence.

About 1 P.M. I stopped on the east shore to get dinner and inquire my way, but failed in both owing to my French, as the people could not understand me at all, nor I them. The farmhouse here was a handsome one, I had seen and near it was erected at a considerable distance, a high stone pole, sure evidence of Catholicism. There was more sand than before seen and considerable woodland, which made a pretty contrast with the surroundings. Rowing close to the beach I soon came to the town of Sorel, the first place of any size since leaving Montreal. It lies at the junction of the Richelieu and St. Lawrence rivers, at the head of Lake St. Peter, the view of which was shut off by a mass of islands and shoals about the river. The Richelieu River, which formerly had been expected and loomed like an insignificant stream, its channel being narrow and flowing out between two lines of sandy shoals until it lost itself in the St. Lawrence.

I arrived at Sorel, or "William Henry," as it was formerly called in honor of England's old king, at 1:30 P.M., having rowed 25 miles since morning. Sorel is 45 miles by water from Montreal, and is a fine old town, the Richelieu River, which formerly bore that name was the Iroquois, is the outlet of Lake Champlain. There was a poor hotel in the town where I got a fish (pickled) dinner, and after a few purchases at the "Bon Marche" of Sorel, a collection of three tiny stores, was under way again at 3 P.M. Every body here is French, and I was informed that no English would be heard until I reached Lake Champlain. At Sorel Landing the steam boat "Sorel" was waiting, and I saw a large steamer and three of good size were lying in it. Heavy vessels go through from the St. Lawrence to New York, however, by the Richelieu, and its channels, though narrow, are quite deep.

I shot out from the shore on the quiet bosom of the new and unknown river, and bade a long farewell to the St. Lawrence with a feeling of much regret, though considerably relieved to have escaped a safety from the rapids. From Kingston to Sorel a distance of 232 miles, I had followed its many wanderings, and left it full of admiration for its size as well as for the charming region through which it pours its tremendous flood. My new acquaintance would about considerably, having a gentle current, which was, however, barely perceptible. Up the Richelieu the course was nearly straight.

Just at afternoon, and evening I had to contend with a strong head wind, a most exasperating one, which delayed me a great deal. Mine was the only craft on the river, and an air of quietness and peace prevailed over the whole country. The banks were beautiful and I occasionally passed some woods where were lofty and sombre pines, with bright colored birches and maples between, and the tall pines hung their branches over the placid waters. Cowbells were heard from the hills, and the people of the whole scene was a picture of pastoral beauty. The people living at intervals along were curious, and gazed at me carefully; as my boat was of an unusual sort, and the speed she showed caused much surprise. There was a beautiful sunset to add to the many attractions of this Canadian country. I saw several windmills in motion, and crosses were erected with no sparing hand all over the fields. The barns had thatched roofs, while the dwelling houses were small, and a considerable number of log huts were scattered here and there.

Just as I passed the village of St. Ours, 12 miles from Sorel, at 5 P.M., the bells in the Catholic chapel began ringing the Angelus, and as their melody rang out on the still evening air I paused at the old mill, and thought of the hundreds of human beings all around, who, at the sound of the bells, repeat the same prayer, whatever they may be, in the fields, workshop or church. It was at 6 o'clock when, 2 miles from St. Ours, I came to a dam 3ft. high, and extending completely across the river. After an unsuccessful and aggravating attempt to get somebody to help carry around it, during which effort I had to walk over some rough fields for a considerable distance, I went across to the lock, and, having secured the man in charge, got him to pass me through. The lock was a very large one, though having but 5ft. rise. Rowing half a mile further on in the pitch dark, I stopped near a light beside the stream to get supper. Landing on a muddy bank, I walked up to an old stone house, taking my own tea, bread and jam.

Having gained admittance, I found an old woman and her husband who welcomed me warmly, and sitting down in front of a large open fire, I tried to find out from them what I wanted. I had brewed some tea but it was Chinese and of no use to me. I had a fine old French Canadian house, with a sanded floor, and a spinning wheel, lately in use, was standing in a corner. Everything being clean and neat to a fault. The old gentleman had many a laugh over my French, and I found that though pretending to comprehend, he really understood but little of my conversation. Endeavoring to find out from him some distances, he began counting in English, "On, to, tree, for, five," and there he stopped. What I asked was nearer 40, and I discovered that he

could only count up to five, in fact, his entire knowledge of English was limited to these words; which he made to answer for everything. This was very puzzling to me at first, but finally I caught his drift and fell into a hearty fit of laughter in which both he and the old lady joined with a will; though they had not the slightest idea of what I was laughing at. This was all we had in common, conversation having failed entirely, and at every remark that anybody made there was a fit of roaring, the old gentleman doing his share in no mean fashion.

While this engaged the woman asked me something which I took to mean, "Will you have some nice fresh eggs cooked?" Making a point of always accepting such offers, and forgetting that I had brought with me some bad eggs purchased near Montreal, I gave a hearty "Out, 's'il vous plait." Now, these very eggs I had boiled and parboiled for an hour at my fire last night, partly for pastime and partly in hopes that they would keep longer in that condition, and had brought them with me here expecting to subsist on them should nothing better turn up. Suddenly I heard a clip, then an exclamation of surprise from Madame and, on turning round behind her nose elevated in a supercilious manner above an egg which she had chopped in two over a frying pan. It was as hard as a rock so nothing fell on but an intolerably bad odor. This tickled the old man fairly into fits, while I began apologizing for my apparent rudeness, the woman doubtless imagining that I was perpetrating a practical joke. The mistake came from my misunderstanding her speech, as she had really asked me whether I would be pleased to have her cook some of my eggs, as it turned out afterward. However, we smugly ate the eggs over by passing them surreptitiously, whereupon she brought out some more recent specimens of "des oeufs," enjoying the mistake as well as the rest of us.

I was quite chagrined at not being able to converse with them, as they were old settlers, and I desired some information about the country. I was slowly picking up a little of the lingo, but could mention only my ordinary needs, connected conversation being impossible. Leaving the cottage and people at 10 A. M., I pushed on about a mile, further rowing exactly as I had done the day before. I tied up to a dead balsam tree that had fallen into the river, then fixed my boat snugly for the night, tying a poucho over the well to exclude the dew and rolled up in my three blankets, and by 10 o'clock was journeying in the land of dreams.

Richelieu River, Saturday, Oct. 17.—A steamer passing in the night gave me a little tossing, but that was the only disturbance. Having dressed and packed up, I rowed on at 6 to the first house that should come in sight, where a buxom dark-eyed girl was tending to the cottage, as the old lady was sick. I did not object to this, however, the change suiting me nicely; I never saw any one who could catch an idea quicker than this young lady, as she understood about all that I said to her. She cooked eggs and potatoes for me while I made some tea, and a fine breakfast was the result, though my stomach was somewhat out of order.

I am picking up the French gradually, but when I remarked "les rameaux" (oars) to show my fair hostess what I was doing, going through the motions of rowing at the same time to make it more explicit, she laughed heartily, as several others had done before. This was puzzling at first, but it transpired subsequently that I had been pronouncing the words "rats mort," or in their proper "dead and buried" sense. At this I was much amused, and on recalling the many times I had used the expression, endeavoring to make a good effect, I relapsed into a state of profound melancholy. The roars of laughter or blank stares of astonishment resulting always after hearing the above—was now explained. At breakfast a farmer sat down with me, but ate nothing except huge chunks of dry bread and raw meat and dairy in either hand.

I got off at 8:30, being delayed half an hour on account of my efforts to converse with my friend the damsel. A very strong head wind prevailed from the south, which, on the long stretches of the river, made a disagreeable little chop to row in, and caused the boat to pound in an unpleasant manner. During the morning I passed the towns of St. Denis, six miles from St. Ours; St. Ours, St. Amable and Eversham, and at 12 o'clock I was at the latter place, near the shore, a large iron pot hung on a tripod, and a little platform consisting of two cart wheels and two or three boards extending out into the water, for washing purposes; the clothes thus cleaned being afterward hung on the bushes to dry. I witnessed this process more than once, and was considerably interested to see the fair dames thus engaged; who, with short skirts and bare arms, and busily engaged in their industry, with but a passing glance at the passing voyageur. After this I vote unanimously for the Richelieu laundry.

Several sloops and small schooners, and a steamer or two, went down the stream, all looking much out of place, the river being so small, never more than a quarter of a mile across, while at many places one could almost have thrown a stone from one bank to the other, and some of the smaller boats, such as the "poucho," which add much to the foreign aspect of the country. Quaint old windmills were in full blast, and many crosses, of all kinds, sizes and styles of decoration had been erected around about the fields. The very well ones generally have a tin rooster on top, though sometimes the cross consists of two rough sticks or branches, others being most elaborate in design. I passed two stone landmarks, and some beds of ice grass, which latter I had not seen for a great while.

About the middle of the morning I observed some mountains, the Beloeil range, several miles away. The wind was exceedingly strong, interfering sadly with my progress. The people along the way continued to be very curious, and would pause at their work as the boat passed, but all were respectful. I did not have a single objection, "rat" and "mort" were the only words I heard, and a frequent request in our free and independent States. The peasants all wore moccasins or sabots, and some buckskin breeches. This morning my eggs were cooked by an hour glass, clocks there were none.

A great many cows, horses, sheep, calves, pigs, dogs and cats, besides turkeys, chickens, geese and ducks were wandering along the pretty shores, and I saw a few of the latter in the water. Several peculiar noises, with much success at one time causing a stampede up a steep bank of a herd of cattle which were drinking. The gale being severe, on two occasions I did not make over 1/4 miles per hour in its face, and never over 4 miles per hour, though pulling steadily.

At 1:30 P. M., 14 miles from my breakfast station, I stopped near a very neat farmhouse, prettily situated in a grove. There were three young women in the well-stocked kitchen, busily employed in putting up something like a head put on an egg, the skin of their arms to perfection. They all had a merry time over my French, though I took care not to say anything about "rats mort" again, being anxious to make a good impression. I procured here some lamp oil, bread, butter, apples, etc., and the prettiest of the "femmes" added me in making my tea, which I was content to eat with great relish, being unused to cooking at a stove. They pretended for some time to comprehend my discourse, and seemed to enjoy the joke exquisitely.

Tying up near the bank beyond I made a glorious dinner of canned turkey, cheese, pie, milk and canned peaches, starting on again at 3 o'clock. Just above this spot the river branches around a large island, and the view to the north is very fine. The island is a high table land, and the river is covered with noble woodland, the changing foliage making a lovely landscape. About the middle of the morning I had entered a veritable "Acadia" called Acadie, and a romantic and rural region it is. Some more sloops, laden with ruddy Fameuse apples, were sailing along with the wind, and in an hour more I was opposite St. Hilaire, a pretty village on the river and nestled at the foot of the Beloeil Mountains, which, towering above the place, covered with dense forests and presenting a precipitous and forbidding aspect, this spot into one of the most attractive places I have ever beheld.

The range consists of three peaks or separate mountains, closely joined together and very high. There was much pine and hard timber on them, and their huge masses of rock contrasted strangely with the bright hues of the maple, birch and other trees on the broad slopes. The river here is perfectly lovely; the quiet river meandering through the scene, with elms hanging over its sunny banks; further back, verdant meadows and fine groves of trees dispersed here and there, all combined to make a picture of rare effect, the aspect of the beetling Beloeil range being in harmonious contrast with the quiet and peaceful landscape below.

One mile above St. Hilaire a railroad bridge crosses the Richelieu, the Grand Trunk Railway of Canada, the only one which disturbs this country, running east and west. The river here is narrow and the current runs swiftly through between the piers of the bridge. A kind of water gate and bulwark, to ward off the current, have been constructed for the use of vessels. Just before reaching the bridge a large sidewheel steamer with passengers on board went by me. From this point the river turns from south to southwest. On the east side, adding beauty to the scenery, are short ranges of hills; while ten miles distant to the west are seen some mountains called the St. Hilaire range. On the west bank stood a fine large granite house, with curious roof and shutters, peculiarly French and of massive proportions; doubtless the residence of some wealthy person, who preserved the quiet of Acadie to the noisy world outside.

Darkness fell shortly, following an ominous sunset. After dark, but before I lit my light, I came in unpleasant proximity to a barge with a huge square sail, which, bounding up suddenly, was

hearing directly down on me from behind, and approaching rapidly but noiselessly. It was quite startling, as I got away from her bow just in time, the yard of her sail swinging over my head. There was no light on the boat save one in the sternsheets, where it could do little good. The wind, which had been troublesome all day, was now stronger, but I rowed without halt from 3 to 7:30 P. M., and harder than usual, as there was quite a current against me in addition.

About 6 o'clock I arrived at a place where the river widened out into a broad lake, three miles across and nearly round, which they call Chambly Basin. I pulled for some lights which I judged were the canal locks, though it was impossible to tell with certainty. The wind blew up a sea here which felt me a little and made rowing doubly hard. It seemed a good while before I reached Chambly town, but on gaining the entrance to the canal I ate some bread, milk and canned peaches, glad of a rest after being six hours in the boat. Made 16 miles this afternoon, making 30 for the day's rowing, which is the best for some time, as the obstacles were great. These distances were obtained from the collector here.

Putting the boat away I went to the Hotel Bellevue, a brick house, large and quite neat, in the French quarter and near the canal. The landlord was drunk, but still I preferred his roof to the prospect of a rainy night outdoors. I played for a while on a curious French piano before retiring. The journey from Montreal has taken but 24 days, 90 miles; Chambly being due east from that city is but 20 miles distant by land. It contains about 4,000 people, living in two distinct quarters, English and French.

Richelieu River, Oct. 18, Sunday.—It rained hard in the night, and the morning was dark and lowering. A nice view of Chambly Basin had from the rear of the hotel. I got an old fellow named Schaeffer, with a fine team and wagon, and a light Canadian horse, to cart me around the locks, which are not opened on Sunday. There are eight of these in one mile, and three opening into each other at first. The total elevation is 75 ft., and each lock is 110x25 ft. We got off and tramped down the canal at 9:15 in a sticky mud of peculiar adhesiveness. Bidding farewell to friend Schaeffer and his pony, beside two or three lads of rough but courteous countenance, I rode down the quiet water 12 miles to St. Johns, there being but one level.

The day had a Sabbath stillness, and it cleared off in the course of the morning. I had the canal all to myself, and saw only a few people driving by. The French-Canadian way of making a horse go is to say with great rapidity, "Allons donc!" which means literally in "American" "See up, donk!" I halted but once in the canal, where a small piece of scenery where the Richelieu broad, shallow and full of rocks, wound about through the hills in a succession of rapids. About half way to St. Johns the canal widened out, with pretty shores and some woodland. Here I saw also a lone mountain, seven miles distant across the Richelieu to the eastward.

At the end of the level I carried across the ninth lock, the last one in a row of 10, a mile more rowed in to St. Johns, arriving at 11:30. Across the river from St. Johns is St. Athlase, a small town. When inquiring along the wharves for a hotel I accidentally met three gentlemen, owners of yachts, who gave me much information, besides introducing me to the collector of the port, who imparted instructions about my pass, clearance, etc., this being my last Canadian port. I dined at 1 P. M. at the Hotel de la Paix, a small place, where I met a little Canadian black-eyed French girl, which was exceedingly pleasant. She vanished abruptly toward the close of the feast, when, summoning up all the French at my command, I said, "Vous ete la plus belle petite femme."

After dining I played a few hymns on the piano in the parlor, among them Rubenstein's melody in F. A young man with a black moustache was sitting in the room, listening to me, and after I had finished he asked me what that selection was, then requested him to play, to which he replied that he was an organist in town and did not handle the piano well. After some persuasion he sat down, and pulling out Mendelssohn's "March of the Priests," from "Athalia," rendered it very agreeably. Afterward he followed me to the boat and we parted mutually well pleased, though I was a little disappointed. St. Johns is a quaint old place, with a population of 5,000 people. I left at 2, and passing under a drawbridge entered the widened part of the river. The country beyond was quite flat and wooded on all sides. The river, for 5 miles only as wide as the Schuylkill, afterward became over a mile across and had much the appearance of a long lake. It is a splendid feeding ground for the waterfowl, and the scenery was very fine, with fields of grass growing out of the water, and I saw numbers of them. For some distance the shores wound in and out in graceful curves, with pretty beaches, the woods continuing in an unbroken line to the water's edge. The reflection of the foliage, brilliant with color, was a lovely sight, and the place resembled a veritable paradise. One could see six or seven miles up or down the river at a glance.

Just where it widened out appeared a small lighthouse, built on a sandy reef, and three miles further on I stopped in a bay, and after walking half a mile to a farmhouse, the first seen since leaving St. Johns, got some milk and bread of a very nice family of French Canadians, and, returning to the boat in company with two young girls, pushed off after wading a hundred yards in the shallow water, on at the boat, where were two or three parties of men, with a large yacht or two, camping on the shore with the evident intention of waging war on the ducks. At 6 P. M. I passed the little village of La Colle, on the west bank. Here the river turns again southwest, having been due south from Chambly. There was wild and long extent of water from this place, the shores of which were wild and heavily wooded.

Just where the river turned, the tolling bell sounding sweetly over the water. All else was still as death, and the scene was an impressive one. Beyond La Colle I had great difficulty in keeping on the direct course, the river being wide with a great many islands dotting its surface, while the night was inky dark, it having clouded up again. That I could discern was the dark blue of the forest, and even then I could not determine whether it was half a mile or two miles distant. Meeting a Frenchman rowing in a skiff, I found more difficulty in understanding him than the navigation. The sound of his oars could be heard a great while before he passed, and it seemed at first as if there was a phantom off in the dark, always keeping a certain distance ahead.

On I nearly collided with a barge coming along with a barge coming along with a gentle breeze. It, too, had a square-sail, and was full of Fameuse apples. In the gloom I did not see its approach until within a few yards, though the rich perfume from the apples had been perceptible for some time. The opportunity was not wasted, or the apples either, for the skipper threw down a half bushel or so for two days. They are a delicious little fruit, called in Philadelphia "Canadian Spitz."

From this point I steered my course for a lighthouse 5 miles distant, whose light shone brightly, and at 7 stopped at a point to eat some bread, milk and jam, beaching the boat on a sandy shoal. While discussing supper, a large animal came through the brush, doubtless confused by my lamp. I could see nothing but a sort of bright eyes, which disappeared after a time. I was greatly tempted to fire at them. It was a wild spot, and reminded me of some out-of-the-way lake in the North Woods.

Beyond the lighthouse I passed under a curious drawbridge across the river, which was here much narrower, and one mile beyond this I tied up at 9 P. M. on the west shore in about 4 in. of water with a sandy bottom. Oars made it lively during the night, calling to each other across the river. This is my last night in Canada. I have rowed 80 miles to-day and carried one mile, 31 miles in all. A dog came down to the edge of the water, 50 yds. from me, and evinced his displeasure by sundry growls. This indicated the proximity of a house, however, and I was glad to hear from him.

PHILADELPHIA, Pa.

THE CENTRAL DIVISION MEET.—The following circular has been sent out to members. The Executive Committee of the Central Division of the A. C. A. desire to announce that they have decided to have a division meet at Lake Chautauqua, N. Y., commencing on July 17 and lasting until July 15. Information as to the camp site, transportation, accommodations, etc., will be furnished to any canoeist upon application to the nearest "lake" or "mill" (members of the A. C. A.). It is admirably suited for a meet, not only on account of the nature of the lake itself, but also for the reason that it is centrally located and is in direct connection by railroad with all parts of the United States.—JAMES K. BAKEWELL, Parser Central Division, A. C. A.

HULL Y. C.—At a meeting on March 11 the Hull Y. C. made an important change in the club flag, the yellow ground being replaced by a red one, and the black bars by blue. The change is a great improvement, as the combination of yellow and black was about displeasing to the eye as any in the list. The corresponding alteration of the oarsmen's uniforms was left to the discretion of officers. The club is endeavoring to have a spindle placed on Seal Rock, and a petition to that effect has been sent to the Light-house Board.

THE LOG OF THE ESPERANCE.

A CRUISE IN A CANVAS BOAT.

AS the subject of folding canvas boats has excited some interest among our readers, we reproduce the following account of the cruise made by Dr. C. M. Douglas last summer, from the *Field* of March 1. Dr. Douglas, who is known to all canoeists as well as to the readers of the *FOREST AND STREAM* as a cruiser and boating man of long and varied experience, is the inventor of the boat bearing his name. Some time since we ordered from Mr. J. Z. Rogers, of the Ontario Canoe Company, a smaller boat than had yet been built, only 7 ft. long and 3 ft. beam. This diminutive craft weighs but 25 lbs., and folds into a bundle 7 ft. long and about 6 in. thick, which with the small oars or a paddle, may be carried in a shawl strap or over the shoulder. We have taken it easily on a horse or a folding it when the water was reached and being afloat in two minutes. Its capacity, it will safely carry two men and some weight in addition in calm water. Each of course the length causes some crowding of the extremities. One man can row or paddle it in quite rough water, the former being preferable on account of the proportion of beam to length being so nearly that of a washbowl that the boat can be spun round on her keel by a single vigorous stroke of the paddle. Water bars which easily keep the boat out of course. She has proved very strong and durable, standing all kinds of hard knocks. Dr. Douglas's story of his cruise is as follows:

How a collapsible, or, as they are called on this side of the Atlantic, folding boat, behaved on a conging cruise between New York and Boston, may, perhaps, interest some of your boating readers.

The *Esperance* is a skiff, built after a modification of the well-known Berthon boat. This modification was designed and patented by me in Canada and the United States some 3 years ago. The many hinges which form a prominent feature of the Berthon boat are done away with; in their place strong ribs are used to expand the boat and keep it in shape, the skin or covering is of single canvas, stiffened by longitudinal battens. The ribs are kept in position by blocks on the keelson, and by staples which fit into notches in the battens. The battens are the latter and knocking the ribs toward the center of the boat, it can be collapsed in a moment, and it can be set up in about the same space of time as a Berthon boat (one or two minutes).

By this method of construction, a light and shapely single skin boat can be built, the model of which will compare favorably with a wooden boat of the same dimensions. When the ribs are in place, the hull is strong and rigid, and will not collapse under the breaking it. During the *Riel Emute* in the N. W. of Canada in 1885, one of these boats was lying on the guard of a river steamboat, when another larger steamer collided with it and the boat was caught between them at the point of contact; even under these circumstances it did not collapse; the ribs were broken and the broken ends forced through the canvas skin; but by substituting heavy hoops for the ribs, the boat was made serviceable again. The drawbacks to a double skin boat are, the extra weight the inside lining involves, and also the annoyance caused when leakage occurs between the skins, for the canvas siding with wooden bends will sometimes leak when left exposed to a hot and dry atmosphere, though it swells up very quickly when put in water. I may remark that the danger of a canvas boat catching fire is not great, as the boat is so small, and the canvas is so thin, that it is often troublesome to do. In the event of the canvas being torn or injured, a single skin is also easier to repair. To give safety in case of accident, collapsible air chambers are fitted fore and aft, which are removable at pleasure, so that their efficiency can always be ascertained, and they can be left behind when they are not likely to be required.

To give safety in case of accident, collapsible air chambers are fitted fore and aft, which are removable at pleasure, so that their efficiency can always be ascertained, and they can be left behind when they are not likely to be required.

To return to the *Esperance*. Her dimensions are: Length, 17 ft.; width, 3 ft.; depth, 1 ft. 6 in.; stern, 22 in. at stern. She has a 3 in. keel to enable her to take advantage of a current and is propelled by a pair of sculls or a standing lug sail when the wind serves. It was July 4, a dull lowering morning, when I launched my boat from a float at the mouth of Spuyten Duyvil Creek, when it debouches into the Hudson River, just opposite the Palisades. This muddy estuary, which becomes the Harlem river, is a very dangerous place for a small boat, as it is converted into a ship canal, so that vessels proceeding from the north to the eastward and vice versa will be able to cross from the Hudson to Long Island Sound, and so save the long detour through the crowded waters on each side of the city. The tide and wind were both against me as I sculled slowly down the Hudson; although the left bank was the city of New York, the wooded hills sloping down to the water's edge, and the coming part of that great human hive. After I had accomplished about four miles, however, warehouses and factories began to appear, and the busy city loomed through the haze.

Finding I made slow progress, I put into a neighboring canoe club house to wait till the tide turned. Here was a solitary member celebrating the national holiday by "monkeying" at his canoe, who gave me a hospitable reception. As I had been in the club house about half an hour, a heavy squall of wind and rain got up, and I was glad to haul the *Esperance* on to the float and carry my mending under shelter. The rain came down with tropical severity; but even this could not extinguish the small boys' firecracker, the noise of which rose superior to the elements. Finding there was no prospect of the weather clearing, I returned to the friend's house, and had lunch and a change of clothes, and then, on the next day. This was under much more favorable auspices. In the early morning, with a fair wind and tide, I sailed slowly down the river, and the *Esperance* was soon bobbing about in the swell of the numerous ferryboats carrying their thousands of passengers to their daily toil in the city. After I had run the gauntlet of these successfully, though not without some apprehension of being run down or swamped, I reached the coming part of that great human hive. After I had accomplished about four miles, however, warehouses and factories began to appear, and the busy city loomed through the haze.

What was the use of their sending yachts over to be beaten? Weren't they always beaten?" and so on. Then he gave me some useful information about my projected cruise, and I looked at the various yachts which were lying in the dock. Certainly, in respect to seaworthiness and comfort, immense strides had been made in the American yachts, the old single-dish centerboard type is becoming a thing of the past, and the deep keel or deep centerboard seems to be firmly established for cruising or racing.

Toward evening I began to think of continuing my journey with the rising tide. Finding the ebb lasted longer than I expected, I laid down in my boat and slept for a few hours. About half-past eleven I woke just as the moon was setting, and getting out of the dock, the *Esperance* was on the back of a strong flood which, with the help of my sculls, soon carried me up to New York. Of course a big city never sleeps, but I was scarcely prepared to find as much wakefulness on and near the river between twelve and one A. M. Vessels were being loaded and unloaded, a tug with a tow barge out in the darkness underneath Brooklyn suspension bridge and nearly ran me down, for the crossing, and the noise of workmen was heard in the lighted warehouses near the wharves. I would recommend any one in search of a new experience to row or paddle a small craft past a big city at midnight; it has a weird and curious effect. The day was breaking as I passed Ward's Island and through the once formidable water gate from the river to the city, which once barred the channel at this point has robbed this occasion of its terrors, and it can now be passed at any time of the tide almost. A short distance below Hell Gate I overtook the ebb tide, and continued on down the Sound, which now widened out till the opposite shore of Long Island disappeared from view. At noon I passed the mouth of a bay or creek, where a fleet of yachts were gathered, all waiting for the moon, and the moon was setting, and the one, as the wind died away to a calm, with occasional gusts of rain from the sea. It was three o'clock before I reached a yacht club where I could leave my skiff, as I wished to return to the city for

a day or two before continuing my cruise, which I did on the 8th. The northern shores of the Sound here are indented by numerous bays and wooded creeks with islands. The scenery is pretty, but wanting in height.

Between New York and New London, Connecticut, a distance which occupied me a little over four days' coasting, I had a good deal of the sort of weather the bumboat woman wished the ship that didn't pay her bills—"light winds and variable, and plenty of small rain." Each night I made a harbor, where I anchored my boat, or made fast to a vessel at anchor, spread my awning tent over the open skiff and made myself snug. A small coal-oil stove served to boil water for my frugal meals. They were of the simplest description. I hold that any one who cruises in small craft should dispense with luxuries, and he will find that the open air and exercise will enable him to enjoy his meals, and plenty of tack and cocoa as much as the bill of fare of a first-class ocean steamship. New London is charmingly situated two or three miles up an estuary of the Sound, and I believe it was a busy port with a large shipping interest, and vessels coming and going, and now grass grows on the wharves, and the dismantled hulks of ships show that its commercial glory has departed. From New London to Newport, Rhode Island, I had an exciting day's run. The morning was dull and still when I rowed down the estuary from the former port, but when I got among the islands which are clustered round the mouth of the river, a fresh westerly breeze got up, which increased when I got clear of the channels, and made an offing for my run to the entrance of Narragansett Bay. The coast is open to the Atlantic for some twenty miles, and the *Esperance* bowled along merrily with the wind and waves, sometimes coming in puffs, which obliged me on two or three occasions to reef. About 3 in the afternoon I was off Point Judith, at the entrance to the bay. Here there is a lighthouse, with a wrecked coasting vessel thrown up high and dry on the beach near it, which latter had an ominous look to me as I prepared to change my course, and I took out the boat hook I used to boom out my sail with (I used a big sail with a loose foot, holding that a boom is dangerous in a skiff of the size of the *Esperance*), took down a reef and put her at it. The skiff took the rollers easy, without shipping any water, and with wind and tide in the tail I boomed out my sail again, and ran northerly until a second bar, the "Beaver Tail Bank," was reached. Here more caution was necessary, but I passed this difficulty with safety, and seeing a sheltered cove when I got into smooth water, I took advantage of it to rest over the Sunday, and give my outfit a thorough drying.

This was a perfectly useless office, for next morning, when I continued my course up the bay, I met a stiff N.E. wind, which increased almost to a gale, with heavy rain. By this time, however, I was under the lee of an island, but though I had smooth water, I found it so disagreeable that, after driving against it for some two or three miles, I could not go to beach my boat, and ask for shelter at the neighboring farmhouse. This was given to me freely. My host was a fine specimen of an American, and, having followed the sea in his youth, had a fellow feeling for me. He had seen service in the civil war, too, like so many others now following peaceful vocations throughout the Northern States. The summer gale was soon over, and I had fair weather for the next two or three days, when I went up the bay to the busy town of Providence, and the "Satanstoe" or channel, or channel, Buzzard's Bay. This channel is obstructed by railway embankments, and is but little used apparently. At its entrance is a lighthouse and rocky inlets, which make a most picturesque sea view. I had a long, hot row to the entrance to Buzzard's Bay, which I crossed to the island of Naushon, the largest of the islands which form the southeast horn of the bay. At the entrance to the bay between the "Satanstoe" and the "Satanstoe" made fast behind a tubby little catboat for a bath. The owner, a fisherman, had sheltered himself under his sail, and was waiting for the sea breeze. We carried on an amicable conversation, without his disturbing himself, and as the falling tide carried her seaward, I found his prediction of a fresh wind come true. Naushon was to me like the island of the *Lotos* eaters must have been to one of the *Lotos* eaters named the "Satanstoe" and the "Satanstoe" in the afternoon, but, unlike them, I put to sea next morning. A brisk run before a fair wind brought me across the bay to the town of New Bedford. Like New London, this was once a great port for whaling vessels, numbers of which are now lying dismantled alongside the wharves of the town. A naval man had once a scheme for utilizing the numerous hulks which are moored in the harbor of Plymouth and Portland, and this was to carry the Jews back to Jerusalem, and I commend this scheme to the New Bedford men for the disposal of their once gallant ships. Whether the Jews would accept a passage in them, or what they would do when they got to Jerusalem, is quite another affair. Every one presumes they will go there some day or other. Manufacturers with tall chimneys are seen in New Bedford though, and it had a busier and more prosperous appearance than the Connecticut seaport. From New Bedford I sailed and rowed up Buzzard's Bay to its head, where a small river (the Monument) flows into it. After rowing up this river for a mile or so, I landed and found an obliging farmer, who agreed to transport my boat and belongings across to Cape Cod Bay. This was easily accomplished with a small horse and a long wagon; the distance seemed to be about five miles, and the sandy road passed through a very English-looking country, which resemblance was increased by the appearance of a four-in-hand, very well appointed, about to start from a pleasant-looking country house close to the roadside. It was nearly evening when I launched my boat on the waters of Cape Cod Bay, but I sailed on until the sunset sun warned me to find a harbor for the night; this I did off the mouth of a creek, as the tide promised to be fine, but had an easterly wind got up I might have fared badly.

The historic but dull old town of Plymouth was reached shortly after noon next day. Here the gray "kaaba" stone of New England is mounted under a sort of canopy in a prominent place by

the water face of the town, and many pilgrims were seen in the verandahs of the adjacent hotel, with their boot soles elevated above the level of their faces. From Plymouth to Boston is a little over thirty miles, and I should have made the latter city early next day, but just as I got to the outer harbor I was caught in what they called an "electric" storm. Certainly it was a very disagreeable one, a deluge of rain half filled my boat with water, and a squall of wind drove me a couple of miles out to sea. What struck me most was the intense darkness of the atmosphere before and during the storm. It was a darkness that enveloped me so that I could scarcely see the bow of my boat. The wind caused no sea, the rain killed it. When the squall cleared off I had a stiff pull against a N.E. wind, but made my port in South Boston at evening, and my cruise was at an end. I was very well satisfied with the behavior of my skiff on her trial trip. No regularly built wooden boat could have behaved better. I doubt if one would have proved as buoyant as the canvas one in a seaway. Of course, I had no really wild weather in the open, nothing that might have obliged me to put her head to sea with a sea anchor, but I think I gave her a sufficient trial to give me full confidence in my boat had I been caught in such an unpleasant predicament. Even in the matter of speed the *Esperance* was but little inferior to a regular skiff. My night's row from Bay Ridge to Larchmont, and my day's run from New London, Conn., to Newport, R. I., are quite respectable performances for a 17ft. skiff not built especially for speed. Of the kindness and hospitality I received from every one I had to do with on my cruise I cannot speak too highly. My experience the canoeist is looked on as a welcome visitor on New England waters, and in view of the insufficient boat accommodations many ocean steamships and others carry, must attract attention some time or other. I had hoped that my humble effort in this direction would have roused some curiosity among yachting men on this side of the Atlantic. Alas! it fell as flat as George Primrose's paradoxes on the learned world. The yachting world said nothing to my folding boat—nothing at all; every man of them was too busy with his own vessel or those of his rivals, and my poor little skiff was unnoticed. *Requiescat in pace.*

I had hoped that my novel craft would have excited more interest among yachting and boating men than it did. The subject of folding boats, as an addition to the boat service of vessels, is one of some importance, and in view of the insufficient boat accommodations many ocean steamships and others carry, must attract attention some time or other. I had hoped that my humble effort in this direction would have roused some curiosity among yachting men on this side of the Atlantic. Alas! it fell as flat as George Primrose's paradoxes on the learned world. The yachting world said nothing to my folding boat—nothing at all; every man of them was too busy with his own vessel or those of his rivals, and my poor little skiff was unnoticed. *Requiescat in pace.*

LAKEFIELD, Ontario, Dec. 1, 1889.

Editor *Forest and Stream*:

In reply to "Clarion" I would say that I have lately obtained a 12ft. portable boat from the Acme Folding Boat Co., of Miamiburg, Ohio; and though I have not had her in the water she seems to be stiff and strong and of excellent model, and makes a bundle easily put into a baggage car, and I anticipate much pleasure in her next summer.

BROOKLINE, Mass., March 14.

Editor *Forest and Stream*:

Two of my friends have a 12ft. Osgood folding boat. They took it to Florida and used it hunting and fishing and speak very highly of it, and say it is easy to row and paddle and steady in a rough sea. They are only sorry that they did not get a 15ft. boat. I like it all but the folding part. I expect to get an Acme folding boat, but am undecided in regard to the width of the boat. I would like to know from some of your correspondents which of two boats 12ft. long, one 40in. wide and the other 45in. wide, will be the best to use in rough and also in fresh water for fishing.

NEWARK, March 11.

A. C. A. MEMBERSHIP.—Central Division: T. P. Gaddis, Dayton, O. Eastern Division: J. A. Nismith, Lowell, Mass.; Herbert Huntington, Boston, Mass. Atlantic Division: Geo. A. Weatherspoon and Chas. Ledyard Norton, New York city; Thos. M. Stuart, Brooklyn; Chas. F. Vincetele, Orange, N. J.; Geo. Stanley, Bloomfield, N. J.; Dr. Frank Sargent Grant, New Brighton, Staten Island.

MORE WAR CANOES.—The Yonkers C. C. claims the largest craft of this kind, now being built by the St. Lawrence R. C. & S. L. Co., its length being 55ft. The Red Dragon canoe, by the same firm, will be 30ft. long and 50in. beam.

PETRONILLA, the 60-rater designed by Mr. Richardson for Lord Dunraven in 1888, after being laid up for a season, has been sold to Capt. Davenport, owner of the cutter *Tambourine*.

Answers to Correspondents.

☞ No Notice Taken of Anonymous Correspondents.

E. B. I., Lancaster.—We have no record of the dog mentioned.

F. T. New York.—Mr. Gustave Grahn, 183 East 115th street, can make any kind of model.

A. B. Paterson.—Will you kindly inform me through your paper the best method of curing a bird's skin? Ans. See back numbers of *FOREST AND STREAM*, Nov. 15, 1889.

T. T., Terre Haute, Ind.—What is the material used in the manufacture of the so-called "grass fish lines"? Is it a fibre from the silk worm or a vegetable fibre? If the latter where is it obtained, and how treated? Ans. The so-called grass lines are made of Chinese raw silk, the product of the silk worm.

A. E., Larimore, N. D.—We do not believe it possible to mount birds or animal skins in the way mentioned. The writer of the article referred to probably did not mean what he said.

J. L. B., Philadelphia.—I mail you a target made of 15 sheets. Will you kindly state in your answer to correspondents column how many of these you consider three pellets penetrated. Ans. All of them were penetrated by at least three pellets.

O. H., Brooklyn, N. Y.—There was no special for the best St. Bernard at the New York show. E. B. Sears's Hesper won in the rough-coated open dog class. "Points for Judging" contains the information you wish, for sale at this office, price 50 cents.

G. F. S., Haverhill, Mass.—A rod with an ash butt, and rest lancewood or split bamboo, as you prefer, will answer for a bait rod, and you should be able to buy it for less than the price you name. The German silver is harder, stiffer and more reliable than the nickel-plated mounting.

W. S. R., Ridgeway, Va.—Please give through *FOREST AND STREAM* a receipt for tempering springs for steel traps. Ans. Heat them bright red hot and plunge into sweet oil, or in lack of this into water. Then draw out the hardness by heating on a stove or hot iron plate until the steel assumes an uniform blue color.

W. J. B., Jamaica Plain, Mass.—Will you please insert in your correspondence column, where, within 100 miles of Boston, Mass., will there be fairly good duck shooting about the first week in April? Ans. Probably in Salem Harbor or at any of the harbors for sea ducks. Or go to the Thimble Islands, off Guilford or Stony Creek, Conn.

Rar. Lachine.—Would you kindly let me know if muskrat skins are of any use if so, and if so about how much could get apiece for them? Would they sell if first dried and not tanned? Ans. Many dealers refuse to purchase skins that have been shot, or if they take them will pay scarcely anything for them. Skins should be tanned and sold raw.

L. W. B., Eastville, Va.—I have a shotgun which I put away without cleaning the barrel. When I did clean it, it was full of small marks, something like smallpox marks, which I have been unable to get out. Could you please tell me what they are and if I can get them out and if they will hurt the shooting of the gun? Ans. Use a wire scratch brush with flour of emery and sperm oil or other oil. Treat the gun in the same way.

C. B. B., Clifton, N. J.—1. Can you tell me of any rifle range near New York where persons not belonging to the National Guard may practice, 200yds. or more? 2. What would remove dark spots from the inside of a rifle barrel? 3. Do they injure the shooting? They appear to come from rust, but I have never seen any other signs of it. Ans. 1. Creedmoor is open to all comers. 2. A scratch brush and oiled jags. 3. Yes, very likely.

J. C., Clarksville, N. C.—Gem Bondhu was bred and is owned by Mr. M. T. Tucker, Charleston, Mass. She is by Gus Bondhu (Dashing Bondhu—Novel) and out of Mollie Druid (Druid—Gusie). Dashing Bondhu (Dash II.—Countess Bear). Novel (Dan—Nellie). Lill Cambridge was bred by Mr. M. E. Murphy, Boston, Mass.; her sire, Cambridge, was by Glad's one (Dan—Petrel) and out of Chip (Leicester—Dart). Her dam Bessie was by Dash III. (Blue Prince—Armstrong's Old Kate) and out of Donna (Royal Blue—Dryad).

T. J. C., New York.—Can you give me any information regarding the fishing and expenses for a trip to Lake Sunapee? Ans. I can get them out and if they will hurt the shooting of the gun? Good fishing at Sunapee Lake in the season. Go from New York to Springfield by N. Y. & N. H. R. R., thence by Connecticut River R. R. to Brattleboro, Vt., thence by Concord & Claremont R. R. to Newbury, and by steamer to Sunapee. Fare about \$7, perhaps a little more. There are four hotels at the lake with varying prices. Forest House is said to be good and cheap. Boats \$2.00 per day.

W. C. D., Jr., New York.—1. Is it necessary to use decoys in shooting bay-snipe along the Connecticut shore of the Sound? 2. What size of shot must be used? 3. How many times do rabbits breed in a year? Also, can they live on an island in the sound that has no fresh water on it? Ans. 1. Yes. 2. Nos. 8 and 10, according as the flight may be of the larger or smaller varieties. 3. Five or six times a year. They might live on such an island, but they would not thrive so well as with a good supply of fresh water, and a dry spell would be fatal.

W. H. R., Phoenix, R. I.—1. Can you inform me where common gray rabbits can be bought for restocking and what will they cost a dozen? When is the best time to restock, in the fall or spring? 2. What is the best way to bleach angle worms for trout fishing? I have heard old fishermen tell about bleaching them, claiming they are better for trout fishing. Ans. 1. Probably an advertisement in a country paper would enlist the services of boys on farms who could supply you. Or write to Chas. Reiche & Bro., Park Row, New York. They should be turned out in April. 2. To scour angle worms let them remain over night in moss; if kept in damp earth, wrapped in a cloth, they will be bright, lively and enticing to the fish.

RITTENHOUSE, Boston, Mass.—1. Where can I get good English snipe shooting in Massachusetts? Will you kindly tell me the best grounds near Boston, and, if possible, give the names of some resident gunners? 2. What flies can you recommend for casting for landlocked salmon? 3. What size nooks? 4. Would small sandy salmon flies be expensive? Ans. 1. We recommend you to go to the Essex Meadows in Connecticut for English snipe. Write to Wm. Flint, Lyme, Conn. We know of no good snipe shooting near Boston in Massachusetts. 2. A fly in which yellow and black predominate is recommended, as a yellow body and black wings; silver-doctor and grizzly-king are good. 3. No. 3 or 4 sprout. 4. Probably; the landlocked salmon is capricious and needs frequent change.

Hotels and Routes for Sportsmen.
THE FINEST
Black Bass
AND
Brook Trout

Waters within easy reach of sportsmen are the streams along the line of the
Baltimore and Ohio Railroad.
On the eastern slope of the Alleghany Mountains are the Potomac, the Shenandoah and their tributaries, all famous for Bass, while across the divide are the Cheat, the Youghiogheny and the Monongahela. The Cheat and the headwaters of the last two named are celebrated for Brook Trout. The fishing grounds are in most cases within gunshot of the railroad stations, and sportsmen are saved the expense and trouble of carrying their outfits long distances.

BIRD PORTRAITS.

Some Native Birds for Little Folks.

BY W. VAN FLEET, M.D.

A handsome imperial octave volume of untechnical descriptions of the lives and ways of fourteen American birds. The list comprises:

Robin, Chickadee, Kingfisher, Great Horned Owl, Bobolink, Blue-jay, Woodcock, Nuthatches, Meadowlark, Ruffed Grouse, Cedar Bird, Kildeer, Summer Duck and Crossbills.

Each of these birds is beautifully illustrated by the photogravure process from drawings by Howard H. Darnell. The paper is substantial, and the 147 pages of large, clear, handsome type contain just the sort of information necessary to make little folks better acquainted with the birds described, and to awaken a taste for extended study. Everything has been done to make the volume one of the most handsome gift books of the year. Price, postpaid, \$3.00. FOREST AND STREAM PUBLISHING CO., 318 Broadway, New York, DAVIES & CO., 1 Finch Lane, Cornhill.

When a sportsman finds anything which adds to his pleasure, without increasing his labor, he wants all his brother hunters and anglers to know of it and share with him the newly discovered "helper."

WHAT WE CLAIM FOR

The Automatic Reel.

FIRST.—It will wind up the line a hundred times as fast as any other reel in the world.

SECOND.—It will wind up the line slowly if the angler chooses.

THIRD.—No fish can ever get slack line with it.

FOURTH.—It will save more fish than any other reel.

FIFTH.—It will prevent tips, lines and snells from being broken by large fish.

SIXTH.—It enables the angler, and makes it desirable, to use lighter tackle.

These claims have been substantiated by the most skillful fishermen in America and Europe.

The reel is manipulated entirely by the hand that holds the rod.

Pedigree Record Book

Containing 175 blank pages arranged for carrying out a dog's pedigree to the fifth generation, with a lettered index for ready reference. \$2.50 FOREST AND STREAM PUBLISHING CO., 318 Broadway, New York.

The Most Perfect SPLIT BAMBOO Rod Ever Made.

THE FERRULES ARE ABSOLUTELY WATERPROOF. This most desirable result is obtained by a new and ingenious device NEVER BEFORE USED IN THE CONSTRUCTION OF A ROD. The Ferrules also are PRACTICALLY DOUBLE, and fitted OVER the bamboo is a WATERPROOF cushion of ZYLONITE, while over that are set the ferrules thus adding MATERIAL STRENGTH AT THE JOINTS. The mountings are of GERMAN SILVER and HAND-MADE IN EVERY PARTICULAR. In short this is the rod anglers have long wished for. Examine it at any of our stores and satisfy yourself.

	ANSWERS TO CORRESPONDENTS.

DUCK NETTING ON LONG ISLAND.
THE practice of setting nets to catch ducks still flourishes at Shinnecock Bay. It is carried on openly, and to such an extent that it is said no less than 800 ducks have been taken at one raising of the nets. There appears to be no law to reach this abuse. The persons who set the nets assert that they are put down for the purpose of catching fish, not ducks, and that the capture of the ducks is only an accident. As a matter of fact only ducks are caught, no fish being taken in these particular nets. They are set close to the bottom, horizontally, it is said, and are without floats. Ordinary fishing nets provided with floats are seldom found to contain ducks, the birds having learned by experience that the presence of such floats means a net near at hand. Efforts have been made at various times to put an end to this nefarious business, which stands on the same footing with the snaring of quail, and ought to be forbidden by law, as is that practice. Such efforts have hitherto all been in vain. The nets have been seized by the game protectors, but these officials have been sued in the courts for damages, and the decisions have been against them. Some five years ago a bill to remedy this abuse was introduced at Albany by Senator Otis of Long Island, and at one time there seemed a prospect that it might pass, but a certain part of the Senator's constituents brought pressure to bear on him sufficient to induce him to withdraw the bill. It is manifest that this practice of netting ducks works an injury to every man who shoots on Long Island. If it is permitted to continue, and nets are constantly set over the feeding grounds of the ducks, it is clear that at no distant day the birds will either desert the bay or will be all caught off. No class of men are so deeply interested in this matter as those who maintain shooting

resorts on the south shore of Long Island. When the ducks are gone their occupation will be gone, and they will be forced to turn their hands to something new in order to make a living. We should suppose that if any men would make a strong effort to have this abuse stopped it would be these, and no class can work so effectively, for they can bring direct influence to bear on their representative in the Legislature.

If Shinnecock Bay and Great South Bay could be properly protected, they would form a ducking preserve which would give splendid shooting to all New York for many, many years; but they never have been wisely treated, and so year by year the shooting grows poorer, until now, many men who used to visit them several times each season have given up Long Island in disgust.

Will things ever be any better there?

DEATH OF GENERAL CROOK.
GENERAL GEORGE CROOK, U. S. A., Commanding the Department of the Missouri, died last Friday in Chicago. His death removes one of our best known soldiers and most successful Indian fighters. General Crook was born near Dayton, Ohio, Sept. 8, 1828. He was appointed cadet in the U. S. Military Academy when he was 19 years old and graduated July 1, 1852. He was then assigned to the Fourth U. S. Infantry, in which regiment General Grant was at that time a captain, and served for a short time at Fort Columbus. Later he was transferred to Benicia, Cal., and in 1855 took part in the Rogue River expedition. In 1857 he commanded the Pitt River expedition, during which there was some fighting with the Indians, and in one of these engagements he was wounded in the leg by an arrow. He was with the Yakima expedition in 1858. In 1861 he was made captain and returned to the East, when he was appointed colonel of the Thirty-sixth Regiment of Ohio Volunteers. During the war he saw constant service and achieved the rank of full Major-General of Volunteer, and Brevet Major-General U. S. A. He was wounded more than once and was captured at Cumberland, Maryland, but exchanged. It was at the close of the war that his most important Indian fighting began. This was first against the Snakes in Idaho and later against the Apaches in Arizona. In 1875, '76 and '77 he was in the field against the Sioux and Cheyennes. In 1883 he was in Arizona again punishing Apaches. He was appointed full Major-General in the United States Army in 1888. General Crook was a very successful hunter and a good frontiersman.

SNAP SHOTS.
THE Journals of the Massachusetts Legislature of March 17 and 18 contain the answers of Senate and House to the petitions for more stringent legislation in regard to dogs, on which we commented week before last. The House Committee on Agriculture reported March 17, granting to the petitioners for additional legislation concerning the licensing and proper care of dogs leave to withdraw, and further that it is inexpedient to legislate on the order relative to compelling all dogs running at large in any street, lane, park, common or any other public place to be muzzled, or that all dogs running at large unmuzzled shall be killed, or that the tax on dogs shall be increased. All these reports were accepted in concurrence, and it seems likely that this will be the end of attempts at dog legislation in Massachusetts during the present session of the Legislature. The House Committee on Fisheries and Game of the Massachusetts Legislature has reported that it is inexpedient to legislate on the orders requiring "market-hunters" to take out licenses and obtain permission from owners of land whereon game is killed. Inquiries which come to us about the spring shooting of the English snipe must of necessity be answered with some uncertainty. About this shooting in the fall there is less doubt, because at that season the country is usually dry and the migrating snipe, in order to find food, must drop down into the marshes, pond holes and wet meadows. During the vernal migration the conditions are usually very different. The melting snows and the early spring rains have made the ground moist and soft, and the snipe can feed as well in the upland meadows as in the lower ground. Moreover, in the spots where this bird feeds in

autumn the melting snows and the rain have now collected, so that the snipe is forced away from them by water too deep for him to work in. The wet meadows along streams are now fairly afloat, holding the moisture which falls on them, and often being overflowed by freshets. The result of this is that the birds instead of being concentrated about a limited number of wet places, as they are in the autumn, are distributed over a wide area and are found only by chance. These are the conditions which usually prevail in the Eastern States, where, at present, the English snipe are really too scarce to make it worth while to look for them when they are scattered.

There is something absolutely comic in the way in which certain newspapers inject politics into the everyday affairs of life. This was curiously shown the other day in the accounts published of President Harrison's duck shooting trip to Benjies Point. A Republican newspaper stated that the President brought down a pair of plump redheads with his first shot, and afterward several fat canvasbacks, while a Democratic paper avers that he banged away all day without doing much harm to the ducks, though he frightened some of them a little. One paper called the President's gun a fowling piece, an archaic term, which, however expressive it may be, passed out of use long ago. As a matter of fact Mr. Harrison had very good shooting, and on Friday got, we believe, about forty ducks, chiefly canvas, redheads and widgeons. The weather, though bad, when judged by the usual standards, was good for duck shooting, and we have no doubt that the President had a capital time.

A curious feature of the heavy snow storm which visited this city March 19, was the presence in Battery Park of a flock of about 500 crows. These birds seem to have been flying from New Jersey to Long Island, and to have lost their way in the thickly falling snow and alighted bewildered in this city park. They remained there for an hour or two, and then taking advantage of a lull in the storm rose high in the air and flew off southward. During their stay they fairly blackened the trees, walks and benches. At the same time there were many blackbirds in Battery Park, and further north on the island great flocks of redwings and crow blackbirds and of robins were seen flying confusedly about in the snow.

In his annual message to the Legislature for 1890, Governor Francis E. Warren of Wyoming Territory recommended the passage of a bill absolutely forbidding the killing of buffalo within the Territory. We are glad to learn that this recommendation has been acted on, and that the Legislature, just adjourned, has passed a bill prohibiting the killing of any buffalo in the Territory for ten years. This is a matter in which all the inhabitants of Wyoming ought to take an interest, for scarcely anywhere in the United States, except within her borders, are any wild buffalo to be found.

A somewhat vigorous correspondence as to the true causes of destruction of Adirondack deer is being carried on in the columns of the New York Times. While the ground covered has been thoroughly gone over a great many times, and is familiar to all sportsmen, this controversy, carried on in a daily newspaper, is not without a certain value. It will bring the subject before people to whom the matter is a new one, and may awaken an interest which will result in the passage and enforcement of better laws for the North Woods.

A bill has been passed in the lower house of the Massachusetts Legislature which establishes an open season for quail, woodcock and ruffed grouse from Sept. 15 to Dec. 15, and wood duck, black duck and teal from Sept. 1 to April 1. It also forbids the transportation of the birds first mentioned beyond the limits of the State. Sept. 15 is too early to open the season for quail, for, as is well known, many broods are then but half grown. Oct. 1 to Dec. 15 would be a better season.

A flood of bills for the protection of game and fish have been recently introduced at Albany. Most of these are local, providing for differing open seasons in various counties, but one introduced in the Senate by Mr. McCarren makes the open season for quail and ruffed grouse, and hares or rabbits, from Nov. 15 to Jan. 15. This is much too late a date for the season's closing.

The Sportsman Tourist.

TO "NESSMUK."

METHINKS kind nature in her sweetest mood,
Hath led thee far from haunt of worldly man,
And, in the inmost cloister of some hallowed wood,
Revealed her strange, divinely-ordered place.
For thee each nymph and naiad has a song
For which our duller ears may list in vain;
Each bird and breeze and brook that leaps along,
Chimes with thy lute in soft and silvery strain.
To us, bound down by grosser cares and ties,
Thy music comes with a mysterious spell,
And in its inspiration we may rise
And join the choir sublime and invisible.
Oh, poet! skilled in forest rune and rhyme,
Take thou this tribute from the purple West,
From one to whom, in distant clime,
Thy woodland song, to-night, brings peace and rest.

SHOSHONE.

DUNGENESS—A WINTER HOME.—V.

THE day following Washington's Birthday we ran two deer out of the pasture, but Morris missed, and we were unable to stop the pack. While Frank and Bone rode up in the pine woods to gather them again, the rest of us waited at Baltimore Gate. They were gone a long while, so Will and I amused ourselves down in the swamp field practicing wing-shooting at wild doves. We only had a few No. 8 shot shells, but got eleven birds; and it was doing well, even if I say it, for they fly faster than wild pigeons and are also a much smaller mark. The delay of the others was explained when they hove in sight, for Frank had back of his saddle the largest deer of the season, one of two he had seen in the woods. They also had some of the dogs, and with these we made a drive. The deer came out by Jack and he brought him down. It was his first, so we dyed his face a bloody hue to commemorate the event.

The best shooting these few days while the birds staid was at the doves, but they were extremely hard to kill; even after our knocking a bunch of feathers out they would fly on.

Eugene knocked at the Tabby door early one morning and said that a ducky had come over from the mainland with two dogs guaranteed to find and tree wildcats. That was just what we wanted, so Will, Jim and I soon drove off in a buggy to prove the guarantee. Near the gate, two miles up the avenue, we met Max, who called our attention to some tracks and showed where he had seen a bear cross that very morning. Having the day before us, we got out of the rig and sent him to Stafford after Cray Pratt and the dogs. Cray was employed on the island then to ride around and keep off poachers. Max was not gone long and with him came Pratt and the dogs. Remus, the pride of the pack, soon took scent, and the others followed, but not so hot. Remus kept after the bear, but the others jumped a deer. Will had a long shot, hitting the buck in one leg; then I fired, also hitting, so that he partly fell; then the ducky shot and the deer, unable to stand any more, fell dead. We waited quite a time for the bear to come out and then unsuccessfully hunted Old House Scrub for cats. The dogs were worthless, for they did not start one. As we passed toward home we still heard Remus trailing the bear, and upon reaching Dungeness told the boys about it. Only Frank came back with us, and he stayed on the road while we went in the scrub to urge on the pack. We had not gone half way into where Remus was, when the dogs at our heels started off on a dead run with noses close to the ground. Away they went, into the thick woods, where the brush was so close that we could not follow. While trying to push through we heard a shot, and running out into the road expected to see a dead bear. Instead, by Frank lay a dead wildcat, weighing as near as we could guess about 40 lbs. The surprise to the cat was hardly greater than it was to Frank. It was a beauty, too, with its formidable strong paws, mottled skin and smellers several inches long; it looked for all the world like an immense domestic cat.

All this time Remus was yelping along on another trail, so leaving the cat by the road side, Will and I again entered the scrub, for we thought the bear was coming toward us. The entering spot chosen was in a sink of ground where the oaks and bushes grew but waist high. We did not have long to wait before ahead of us where the brush was high and thicker a cracking of twigs and snapping of jaws was heard, and believing we would at last be rewarded for patient waiting, I cocked my gun and Will his Winchester. Thus prepared we pushed in, expecting every minute to see Bruin's shaggy coat. The faster we went the more noise we made, and this must have been what scared our game, for he immediately made tracks toward the beach and we after. Long penetration through such a thicket was impossible, and much disappointed we again reached the road, but none too soon, for I heard the rest of the pack break out into one of their tell-tale cries. To jump into my saddle and away as fast as Cooney could bear me took but a minute. Out into Gray Field we flew, faster still as I saw the dogs had crossed the road, until I was nearly at Stafford line and close to the Sound Side Scrub. There I jumped down and twisted my reins about a stump, knelt and waited. I heard the dogs coming closer and closer, and at last saw them come out of the scrub and start to cross the field. Turning quickly around I saw Will coming along on a gallop and yelling like mad. Out from behind a clump of little oaks the big buck jumped, not over 60 yds. away, and then I took a rapid aim and fired, calling to Will to head him off. No stopping was needed as four buckshot were in his side, and when I rode up I found he was dead. When Frank arrived we threw the deer behind my saddle, and as the afternoon was about over slowly rode home, stopping on the way for the prize, our cat, and thoroughly satisfied with the day's sport.

After dinner we enjoyed some true Henry Clays, a box of which was the standing prize for a dead wildcat.

A strange thing happened the next afternoon when we were shooting birds in the Swamp Field. Probably between us we had twenty-five shells, and when these were about exhausted I saw a deer come out of the woods and slowly walk across the field. I was partly hidden, having knelt behind some cornstalks, but what surprised me was that a deer would enter a field where so much

firing was going on. Of course I took a try at him, hitting, I thought, the hindleg; but Will laughed and said, "A clean miss."

That little occurrence shows what headstrong animals they are, having once made up their minds to cross a field or road it takes a good deal to stop them. Old Cray almost met his death once when trying to change a deer's course, and he never has recovered from the experience. The deer he tried to head was coming on a run obliquely across a field, and putting his horse in a gallop Cray tried to reach the corner first. The deer saw him coming and went faster, so that horse and deer met just on the road. One horn of the deer entered the chest of the horse, causing both animals to stumble and fall, landing Cray off about 10 ft. against a tree and crushing in two of his ribs. The horse was badly wounded, the deer was killed, and Pratt had broken ribs which to this day painfully recall the collision.

As the days grew warmer, and consequently the hunts less frequent, more time was given to quail hunts and fishing. Nothing could have been more lovely than the evenings we spent in a midnight sail out to sea, a ride up the pretty St. Mary's River, or a walk upon the broad, smooth track. I often thought of the island's former owners and what times they had or how they spent their leisure hours.

It was on one of these walks that I chanced to wend my way down the shady avenue which ended at the little cemetery with its gravestones. With but little trouble I read their inscriptions. Three large slabs lay flat upon turned columns two feet above ground. Inscribed on the first slab was this:

CAROLINE MILLER, widow of the late Major Genl. Nath. Greene (Commander-in-Chief of the American Revolutionary Army in the Southern Dept., 1783), who died Sept. 2d, 1814. Age 67 yrs. She possessed great talents, and exalted virtues.

On the next slab I read:

Sacred to pure affection. This simple stone covers the remains of JAMES SHAW. His virtues are not to be learned from perishable marble; but when the records of Heaven shall be unfolded, it is believed they will be written there in characters as durable as the volume of eternity. Died Jan. 6th, 1820. Age 35 yrs.

Upon the last stone was cut:

Natural History.

CATS AND DOGS, AND THINGS.

"FROGS is toads, and I know it," was the axiomatic reply always made by Ignotus when I would press him to share in the banquet which a little patience and red flannel had provided from the pools of Acequia Grande. Allow me to paraphrase this immortal utterance by saying, "Cats is fools, and I knows it." An acquaintance of over thirty years with the North American *Felidae*—from the "mountain lion," large as a good-sized mastiff, down to the little Mexican "ocelot," not much larger than a flying squirrel, to say nothing of domestic cats of all varieties, Persian, Maltese, Angora, tiger, Manx, Lusitanian and "just common"—ought to furnish ample grounds for positive opinion. But the fact has been more "borne in upon me" in the last few months, during which time I have been studying the psychical (if the proof reader or compositor makes that "physical" I'll murder him) development of a couple of Creole kittens, presented me by a small Acadian friend. From their color, I have named them respectively Ginger and Chalk; Chalk being of the sterner and Ginger of the softer sex. For two thoroughbred, unadulterated, simon pure, brass-bound, copper-riveted, hand-forged, stub-and-twist fools, I'll back them against all creation. Thompson's colt, who "swam the river to get a drink," was wisdom incarnate compared to them, while a wooden jumping-jack would blush for shame if he thought he was as big a fool as they.

For instance, one would suppose that the mere stress of hunger or common animal instinct would teach them to eat, when the food was within their reach, but it does not. About five times a day on an average I am disturbed by their piteous whining, and leaving whatever I am at I carry them a plateful of provender and set it down before them. They look at it in a dazed way, then up in my face and redouble their yawn. I seize Chalk by the scruff of the neck and thrust his nose into the provender. He seizes a morsel and "pitches in" as though he had been starved for a week. By the time I have done the like good office for Ginger, Chalk has bolted his piece and is yowling agonizingly for more. Another clutch of the neck, another thrust of the nose into the plate, and by this time Ginger "wakes the melancholy lay," and I attend to her. So it goes, till finally their hunger is appeased and their howling stops. If I leave the remainder of the food till their appetite awakes again, then instead of helping themselves they sit by the plate and howl lugubriously till I again come out and play the wet nurse to them. "Why don't I let them alone till they learn to eat of their own accord?" Well, I am not deaf and I have such things as nerves. Tried it once till they drove me to the verge of insanity. Since then I prefer the lesser of two evils.

Like all their tribe, they are fond of milk, but they came to grief the other day through their lack of sense. A pair of whitewash happened to be sitting where they could get at it, and I suppose they reasoned, with cat logic, "Milk is white, this stuff is white, therefore this stuff is milk," and they tucked away a pint or so before they were discovered. A sicker lot of cats than they were for a few days you never saw. But do you suppose they gained wisdom by experience? Not they! When fairly recovered I put the same pail where they could reach it again. Again they went for it, and, if I had not interfered, the same results would have followed. I submit that a cat that can't tell the difference in taste between whitewash and milk is a fool.

My puppy—a full-bred mongrel—though not much larger than either, is a holy terror to them, and makes their life a perpetual torment. He tumbles them over upon their backs, mauls them around, drags them over the yard by their ears or tails, and they meow piteously, but haven't sense enough to get out of his way, or courage enough to turn upon him, and give him a royal licking. This they could do easily enough, for, like all puppies, he is an arrant coward, and one scratch from their claws would send him to his kennel, yelping with pain and fear. Even now I can hear Ginger's plaintive whine of "Qui-i-it th-a-a-t!" and there is hardly an hour of the day that isn't burdened with their querulous complaints.

And then, you can't teach them anything. It took just one day to convince the pup that the kitchen was forbidden ground—six months had not been sufficient to impress that fact upon the cats. If I fire them out at 8:30, cuffing their ears soundly in the process, still, when the door is next opened at 8:31, in they pop, as confidently as if they knew they were heartily welcome. (I have never "heaped coals of fire on their head," but one or two applications of hot water, not too hot, you know, but just hot enough, has had no effect.) It took me about three days to teach the pup that he had a name, and must come when called, but with the cats, I have given up in despair. In fact, they seem to know nothing, learn nothing, and can be taught nothing. I don't believe a cartload of cats would furnish enough gray brain matter to fill the hollow of a mosquito's tooth.

They are cold-blooded, too. A cat has no more affection than a cypress fence rail. They love to be petted, but that is pure selfishness. Some writers credit them with an affection for place, if not for persons, but I am convinced that a cat returns to her home, not because she loves it, but because she is too big a fool to understand that she can get her own living anywhere else.

In short, patient study of the beast only strengthens my conviction that "cats is fools and I knows it."

By the way, those who took the trouble to follow the fortunes of "My Chickens," as reported some time ago in *FOREST AND STREAM*, may be interested in some further details of their welfare. The poor remnant, left by the murderous possum, I re-enforced with two dozen more, and built for them a commodious coop, which I fondly imagined I had made vermin-tight. Care was taken to shut them up carefully every night, and I had begun to look with gastronomic eye upon them, and consider whether they were not almost ready for the gridiron. A few mornings ago when I went to let them out I found all but seven lying dead on the floor, each with a small hole neatly bored in the back of his head. Close inspection revealed where the marauder had dug under the foundation, burrowing through dirt at least six inches deep. About the middle of that same day I heard a great fuss among the survivors, and going to the chicken yard I found the solitary rooster standing at bay and pluckily

confronting a large mink, who had come back in broad daylight to finish his nefarious work. He was so absorbed in his fell designs that he gave me time to get my rifle and balance accounts with him. I think I shall give up chicken raising as a bootless job, for I can't afford to feed Louisiana possums and minks with choice Plymouth Rocks worth a dollar a pair. H. P. U.

"A FIRE OF POPLAR."

Editor *Forest and Stream*:

Permit me to express the pleasure I experienced in reading No. 11 of the series of "Out-Door Papers," "A Fire of Poplar." One can, no doubt, become greatly interested in a well and entertainingly written paper on a subject of which he knows very little. Yet it is more often (if you will pardon a homely metaphor) like the eating of the solid part of an insipid food for the sake of the delicate sauce with which it is served. But when, apart from its literary excellence and the fact that it was written in a part of the world not unknown to the reader, an article treats of a subject with which the latter has been intimately associated for a quarter of a century; when it assimilates and places before him in exquisite shape thoughts that have often drifted vaguely through his own mind, together with others that perhaps he had not brains enough to conceive, but which his experience enables him to readily understand; when it awakens a flood of old memories from which the disagreeable pasts have long since been distilled in Time's retort, dull indeed must be his soul if no responsive chord is struck.

The "Fire of Poplar" reminds me of camps from the Miramichi to Baskahagan, of "cold bites" when we could not get the fire to go, and of hot lunches on cold days, when we chanced to strike a bonanza in wood. I have only to close my eyes to see again the low flat "banks of the Gaspereaux," with their labyrinthine fringes of alders, and the rugged hills of northern Maine, where broke the apron string of the rock-sower. With these are associated memories of droves of caribou, big bucks, whose footprints a two-year-old steer could hardly enlarge, grouse, brant, togue, together with a liberal sprinkling of porcupine, and lots of spruce and pine lumber and hemlock bark; so much of dross will mix itself up with the better parts of one's thoughts.

We cannot all write like the author of "Out-Door Papers," but we can be thankful that we have had the training necessary to the understanding of her work. "Let every man worship at the shrine of his choosing." But for the Northerner who has roughed it either alone or with lumber gangs and surveying parties, the "Fire of Poplar" is a thing of beauty; a joy for—a long time.

MCDONALD'S POINT New Brunswick.

L. I. FLOWER.

EVENING GROSBEAKS IN CONNECTICUT.—In its remarkable migrations the past few months, the evening grosbeak (*Coccothraustes vespertina*) did not neglect Connecticut, and has thus won a place among the birds of the State. Two were killed here March 6, by Mr. Arthur S. Bailey, one of which, an adult male, he sent me to-day. The other specimen was eaten by his cat, and a wing, which she was considerate enough to leave, is that of a female or young male. Mr. Bailey tells me that nine or ten of these grosbeaks were seen several times in the vicinity of his house the last week in February. They came early in the morning and were feeding on the buds of the maples. He shot into them March 4, but none were secured. The flock returned in forty-eight hours, when the two birds referred to were killed; the others disappeared and were not seen again. They were not wild and had a "low, twittering-note" when feeding. One-half of the flock seemed to him to be old males. Portland is in the lower Connecticut valley and only thirty miles from Long Island Sound.—JOHN H. SAGE (Portland, Conn., March 22).

EARLY MIGRANTS.—Kingston, Kenty County, N. B., March 17.—The first wild geese seen this spring passed over this place on March 6. It is unusual for geese to put in an appearance so early in these parts. So far we have every indication of an early spring.—S.

CLUB ELECTION.—On Saturday, March 15, a regular meeting of the association comprising the United Hunting, Fishing and Camping Clubs of Western Pennsylvania, was held at the rooms of the Pittsburgh Rod and Gun Club. In spite of the bad weather a large number of the delegates were present eager to discuss future camping grounds and to talk over the old ones. Several clubs have applied for admission and will be acted upon at our next meeting. The secretary was instructed to prepare a book of last year's camping for this year's reference, and urged to get it completed as soon as possible, as many members desire articles advertised in the book. The following officers were elected: President, Wm. Scudrett; Vice-President, Geo. Weaver; Treasurer, Hon. B. C. Christy; Secretary, J. W. Hague; Directors, Dr. W. G. Schirmer, S. H. Pollock, F. L. Neely, T. S. Coats, Wm. Lagrande, Orrie Sims, A. M. Cutter, G. H. Taylor, Christ Kestner. The State ornithologist, Dr. B. H. Warren, of West Chester, Pa., was present, and made an excellent address, and advised several changes in the game laws, and complimented the association upon the good work done in protecting game and fish. Rev. W. H. Law, of the "Snow" island, Mich., also made an address, which was well received. The association is prosperous, new clubs joining and more applying, indicating a good outing year.—J. W. HAGUE, Secretary, Pittsburgh, Pa.

NO WONDER IT IS POPULAR.—The appointments of the famous New York and Chicago Vestibule Limited, via the New York Central and Hudson River Railroad correspond in elegance and luxury with those of a first-class family hotel. The convenience of arriving at Grand Central Station, largest and finest passenger station in America, and the only one in the city of New York, is another advantage enjoyed exclusively by patrons of the New York Central. This great four-track trunk line is unsurpassed for safety, comfort, and the speed of its splendid trains.—*Adve.*

A BOOK ABOUT INDIANS.—The *FOREST AND STREAM* will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-Tales," giving a table of contents and specimen illustrations from the volume.—*Adve.*

611 HINTS AND HELPS FOR SPORTSMEN. A book of 240 pages. Send for table of contents. Price \$1.50, postpaid, from this office.

or dry; who never loses his temper or grows "grumpy" after an unlucky day or a run of bad weather, is a jewel, and one whose single companionship is worth more than a half dozen "good fellows," whose good fellowship fails them in the stress of disappointment or disaster. Such a man—in fact, two or three such men—it has been my happy fortune to camp with, and the highest praise my pen can tender them is to express the hope that they have found in my society one-half of the satisfaction that I enjoyed in theirs.

What equals the solemn majesty of night? And when viewed from the bow of a hunting skiff that, silent as its own shadow, glides across the bosom of some solitary hill-encircled, forest-fringed pond, dimly gleaming as an opal in the faint light of a far away moon—its pale crescent high hung in the blue-black heavens and scarce outshining the stars—the solemnity of that majesty fills the soul.

How still the air is, how absolutely silent the night! The soft patter of the rabbit, the scrape of the hedgehog's quill, the very flutter of some uneasy bird, perchance disturbed by "a tough little worm in his tender insides," all these sounds are caught and analyzed by the hunter's ear with a clearness and accuracy that is surprising, and the footfall of the deer himself venturing to feed among the lily pads along the shallow shore half a mile away comes with startling suddenness to rouse the flagging hope and sharpen all the senses of his would-be murderer.

With what a ghostly gliding then the little skiff wins its silent way toward the spot, and he in the bow with bated breath and tense-strung nerve, eyes outstrained and mouth and ears both opened for every warning, grasps his gun with determination not to fire too soon, and has already counted the game his own, when the waiting silence is fairly torn asunder by the startled whistle of the alarmed buck, the light flashes, there is a sudden deafening roar, echoing and re-echoing from crag to crag, a second whistle, the beat of rapid retreat within the sheltering fringe of woods, followed by disappointed growls, the low laughter of the guide, and then silence again.

How the deer can multiply in the North Woods, in spite of hounds and hunters, jack light, June law breaking and the score of other dangers which threaten them, is beyond explanation. Perhaps they do.

One way of extermination we tried. Imagine, if you will, a pond half a mile wide by a mile long, set in the very heart of the forest. About its margin lie scattered boulders, relics doubtless of the glacier period, green with moss and lichens. Its silent waters gleam like burnished steel beneath the rays of a noon day sun as we launch the weather-worn dugout, and hunter and guide seat themselves, each upon a handful of branches, in bow and stern. No word is spoken, for all arrangements have been made upon the trail half a mile back, and the single click of the rifle hammer as it rises to full cock is the only sound that breaks the silence of nature.

The paddle of the guide never leaves the water, as it turns and turns in his deft hands, and the old log canoe, like some preadamite lizard, slowly swerves with hardly a ripple toward the center of the little lake. Eagerly four sharp eyes are searching the shore line, not with hasty motions of the body, but with all the caution such hunting demands. In the pure air and full glory of the sunlight every bit of beach, rock, fallen tree, bed of rushes or tiny bay shows sharp and clear with the border of shadowy green forest beyond. Suddenly the dugout jars, as if it had touched a hidden snag, and turns as sharply as its ponderous length will permit toward the lower end of the pond, and he in the bow sees something that doubles the pace of his heart beats, control them as he may. There, upon a bit of shingle, nearly a hundred rods distant, but so plainly seen that the ear listens for the sound of hoof beats, stands a deer feeding. A beautiful picture he is, fittingly framed by this wild spot, and as he slowly moves, now stamping to rid himself of some galling insect, now raising his stately head to listen and look, and again pausing to feed daintily, but not hungrily, upon the soft water grasses at his feet; he is in truth a noble animal.

Slowly but surely the old canoe holds its course, and the rifle, ready for instant use, rests its deadly muzzle upon the strained and broken bow, quietly waiting. The deer seems nervous yet with all his motion—and now he half trots up and down the little beach—he never looks out across the pond. If fear assails him it is of something within the leafy fastnesses and shadows of the wood, not of the fate that steadily glides toward him upon the placid waters.

Nearer and still nearer, until as the quarry suddenly raises his head with a half whistle the paddle pauses, the canoe moves more and more slowly, and a whisper so low that it almost fails to reach the ear it is meant for, the guide says "shoot!"

The steel tube rises steadily to the hunter's shoulder, his head drops to its stock, his eye catches a bit of the red just behind the fore shoulder through the sights, and as the deer half turns toward the sheltering shadows behind him the sharp crack of the gun rings wildly out.

The same instant, and while the smoking muzzle still hides the shore the guide shouts, "You've got him! Good shot! Forty-five rods if it's an inch!" and with a half pang of remorse the hunter, now all of a tremble, sees the deer lying still and dead upon the shore.

Another scene memory clearly paints upon the forest leaves of a dead and gone summer. Another pond, so seeming small that one might almost dig a well and hide it therein, yet many rods across, walled about by great hills that cast their shadows from shore to shore at morn and eve. The sky, pearly white, shot through with long lances of reflected glory from the setting sun, and a few far off clouds of purple and gray. A lonely twilight thickening along the pond through which the tamaracks on the opposite shore seem to draw closer together for whispered converse; a low tinkle of bird notes from over head, and an undertone of frog song from the lily pads along the verge. Near the center of the bit of water a boat and two motionless figures, over whom slowly and silently the pall of night is gently falling. Suddenly a dry branch snaps in the gloom of the further bank, the man in the bow stirs, and the same instant the flash of his Marlin gleams, and its sharp voice rings clearly out. Then with a sigh the soft silence of the woods falls again; but the deed is done, his eye was true, his hand steady, and the deer lies dead. F. E. H.

Game Bag and Gun.

"FOREST AND STREAM" GUN TESTS.

THE following guns have been tested at the FOREST AND STREAM Range, and reported upon in the issues named. Copies of any date will be sent on receipt of price, ten cents:

COLT 12, July 25.	PARKER 12, hammerless, June 6.
COLT 10 and 12, Oct. 24.	REMINGTON 14, May 30.
FOLSOM 10 and 12, Sept. 20.	REMINGTON 12, Dec. 5, Feb. 6.
FRANCOTTE 12, Dec. 12.	REMINGTON 10, Dec. 26.
GREENER 12, Aug. 1.	SCOTT 10, Sept. 5.
GREENER 10, Sept. 12, Sept. 19.	L. C. SMITH 12, Oct. 10.
HOLLIS 10, Nov. 7.	WHITNEY SAFETY 12, March 6.
LEFEVRE 12, March 13.	WINCHESTER 10 and 12, Oct. 3.
PARKER 10, hammer, June 6.	

BIG GAME IN EAST AFRICA.*

WHEN a man starts out for big game in east Africa he does not travel with a long string of ox teams nor wagons nor even of pack animals; he goes on foot and all his baggage is carried on the heads of native porters whose training enables them to make long journeys under a load of 65lbs. If the journey is to be of long duration, the number of men in such a caravan must be large.

An interesting account of such a trip is given in Sir John Willoughby's recently published book on "East Africa and its Big Game." Three of the party whose adventures are here recounted left England Nov. 5, 1886, and went to Zanzibar, whence after a short stay they proceeded to the mainland, and on Dec. 10 started for the interior. Their company was made up almost entirely of natives, of whom 250 were Zanzibari porters. At first they lost some men by desertion, and had some trouble through lack of water, but a few days brought them into a country abounding in game. Here they made a permanent camp, and from this point as a center made short trips of a week or two's duration into the neighboring region.

There is perhaps no way of conveying to the reader so clear a notion of the sport which they had and the methods pursued in hunting, then to give some extracts from the volume. Here are two accounts of rhinoceros hunting:

"Our camp was charmingly situated, and partly encircled by a sudden bend in the river, which enabled us to manage with only a thorn fence for the protection of our front. Here I had a great day's sport. Starting early I crossed the river, and after knocking over a steinbock within two hundred yards of camp, proceeded for about five miles over an open plain, seeing nothing but granti and hartebeest, until I caught sight of an immense rhino standing about half a mile off. Quickly concealing myself I watched until he lay down, and though a party of natives on the way to cut grass passed quite close to him, he showed no sign of being disturbed. Favored by a slight depression in the ground, I managed to get within thirty yards of him, and placed a bullet from my .577 rifle behind the shoulder as he lay broadside. At once jumping up and wheeling around with a snort he galloped off, and I gave him the other barrel as he passed; but he only ran about two hundred yards, and then stopping short, faced around, and after swaying from side to side for a second fell dead. He proved to be a grand prize, and was evidently a very old beast, the thick front horn measuring 27in. in length, and being much more prominently placed on his nose than usual; the back horn was also very thick, though it had been curiously worn away on the top and slightly damaged in front. On cutting him up we found two of B's steel-tipped bullets in his neck, one just behind the ear and the other lower down, and it was surprising that neither seemed to have done him harm. He was clearly the enormous rhino B. told me he had wounded during his trip with Jackson, and I think he was most unlucky not to have secured him. I have no great faith in the value of steel-tipped bullets, and although I have killed some rhinos with a single shot in the neck, I do not consider it offers anything like the chance of the one behind the shoulder."

"At about 10 A. M. some natives reported 'two big rhinos quite close,' so after them I started in all haste, lightly equipped in a suit of pyjamas. But, as usual, 'quite close' meant a long four miles, and my annoyance at having allowed myself to be hoaxed into believing anything ever could be 'quite close' was deciding me to abandon the hunt, when I sighted them standing under a solitary tree in the open plain, attended by a half grown offspring about the size of a big bullock. They were awkwardly placed, and after getting to within a hundred yards I had to wait some time, as the two big ones were actively engaged in carrying on an animated flirtation. At length they lay down, thus enabling me to crawl within thirty yards, at which distance all three rose suddenly and faced me, an anxious moment, during which I feared a charge or a bolt before I could get in a shot. For about one minute, which seemed to me many, they were motionless, and then turned inquiringly toward each other. Seizing the first opportunity of a broadside shot, I bowled the cow over with a bullet behind her ear. The bull ran some twenty yards and then stood, until a shot from my second barrel took effect in his neck and brought him also to the ground. Wishing to spare the half-grown one, I tried to drive him off, but at twenty yards he came for me, so I had to stop him with a bullet in the chest. Thinking he was done for, I reloaded and approached him, upon which he rose and again charged with a vengeance. I fired my first barrel without effect, but knocked him over with the second when he was within five yards of me. It was, perhaps, fortunate this shot dropped him, as, although I jumped aside after firing, I think it very doubtful whether my activity would have proved equal to his."

"I now proceeded to examine my prizes. The cow proved a splendid beast with symmetrical horns measuring 21 and 23in. The bull was also a fine specimen as well as an anatomical curiosity, for in addition to short anterior and posterior horns, he had developed a third

horny excrescence far back, sufficiently distinct to entitle him to be considered as a unique example of the *Rhinoceros tricornis*."

Rhinoceroses were the most important game found abundant in the country where this party hunted, and were therefore the most eagerly pursued. The result of this was the killing of 66 of these great beasts—more than 20 per cent. of the game secured—during the five months that their trip lasted.

The African buffalo (*Bubalus caffer*) were quite abundant in the country, but owing to their shyness and the fact that they pass much of their time in the thick brush, not very many were secured. The author gives this account of the death of one of these animals which shows the tenacity of life of this species:

"The last day of our stay here I shot another very fine buffalo, and in rather a lucky way. I walked a long distance without seeing anything but mpallah and waterbuck, though from a rocky ride I could view a magnificent plain crawling with zebra, hartebeest, buffalo, ostriches, mpallah, and in the far distance a big herd of eland; but as they were not on my beat I was unable to whet my appetite for sport, and went down to the river to get a drink. While scooping up the water a splendid buffalo bull jumped up on the opposite bank about 70yds. off, and having only the .45 express in my hand I shot at his neck as he was making off. Whether the bullet took effect I do not know, but after floundering about among some thick bushes under the trees he retraced his steps and passed me broadside. With two shots from the 8-bore I broke his shoulder and sent a ball through the lungs; but this was not enough, as he charged down the bank and began crossing the river straight for us. I then gave him another shot, which made him lie down in the water, where after prolonged bellowing he expired. He had a very fine massive head, 38in. across the widest part."

The lion was not uncommon here, but its habits made it very hard to find. Only three were killed on the trip. Of one of these the author says:

"I now come to one of my great days, when I shot my first and only lion. I had started out to the left of the river and was skirting the far side of the plain, in the hopes of coming across buffalo near the edge of the bush. As I went along I put up from under a tree an enormous leopard, about the size of a moderate lioness, and I put in a snap shot, with no apparent effect, as the creature rapidly disappeared. Having proceeded about a quarter of a mile further, I saw some ostriches, and was debating whether I should try and stalk them or not, when one of my men gave a low whistle to attract my attention, and standing broadside to me, not 40yds. away, was a magnificent lion; he was looking at the ostriches, and, like myself, so busy debating the chances of a good stalk, that he neither saw nor heard me. He looked truly magnificent and quite the king of the forest at that moment; but though full of admiration, I lost no time in letting off my .450 rifle. With a deep roar he bounded off, and fearing that I had not planted the bullet in the right place, I gave him the other barrel. This time I aimed for the back of his head, and, as I afterward found, with great accuracy, though the bullet had only penetrated the skin and then glanced all along his skull, coming out just above the upper lip. As he disappeared after this shot in a thick clump of brush some 20yds. off, I waited a quarter of an hour before taking up the tracks; I then did not have to penetrate far before I came upon him stone dead, my first bullet having penetrated the heart. He measured 8ft. 5in. from the tip of his nose to the tip of his tail as he lay, and the skin when removed, without any stretching, measured 11ft., and that, too, with rather a short tail. He had a fair amount of mane, which is rare, as it generally gets torn out by the bushes. I was immensely pleased, as I had given up almost all hopes of ever getting a good chance at a lion, for it is pure luck stumbling on them in these parts where bush is everywhere thick and vast."

Although the travelers found elephant tracks in plenty they saw but few of the animals. However, they succeeded in getting two, and the author tells the story of the encounter in quite graphic language. He says:

"At the end of these few days of fruitless search, as I was somewhat better, though still very weak and pulled down, we struck camp, and after a march of some miles came upon a small herd of giraffe, three of which C. shot, as we were greatly in need of meat. H. and I—the two cripples, for H. was also down with the fever—pushed on, while the other remained behind to cut up the meat, as we were both anxious to get to our new camp, where we could lie down. I was mounted on our only surviving donkey, while poor H. hobbled slowly by my side, and although every few yards we came upon fresh elephant spoor, we were far too seedy to think of following them up. Before we had traveled in this melancholy fashion more than a mile beyond where C. had shot giraffe, we were suddenly invigorated by the sounds of crashing branches, and the unmistakable grunting of elephants feeding on mimosa bushes."

"Here was an opportunity not to be missed, even by two such poor creatures as we believed ourselves to be, and undoubtedly were, so we at once made shaky signals to our servants to bring our rifles. Unfortunately H.'s man, thinking him too ill to shoot, had packed up all his cartridges and his complete battery excepting a .577 rifle. So after borrowing some of my cartridges we advanced on our unseen quarry, H. with his .577 rifle and I with my 8-bore. The elephants, when we first heard them, could not have been more than 60yds. off, and our feeble limbs had not carried us much further than a third of that distance before a grand cow with one uncommonly long tusk pushed her way through the covert and offered a fair broadside shot at her head. Aiming for the center of the ear I pressed for the trigger, and have a dim recollection of something like a loud thunder-clap in my ear and of being sent flying head over heels anywhere. Both barrels of the rifle, loaded with 20 drams of powder, had exploded at the same time, an active remedy for a sportsman fever-stricken and suffering from a splitting headache. However, my first elephant was more completely bowled over than myself, for she had gone down never to rise again."

"At the report of my rifle a magnificent bull with splendid tusks showed his head, and H., with a shot from his .577 rifle, stunned him for a second and brought him to the ground; but no sooner had he recovered himself than he came straight for us with ears cocked and trunk

erect, and evidently in high dudgeon. Our gun-bearers wisely fled, followed by H., who was, of course, helpless with only one barrel of his, comparatively insufficient, weapon loaded. Luckily I had first managed to pick myself up and to reload, and when the beast was within twenty yards I put a bullet in the center of his chest, which immediately checked his charge and made him turn back into the bush. Had I been quick enough I think I might have got in a broadside shot as he swung around, but I missed the opportunity, and in what seemed to me the twinkling of an eye he was out of sight. We followed him for about a quarter of a mile, but were much bothered by the attendance of a well-grown offspring accompanied by a suckling, which snuffed about and kept up that low internal rumbling peculiar to elephants when excited or alarmed. As both declined to be driven away, and even made a threatening response to our efforts in that direction, we were obliged to shoot the larger one in self-defense."

"After that we took up the blood track of the big bull, without further interference, until its traces ceased and the spoor was obliterated by that of numerous others who had either followed or intersected its path. Then, feeling utterly exhausted, we returned to examine the cow, whose measurements proved to be 9ft. 7in. from toe to wither. The right tusk when removed was exactly 6ft. in length, while the left, which had been broken off, measured only 4ft. Both were, of course, delicate, weighing respectively only 27 and 18lbs., the former being a rather unusual weight for female elephant ivory. As we could only find the trace of one bullet I suppose the explosion of the second barrel was not exactly coincident with that of the first, but any such mathematical refinement was a scientific waste as far as I was concerned, for the effects of a simultaneous explosion had fully operated upon me."

"During the rest of the march toward our new camp, which lay east of the Kilima Mombasa Hill, it was a pleasant surprise to note the remarkable change the rains had worked in the aspect of the country during the last three months. Then, everything was dried up and in places the ground scorched and bare; now, the surrounding country was covered with fresh-grown grass from four to five feet in height, all the bush was getting out in buds and leaves, and even the tops of the dry old baobab trees were fairly well clothed with verdure. It was a curious fact that the excitement attendant to our falling in with elephants made me feel fifty per cent. better, and the letting off of twenty drams of powder drove my headache completely away instead of aggravating it, and I am quite convinced that there is nothing like excitement to help one throw off fever. The whole secret is not to give way to, but to struggle against the almost painful lassitude that succeeds an acute attack, for the more one gives in the worse one feels."

Only in one or two places did the party find hippopotamus, and in these places the conditions were not favorable for getting shots. The author, however, overcame this difficulty by having a raft built, on which he was poled out into the shallow lake in which the hippos lived. But we will let him tell his own story:

"On April 14 we were leaving the camp Taveta, so early in the morning our raft was launched, and boarded by myself and two gun-bearers who shared my keen desire to secure a hippo. Although the raft floated capably, our progress was naturally slow, as her ends were square, but the two men were able to punt her along, keeping about two hundred yards from the shore, the water being nowhere deeper than from 7 to 8ft. We passed hundreds of large alligators, floating on the surface of the lake, and just showing a portion of their long heads above the water, but as we approached them they sank out of sight without making the slightest splash."

"Before long we viewed a small school of hippos, so we all crouched down, while the men punted me cautiously toward them. They did not seem to mind our approach in the least degree, but continued to enjoy themselves by puffing and snorting and blowing water, in jets, from their nostrils, and now and again sinking down, to reappear at the end of two or three minutes, and, with their heads half out of water, to take a look round. When we were within 30yds. they ceased their gambols to gaze with astonishment at what I supposed was a first attempt to navigate these waters. Drawing a bead on the eye of a big fellow quite near me I fired. The effect was a terrific plunge and an immediate absence of anything like a hippopotamus's head to be seen anywhere. After about fifteen minutes patient waiting heads began to pop up all round me, but another shot was followed by another plunge and another complete disappearance. This time I had only to wait a few minutes before the heads reappeared, for I fired my second shot before they had time to take in enough air for a long dive. After my first shot I think their first impulse of curiosity gave way to a sense of danger, as, before reappearing, they placed a long distance between themselves and the raft, and were making hard for the middle of the lake. I now decided to give up the hunt and employ my time, while hopefully awaiting the appearance of some hippo carcasses. The fish, however, were not hungry, or my bait was not sufficiently attractive; but I continued to practice the 'gentle art' until the smooth surface of the water was broken by a small round disc, the first appearance of a dead hippo."

During their five months' trip the party killed, as shown by the list given at the end of the volume, 350 head of game—a slaughter which would seem unpardonable if we did not recollect that there was an army of 300 men to be fed. When we think that a two weeks' trip from their main camp yielded 75 head of game, of which 43 were rhinoceros, we are inclined to wonder how long the big game of Africa will last."

In one special particular the present volume deserves great praise. It is provided with an annotated list of the game mammals and birds seen on the trip, giving the scientific names of the species and a good deal of interesting information about them. Unfortunately the proofs of these pages have not been carefully read."

The postscript by Sir R. G. Harvey, giving an account of his trip up the Tana River, is interesting."

The illustrations of this work are extremely good. The plate which faces the title page is very striking, giving as it does not only a conception of the enormous abundance of animal life, but of its variety as well. The four lithographic plates of heads are worthy of careful study by all who are interested in big game."

MICHIGAN GAME NOTES.

CENTRAL LAKE, Mich., March 12.—*Editor Forest and Stream:* Our winter has been mild, much like an average winter in central Massachusetts.

The deer, which appear to be somewhat more numerous than they were three or four years ago, have had a good chance this winter and I have heard of none killed since the expiration of the open season.

No spring ducks or other spring birds have been seen as yet to my knowledge, though I have heard reports of robins in January, and some say they have heard them of late.

There was no zero weather till March 1, and Torch Lake and Grand Traverse Bay were open until early this month.

Ruffed grouse were scarce last fall, why, I know not; but few were shot in comparison with the bags made the year before.

More trout are to be planted in the Cedar River, which is encouraging.

The sentiment of the people toward the proper observance of the game laws, has undergone a marked change for the better within the last five years, but there is still room for improvement.

Some Michigan correspondent some time ago spoke of the absence of mallards where they were formerly abundant. I also have noted this hereabout, and also the fact that there are now scarce any winter ducks. I think it is due to the shotgun and not altogether the breechloader of the tourist, either. For instance, there was an old fellow from Ohio who settled on our rivers a few years ago, and whose guns, though of ancient pattern, were in his hands thoroughly effective. He spent a winter in his shanty, then departed. He stated that during that winter he bought a pound of shot, with which he killed fifty-two ducks. I do not doubt the statement. KELPIE.

A NEW RIFLE AND CARTRIDGE.

Editor Forest and Stream:

The writer has just tested a new rifle and cartridge, and it has proved to be such an excellent little combination for small game and short-range target work that he desires a little space to tell the rest of the boys that are fond of the small-bore about it.

This cartridge is a .25cal. rim-fire copper shell 1 1/4 in. long with the bullet seated down inside the shell. No lubricant is exposed to grease the hands or gather grit, as in the old style rim-fire cartridge, but the grooves are covered by the outside of the shell. The bullet holds its size clear down to the base and is seated down in the shell same as the central-fire cartridges of the most approved type and latest idea. This is a new departure in rim-fire ammunition, and the wisdom of it has only once to be seen to be appreciated. The shell holds 10 grs. of powder and a bullet of 6 grs. weight.

Being something of a crank on the subject of small calibers the writer gave his order for one of these .25 calibers as soon as he learned that such a thing was to be brought out, and the exceedingly satisfactory performance of this arm has led the writer to take it into print and give the boys a chance to share the pleasures that are to be derived from this little weapon in field and forest.

The credit of bringing forth this rifle and cartridge belongs to the J. Stevens Arms and Tool Co., of Chicopee Falls, Mass., a company that has made a specialty of small rifles and whose arms are unexcelled for fine shooting qualities.

The writer received a No. 9 Stevens range rifle from this company last week, and with another member of the Massachusetts Rifle Association at once repaired to our range at Walnut Hill to give the gun a thorough test.

In a little box that came with the gun was a note from a well-known crack shot at Chicopee Falls, that said, "Your rifle is a hummer; full score on the standard target at 40 yds., out of doors.—ENGLE." Of course, I was then prepared to see some good work done, but did not expect to see the rifle shoot at 200 yds. in the way it did.

We commenced the shooting at 200 yds., standard target, and after a few sighting shots made the following scores, 50 shots, 200 yds., no cleaning, scores 10 shots each: 84, 80, 82, 87, 86, making an average of 83 points. This shows that the rifle will keep the bullets in the 8-inch bullseye at 200 yds. without cleaning. We next tried it at 100 yds., but kept no record of the scores. It was, however, an easy matter to call the shot before the marker signaled, and it shot just where it was held. Next we went to the 50-yard firing point to see what the capabilities of the arm were for a squirrel gun. After a few sightings, a score of 98 was made on the first trial, and had the daylight held out I am confident that I could have made a full score the next time easily.

The arm is a jewel, and the lover of the small-bore rifle can but fall in love with it at first sight, for the shooting is simply perfect, and the .22 long rifle rim-fire cartridge—that has been so popular of late—has met a formidable rival in the new cartridge, and while it may seem a little premature, I predict that this cartridge will supersede the .22cal. both rim and central fire for all outdoor work. For gallery shooting the .22 short and long rifle rim-fires will, of course, be the favorites for many reasons which are obvious. This new cartridge has the good qualities of the central-fire without the trouble of reloading cartridges. The net cost of the new cartridge is \$8 per thousand at wholesale, and in quantities can be bought for considerably less. We think the price will be reduced by and by.

Another good point about this cartridge is that a great many .22cal. rifles that have been allowed to rust and spoil can easily be rebored and rifled to take the .25 cartridge, thus at a nominal expense giving us a new rifle. I understand that the Stevens Co. are to do this kind of work in the near future, so that many an old worthless rifle may be redeemed and made to do good service again.

As the reader has already discovered, I am very enthusiastic over this new cartridge, and for many reasons think it will become very popular.

There are many desirable features contained in this rifle and cartridge, among which may be named accuracy, compactness, cheapness, sufficient killing power for all small game at any reasonable distance, cleanliness, no grease being exposed to daub the hands or pocket, and stability, as it does not come apart and leave the bullet in the rifle if the cartridge is extracted without firing. The

"Hunter's Pet" and pocket rifle made by these people are also to be adapted to this cartridge, I am informed. The cartridges are made only by the U. M. C. Co. at present, but I understand that another company is making preparations to manufacture them. This cartridge will be known as the Stevens special .25-cal. rim-fire, and listed as such. The .25 central-fire cartridge has met with a very favorable reception, and Colt magazine rifles are to soon be placed upon the market that will use it. Some two or three months must elapse, however, before there will be any ready for delivery.

Any of the readers of FOREST AND STREAM that desire to know more about the new rifle and cartridge will receive a prompt reply if they will send an inquiry with postage to FOREST AND STREAM, addressed to

IRON RAMROD.

A GAME LAW OPINION.

Editor Forest and Stream:

The following opinion by Hon. Frothingham Fish, Justice of the Supreme Court for the Fourth Judicial District of New York State, in the case of The People vs. Hiram Rouse, is of much interest and importance, as it determines a question which frequently arises:

"This action is brought by the District Attorney of Herkimer county upon the direction of one of the State game protectors to recover penalties for violation of the game laws committed in the county of Fulton. The place of trial named by plaintiff is Herkimer county. The defendant moves to change the place of trial to Fulton county on the ground of the convenience of witnesses upon affidavits which, if uncontroverted, would make a proper case for the change, provided the class of cases is governed by and comes within the provisions of Section 987 of the Code of Civil Procedure.

"There is very little adjudicated authority on the chief point involved, and what there is of such authority does not continue available because of the action of the Legislature, had since the case relied upon was decided.

"The decision in The People vs. McDonald, reported in 44 Hun. at page 592, would have come very close to the case but for the fact that it was reversed by the Court of Appeals upon the opinion of Justice Learned, who dissented from the majority of the Supreme Court at special term. 108 N. Y. 655.

"Then, if we take the dissenting opinion of Justice Learned as authority, it was held that, as the statute read at that time, an action could not be brought by the district attorney of a different county in which the crime was committed. That case would be a safe precedent if the Legislature had not again reformed the statute regulating the bringing of action for such penalties. Chapter 577 of the laws of 1888, entitled 'An Act to provide for a more effective organization of game and fish protectors,' makes some radical changes bearing directly upon the point here raised, and removes the subject from the operation of the decision in the People vs. Mr. McDonald. By Section 3 of the last-named act, actions for violations of the game laws are required to be commenced on the order of any game protector in the name of the people, by any district attorney where the offense is alleged to have been committed, or by the district attorney of an adjoining county, and such actions shall be prosecuted to determination in the county where they shall be commenced, unless for good cause appearing, a discontinuance shall be directed by the Chief Game and Fish Protector.

"The letter of the section does not direct the place of trial in such actions to be laid in any other county than that in which the offense was committed; but the spirit of the section read together quite clearly contemplates the bringing the action in an adjoining county when the game protector so directs. There is reason for holding that the Legislature had a purpose in giving this power to the officers who were charged with the duty of protecting the favored game animals.

"It is well understood that the enforcement of this class of laws is difficult and fitful; that some counties in which the best hunting grounds are found are largely infested with persons who disregard such laws, and whose influence is brought to bear locally, so that it is difficult to secure a verdict against the violators of the law in the immediate vicinity where the mischief is done. For this reason, those officers are authorized to go into an adjoining county to prosecute the men who ought to be prosecuted.

"It seems to me that this act was intended to establish a plan of official procedure in reference to the particular subject entirely independent of the general provisions of the Code of Civil Procedure, to meet the difficulties which experience proves to exist in this business of protecting the game animals from extermination. It does not assume to be an amendment of the code, but assumes to be an independent item of legislation applicable to a special subject.

"There would be little reason for conferring the authority to bring the action in an adjoining county if it was intended to be subject to the power of the court to change the place of trial for the cause stated on this motion. There would scarcely be a case in which the trial could be retained in another county against such a motion; for in almost every case of violation of such laws the witnesses would be residents of the county in which the offense was committed, so that the object of bringing the action where the game protector thought best, would be defeated.

"Motion denied with costs to abide the event of the action." PORTSA.

UTICA, N. Y., March 22.

WILL MAINE COMMISSIONERS' VER?—Boston, March 22.—*Editor Forest and Stream:* There has lately been formed in this city a land company, whose land is in Washington county, Maine. If I am correctly informed, they have already built a deer park and are now purchasing deer in the Province and Maine, with which to stock their park. They intend to allow sportsmen (?) to hunt these deer for so much per deer and then are counting on selling a part of the natural increase in the Boston market. Will the Maine game law allow them to do anything of this kind? As far as I can see, the law will not allow them to keep in confinement more than three deer, and these will have to be taken in the open season. How will the law work about transporting these deer to the Boston market? They intend to start with about a hundred deer.—J. S. C.

SPRING SHOOTING ON THE CONNECTICUT.—Essex, Conn.—*Editor Forest and Stream:* In your last number, March 20, I noticed inquiry of Rittenhouse, of Boston, Mass., as to nearest English snipe shooting, and saw that you referred him to this place. As yet no snipe have put in an appearance here, and owing to the extremely heavy freshets in the Connecticut, which completely overflow the grounds, sportsmen hereabouts are not looking for any shooting worth mentioning this spring. The fall shooting is always altogether the best all along the Connecticut Valley, owing principally to this fact. The largest bag made here to my knowledge in the past five years was twelve snipe to two guns two years ago, which is not very remarkable. The past two weeks has seen some very good duck shooting in the coves hereabout, principally in Lord's Cove Bay, across the river in the town of Lyme. In fact, this is the first good flight since last fall. Good boatmen, with stool, can be secured at reasonable rates, and three good hotels, one within a stone's throw of the river, exist. Metropolitan sportsmen who wish to come here will find the handiest route is to take the Hartford and New York Transportation Co.'s steamers from Pier 24 E. R., which leave daily, except Sunday, at 4 P. M., for Connecticut River landings and reach here about 1 A. M. Their passenger rates are reasonable, and they treat dogs somewhat humanely, which cannot be said of all the railroad officials. I was very much interested in the "Record of Twenty-seven Shots," of late issues, and wish we might have some like shotgun records. I consider a man a very fair shot in the cover who can average 50 per cent. kills out of shots taken.—A. W. J.

RHODE ISLAND ASSOCIATION.—The meeting of the recently formed Olneyville (R. I.) Game Protective Association, held Monday evening, was attended by two score of men interested in the plan to enforce the game laws and to import quail to be liberated throughout the State. They voted to reconsider the vote fixing the name of the Association, and passed a motion that it be called the Rhode Island Game Protective Association. This was brought about by a general agreement that this Association should secure a charter and seek to organize branch associations in all parts of the State, so that each locality may be more effectively protected by local associations. Messrs. A. J. Andrews, Thos. Aldrich and the president, T. W. Penning, made addresses on this plan which met with unanimous approval. A. L. Andrews, Eugene Bender, T. W. Penney, Thos. Aldrich and E. B. Eddy were appointed a committee to draft a constitution and by-laws and to apply to the General Assembly for a charter. Frank Hanley was elected assistant secretary of the Association. The secretary was instructed to order 100 quail to be brought from Chattanooga, Tenn., and they were ordered by telegraph this morning. This is the first of several orders to be sent this season. Eugene Bender, Fred Plaisted and Robert Wilson were elected a committee to distribute and liberate the quail. Communications were received manifesting deep interest all over the State in this movement. Charles F. Baldwin, attorney at law, and a member of the Narragansett Gun Club, has offered his services free of charge as a prosecuting attorney, to enforce the game laws against any offenders. The meeting adjourned to the call of the chair.

NETTING DUCKS ON LONG ISLAND.—New York, March 21.—*Editor Forest and Stream:* I have just returned from a few days of duck shooting at Shinnecock Bay. The netters are busy at work, and are destroying many of the birds. They set their nets ostensibly for fish, but without success in that direction, and with a great deal of damage to the ducks. One netter in one night secured over eight hundred birds. As this practice of netting is assuming larger proportions all the time, and is becoming general all over Long Island, it seems to be time that matters were so arranged as to abolish it altogether. Particularly is this so at the present moment, as the netters have recently been successful in a lawsuit brought against them, and now no longer hesitate to place their nets wherever they wish, feeling perfectly safe under the court's decision that it is the duck's fault if he allows himself to be caught in a net set for fish. These nets are made of dark-colored fine thread and are used without floats. In the regular gill-net they seldom if ever catch any ducks, and in the duck nets few fish are caught. A person netting fish will not catch any ducks, and it should be illegal to catch ducks whether the nets be set for fish or not. Stopping the sale of netted birds might be of some benefit. Will you please call attention to these facts in the columns of your paper as they are of a serious nature, and action had better be taken before these resorts will be ruined by the practice of netting.—L. S. T.

WAS IT A GUN?—New Ipswich, N. H., March 24.—*Editor Forest and Stream:* I write to ask what has become of our quail. During the last half of the winter of 1887 a small flock of five quail came round our farm and we fed them till spring, three only living through the winter. We often heard Bob White through the spring and early summer. When snow came in 1888 some dozen or more came back to their old feeding place, which was a chicken coop a short distance from the house. Nine lived through this time, and we often heard their familiar note during spring, but thus far this winter not a solitary quail has put in its appearance. Now we were much disappointed, as we had hoped by feeding them a year or two more they would become quite plenty. Perhaps you or some of the readers of FOREST AND STREAM can give some reason for their disappearance.—GEO. S. WHEELER.

GAME AND GAME LAWS IN KENTUCKY.—Shelbyville, March 20.—There is no game here except quail, squirrels and rabbits: the latter numerous, the others scarce. The prospect, however, is good for quail for the next season. All these are protected by law, but the law is not strictly observed. I am sorry to say the splendid gun club has lost interest and dissolved its organization. Another will probably take its place. There is fine material, and it would be a shame for all interest in these matters to be entirely lost.—J. S. M.

NAMES AND PORTRAITS OF BIRDS. by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price \$2.50. For sale by FOREST AND STREAM.

A GROUSE ON THE GROUND.—*Editor Forest and Stream:* I had marked the flight of a ruffed grouse across a vale to a steep and well-wooded hillside. I knew for a certainty the bird was there, and supposed that if I should see him I would surely recognize him; but the result proved that I could not. Following after, I got on a small path that ran along the hillside about midway up. I had gone but a short distance, when I stopped for a rest. Happening to look on the ground above the path, not over 20 ft. away, I saw something that attracted my attention. Why I noticed it I cannot say. I stood for some time trying to make it out. I looked for a head, a tail, a body or an outline, but could distinguish none; neither could I make out any difference in its color from the surrounding ground. A dry limb about 3 in. in diameter and 3 or 4 ft. in length lay directly across it. I finally concluded it was all imagination; that there was nothing there, and moved on to seek the grouse, when up went the object. It was indeed the grouse, who lay thus perfectly flat upon the ground. When he flew the limb across his back flew also quite a distance. It was in fact the stick that had completed the deception. Nettled at being thus outwitted I made a hasty shot at him as he went, and had the satisfaction of seeing him fall, but only winged; he ran down the steep hillside and into a rabbit burrow. I pushed my hand in and managed to drag him out; he struggled desperately, but I finally bagged him.—DORP.

GUN TEST SUGGESTION.—*Editor Forest and Stream:* I am one of those cranks who are greatly interested in pattern and penetration tests, and who, if not bankrupt when the results are published in pamphlet form, will own a copy. But there is something I would like to see done. I have not spoken of it before because I hoped that somebody else felt as I do and would speak out. I meet scores of people who tell me that a muzzleloading shotgun can beat a breechloader, especially in penetration. I don't believe it. I have owned high grade muzzleloaders, and never possessed anything in advance of a pretty low grade breechloader, and with me the latter always outshot the former. For years I shot an old shaky 12-gauge full-choke breechloader against all comers with muzzleloaders, and beat every time. I would like to see one or two really fine muzzleloaders tested at the FOREST AND STREAM screens. Surely such arms are available, and the value of such tests for purposes of comparison would readily offset the extra trouble. If such plan is not feasible, why "nuff sed," but I thought it would be no harm to mention it.—L. I. FLOWER (McDonald's Point, N. B., March 20).

NEWBURYPORT, Mass.—The South End Gun Club, of this place, was organized in the fall of 1888, starting with fifteen members and occupying a room only 12 ft. square. It now occupies a large and comfortable building, handsomely furnished and decorated, and has a constantly increasing membership. The officers are: Henry Godfrey, President; C. W. Small, Vice-President; A. O. Noyes, Secretary; J. MacDonald, Treasurer. The object of the club is to secure the protection of game, dogs and fish, also the encouragement of the citizens in their efforts to increase the varieties and numbers of fish and game in this vicinity, and the enforcement of all game laws. The club is engaged at present in restocking this section with quail, having received and distributed 180 and are to receive 360 more. They are expecting some ruffed grouse and California quail. They also intend to stock the brooks with trout. During the spring, summer and fall the club hold weekly shooting matches. They open the season at their grounds on Fast Day, April 3.—TILLY.

DEATH TO THE CHUCK.—There has been introduced in the Massachusetts Legislature a bill which provides that "any person who shall kill or caused to be killed any woodchuck or ground hog within the limits of this commonwealth, and shall under oath produce satisfactory evidence thereof, together with the head of the woodchuck or ground hog killed, to the clerk of the city or town within whose limits the woodchuck or ground hog was killed, shall receive from the clerk of such city or town a certificate thereof, stating the fact, and, upon filing the said certificate with the city or town treasurer, such person shall be paid out of the treasury of such city or town the sum of 25 cents for each and every woodchuck or ground hog so killed." The bill if passed will please the farmer and the farmer's boy, and may perhaps lead to the formation of woodchuck preserves all over Massachusetts.

BY THE ROADSIDE.—In returning from a day's hunt last October a woodcock flipped across the road directly in front of the horse and alighted upon the other side. It was in a spot where there was no apparent inducement for a cock to locate either from attraction of feed or shelter; it was such a place as one might expect to see a domestic fowl cross, and the action of the twittering longbill was not unlike that of the barnyard pullet. The team was stopped, the cock walked up, and one more bird added to the day's bag. For a wary flight bird, the proceeding was certainly unusual, to say nothing of being stupid, for the hour was still some distance from dusk. I have often known woodcock to fly across the road from day shelter to night feeding grounds just at dark, but never one to do so under such conditions as this October cock.—FEATHERWEIGHT (Manchester, N. H.).

TO PROTECT ONTARIO GAME.—A despatch to the Montreal Gazette, dated Toronto, March 17, says: "In the local Legislature to-day Mr. Balfour moved the second reading of his bill for the protection of game and furbearing animals. He explained that under the measure it was intended to permit shooting of river duck from Sept. 1 to May 1, and to prohibit shooting of marsh ducks between Jan. 1 and Sept. 1. These fowls, he stated, were being shot in great numbers in creeks, rivers and bays on the Canadian side. Their law as at present constituted prevented Canadians doing this, while there was nothing to prevent Americans, who came over in boats, and were often abusive if interfered with. In concluding, he said the abuse referred to was particularly obnoxious along the St. Lawrence River. The bill was read a second time."

MONTREAL GAME AND FISH PROTECTIVE CLUB.—A meeting of this association was held here March 18, Mr. Matthews in the chair. The meeting was opened by a reference to the irresponsible conduct of certain Americans, who travel over the waters of Lake St. Francis in steam yachts and use swivel guns, destroying ducks by wholesale. The president, Mr. G. W. Stephens, has already written to Premier Mowat, of Ontario, in reference to the matter and explaining the difficulties under which the game wardens of both provinces labored. On motion of Mr. I. H. Stearns it was resolved that the club heartily approve of any measure that would lead to concurrent legislation, and that the committee be instructed to use all means in their power to reach this desirable result. The secretary reported that since Jan. 26 he had succeeded in obtaining seven convictions against offenders against the game laws, each of whom were fined \$5 and \$6.75 costs, and two more cases were now pending. There was considerable discussion about the amendments of the game laws of Quebec, which do not appear to be clearly understood by any one. A law that met with the approval of all genuine sportsmen was on the books a couple of years ago, wherein it was forbidden to take: 1. Caribou and deer between Jan. 1 and Oct. 1 in each year. 2. Moose at any time until Oct. 1, 1890, after which date the close season will be the same as for caribou and deer. The law up to the present stands as follows: Sec. 1396. By this section, which may be cited as the Quebec game laws, it is forbidden within this Province to hunt, kill or take: 1. Deer, between Jan. 1 and Oct. 1 in each year. 2. Moose and caribou return Feb. 1 and Sept. 1 in each year. 3. It is forbidden to make use of dogs for hunting, killing or taking moose, caribou or deer. All sportsmen will be sorry if the amendment now proposed passes. The law now forbids the use of dogs in running deer, and the proposed amendment will do away with all that and permit the use of dogs for a month. This is certainly a very backward step and it behooves this club to watch the progress of events and prevent such legislation. By comparing the extracts from the statutes printed above and the following, the true inwardness of the proposed amendment will be appreciated. The Quebec Legislature has had before it the following bill to amend the Quebec game laws: 1. Article 1366 of the Revised Statutes of the Province of Quebec, as amended by the Act 52 Victoria, Chapter 19, is further amended, by striking out the word "deer" at the end of paragraph 3 of the said article, and by adding the following paragraph thereto: "4. It is forbidden to make use of dogs for hunting, killing or taking deer, except between Oct. 15 and Nov. 15 in each year."

PENNSYLVANIA PROTECTION.—In the cases of J. W. Hague, Warden, vs. William and Sarah Wilkinson for having twenty quail, and same vs. Noamie Sassara alias Noamie Jones for having 115 quail illegally in their possession, the Grand Jury returned true bills in all the cases. The Wilkinson cases were on the list for trial, but were not tried owing to so many jail cases and because of the license court. They all go over until the June term, when they will be tried. The authorities feel sure of conviction in all cases. The cases of the restaurant keepers were settled by them paying the fine and costs.

MIDDLESEX COUNTY ASSOCIATION.—Middletown, Conn., March 17.—*Editor Forest and Stream:* The following preamble and resolution was adopted unanimously by the Middlesex County Association for the Protection of Game and Fish: Whereas, The Connecticut Association of Farmers and Sportsmen for the Protection of Game and Fish accomplished most effectively the object for which the Middlesex County Association for the Protection of Game and Fish was organized, rendering its active continuation unnecessary. Therefore, Resolved, That in the opinion of this committee it is not advisable to continue the active organization of this association.—JOHN C. BROATCH, Secretary.

SLAUGHTERING THE ROBINS.—*Editor Forest and Stream:* The following note, taken from a paper published in Indiana, shows something of the great destruction of birds which has been going on this spring: "Robins continue to congregate by the many thousands near Bradford, Ind., and are slain in great numbers, people visiting the roosts after nightfall provided with a lantern and a long pole, and knocking them from their perches. The killing is contrary to law, but it is continued without interference on the part of the officials of Harrison county."—D.

PITTSBURGH, Pa.—The Wyoming Valley Sportsman's Association has been organized here with the following officers: President, E. B. Knight; Secretary, E. W. Campbell; Treasurer, E. H. Williamson. More than thirty members have already joined, and the list will no doubt reach fifty in all. The association has purchased a number of partridges (quail), bringing them from Tennessee, and will put them out in the spring. The members have secured the arrest, conviction and fine of Wm. Hepler for killing game out of season.

AN ONTARIO GENIUS wants to protect quail by forbidding the use of dogs in their pursuit. He thinks that perhaps it would not be necessary absolutely to forbid the use of dogs, but that a license fee of \$100 to be paid by those who did shoot with dogs would narrow down the sport sufficiently to preserve the game supply.

TOO FLY.—Dobbs—What do you think of those trout I have painted for the exhibition, old man? Studies of some I caught last summer, you know. Scumble—I should say they were not like the originals in one respect. Dobbs—How so? Scumble—They don't look as though they'd go on the line.—Puck.

FOREST AND STREAM, Box 2,632, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nant," "Glean," "Dick Swiveller," "Sybilene" and other competent authorities to be the best treatise on the subject extant.

THE MOST POPULAR THROUGH TRAIN IN THE WORLD.—The most popular through passenger train in the world is the No. 5, on the New York Central and Hudson River Railroad. It leaves New York for the West at 6:00 P. M. daily, and contains of from twelve to sixteen magnificent Wagner vestibule sleeping cars, in addition to day coaches, dining, baggage, mail and express cars.—Adp.

Sea and River Fishing.

RIPARIAN RIGHTS IN CANADA.

Editor Forest and Stream:

I have read with pleasure the letter of Mr. Henry Wells in your issue of the 13th inst., under heading "Canadian Fishing Leases," in reply to "Fisherman's communication under same heading in issue of 7th inst. As I was either plaintiff or defendant and also counsel and attorney in the many suits brought in New Brunswick for the establishing, or rather the recovery, of riparian rights, the following items may not, I hope, be considered out of order by your readers.

A lease had been granted by the Minister of Marine and Fisheries of Canada of all the fishing rights on the upper waters of the Southwest Miramichi extending down to and including certain waters owned by Judge Steadman, Mr. Hanson and myself. We claimed as riparian owners the exclusive right of fishing in the waters opposite our lands, and we persisted in exercising such rights, as we were fishing our water when Robinson's guardians seized Steadman's and Hanson's rods, and Robinson brought suits in the Supreme Court of New Brunswick against three of us for trespassing upon and fishing within the limits of his lease, and I brought suits against him for seizing their rods. In the suits against us we agreed upon a special case for decision of the court. The matter was argued and the court gave judgment against us, the law was sustained and we were put in for damages at costs. We did not appeal from this judgment only because we believed there had been some misunderstanding on the points raised in argument; and as we had the case of Hanson and Steadman vs. Robinson for seizure of their rods still pending and ready for trial at the next assize we determined to go to trial, and if judgment went against us we would then appeal. The trial was had and we got a verdict subject to the decision of the court about the question reserved as to the validity of the lease. The Supreme Court then, after argument, sustained the verdict, declaring the lease void, and, in fact, reversing their former judgment. No appeal was taken from the judgments, but the Governor-General in council then made an order (under authority which they assumed was given them by the Canadian Fisheries act) forbidding persons to fish on any of the non-tidal waters of Canada without a license or permit from the Minister of Marine and Fisheries.

Judge Steadman, Hanson and myself persisted in exercising our rights of fishing on our own water, irrespective of any permit from any one. The fishing inspector from St. John (Venning), acting under orders from Ottawa forbidding our fishing, and with a large posse of constables and fishing guardians came upon our land where I was fishing for salmon and demanded my rod. On my declining to give it up he held a consultation with his legal adviser (who was present on behalf of the Minister of Marine and Fisheries), and then asked me if I meant to say that I would resist him with violence. I replied that I would resist with such violence as was necessary to protect my own property. "Then," said he, presenting revolver at my head, "I will use this." Of course there was no further resistance. I gave up the rod with the remark "that I would not endanger my life for the sake of my rod." He then seized Steadman's and Hanson's rods. I then brought suit against him in the Supreme Court of New Brunswick for assault, for Steadman, Hanson and myself, and he prosecuted us for fishing without a permit. These latter were before the police magistrate and a justice of the peace at Fredericton, and were dismissed. In my own suit vs. Venning the jury gave me a verdict of \$511 and costs, which amount was paid without appeal. Steadman and Hanson's suits were tried until the next assizes, before another judge and different jury; they obtained verdicts for a considerable larger amount.

On the trial of all these cases the question as to the authority of the Governor in council to make the above mentioned order in council was reserved for the decision of the court in banc. On argument the court decided that the order in council was *ultra vires*; and sustained the verdict in my own case, but ordered a new trial in the other two cases unless plaintiffs would accept reduced damages at a stated amount. This plaintiffs offered to accept but defendants would not pay. They paid no judgment but appealed to the Supreme Court of Canada in the others. On this appeal the judgment of the court in New Brunswick was sustained, on the point of the illegality of the order in council, but a new trial was ordered in Steadman's and Hanson's suits on payment of all costs including costs of appeal by the defendants, on the ground that the Supreme Court of New Brunswick should have either confirmed the verdicts in toto or ordered a new trial, that they could not give the plaintiffs an alternative of accepting a reduced amount or submit to a new trial. After considerable demur and some more costs, defendants paid the amount with all costs which plaintiffs had offered to accept after trial of my suit. I giving judgment on the appeals in these suits the Supreme Court of Canada declared that in all non-tidal rivers in New Brunswick, where the land was ungranted, the Government of New Brunswick were riparian owners and held the exclusive right of fishing; and when such lands had been granted the exclusive right was in the grantee. So you will see the riparian rights were not recovered without some fighting; and that all possible phases of the subject have been argued before and decided upon by the highest courts in Canada; and such decisions must be taken as final at least until reverse either on appeal to the Privy Council or by the Supreme Court is reversing their former judgments.

It was after the courts both in New Brunswick and in Ottawa had declared Robinson's lease void, that he brought his suit in the Exchequer Court of Canada against the Queen, for damages in granting him a lease beyond the authority of the Minister of Marine and Fisheries which suit was appealed to the Supreme Court of Canada and the judgement given as stated by Mr. Wells. Sec. 91 of the British North American Act is as follows:

"Distribution of Legislative Powers.—It shall be lawful for the Queen by and with the advice and consent of the Senate and House of Commons, to make laws for the peace, order and good government of Canada in relation to all matters not coming within the classes of the subjects by this act assigned exclusively to the Legislature of the Provinces; and for greater certainty but not so as

restrict the generality of the foregoing terms of this act it is hereby declared that (notwithstanding anything in this act) the exclusive Legislative authority of the Parliament of Canada extends to all matters coming within the classes of subjects next hereinafter enumerated, that is to say: (1) Public debt and property; (2) regulation of trade and commerce; (3) raising money by taxation; (10) navigation and shipping; (11 12) sea coast and land fisheries, etc., etc."

Thus I contend the Parliament of Canada have the power to enact laws to regulate inland fisheries, also navigation and shipping, but the act does not give the Dominion Parliament could take away a riparian's private rights and prohibit his fishing in his own water, no matter how much it might be considered in the public interest to do so, without adequately compensating him for his loss.

Mr. Wells's letter is correct throughout and is so plain at it really requires no further explanation, but as one of the cases which I have cited above touched upon rather a different ground, I thought they might interest some of your readers.

I. HENRY PHAIR.
FREDERICTON, New Brunswick.

FOUNDER FISHING IN JAMAICA BAY.

SCARCELY has February gone with a last blast of mighty winds and rattling hail, while the Marches are yet wan with threatening snow and the gulls' wings glint ghastly white against leaden clouds, when a flounder fisherman gets ready his hooks and lines for a capture of the flat fellow that has been bedded all winter in every muddy channel and drain that connects the ocean from Montauk to the Battery. Then may be seen daily, whenever the tide has receded and exposed a shore with its tangled seaweed and gasping, staring creatures, bending figures toiling busily among the rocks and sands. Far as eye may reach, from where the stories of South Brooklyn breathe forth their heavy por, along the tree-broidered steeps of Bay Ridge, past the picturesque Owl's Head and under the grassy embankments of Fort Hamilton, far along Gravesend's rocky beach, are scattered the toilers, reaping a living harvest. They are seeking for the unfortunate creatures that have never been accepted as the proper bait for flounders—the giggling red sandworms. Rudely torn from their resting place, they are transported to the city, where they may be seen displayed in flat trays in the markets, notably Catherine Market, which is, especially on Sunday morning, a great resort for salt-water anglers whose purses follow them but one day to devote to the gentle art. Then may the well-muffled passer-by in the early gray of morning see chance-muffled figures, with rods and baskets giving glimpses of material comforts within to ward off the cold without, crowding around the stands, all eagerness and excitement, lured and hurried on by visions of mighty catches and wondrous sport; and, perchance, if his tastes be at all inclined toward the luxurious, he will wrap himself more closely in his great coat, and, shivering as he watches his breath congeal in the biting March air, wonder greatly at the doubtful taste of the anglers. Down in Long Island's southern bays, great, clamorous and bitter winds are sweeping, and mighty billows, white-capped and frothy, hurl themselves ceaselessly on shore; boats are tugging and straining at their moorings, and the cold air is filled with stinging salt spray.

If you are not disheartened come with me; yonder, straight across the bay, where four miles off the sand-ber glints white, while the ocean's surf is flung high over it, I know a sheltered spot, where bending reeds and high shores break the winds. There the flat misshapen fish have bedded for the winter. Last fall, just as the Indian summer was bedecking the land with paint and flashing, flaming tints for the struggle with wintry death, they came fresh-run from the sea, a hungry, countless multitude, and rare sport they gave until the ice chained the bay in its silent glittering rivets. All winter they have been hidden in the soft black mud, with nothing but their eyes exposed, so that the dark bottoms must have seemed studded with innumerable tiny stars. Now, at the summons of the March sun, they are coming out and will feed until about the end of April, when they start for the sea again, to go who knows whither? After April some may still be caught, but the great army has melted as it came, and made way for other and gamier fish. It is cold work rowing across the stormy waves on a sharp morning like this, and we are glad we have reached our destination. Muddy flats, shallow near shore and gradually deepening until they form a channel about 10 ft. deep at mean low water, the bottom of black mud and sand, with broken shells well mingled with it, is the end of a place where flounders should be found.

We anchor, not in the middle of the channel, but on the edge, and proceed to throw over a few shells to bait the ground, with the pious hope that they will attract the objects of our quest, and not the ubiquitous and spiny tickle-head, or the beautiful and sylph-like skate. Now into your rod. It should be fairly limber, but stiff enough to hold a considerable weight of lead. Alas for us who have light, airy tackle for the flounder we must use heavy sinkers and fish on bottom. The most successful angler in the western end of Jamaica Bay, who rarely comes ashore with less than fifty and always with at least twenty-five to thirty, uses 14oz. weights. Weep, aak! But while we not advocate carrying matters to such extremes, we urge the necessity of as heavy leads as possible. The reasons for this are twofold. Firstly, the fish we seek is a bottom fish and seeks his food there, and the baits must consequently be there also. Secondly, the heavy weight sinks into the mud, and when it is moved gently, as it should be from time to time, the sediment is stirred up, and this attracts the flounder, who, as mayhap, up to this time been quietly bedded not a foot away from your line. Seeing the stirred up mud, he probably suspects either a more than usually tempting prey, or fears that some rival has hunted out a bait which he thereupon desires, and slides toward the scene, to be lucky favors the fool at the other end of the line) promptly hooked and gathered to his forefathers.

This reminds us that before you hook your flounder you must attach to your line the where-withal for so doing. If you have not left this necessary adjunct at home, as the Irishman did his anchor, you must choose from your book some No. 14 or 1 hooks. Double-gutted croats are what we like best, and with reason, but every angler has his own particular favorite, and denounces those who believe not in him as men who know not

Moses. At any rate, whether you use any of the different shapes or all, bring a good supply along. Make room for them, if necessary, by throwing out the medicine bottles, for you are after flounders, not swallows. Please spit on your hooks carefully and then tie one immediately above the sinker and the other as close to it as possible. There is no law against putting more than two on, but it is not advisable to put more than a dozen on, as unfeeling spirits might hint darkly at "pot" if they saw such an array.

An English gentleman, well known in the western end of Jamaica Bay for his sporting proclivities, always uses about four hooks on each line, and generally has two or three lines out. Each hook being liberally loaded with one or two feet of sandworm or a half pound or so of clam, he spits on them, as advised above, and then casts his bait establishment on the waters. As a consequence, when he anchors in a promising place, he must first fish out all the skates, hackleheads, crabs, sea-spiders, and old shoes and tomato cans, before he can buckle down to the work of the day and pull in *Paralichthys dentatus*. (For the benefit of laymen I would mention that, to the best of my knowledge and belief, this is the scientific name of the flounder.)

This season the fishing has been more than usually good in Jamaica Bay, and notably that part of it which is reached via Canarsie. Catches of from fifty to sixty have been brought in by the old anglers, while even the tyros have had good luck. The fish, owing, no doubt, to the mild winter, are larger than they have been for some seasons. Measurements of three taken last week showed each one to be 18in. in length and 8in. across, with a weight of 3lbs. These were the ordinary size, and larger fish were brought in. Though not honored by being called a game fish, a flounder of that size will give genuine enjoyment and makes a good fight, and the warning given above, relative to bringing plenty of hooks, is not without reason, for the fish fights hard and

is a violent and powerful plunger, being more destructive of tackle than gamier fish are. The season, so far, has not shown signs of abating, and anglers who come properly prepared (without a "jag") may still hope to find sport during the next few days. I speak more particularly of that part of Jamaica Bay known as Canarsie, because all my fishing this season has been done there. It is easily reached from East New York and promises to reward the patient angler well this season.

The writer belongs to a circle of gentlemen who know the possibilities of the bay, and are anxious to have gentlemanly anglers come there, hoping that this may gradually lead to the discouragement of rough elements, which, however, are not nearly so prevalent as they once were. Boats may be had all along shore at reasonable rates, but sand worms had better be brought along. Later in the season all baits such as shadders, shrimp, etc., may be had there. Last season those who know the proper places and methods had splendid sport with large weakfish, and it bids fair to be good if not better this year. The "lone fisherman," J. J. R., as usual carried off the palm and had a bad habit of loading his boat with the croaking beauties, while others caught nary fish. However, our records averaged well, and each one generally brought in from twelve to thirty large, handsome fish, no school fish, but all tide-run and powerful fighters. I will write you about blackfishing and sea bass in a few weeks. Catches of large tautog are being reported. Last spring we took some from the wrecks inside the inlet that weighed 5 to 6 pounds.

J. N. M.

HATCHING PERCH EGGS.—In his report upon the operations at Central Station, U. S. Fish Commission, last year, Mr. S. G. Worth, superintendent of the station, refers to the successful hatching in April (1889) of eggs of the yellow perch (*Perca americana*), as follows: "Adult specimens gathered from the Potomac River, March 3, for exhibition purposes during the inauguration ceremonies, spawned in the aquaria tanks, where the eggs were naturally fertilized. Upon being removed and placed in Universal hatching jars, the result was in all respects satisfactory. The loss in hatching was so slight that it was hardly to be computed or recorded. The eggs from several fish were handled, those from each fish being in a conglomerate mass, oblong in shape, of fleshy texture, several inches long and heavier than water. The fry were very minute. No deposits of the young were made, they being retained and kept under observation." Mr. Worth further informs us that their experiments last spring were of such an interesting nature that they have taken the matter up again this year, and have secured a number of adult perch, which are now in the aquaria. On March 10 these began to spawn in a temperature of 41°. The principal object of the experiments this spring is to determine the date of spawning and the period of hatching, together with temperature. The results of these observations will be of much interest and benefit to those who may in the future desire to propagate this species.

SANDWORM (*Nereis pelagica*).

THE OLD LAKE NOT FOR LEASE.

Editor Forest and Stream:

I am reminded that some time ago I sent you a form of advertisement in relation to leasing a trout lake. I shall have to let it drop. The fact is my brother went back on me. That is, one day last winter he pitched all his Greek and Latin lexicons into a corner and came here to visit me. We went straight off into the woods and to our cabin, as we always do, where we spent ten delightful days together. It snowed a portion of the time, rained some and blew great guns a part of the remainder, but that made no difference. We caught what trout we wanted to eat through the ice and Nazaire cooked them.

The result was that when the question of leasing the lake was broached there was no question at all about it. The thing couldn't be endured. We should be too homesick. We must do as a friend of mine says he is going to do whenever some new book or something of the kind tempts him, a thing that happens about every day of his life, "economize in some other way." There was another thing that I will never allow influenced me in the least, and that was when I spoke of leasing the lake two young girls (isn't it strange how fast they grow up?) exclaimed, "What! Let our lake! Oh, papa, don't!"

So there was a unanimous decision that we must keep it for ourselves and friends this year as formerly. My brother's economy takes the shape of determination to visit the place four times a year instead of three, and mine comes in in adding to the accommodations for ladies. It is really an economy for him, as such things are for almost every one who will escape from the city and work to lakes, hills and trout streams, for he picks up the pure air, health and vigor to carry him through double what he could do otherwise.

Therefore, instead of advertising in FOREST AND STREAM and finding some man who would appreciate the loveliness of the spot (if he fully appreciated it he would double the rent of his own free accord) and would pay us several hundreds of dollars, we not only keep the place for our own enjoyment, but go to work to make it even more attractive.

I don't know that a fishing camp is not as bad as a yacht. "You commence with a dugout and end in the poorhouse." Our first cabin, ever so many years ago, was 6x8. The present one is 14x56, to say nothing of the "summer pavilion" (which is a joy forever), the ice-house, bathing house, storehouse and all the rest.

Three years ago I said we had all we needed and I was not going to spend any more money there. But now that economical brother of mine is prompting me to set up a hatchery, where we can breed winninish by the thousands and trout by the tens of thousands, to put into other lakes where the minnows so abound that the trout grow big, fat and lazy and do not care for flies. As he says so I suppose it has got to be done, or at least attempted. Just as if there were not all the trout we want already right at hand. I don't suppose we take a hundred dozen trout from the lake in a whole year, while thirty or forty years ago the *habitans* would take nearly as many in two or three days. And yet I have no reason to think there are less trout in the lake than there were then, for of late years certainly it has not been overfished.

In those days the people waited for *la première glace* (the first ice) and took the fish on the spawning grounds by the thousands. Seven salt bags full, one man tells me, he brought away on one occasion. They don't do that now, I can assure you. I am a stickler for the game laws. They may not always fit the cases exactly, but I regard them all the same, and sometimes more. Last year, in one of our rivers, three weeks before the close season, I found spawn in the fish, quite well advanced. I quit fishing there at once and betook myself to other waters.

Speaking of our "pavilion" as a thing of beauty it is interesting to see how the rude mind takes in that beauty that comes from proportion and simplicity. The thing is only a roof set on four posts. Its size and height were determined partly from accident of location, but a gentleman of intelligence and of some distinction in Canada as well, who chanced to be a visitor last summer, pronounced the proportions to be absolutely classic. There is nothing in the slightest degree pretentious or ornamental about it. The roof timbers are stayed by tamarack knees, spiked to them and to the corner posts. The roof itself is covered with light spruce poles, common bean poles, projecting a foot or so beyond the crossbeams. Almost all the work was done by the guardian, with only axe, saw and hammer. And yet this arrangement strikes the uncultivated Canadian *habitant's* mind—than which there is none more primitive except that of the savage—with delight. He pronounces this "*la plus belle bâtisse de toutes*," and calls it "*charmant*." I agree that it is charming and the prettiest building of all and its appearance better than I anticipated, but what surprises me most is that the ordinary Canadian, so little alive to the beautiful as a rule, should be so taken with it. I attribute the effect to the tamarack knees, the roof of poles and the projecting eaves. Without these apparently trifling things the whole would be merely commonplace. With them it pleases the rude and cultivated alike.

Another thing in the same line also pleases. A common way of covering lumbermen's camps, here as elsewhere, is with partially hollowed logs (*duiges*, troughs), one tier inverted over another. Our cabin is covered in the same way, only, instead of using small logs on poles of say 6 to 10in. diameter, as the lumbermen do, we used hollow pines and cedars from say 16 to 24in. diameter. The difference in appearance is wonderful. This also strikes the Canadian, for though our camp is built almost precisely like a lumberman's shanty, there is no similarity between them. It shows what little change from the ordinary way of building may produce a picturesque effect. And as our camp has been enlarged at different times by elongation only, without change of height or line of front, the projecting ends of the cross timbers produce a similar effect to what an architect might seek to get by means of pillars, columns, etc., in a long façade. We also avoid incongruity. We have no suburban villa in the woods. The whole thing accords with the surroundings, while giving us every convenience.

So I do not think we can let our lake this year. It would go too far toward breaking our hearts to miss the tender touch of the rising sunlight on the hills across the lake and the broad glow that sweeps up the mingled shadows and reflections that front us as the sun goes down. There is no other lake like it. G. DE MONTAUBAN, QUEBEC.

FISHES INSENSIBLE TO PAIN.

I HAVE read many articles on the subject of whether fish when caught on the hook feel any pain or whether their struggles were merely the result of finding themselves fast. I fish a great deal in the summer months for trout, bass and pickerel, and have done so for many years. I have studied the matter very carefully and have made up my mind from various incidents that have come under my observation that fish are not sensitive to pain as are warm-blooded animals. I will cite two instances that show to me plainly that I must be right in my conclusions on this subject.

Last October while fishing for pickerel on Lake Cary, Wyoming county, Pa., in company with a companion, among other fish that we caught was a pickerel that would weigh nearly, if not quite, 3 lbs. My friend pulled it up, and as it came on to the top I saw about 12 ft. of a very coarse brown line hanging to it. Upon inspecting it more closely I found that the fish had in its side a very strong and coarse hook, to which the piece of line was attached. The wound must have been made a very short time previous to our catching the fish, for it was bleeding quite freely and looked very fresh, and if the fish could feel pain it would certainly have deterred it from taking our hook so soon after such an injury. There was only one other party fishing on the lake that day, as it was cold and windy, and that pickerel must have received his injury from them and have come nearly across the lake to us, dragging that piece of heavy line with him.

The other instance occurred in this way: I was fishing for pickerel with a "skipping bait"—most of your readers know what that is—a piece of pork rind or a pickerel belly, and had with me a friend who, though he could handle a brigade under a heavy fire, was not up to the trick of catching fish that way. I was having fairly good sport, but he got impatient and finally, when he had a good strike, he jerked so hard as to break his line, and away went the fish, and he at once proposed to go home; but I told him in joke if he would wait five or ten minutes I would catch that fish and get back his hook. So we sat down and had a short smoke. I soon commenced to cast my hook near where he lost his fish. I had a strike, and to our mutual surprise out came the General's fish with his hook well fastened in its mouth. Now, I don't think the fish would have taken the bait so soon again had it been in any pain from the hook. LEX.

[We are prepared to believe that fishes are insensible to pain. The pike, after having its mouth torn with a hook, will take the bait as freely as before. We have seen sharks which had been disemboweled and thrown away for dead, swim about near the surface and seize food as eagerly as if nothing unusual had occurred. Eel-like fishes are often bitten in halves and make a perfect recovery, sometimes figuring in scientific papers as representatives of entirely new animals. Sunfishes and sticklebacks, which have lost the tail fin and replaced its functions by an extension backward of the dorsal and anal fins are frequently seen.]

THE ALASKAN BLACK BASS.

CALIFORNIANS are just discovering the immense field for sportsmen in Alaska. It is for us what Canada would be for New Yorkers if it were still a wilderness. The fishermen seem to gain most in Alaska, for the coast is far more accessible than the interior. Several thousand tourists go to Alaska every summer, and many more fishermen would find their way there if the field were better known. Salmon are so plenty in Alaska that Sitka people deride the idea of calling salmon "game." They claim, up there, that the leading game fish of the region is the black bass. This fish is extremely rare on the California coast. Once in a long while fishermen bring in a few. In Alaska, on the contrary, black bass fishing among the wooded, rocky islands, is the great sport.

A writer in the *Alaskan*, published at Sitka, describes his experience with black bass. He says:

"Our bait consisted of needle-fish, obtained only at low tide and dug from the sand. The hooks had barely sunk beneath the surface when both poles were suddenly pulled into the water by some unseen thing of apparent great weight and strength. How they pulled, plunging down, then drawing the line beneath the boat, then darting directly for us. We at last conquered, and with the two lines twisted together we pulled into the boat two large and beautiful black bass. Our luck continued until late in the evening, when we cast the boat loose and pulled for home. The catch amounted to something over ninety fish, ranging from 1 to 6 lbs."

NILES, California.

[This name is well established in southeastern Alaska and on Vancouver Island for a fish which bears a pretty close resemblance to our fresh-water black bass; the species is *Sebastichthys melanops*, which is mentioned in *FOREST AND STREAM*, Aug. 8, 1889, among the fishes of Esquimaux. Without doubt it is one of the choice food fishes of Alaska and affords excellent sport for the anglers, to whom it is known also as "rockfish" and "rock cod," although it is no more like a cod than a cunner is. The needle-fish is what we would call a sand lance or sand eel (*Ammodytes personatus*) and is universally used for bait. *Sebastichthys melanops* ranges south to Monterey, but begins to be common in the Puget Sound region. We have heard the name "black bass" applied to it at Kodiak and Unalaska, as well as at Sitka.]

LOBSTERS IN GULF OF ST. LAWRENCE.

IN his last report upon the Fisheries Protective Service of Canada, Lieut. Andrew R. Gordon, R. N., refers to the lobster fishery in the Gulf of St. Lawrence as one of the most important industries engaged in by Canadian fishermen. He says that this fishery, like the mackerel fishery, has greatly declined during the last few years, and he makes the following practical suggestions for the preservation and future development of this important industry:

First—"That the packing season in the Gulf of St. Lawrence close on July 5 instead of on the 15th, as at present.

"Second—That every buoy to lobster trawl, net trawl, or in fact every fisherman's buoy, be marked with a registered number or mark, register to be kept with the nearest Custom house officer or fishery officer, all un-

numbered or unmarked buoys to be confiscated and destroyed.

"Third—That the artificial culture of lobsters be undertaken and proceeded with on a commensurate scale as soon as possible. The packers to save all the ova.

"Fourth—That a system of nurseries or closed areas be adopted for the waters of the Gulf of St. Lawrence. These closed areas should be strips of water two miles in width and extending out at right angles to the general trend of the shore. The boundaries to be marked by the alignment of two small beacons, and a closed area of two miles out of every ten to be set apart. There would thus be alternately eight miles fishing and two miles closed area.

As to the first recommendation, the closing of the season on July the 5th would probably not have much effect in protecting the hatching of the lobster, unless the season there is much later than on the New England coast, where the spawning (*i. e.*, the hatching of the eggs) season commences about the first of May and continues until July 10. The second, if carried out, would be of much convenience to the authorities in preventing depredations and illegal fishing. Third, it has been determined by the U. S. Fish Commission that the artificial cultivation of lobsters can be carried on successfully, that the eggs taken from lobsters during the hatching season can be hatched separately from the lobster in the ordinary hatching apparatus used for hatching codfish eggs. The fact that the packers are called upon to save all the ova would, of course, result in great good and largely increase the number of eggs. It would be practically useless, however, to take the eggs from the lobster for this purpose except during the spawning season or immediately preceding it. As to the fourth recommendation, the system of nurseries is undoubtedly a good one, but the width of the areas proposed by Lieut. Gordon for nursery purposes is probably not large enough. While lobsters are supposed not to migrate far up or down the coast, still they must move to some extent in those directions. Their principal movement is toward the deeper water at the beginning of cold weather, and toward the shallower water at the commencement of spring.

A LINE DROPPED TO MICROPTERUS.

THE RIFFLES, Crystal Brook Co., State of Coldwater. Dec. 15, 1889*.—*Micropterus Dolomieu, Esq.*: DEAR SIR—It was with mingled feelings of pleasure and pain that I read your most courteous and highly valued letter to me in *FOREST AND STREAM* of Dec. 12; pleasure at being the first member of my family, so far as I know, to receive a written communication from one of yours, and a communication withal so explicitly friendly in its sentiments; but pain that, through a misprint (due to a hasty and obscurely penned word of mine) and also partly to a too careless reading of my words on your own part, you should have formed so mistaken a notion of my true feelings toward you and your kindred. Let me say at the outset that I welcome any lawful means which may promote communication between us, and of the means known to me I consider our beloved *FOREST AND STREAM* one of the very best, especially during my long "stay-at-home" periods, when all tackle but a stub pen has to be hung up.

I am sure that the sense of deep and undeserved injury which must have filled your heart when you read my words in *FOREST AND STREAM* of Nov. 21 could not have exceeded in poignancy my own chagrin at reading the same and seeing the error which the types had made. I am somewhat comforted, however, by the hope that you saw in the issue of Dec. 5 the disclaimer which I hastened to make, and which for double assurance's sake I here repeat: "The Bristly Bass.—In some recent comparisons between trout and black bass and pickerel as game fishes I did not mean to be quite so hard on the bass. I intended to say 'the bristly bass,' and not 'the beastly bass,' as the types made me. I had in mind the spiny dorsal fin and rough scales of the bass compared to the smooth-backed and practically scaleless trout with never a scale about him."

You charge me with saying, speaking of your family in general, "He is no friend of mine," whereas what I did say was, "Compared with the trout the black bass is no great friend of mine." This is a very different thing, as I am sure a person of the frank and honest disposition shown in your letter will, on reflection, admit. The epithet "coarse" and the expression "only better than a pickerel," I must own up to, and of the latter I shall have something more to say in a moment, but it is due to me to add that I also said, speaking of you, "But still he is a genuine game fish, and in waters where he is the rightful king and not an interloper, he is to be respected and valued." I submit that, making allowance for pardonable difference of private preference and the influence of early association (I was born among the trout brooks of New Hampshire, and never had the pleasure of seeing one of your family till I was 14 years old), the above ought to put me on a fairly respectable footing with you, especially as I went on to denounce a certain ruthless enemy of your race.

Now, as to "only better than a pickerel." I myself called him "the miserable fresh-water shark," and you call him, and I think justly, "tyrant, bully, coward and thief." With so bad a count against him I perceive that in calling you "only better than a pickerel" I did you a great injustice, and I hereby beg to make my best apology to all black bass and emphatically to state that "for pluck and gameness," and "fair, equal, straightforward style of fighting" the pickerel is simply nowhere compared to you, and I freely admit that I did "speak in haste" and for a moment failed to make proper discrimination. I have not the slightest wish to excuse myself from your just criticism on this point, though it affords me, perhaps, a trifle of comfort to note how others—yourself, for instance—can now and then become a little overearnest in speech. Are you sure you are not giving even the pickerel a rather mixed pedigree and relationship, when you call him "that misbegotten progeny of a water snake and an alligator, that slimy, speckled, slab-sided cousin of a shark and foster brother of the eel?"

I am glad that my little article, whatever its shortcomings, was the occasion of calling forth your really brilliant panegyric on the noble qualities of your race. I consider that you have made out an excellent case for yourself and kindred in respect to your claims to a high degree of courage, a refined and æsthetic color sense,

*Written at that date, but deferred by la grippe.

conjugal fidelity, cleanliness, etc., and you are quite justified in demanding that opinion as to your flavor should be formed under proper conditions and not after you have suffered from violence and abuse. Still in giving my vote, as I must in opposition to Dr. Henshall, and for *Salmo fontinalis* (I will say *Salvelinus* if anybody wants me) as having the most counts in his favor. I wish to assure you that I am not compelled to base my comparison on knowledge of your family gained from the Florida members of it alone. In fact, my first acquaintance with you was on the Fox River, of Illinois, and I have memories of very agreeable and satisfactory meetings with others of your kindred on Indian Lake, Minn., who fully sustained the high character you have given them.

You will admit that the whole matter is largely one of taste, and will understand me as in any case according you a place high in the scale. I shall be only too happy, whenever engagements permit, to drop you a line. Yours cordially,

C. H. AMES.

AQUARIA NOTES.

Occasional Observations on the Fishes in the Aquaria of the U. S. Fish Commission.

THE popular ignorance of the physiology of fishes and of aquatic life generally is so great that the comments and queries of visitors of all grades of intelligence are of the most remarkable character. Some of the guides, too, of Washington, who are supposed to enlighten the weary pilgrim to this Mecca of scientific research, rattle off with a glib tongue a hotch-potch of mingled truth and fiction that would horrify a naturalist, well knowing that there is little likelihood of their being detected, and knowing also that what they may say will be forgotten or so confused in the mind as to be a matter of uncertainty before references can be made to the encyclopedia (or natural history) at home.

On one occasion a finely dressed and apparently cultivated man of a small party was overheard to say to his companions, "Well, I can't understand how a fish can open its mouth in that way without getting the water into its lungs." The fact that fish should have their mouths open in the water excites continual surprise, and the motion of the gill covers is often taken to mean some distressing condition, the function of the gills not being generally understood. It is quite a common belief the gills are mere strainers, solely of use in catching food and that the fish are able to extract animalcule life or other imperceptible nutriment from the water. In fact this is a very common statement made by dealers in goldfish. "Dick's Encyclopedia of Receipts and Processes" states, concerning the keeping of goldfish: "It is not good to feed them, as the food will only serve to render the water unfit for their existence, and if renewed every day the water itself furnishes them with enough material for their sustenance."

The fact is, however, that none but the very youngest fry feed upon animalcule except where they are taken with the slimy masses of minute plants upon which many species feed. The young fry can be seen to catch the animalcule invisible to the naked eye of man, they no doubt having microscopic vision. The gill-rakers which are, in some species, specially adapted to the purpose, are used as strainers, but it is only creatures above the protozoa and visible to the naked eye that are thus caught. At all events even quite young fish will starve in water alive with animalcule if not provided with food.

The manner of reproduction of fishes is also but little understood, and by the way, the fact that the fish egg is transparent and that the little fish may be seen moving about in it furnishes the means of an important objection in the demonstration of a great universal physiological fact—the development of all vertebrate life from the egg. The hatching jar is the one place where a person may be taught the elementary knowledge of the fundamental principles of physiological development. When people realize that the little spheroids of protoplasm or the tiny transparent fry in the hatching jars and aquaria grow into the great fish they see in the markets and enjoy on the table, they will have learned something of the lesson not easily forgotten. In certain seasons the ova may be seen in the various stages of development from that in which the nucleus is first visible to that in which the little fish may be seen moving about.

The guides have been heard to point out the anemones as immature forms of the lobster. A common question concerning the lower forms of aquaria life is, "What do they turn into?" Often otherwise intelligent persons are heard detailing to their friends the most astounding metamorphosis and developments of marine animals, rivaling even the mythical origin of the goose from the goose barnacle or the popular horse-hair theory of the development of *Gordius aquaticus*.

Be it understood that it is not in a spirit of ridicule that these things are referred to, but only to show the general ignorance of the subject and the desirability of the development of opportunities for extending such knowledge.

Perhaps the funniest question of all, asked in all sincerity, in a genuine search for information by a person engaged in one branch of fishculture, but unfamiliar with marine fishes, will be received with incredulity. We must, however, charitably look upon it as a case of momentary mental confusion arising from an association of the article of commerce of the same name rather than as the dense ignorance implied. The question was "Have you such a fish as the boneless herring?" Fortunately the person appealed to was not familiar with marine fishes, and being non-plussed, replied that he didn't think we had.

Millions alone will satisfy the average mind in estimating the numbers of fish fry in an aquarium. Half a million fry but half an inch long, and so transparent as to be invisible, in an aquarium 5 ft. long, 18 in. wide and 18 in. deep, appear like clouds, literally swarming like maggots. When carried in cans, four or five million make a very large carload. The amount of labor and skill necessary to handle 150 or 200 millions of delicate fry, as is done in the case of the shad and the whitefish by the U. S. Fish Commission alone, and the enormous space they would occupy if collected together, would be difficult to appreciate.

WM. P. SEAL.

THE BEST FISHING TACKLE IN THE WORLD is to be found at the salesroom of Thos. J. Conroy, 65 Fulton street, N. Y. See advertisement opposite first page of reading matter.—Adv.

RANDOM CASTS.—VI.

ONE man may be a seiner, another a hook and line fisherman; no man can be both at the same time.

Some men do more for their fellow anglers in a few seasons' outing than others who may have fished for twenty years ever do. The one, by the proper use of his abilities, adds to the pleasures of angling by inquiring into causes and informing the fraternity of the effects of certain experiments as applied to them. The other just catches fish, neither looking to the right nor to the left, without a thought for those who come after him.

Always carry a few cheap flies with you to the stream for the country boy who lives on the bank. A "fly-hook" to him is a treasure; to you a free pass.

Come now, ye adepts of the angle, cast at random and let us hear from you once in a while, that we, the young and inexperienced, may have an opportunity to benefit by some of your valuable knowledge.

About this time look out for a storm—of angling catalogues. Their name is legion, but their contents—well, to put it mildly let us say, just a bit misleading. You can invest anywhere from a two-cent stamp to a half-dollar with the same result in finding them all built upon their owners' patent principles. Each one has about the same interior, the only real difference being that each individual thrusts some particularly profitable article at you in some such style as this: My nets are the best in the market, being made from specifications furnished by the great "angler," John Doe; or my hooks are not like my neighbor's, they are the best in the world; or my lines cost more than any one else's, but they are so much better, being especially made for me; or my knowledge of everything is so complete that it is presumption on your part to attempt to decide for yourself; I am the only Jacob.

To those who have passed the catalogue period of their angling existence it is often highly amusing to note what utterly absurd claims are made by the one or the other; but for the novice it becomes a bewildering task to find much of value in them. There is an old saying to the effect that water always finds its level, and this seems particularly applicable to the catalogue makers, but of course they will not see the value of the suggestion, so when the proper opportunity presents itself I do a little missionary work on my own account, and in this way endeavor to point out the pitfalls to those of my friends who may still be in ignorance of the delusive snares that beset them in the search for what is practically good and necessary for their needs.

BIG REEL.

TO SUNAPEE LAKE.—Charlestown, N. H., March 24.—*Editor Forest and Stream:* Your answer to "T. J. C." in FOREST AND STREAM of the 20th inst. is misleading. He will have nothing to do with Brattleboro except to go straight through it. Tell him to buy a ticket at the Grand Central Station for Claremont Junction, on the Connecticut River road, for \$6.15. He can leave New York at either 12 M. or 4 P. M. and arrive at Claremont Junction at 7:45 or 11:30 P. M. Sleep and breakfast at the Junction House, and take the train at 7:30 for Sunapee station, and the mail carrier will take him over to the "Harbor" or village where the hotels are, and where he can get boats. The steamer from Newbury will not be put on before June, and the best fishing is in May. If he likes he might stop in Newport, four miles short, and inquire for your correspondent Nap. Woodbury or Mars-ton. (Change cars at Springfield, Mass., only)—VON W.

ABOUT TARPON FISHING.—East Orange, N. J., March 21.—*Editor Forest and Stream:* Permit me through your columns to shake the hand of "J. V. I." His article on tarpon fishing will bear better fruit than he has any idea of, for I believe the true angler is always willing to learn and to adopt whatever is an improvement on his former methods. Under the conditions mentioned skill is needed, and no small amount either, to handle and save a tarpon, and if "J. V. I.'s" methods had been the rule and not the exception, I would have been the last one to criticize. Unfortunately my strictures are well deserved by the great majority of those who go to Pine Island. How would your correspondent like to take tarpon with a fly-rod and a fly? It has been done.—BIG REEL.

MASSACHUSETTS FISH LAW.—An act to repeal certain acts prohibiting the seining of fish in certain ponds on the island of Nantucket: Be it enacted, etc., as follows: Section 1. Chapter one hundred and eighty of the acts of the year eighteen hundred and seventy-five, and chapter forty-nine of the acts of the year eighteen hundred and seventy-six, prohibiting the seining of fish in the ponds on the island of Nantucket, are hereby repealed. Sec. 2. This act shall take effect upon its passage. Approved March 13, 1890.

A BIG CARP.—Dayton, Ohio, March 25.—A rod fisherman, using ordinary angleworms for bait, caught a scale-less German carp weighing 16½ lbs. in the Miami River here. The fish measured 40in. long and 22in. in girth, and was not landed for a half hour after being hooked. After the angler had played the fish a long time the line broke, and the angler jumped into 2ft. of water and with his hands shoved the carp into shore. The carp did not die until five hours after being caught.—BUCKEYE.

MORE NETS IN THE ST. LAWRENCE.—State Game Protector Daniel Starring, assisted by Mr. W. Visger, in the employ of the Anglers' Association of the St. Lawrence River, captured two large nets recently in the St. Lawrence River. In one net they found twenty-eight pickerel, a large number of bass and perch, with a great quantity of bullheads. The Anglers' Association propose to keep these two men at work on the river so long as may be necessary.

SURF FISHING FOR STRIPED BASS ON THE JERSEY COAST is the theme of an instructive paper which will be printed in our next issue, April 3.

GONE UP THE FLUME.—*Nature*, the new paper devoted to outdoor life, recently started by William C. Harris, on J. K. Emmet, Jr.'s money, has gone to join two other papers, *Afield and Afloat* and *Hook and Line*, which were started by Mr. Harris, and which died after several weeks' existence. Mr. Emmet wasted \$3,000 on *Nature*.—*The Journalist*.

DATE OF NEW YORK TROUT OPENING.—By an error of paraphrasing in last week's issue, under the head "Angling Notes," we were made to say that the New York trout season opened May 1. The remark refers to the Adirondack region only, the date of the open season for New York State in general being April 1.

NETS IN ONEIDA LAKE.—The *Oswego Times* says: "Augustus Maire, of Oneida, one of the fishermen charged with taking fish in Oneida Lake with nets last September, has settled the action brought against him by the district attorney by paying the penalty and costs, amounting to \$113."

THE AUTOMATIC REEL.—A Washington, D. C., correspondent reports that he has found the automatic reel a most satisfactory implement, and that it is growing in favor among Potomac anglers, who like the way it reels in a fish.

ABBEY & IMBRIE'S CATALOGUE.

THE firm now known as Abbey & Imbrie dates back to 1820, and the bulk of its new catalogue for 1890 justifies the theory that the book is a growth of these seventy years. The list of goods here described includes everything that an angler needs, and a few luxuries with which a man of economical turn of mind might manage to dispense. It appears to be the purpose of Messrs. Abbey & Imbrie to cover perfectly the several departments of the fishing tackle trade and to maintain the high grade long ago established for their goods. The illustrations are specially valuable because carefully drawn to exact measurements.

Fishculture.

DISTRIBUTION OF SALMON EGGS.

BELOW will be found a tabulated statement of the distribution of salmon eggs by the U. S. Fish Commission, the largest distribution made by the Government to the present time.

LANDLOCKED SALMON FROM MAINE STATIONS.

W. T. Dennis, Com. of Fisheries, Indiana.....	10,000
Geo. D. Mussey, Sec. Fish Com., Michigan.....	50,000
S. S. Watkins, Com. of Fisheries, Minnesota.....	40,000
E. B. Dodge, Com. of Fisheries, New Hampshire.....	20,000
Geo. T. Mills, Com. of Fisheries, Nevada.....	25,000
E. G. Blackford, Com. of Fisheries, New York.....	115,000
Henry T. Root, Com. of Fisheries, Rhode Island.....	10,000
Herbert Brainerd, Com. of Fisheries, Vermont.....	25,000
Central Station, U. S. F. C., Washington.....	30,000
Ft. Gaston Station, U. S. F. C., California.....	20,000
Green Lakes, U. S. F. C., Maine.....	75,000
Northville Station, U. S. F. C., Michigan.....	30,000
Duluth Station, U. S. F. C., Minnesota.....	30,000
Dr. Heber Bishop, for Megantic Fish and Game Club, Massachusetts.....	10,000
E. R. Hewitt, New Jersey.....	10,000
Gen. Geo. W. Hooker, Battleboro, Vermont.....	25,000
W. Aug. Carter, Malvern Wells, England.....	15,000
Herr von Behr, Germany.....	40,000

Total.....580,000

PENOBSCOT SALMON FROM MAINE.

Benj. Lincoln, Com. of Fisheries, Maine.....	40,000
E. B. Dodge, Com. of Fisheries, New Hampshire.....	40,000
E. G. Blackford, Com. of Fisheries, New York.....	200,000
H. C. Ford, Com. of Fisheries, Pennsylvania.....	100,000
Henry T. Root, Com. of Fisheries, Rhode Island.....	10,000
Ft. Gaston Station, U. S. F. C., California.....	100,000

THE SUCCESS OF TROUT CULTURE.

Editor Forest and Stream:
I notice in your issue of Feb. 6 that a certain railroad company have applied to the N. Y. Fish Commission for 350,000 trout to stock the many miles of public streams contiguous to their lines, some of which are natural streams that have been fished out, while others never contained trout. Can you tell me of a solitary well-authenticated instance where there has ever been any material increase of trout in any stream from artificial stocking? I have often read of such instances in FOREST AND STREAM and other journals, and, as a journalist in search of accurate information, I have often made extensive and searching investigations concerning said statements, and have invariably learned that there was little if any foundation for the statements published, and that said statements were made manifestly in the interest of fish commissions, for the purpose of influencing appropriations. Scores of thousands of dollars continue to be wasted annually through this long exploded trout-stocking folly.
MILTON P. PEIRCE.

[We can call to mind at once the names of three gentlemen who have personal knowledge of the success of artificial trout culture and hope that Mr. Peirce will correspond with them on the subject. The number can be increased in definitely if desired. We have no doubt that a great deal of money is wasted annually through ignorance of proper methods of work and the natural limitations of streams; but we deny the existence of a "long exploded trout-stocking folly." No person who reads intelligently need be in doubt as to the entire practicability of trout culture as a business enterprise. Mr. H. R. Clarke, 237 Eighth street, Jersey City, N. J., is familiar with the sales of surplus trout by the South Side Club of Long Island. Mr. Wm. Montgomery, of Verona, Missouri, can tell how the rainbow trout has caught on in tributaries of Spring River. Dr. John Laws, of Leadville, Colorado, will doubtless confirm the statement that he has now 100,000 Eastern brook trout in possession and that they are phenomenally large and vigorous. We will undertake to furnish scores of names of gentlemen who know that trout streams have been restored and improved by artificial introduction.]

FIXTURES.

DOG SHOWS.

April 1 to 4.—Sixth Annual Dog Show of the New England Kennel Club, at Boston, Mass. J. W. Newman, Secretary.
April 15 to 18.—Show of the Buffalo Kennel Club, Buffalo, N. Y. A. W. Smith, Secretary.
May 6 to 9.—Second Annual Dog Show of the Southern California Kennel Club, at Los Angeles, Cal. H. W. Wilson, Superintendent.
Oct. 6 to 11.—Ninth Annual Dog Show of the Danbury Agricultural Society, at Danbury, Conn. B. C. Lynes, Secretary.

FIELD TRIALS.

Nov. 17.—Twelfth Annual Field Trials of the Eastern Field Trials Club, at Otterburn Springs, Va. W. A. Coster, Saratoga Springs, N. Y., Secretary.
Dec. 1.—Second Annual Field Trials of the Central Field Trials Club, at Lexington, N. C. C. H. Odell, Mills Building, New York, Secretary.
1891.
Jan. 19.—Eighth Annual Field Trials of the Pacific Kennel Club, at Bakersfield, Cal. H. H. Briggs, Secretary.
Feb. 2.—Third Annual Field Trials of the Southern Field Trials Club. T. M. Brunby, Secretary, Marietta, Ga.

THE WORCESTER FUR COMPANY.

WORCESTER, Mass.—*Editor Forest and Stream:* The Worcester Fur Company is an organization of which Mr. A. B. F. Kenny is president, and Mr. Elisha S. Knowles is secretary. Among its members are many professional and leading business men. The principal object of the company is to hunt the fox, and an unwritten law, but a law very seldom broken, is that no fox shall be sought except between Oct. 1 and March 1, and one taken between those dates is never counted on the score of the company. The company has been in existence about seven years, and the rules of the company were never more rigidly lived up to than during the past season, and few seasons have seen so many pelts taken in a legitimate manner as the season which closed with March 1. The season was not considered by sportsmen as a favorable one. The winter has been very open with but very little frost in the ground, and for that reason as well as the mild weather the little snow which we have had has, with but two or three exceptions, melted as it fell. The eleven snow storms during the season aggregated but 22in., while the average in this vicinity for the past fifty-one preceding seasons is 43.74in. At no time has the ground been covered with snow for more than a half a dozen consecutive days. On seventy-six days of the season it stormed, and most of that time it was a drizzling rain, and a great many times it rained so hard as to destroy the tracks in a very short time, while the fields would be flooded or else so soft and heavy that it was almost impossible to get about. The work, or rather the captures, for there was many a hard day's work and not a pelt brought in, follows: W. R. Dean, E. T. Whittaker and W. J. Harrington, each five; John M. White, four; John R. Thayer, A. C. White, E. W. Gill and S. E. Smith, each three; Robert Perry, A. B. F. Kenny, S. Gates and Chas. Howe, each two; David M. Earle, George W. Russell, L. E. Divoll, Ledyard Bill, H. C. Kinsley, Tyler Newton and N. S. Johnson, each one; a total of forty-six pelts. About as many more have been taken by others not members; among those who have secured a number are M. M. French, Alvin Fisher and W. F. Bigelow. The biggest foxes of the year were shot by Messrs. White and Dean, and each weighed 13lbs. All foxes secured were reds save one, which was a handsomely marked cross gray fox with black points.

DOGS OF ANY DAY.

Editor Forest and Stream:
I was wrong as to Ashmont Nero being the sensational puppy by Hero II. out of Lorna Doone. It appears that this is another and younger dog of the same name, by Ilford Cromwell out of Ashmont Queen. The duplication of the name of such a wonderful dog should not have been permitted by the A. K. C. Stud Book Committee.
"J. W." that is all very pretty about the "hayseeds" and the distinction in taxation of dogs and bitches; and, while it is true that a dog may be the sire of a hundred pups a year, is it not also true that one hundred dogs may be the "sire" of one litter? Do you not remember "S. Reincafs" story of the high type fox-terrier whose "mudder" was a black and tan terrier and his fader was all de dogs in de town"? Certainly, if the object is the suppression of worthless curs, striking at bitches is the way to effect it.
Again, "ma freend," did your pen slip when you wrote of Ivan Romanoff and Zerry being the most "typical" Russian wolfhounds at Chicago? Firstlry, there is no such thing as a definite type in this breed further than being very large greyhounds with setter-like coats. When Russian breeders have been breeding them for seventy-five years and still have long and short-coated ones come in one litter, they haven't mastered "type" yet. Then, again, surely Ivan Romanoff and Zerry cannot both be typical? Ivan R. is too small, with a nice coat, fairly level profile, decent depth of chest and reasonable substance; while Zerry has a wiry, harsh, scant coat, nose drooping like the knee of the worst knee-sprung horse ever you saw, no depth of chest and a regular weed all over. I say nothing about Ivan (Mr. Hacke's) and Zzar, for I have not seen either for two years; but at that time they were miles ahead of anything else of the breed I have ever seen.
W. WADE.
HULTON, Pa., March 21.

ROCHESTER DOG SHOW.—*Editor Forest and Stream:* In reply to Mr. Otis Fellows's communication regarding the Rochester bench show, I would say that all I have said in regard to the management and regulations of it is absolutely correct. I appeared there early in the morning and saw a number of dogs being led in, with no one to receive them nor to check them off. What there was to hinder their being led out again, I do not know. I do not wish to reflect on the managers of this show in particular, as they are pleasant gentlemen and tried to please all. But this sort of thing happens at three-fourths of the shows, and it seems about time that attention should be called to it. I met Mr. Fellows at Rochester, and from his appearance do not believe he would intentionally make a misstatement; but he must have arrived on the scene later or earlier than I did.—CHESTER.

A PROPOSED KENNEL CLUB.—St. Louis, Mo., March 21.—The organization of a kennel club in this city has not taken definite shape as yet, but the matter is being actively agitated and the probabilities are that a preliminary meeting of dog owners will be held this coming week and a plan of organization perfected. Your correspondent has seen quite a number of sportsmen in reference to the matter and they all expressed themselves as heartily in favor of the club, and have promised their support to make it a go.—UNSER FRITZ.

SCANLAN'S BEAUTY.—Can any of our readers give the pedigree of the cocker spaniel bitch Scanlan's Beauty?

BALTIMORE DOG SHOW.

THE first annual dog show of the Maryland Kennel Club was held at Natatorium Hall on March 18, 19, 20 and 21, and a genuine success was scored. It is detracting nothing from the services rendered by the club members to say that to the indefatigable secretary, Mr. W. Stewart Dufferin, the greatest credit is due. He boomed and worked for the show as if his life depended on its success, and when it was on he was always to be found busy at something or other. Of course, other members rendered valuable assistance, among whom were Mr. Malcolm and Mr. Cagle, and a pleasant time was enjoyed by all who paid the Monumental City a visit.

Natatorium Hall is conveniently situated close to the Academy of Music on Howard street, and the only drawback is its small size. It is just suited for a 300-dogs show and no more. With that number on hand it was necessary to use an upstairs room for the judging, two rings being made. Owing to this arrangement there was a great deal of time lost in getting the dogs into the ring. This will be best understood when it is stated that Mr. Mortimer, who had about 225 dogs to pass upon, including a number of classes that were either walk overs or practically that, did not finish his regular awards till after 11 o'clock on Tuesday night. With a well-served ring, Mr. Mortimer would not take over three or at the most four hours to judge that number of dogs. Criticism on this point is not specially directed at Baltimore, but is applicable to most shows outside of New York.

The attendance on Tuesday and up to the time of our leaving on Wednesday was excellent, both as to quantity and quality, and Baltimore, it is well known, can turn out something extra good in the quality of the fair sex. The club members were unremitting in their attentions to the visiting exhibitors, and a four-horse coach was engaged to take them over the celebrated milk route. The judging evoked little or no criticism, except in the pointer classes.

MASTIFFS—(MR. MORTIMER).

For a starter Sears' Monarch defeated Homer, this being a reversal of the universally condemned New York decision of Mr. C. C. Marshall. Open dogs were a ragged lot, and first and second were properly withheld, third going to The Moor, who did show some mastiff character, but was in poor condition. Two cards were given, he to a dog with fox-terrier ears, and c. to a small, thin animal with a bad expression. Countess of Dunsmore made a sorry showing of her opponents in the bitch class; second was withheld and third given to Duchess, and then two c.'s to wind up. They were so deficient in character that it is unnecessary to go into close criticism. It should be understood, however, there were many dogs of good breeding, and that must have cost money if bought as puppies. They ought to have turned out better than they did, but puppies are an uncertain quantity.

ST. BERNARDS—(MR. MORTIMER).

Plinlimmon, Jr., though quite a sick dog, got his challenge ribbon, Lady Wellington being absent. Hesper, of course, won in open dogs. Next to him came Alpine Chief, whose new owner has not made the improvement in this dog's condition he hoped to do. He seemed smaller and weaker than ever, with a very open coat. For second we preferred the white Marquis of Stafford, pinched in muzzle though he is. He was well shown. Bruno is light and shelly, with a weak head and ring tail. Leo X. just deserved three letters and no more. Over Manon and Blodwin Mr. Mortimer dwelt a long time. Nice bitch as the former is, yet the campaign is telling on her, and condition, together with better body, should have just about turned the scales in favor of the new bitch. Lady Valentine, plain in head and of the bad Valentine gray color, got the diploma for third; while her tall son, Lord Baltimore, won in the puppy class. He is of the same objectionable color and very bad behind. General Lyons, second, is very long faced.

Victor Joseph got the smooth challenge prize, unopposed, and beat Nevis for the special. This decision we would have reversed, for Nevis, barring depth of muzzle, is a more typical smooth than his sire. In the open class, next to Nevis, we preferred Leo IX. He was better in skull, expression, and especially in hindquarters, than the hound-headed Tony or the weak and leggy MacGregor. Leo IX. is rather squat, but he has type. Robin Hood was not worth noticing, being very weedy. Lord Clifton, pinched in muzzle and ring-tailed. Alpine Queen had no opponents and neither had Wenona in the puppy class.

GREAT DANES—(MR. MORTIMER).

Pedro, second, is cleaner and longer in head than Minca Mia, but was well beaten elsewhere. Minca, third, is weak-faced and very badly cropped. Atlanta, first in puppies, was a very sick animal when we looked at her. She bent Bella easily enough, but neither promise any great future.

DEERHOUNDS—(MR. MORTIMER).

An easy win for the well-known Olga, and then came three of Dr. Downey's, of which Thora II. was the only one in good condition, but her coat was very short. It must have been a puzzle to know what to do with these three entries.

GREYHOUNDS—(MR. MORTIMER).

It was the Chicago judging over again, and notwithstanding the outcry of Conspirator's owner about the error in putting him behind Master Rich, we cannot form such an estimate of his dog as he does. Highland Chief was absent.

POINTERS—(HON. JOHN S. WISE).

All four challenge winners had walkovers and then we came to an open class of nine, which was badly handled. First was given to Tom, a flashy customer, but a bad one. Short in neck, straight in shoulders, knuckles over in front and his quarters are not right. Tempest, second, ought to have won. He is a bit off in front of the eye, but from occiput to tip of tail is excellent, and his every motion speaks pointer. Third went to Carlo, a mottled tan-liver dog, without a particle of quality. His coat is so coarse and stiff that it makes one look to see whether he has not been clipped. Carlo should never have been noticed. Dash is short in head, thick-skulled and full in eye. Fritz, Jr., unnoticed, should have been second to Tempest. His expression is not just right, as his eyes show the haw, but he is a rare made one. For third place Don W. was the dog, a nicely marked lemon and white, not quite so good in body as Fritz, Jr., whose son he is by the way. Mr. Wise withheld first in the heavy weights, a decision the merit of which can best be shown by saying that the three shown included Queen, first, St. Paul, Milwaukee and Philadelphia, and Lady Norrish, second, Richmond, second, New York; first, Troy. The order in which they were placed was Lady Norrish second, Blanche May third and Queen he. Had we been judging them we would have given Lady Norrish third, Blanche May second and Queen first. Queen was a little low in flesh and her condition might have put her behind Blanche May, but she is so full of quality. In small dogs the well-known Pommery Sec was first and Lancelot second. Naso Peshall looked full heavy for the class; he is wrong in muzzle, has a wild eye and is short of quality. Robertson, unnoticed, is a good dog, out of shape just now. Cards were rather freely distributed. In small bitches Mr. Wise accepted the first opportunity of correcting his New York error, and Sally Brass II. now beat Merry Legs, and the remainder of the class was satisfactorily handled. Puppies were two in number and they got all they deserved.

ENGLISH SETTERS—(MR. MORTIMER).

Count Howard, first and alone in challenge class. Revolver, first in open class, has a head of good type, and is of

good outline, won well. Dixie Gladstone, badly domed. Bute, a very plain dog in head, fairly good body. If the dogs were not a strong class, the bitches were still poorer. There were a number of about equal quality, and this probably accounts for the number of cards given. They were of a low grade all through. The winning puppy, David Hill, looks like growing on to better things. Good head, nice shoulders, body, legs and feet, and very stylish. There was a dog, No. 101, Brown, breeder given as John S. Wise. It was a brown mongrel water spaniel. Mr. Wise should see that the owner is put right as to his breed.

IRISH SETTERS—(MR. MORTIMER).

Blarney got a bloodless victory in challenge class. The well known Larry S. won another first and is now out of the open class. We did not take to the second prize winner, Leverick. He is short in head, has a soft look all over and lacks quality. Hela, third, is also off in head, rather too strong. Dan we thought might have been a little higher, as there is more of the right type about him. The other card winners were not up to the mark at all. Sport has quite a St. Bernard-looking head. Ronauld has immense ears, badly carried, and Doctor is thick-skulled with curly ears. Lady Glencho won from Sedan in bitches, with the plain and weak-headed Nino third. There was an old Elcho bitch, Fee, whelped March, 1879, which was wonderfully well preserved and was quite typical in head.

GORDON SETTERS—(MR. MALCOLM).

The best challenge class of the show faced Mr. Malcolm when Little Boy, Beaumont, Belmont and Madge were paraded. The judge hung between Belmont and Little Boy for some time and finally chose the bitch. Later on he gave Little Boy the sex special. We agree with the owner of Beaumont and Belmont that the dog is the better Gordon, and therefore disagree with Mr. Malcolm. In the open dog class King Item was placed over Dixon, which was reversing previous decisions altogether. It is quite a close thing between them, and we don't know but what Mr. Malcolm was quite justified. The bitches are too well known to dwell upon, Jessie gaining her fourth open class win we believe.

FOXHOUNDS—(MR. MORTIMER).

These were by no means as strong classes as we expected to see, considering the importations to this section. Mr. Brown's draft were anything but a sorry lot. The Elkridge Hunt showed only one, True Lass, which won first and special for the breed. There was a marked difference between Richard and Rapid in the open class, the latter having a regular beagle look about him. Mr. Mortimer got a bit mixed up. In the American foxhound class he gave Richmond first, and for the special for best brace of English foxhounds Richmond and Handmaid won. Richmond is not an American, but a poor English hound. Somerby was about as good as anything in the show, but half of his stern was gone and that put him out.

CHESAPEAKE BAY DOGS—(MESSRS. MALCOLM AND NORMIS).

This was a sort of educational class for the critics who were to be shown right at the headquarters of the breed what the right sort was. Well, the judges picked out dogs with heads more of the pointer type than anything else. The breed was divided into roughs and otter-coated, but as the winner in each class was by Monday, it is presumable that like smooths and roughs in other breeds they are interbred. The coats were not quite so close and water-resisting as we expected to find, there being little or no pile.

COCKER SPANIELS—(MR. MORTIMER).

Bene Silk won the champion prize with no opponents. Dick S. is pinched in muzzle. Newton Abbott Dinah is rather long in head and high on leg. Brantford Red Jacket is well known and so is La Tosca. Flora was outclassed, a liver and white.

COLLIES—(MR. MORTIMER).

Scotilla won in challenge class, but went down before Roslyn Wilkes for the breed special. This decision your correspondent unqualifiedly indorses, although Mr. Harrison favors Scotilla. Wilkes makes Scotilla look all out of shape behind the shoulders. Wilkes has improved in coat since New York. He won in the open class, with Hempstead Zulu second and a new one, Roslyn Conway, third. He is by Edgbarton Fox out of Edgbarton Bess. He has great length of muzzle without snippiness or being overshot. His skull is yet narrow but will thicken as he is only ten months old. There is a great future in store for this dog. He was sent away from the show on Wednesday morning owing to his having a bad cold. Duke of Kalmia is not improving in head and his coat is scant. Kenneth is plain in face, ears poorly carried, coat good. Young Ben Nevis has good length of head, plenty of character. He carries his ears badly and leaving the long hair on them makes them appear larger than they are. Roslyn Clara first and second withheld in bitches tells the tale of the quality in that class.

BULLDOGS—(MR. C. D. CAGLE).

The winners are all well known. Quasimodo was again objected to, but the Baltimore veterinary said the dog had not been castrated.

BULL-TERRIERS—(MR. MORTIMER).

Chesset's Flyer won easily in the dog class. Dufferin has a good eye and was in good condition, but he is still a little leggy. Grover Cleveland, thick in skull and coarse. In bitches only a third was given to Lady Burt.

BEAGLES—(MR. MORTIMER).

The challenge class was divided by sex. Storm beat Little Duke, and Lou winning in bitches. Belle of Woodbrook, winner in the New York challenge class, was here put back into the open class, and was beaten by Cloud. Goodwood Rattler was properly placed at the head of the open dogs. This class was well handled throughout.

FOX-TERRIERS—(MR. MORTIMER).

Blenton Rubicon here joined the champions of record. Blenton Racket, second puppy class New York, won a double first here. He is a stylish dog with a plain head. Blenton Corporal is too soft in coat, and ears somewhat large, but he has got lots of style. Blenton Brisk was not in usual "Hopkins condition." First and second in bitches came Blenton Consequence and Blenton Brilliant, New York judging over again. Rejoice was third, a neat bitch but far too small. Blenton Enid was third in the puppy class. She is too small and a little full in eye.

OTHER TERRIERS.

The firm of Lewis & Jarrett have at last engineered Burnside into the Irish terrier challenge class. Sir Stafford and Meersbrook Maiden are regular show-goers.

PUGS—(MR. MORTIMER).

With Bessie, Bob Ivy and Myrtle, Dr. Cryer won three firsts. Little Jewel, second in dogs, is quite a nice pug; short face, good skull, nice size, a shade leggy. Frank, rather long in muzzle and lacking in character. Trixie is weak-faced, has a small skull, but well wrinkled. Rustic Katti, off in ears and rather small eyes. Lord Baltimore has a fair sized skull, but his coat is coarse; he is also leggy and ears are too large.

Eva, the winning King Charles, is a nice-sized one, needing a little more coat. The winning Blenheim is a shade too large, and he was also short of coat, particularly on ears. Me Too easily won in the Mexican hairless class from Duke. Patsy O'Connor, Irish water spaniel, won in the miscellaneous class, with a truffle dog second.

Following are the corrections, additional awards and specials:

SPECIAL PRIZES.

Mastiffs.—Best, Countess of Dunsmore; best pair, Sears' Monarch and Countess of Dunsmore. Kennel, J. Thompson. St. Bernards.—Best, Countess of Dunsmore; best rough, Hesper; best smooth, Victor Joseph; best pair, Hesper and Plinlimmon, Jr.; best in all classes, Hesper. St. Bernard Club prizes to members: Best American-bred smooth dog, Nevis; bitch, Alpine Queen; rough dog, Lord Baltimore. Pointers.—Kennel, Hempstead Farm Kennels; best, Robert le Diable; brace, Robert le Diable and Duke of Hessen. Pointer Club specials to members: Best dog, Robert le Diable; bitch, Sally Brass II. English setters.—Kennel, P. H. O'Bannon; best, Count Howard; brace, Revelry and Rod's Belle. Irish setters.—Best, Blarney; brace, Sedan and Mulcahey; bitch, Lady Glencho. Gordon setters.—Kennel, Beaumont Kennels; best, Belmont; brace, Belmont and Beaumont; dog, Little Boy. Foxhounds.—Kennel, A. Brown; best, True Lass; brace, Richmond and Handmaid. Chesapeake Bay Dogs.—Best, otter-coated. Mary; best in all classes, Dan; brace, Dan and Mary. Cocker spaniels.—Best, Brantford Red Jacket. Collies.—Kennel, Chestnut Hill Kennels; best, also Collie Club trophy and president's cup, offered by Collie Club, Roslyn Wilkes. Bull-dogs.—Best, Harper. Bull-terriers.—Best, Chesset's Flyer. Dachshunde.—Best, Brownie. Beagles.—Kennel, Somerset Kennels; best, Storm; bitch, Lou. Fox-terriers.—Kennel, Blenton Kennels; best, Blenheim. Pugs.—Best, Bessie. In addition to the foregoing there were four puppies which went with the regular judging and others for local dogs.

ADDITIONAL AWARDS.

PUGS.—Bitches: 1st, Dr. M. H. Cryer's Myrtle; 2d, Mrs. C. P. Dufferin's Trixie; 3d, G. W. Wombach's Rustic Kate. Com., W. G. Brunt's Fussie and L. A. Readasell's Woodbrook Bright. Puppies: 1st, G. W. Wombach's Lord Baltimore; 2d, R. F. Harrison's Nellie Bly.

KING CHARLES SPANIELS.—1st, A. A. Knoblauch's Eva. BLENHEIM SPANIELS.—1st, J. C. Macgill's Lord Randolph Churchill.

ITALIAN GREYHOUNDS.—1st, withheld; 2d, Mrs. R. B. Crawford's Lady.

MEXICAN HAIRLESS.—1st, Mrs. H. T. Foote's Me Too; 2d, G. R. Bassett's Duke.

SIBERIAN WOLFHOUNDS.—1st, W. N. King's Ivan Romanoff. MISCELLANEOUS.—1st, J. R. Daniels's Patsy O'Connor; 2d, Miss E. H. White's Harry. High com., W. S. Rice's Nero.

CORRECTIONS.

In rough-coated St. Bernard puppies, F. W. Knoblauch's General Lyons was not present, and Pedro was 2d and Jessie was com. In large pointer bitches, J. H. Wilson's Queen was high com. In small pointer dogs, Pommery Sec was 1st, Lancelot 2d, Naso Peshall 3d and Daniel Deronda was high com.; in bitches, Lassie Bang was high com., and in puppies, Scout was high com. instead of 2d. In Irish setter bitches, Glendwyne Kennels' Sedan was 2d. In American foxhound dogs, E. W. Jester's Dodge was high com., and in English foxhounds, A. Brown's Handmaid was 1st. In Chesapeake Bay, otter-coated, W. T. Levering's Jack was very high com. and J. B. Wilson's Boatwain was high com. In black cocker spaniel bitches, Newton Abbott Dinah was 1st. In collie dogs, Young Ben Nevis was very high com. instead of Nevis and E. L. Rogers's Bob Acres was high com.; in bitches, 2d was withheld and Mina was very high com. In challenge beagle dogs, Somerset Kennel's Storm was 1st, and W. D. Hughes's Love was 1st in bitches. In fox-terrier bitches, Blenton Brilliant was 2d and Rosalind was very high com. J. W.

DOGS OF THE DAY.

AFTER my return from Baltimore dog show, I had the pleasure of meeting Mr. Mitchell Harrison—Mr. "Christopher" Harrison, I see the *Stock-Keeper* has it. He did not look quite so changed in appearance, as is usual, after a good stiff breezy passage across the Atlantic. Our conversation was quite a long one and treated of men and dogs in England very freely. Mr. Harrison gave me permission to use such parts of his talk as I thought might prove interesting, but to be particularly careful to say nothing that would in the slightest degree give offence to any gentleman on the other side. I am quite sure that every word Mr. Harrison uttered might be printed without causing him any uneasiness, for it would indeed be a cautious critic with a touch of gout who could find any cause to grumble.

Mr. Harrison had a most enjoyable time abroad, and I am commissioned to say one thing, and will do so now so as not to forget it. He was received among the English collie men in the most open-hearted manner, and from all hands, breeders and exhibitors, north and south, had as pleasant a greeting and received as many attentions as any one could wish for. It is of course well known that Mr. Harrison's object in visiting England was to enjoy a winter's hunting, and he spent the greater portion of the five months he was away in the shires. When he mentioned Warwickshire I broke in with the query as to his meeting Mr. Charles, and that was the end of the hunting story. "Oh yes, I met Mr. Charles, and it was very funny how I did. I had been out hunting, and when I turned my horse's head homeward there was a twelve-miles journey ahead of us. I got to the village of Wellesbourne, and waiting to give my horse a little attention I pulled up at a nice, comfortable-looking inn. There I saw a couple of collie puppies playing about, and said to the ostler, 'How much for the puppies? Will a sovereign buy them?' 'I don't think Mr. Charles would let them go for that, sir,' was his reply, and at the name of Charles it all at once came to me that here I was at the house of one of the great collie breeders of England. After that we met frequently. As you know I bought The Squire from Mr. Charles, and sold him Roslyn Sensation, Strephon and Colonel Scot."

"When are we to see Christopher?" "That is more than I can tell you. Since I bought the dog and learned in how much demand he was in England I have pretty well made up my mind to let him remain there for a time at least. You know very well the small demand there is here for stud services. It is so different in England. There they breed to the sire of winners, while here if a person gets a litter by a good dog there is an end to his patronizing other people's dogs. He uses one of his own young ones after that, regardless of what it is and simply because it is the son of a good dog. Christopher I have left with Mr. Charles, at Wellesbourne."

"I have not entirely given up the idea of bringing Christopher here and I will do so if I see my way clear. By that I mean something like this. If the collie breeders will give me a guaranteed amount of support for him to remain here a year or two. You must bear in mind that I would be to a certain extent sacrificing the dog by bringing him over. Six months' absence from England makes a great difference to a dog. While he is away a new one comes out, the old one is partly forgotten, and when he returns he has to meet a recognized leader or perhaps two, and opinions have perhaps undergone a change, which would have not occurred had the dog not gone away. It is not from mercenary motives that I say this. I can already win all the prizes here that I could if I had Christopher at Chestnut Hill, and it will afford me just as much gratification to hear of his winning in England as at New York or any other show in America. As you see I am very undecided in the matter, but at present I can say that Christopher's appearance here is problematical, and does not depend so much upon myself as upon others."

"Of course you have seen the *Stock-Keeper's* story about the sale of Christopher and that you gave a check and exchanged dogs to the value of £1,000, can I learn the amount of the check?" "Well, no," laughingly responded Mr. Harrison: "I think you had better drop that inquiry. The *Stock-Keeper* publishes a good deal that is new to me as it is to you. The terms of the sale were to be considered private." "When do Dublin Scot and Charleroi II. leave for

Mr. Stretch's kennels?" "It will not be long before they do, and to give breeders a chance to get the blood their fees will be reduced very considerably from now until they go. Charleroi is a dog that should have been used much more liberally, as I am sure you will say after having seen his puppies which came out this year."

"Christopher has got some good puppies." "Yes, there is Strathcathro Ralph, that did so well at Birmingham. He was then but a puppy, and there is always a chance about a young dog developing rightly. It is safe, I think, to buy developing dogs in the long run. Ralph was at Liverpool, too, but he was not in such good coat then. Mr. Campbell works his dogs in Scotland, and when they meet the English exhibitors' dogs they meet something always shown to the best advantage."

Another addition to the Chestnut Hill Kennels is the bitch Purity, dam of Lady Muriel, Portington Squire and Sir Jumbo, and she has been bred to Christopher.

Here are a few notes sent on to me from Baltimore. Reference is made in the report of that show to a mix up in the awards in the foxhound classes. Well, after Mr. Mortimer had left for New York Mr. Jester entered protest against the English dogs awarded prizes in the American foxhound class. The committee sustained the protest. There seems to be some difficulty, however, about how the prizes are to be awarded.

On Thursday Mr. Diffenderfer said that enough had been taken at the door to pay all expenses.

Plinlimmon, Jr., who was sick on his arrival, pulled through all right. It was said that Mr. Sears has a \$2,500 customer for this dog at Boston.

Quite a number of sales were reported. Mr. Diffenderfer sold the St. Bernard puppy Wenona for \$50; Dr. Downey the deerhound Thora II. for \$75; Mr. J. H. Hall the St. Bernard Marquis of Stafford at catalogue price, \$400; and Mr. George H. Elder disposed of several collie puppies.

Mr. Wade, in writing of the mastiffs at Chicago, mentions Ashmont Nero, the sire of Duke of Connaught, and my having once weighed him at a year old, when he scaled 190 lbs. I think he was thirteen months old then. I never saw such a monstrosity in my life. He so outmasted anything I had ever seen or have seen since, that I said to Mr. Mason afterward, "I don't know what you could do with him if you had to judge him." He had not matured in head, but such width of chest, such immense bone, length and strength of back, and such loins, I never saw on any dog. He was a bit low on the leg, but of course he had still time to grow. The weight was absolutely correct, as I tested the scales. He had cinnamon markings, like his dam's sire. Duke of Connaught is a brindle, and that raises a little doubt in my mind as to his sire being the dog Mr. Wade speaks of. Ashmont Nero died before he was two years old, of some liver complaint, according to what Dr. Perry was told; and it occurs to me that Duke of Connaught is too young a dog to have been sired by him. I have not the Chicago catalogue by me as I write, so can only draw Mr. Wade's attention to this point.

I had a note last week about certain criticisms which had been made about rejudging classes at Chicago to rectify oversights made by the show employees. An instance of a different character occurred at Rochester. My dog Clipper was shipped early on Monday morning from Lee, Mass., and if not at Rochester on Monday night should have been there by Tuesday morning. He turned up at the show on Wednesday morning, too late for the judging. Ben Lewis tells me that he drew Dr. Gray's attention to the dog, and upon the case being brought before the committee they very courteously and kindly asked Mr. Mortimer to judge the dog, there being no other in the class. It is a thing I could not have asked for, because the committee would have every right to decline such a request, and I fully appreciate this voluntary act on their part. I would further advise Mr. Yates that Clipper did not reach Lee on the return journey till Tuesday night, and he must surely have been shipped from Rochester on Saturday. Will he kindly reply.

SPAYING.

Editor Forest and Stream:

From time to time I have read with much amusement in your very excellent journal ancient and stereotyped articles on the surgical operation ovariotomy, commonly known as spaying, and I must say that my observations and experiments are as opposite from yours and several others whose letters you have published, as the antipodes. As a physician and surgeon I first performed the operation of ovariotomy on young bitches for the simple purpose of watching the effect from a physiological standpoint. Later, at the solicitation of some of my sportsman friends, I performed the operation on valuable puppies, pointers, English and Irish setters and spaniels. I have also operated on mastiff and St. Bernard puppies, collies and "strange yaller bitches" and never in all my close observations on the results of these operations have I seen any of the pernicious effects that you are pleased to mention, and the aforesaid observations have not been made on one or two isolated operations, but on nearly one hundred cases.

You speak of the operation as cruel. If it is done under an anæsthetic, with all the antiseptic precautions in vogue at the present day, there is no cruelty about it. The incision should be small, not more than one inch in length in the median line, half way between the umbilicus and the pubic bones. The ovaries should be carefully drawn to the opening and cleanly dissected out with a curved scissors. The cut surface should then be sponged with a bichloride of mercury solution and returned to the abdominal cavity; no ligatures should be used. The incision in the abdominal wall is then closed with carbolic cat gut sutures. The puppy awakens from the etherization and soon after laps milk, and on the following day plays with the rest of the litter, if there be any, as though nothing had happened. The best time for the ovariotomy is from the tenth to the twelfth week. That is the better age.

One of your contributors, Mr. H. S. Pitkin, of Hartford, Conn., speaks of the operation as being unnatural. If we should ask why, he might give a woman's only answer, "Because." I should like to ask the gentleman on what particular experience or observation he bases his statement. From his own confession he never knew the nature of the operation, nor has he seen any of its effects, therefore he is in no condition to pass judgment. If we should follow out his argument we might say that he is injured thereby, yet all know that in the gelding we have a superior animal for domestic uses, made superior by castration. I cannot understand why the presence or absence of ovaries have anything to do with the memory, reason, judgment, volition or the special sense of smell in the female canine. Women who have had both ovaries removed for some diseased condition are not less intelligent or more irritable, neither do they necessarily "grow fat," nor are they more susceptible to "catch cold." Why would it not be as consistent for some one to attribute the fault of being gun shy in the canine to spaying and attempt to prove that only spayed bitches are gun shy. Allow me to say in conclusion that the above statements are made from facts deduced from a careful and close study of the operation and its effects. And if there is a bitch that has no intelligence or nose after an ova-

riotomy it will be safe to wager that she had none of these qualities before.

Hudson, N. Y.

Editor Forest and Stream:

I have read in your edition of Feb. 13, an article setting forth your very positive objections to spaying bitches, and the reasons offered seem in the main well founded. There must be exceptions, however, to this possibly general rule laid down by you, and I beg to call your attention to and put on record with you two cases, which I now have under my eye. Mr. C. C. Henderson, of this city, is the owner of a young pointer bitch, a beautiful animal and very smart. She was whelped about the last of February, 1889, and at the first sign or indication of estrum in September, she was spayed by Dr. H. B. Moore, of Gordon, 16 miles south of this city. She was apparently entirely recovered from the effects of the operation in four or five days. In November she was put in charge of a trainer—Mr. Blunt—and at the end of the season, which closed on the 1st instant, she was returned to her owner almost "a perfect dog." She is well trained, very intelligent and the most biddable dog of her age I have ever seen. The only difference apparent up to the present, which may be attributed to the fact that she is "a spayed bitch," is her obesity, but trainer Blunt has demonstrated in her case that her fat can be worked off and kept in abeyance very easily. She is very industrious, works hard and retrieves without fault. During the last week of the season she performed a feat that was indeed pleasing to all who witnessed it and one that is new among dogs of her age. She was sent after a "winged" bird; she found it and was returning with it held tenderly yet firmly between her jaws, when she suddenly turned her head and neck to a position at almost right angle with her body and came to a dead stand. The bird was flushed and killed, and though the hunters had some distance to walk, and the bird in her mouth became more restless and tried to free itself, she remained staunch until ordered in. I simply mention these things to show that Nellie Gage is a fair subject on which to test the results of spaying. The second case need not be gone over. She is a full sister and of the same litter as the one just described, and is owned by Dr. Moore.

Now as to the inhumanity and cruelty of the practice, Dr. Moore, a leading physician, denies. He says he has spayed quite a number and never had one to squirm or cry out during the operation. They are always placed in anæsthesia before the operation is begun, and he claims that the majority of them suffer little inconvenience from the wound thereafter. He also insists that he has never known a bitch of his spaying to give the least indication of coming in season.

If I do not trespass on your space too far, let me give you the testimony of another man, Ezekiah L. Cash, of this city, an old fox and deer hunter. He says he has owned a great many spayed bitches, and they were always his best dogs—ever ready and the most tireless. He has only handled hounds. He tells me that the fleetest and most reliable pack he ever owned was composed of seven spayed bitches and three dogs. He owned the pack several years, and not until several of them became too old for hard service did he break the pack.

I am anxious for the truth in this matter, and shall scrupulously watch the two young subjects mentioned above and will let your readers know the result. GEOMBECK.

AKKADEPHIA, Ark.

[The article upon spaying, to which our correspondents take exception, is a statement of our personal experience in the matter for more than forty years, during which time we have carefully noted the results in scores of cases that have come under our observation, only to become more and more confirmed in our belief that the practice was entirely wrong. While in some of the cases that have been brought to our notice the work may have been done by unskillful hands, in many of them the operation was performed by surgeons and veterinarians who were skilled in their profession and who presumably made no mistake. From some cause the experience of our correspondents has been different from our own in the results obtained. Let us hear from others.]

BOSTON DOG SHOW ENTRIES.—The entries for the dog show to be held at Boston next week number 737, divided among the different breeds as follows: Mastiffs 22, St. Bernards 65, bloodhounds 3, great Danes 17, Newfoundland 1, deerhounds 14, greyhounds 14, Chesapeake Bays 1, pointers 80, English setters 34, Irish setters 52, Gordon setters 33, spaniels 37, beagles 27, dachshunds 3, foxhounds 16, collies 45, poodles 9, bulldogs 17, bull-terriers 28, round-headed 24, fox-terriers 80, Scotch terriers 3, Irish terriers 19, Dandies 1, black and tans 11, Skyes 4, Yorkshires 22, pugs 13, King Charles spaniels 10, Blenheim 7, schipperkes 6, Mexican hairless 1, miscellaneous 18.

ST. LOUIS COURSING CLUB.—St. Louis, Mo., March 22.—Editor Forest and Stream: Lovers of the sport in this city have organized a coursing club, having in view the giving of a meet at the St. Louis Fair Grounds, about the middle of May. Mr. Allison, of Hutchinson, Kan., was here last week for the purpose of looking over the ground and also to give the local club's managers a few pointers on how to conduct the affair. The hares to be used will be brought from Kansas and none but local dogs will take part in the meet. The affair is to run four days, divided into two stakes. Mr. Allison, Dr. G. Irwin Royce and D. C. Luce will be here to manage the meet.—UNSER FRITZ.

CHICAGO, March 17.—Editor Forest and Stream: The Mascoutah Kennel Club wishes to express to you its thanks for the valuable assistance rendered them by your paper in making their show just concluded such a success. We fully realize the importance of the work done and can but express our appreciation of the kindly interest and good will extended to us by you and your staff. We shall always remember your efforts with pleasure, and wish it were possible to reciprocate.—G. H. GOODRICH, Chairman Bench Show Committee.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

Prepared Blanks sent free on application. Duke of Urbana, Pickaway and Countess Foulk. By B. C. Van Heyde, Urbana, O., for red Irish setters, two dogs and one bitch, whelped Feb. 22, 1890, by Michael Angelo (Lee Grouse-Della) out of My Dot (Vance's Cap-Gipsee Queen). Razzle. By M. Fluvun, Jr., Bristol, R. I., for red Irish setter dog, whelped Jan. 23, 1890, by Grip (Glencho-Lady Edith) out of Sheila (Jim-Nell II.). Vortigern II. and Stella. By E. Lever, Philadelphia, Pa., for black and tan terrier dog and bitch, whelped Sept. 20, 1889, by champion Vortigern (champion Viper-Gipsee) out of Lucy (Ben-Fortune).

BRED.

Prepared Blanks sent free on application. Ida J.—Pomp. E. P. Jennings's (Urbana, O.) pointer bitch Ida J. (Greek-Queen A.) to B. C. Van Heyde's Pomp (Glendale-Vixen), March 14. Fair Inez—Kash. F. C. Nims's (Painesville, O.) pug bitch Fair Inez (Zango-Nellie) to A. E. Pitts's Kash (Bradford Ruby-Lady Cloudy), Jan. 2.

Mena II.—Ted Laverack. C. A. Ives's (Bridgeport, Conn.) English setter bitch Mena II. (Belthus-Daisy) to Warwick Kennels' Ned Laverack (Perfection—Lit Laverack), March 5. Lillian B.—Daisy's Bitch. E. K. Spence's (New Haven, Conn.) English setter bitch Lillian B. (Druid-Frolic Bondhu) to Warwick Kennels' Hair's Belton (Yale Belton—Poly Bitch), March 17. Lendline—Ned Laverack. Wm. Knott's (Stamford, Conn.) English setter bitch Lendline (Glen-Frisk) to Warwick Kennels' Ned Laverack (Perfection—Lit Laverack), Feb. 17.

Winnie Rake—Reverdy. Dr. L. M. Thompson's (Mabany City, Pa.) English setter bitch Winnie Rake (Count Rake—Winnie Davis) to M. H. O'Bann's Reverdy (Gath's Mark-Rosa), Feb. 14. Elchoeen Jessie—Larry S. C. Smith's (Philadelphia, Pa.) Irish setter bitch Elchoeen Jessie (Elcho, Jr.—Pequot Jessie) to E. Maher's Larry S. (Chief-Luray), Feb. 6.

Red Rose—Sarsfield. W. B. Rogers's (Jefferson, Pa.) Irish setter bitch Red Rose (Biz-Lady Clare) to Kildare Kennels' Sarsfield (Garryvoven—Currier Bell II.), March 13. Lady Flora—Tim. I. H. Roberts's (Philadelphia, Pa.) Irish setter bitch Lady Flora (Begorra-Leigh Doane) to M. Wenzel's Tim (Biz-Hazel), Feb. 26.

Belle—Tim. Jas. L. Carr's (Orange, N. J.) Irish setter bitch Belle (Chief —) to Max Wenzel's Tim (Biz-Hazel), Feb. 20.

Belle—Tim. I. H. Hitchcock's (Sing Sing, N. Y.) Irish setter bitch Belle (Glencho-Tara) to Max Wenzel's Tim (Biz-Hazel), March 13.

Dimple—Lubo. Forest Kennels' (Grooten, N. Y.) cocker spaniel bitch Dimple (black Duck-Bijou) to their Lubo (Obo Jim-Rideau Lou), March 19.

WHEELS.

Prepared Blanks sent free on application.

Fair Inez. F. C. Nims's (Painesville, O.) pug bitch Fair Inez (Zango-Nellie), March 9, five (two dogs), by A. E. Pitts's Kash (Bradford Ruby-Lady Cloudy).

Rose S. Learner Kennels' (Hudson, N. Y.) fox-terrier bitch Rose S. (Luke—Nora), March 18, five (four dogs), by F. A. Stuppleben's Hillside Tarquin.

SALES.

Prepared Blanks sent free on application.

Bannerman—Desdemona whelps. Black, white and tan beagle dogs, whelped Jan. 2, 1890, by F. W. Chapman, Melrose, Mass., one each to Kuehl & Prefontaine, Manistee, Mich.; A. E. Perry, Detroit, Mich., and Wm. Vaisey, Toronto, Can.

Synan. Black, white and tan beagle bitch, whelped Jan. 2, 1890, by champion Bannerman out of Desdemona, by F. W. Chapman, Melrose, Mass., to Kuehl & Prefontaine, Manistee, Mich.

Bannerman. White and lemon beagle dog, whelped November, 1889, by Archiboy out of Dewdrop, by E. C. Barrett, Boston, Mass., to F. W. Chapman, Melrose, Mass.

Restless. Black, white and tan beagle dog, whelped Jan. 2, 1890, by champion Bannerman out of Desdemona, by F. W. Chapman, Melrose, Mass., to O. H. Clapp, Campello, Mass.

Hair's Belton. Black, white and tan English setter dog, whelped Dec. 5, 1889, by Yale Belton out of Polly Bitch, by Warwick Kennels, Bridgeport, Conn., to Fred W. Shaw, Forest, Ore.

Razzle. Red Irish setter dog, whelped Jan. 28, 1890, by Grip out of Sheila, by John W. Gale, Providence, R. I., to M. Flynn, Jr., Bristol, R. I.

Lubo. Black cocker spaniel dog, whelped Jan. 15, 1888, by Obo, Jr., out of Rideau Lou, by E. O. Living, Ottawa, Ont., to Forest Kennels, Grooten, N. Y.

Borer, Kit, Falke and Ermitic. White bull-terriers, one dog and three bitches, whelped Oct. 11, 1889, by Rusher out of Bertha, by Mrs. John Whittaker, Philadelphia, Pa., to Edward Lever, same place.

Sandy. Wheaten Irish terrier bitch, whelped Aug. 23, 1888, by Dennis out of Sandyorrit Vim, by John J. Campbell, Philadelphia, Pa., to Edward Lever, same place.

Rifle and Trap Shooting.

INSTRUCTIONS FOR RELOADING.

A VALUABLE series of instructions for reloading arms has been prepared by the Ideal Manufacturing Co., of New Haven, as follows:

Properly reloaded ammunition being recognized as superior, the question arises: How can it be so properly reloaded?

There are four necessary requirements: First, good shells. Second, good powder. Third, good bullets. Fourth, but not least, good tools. These with a little patience and perseverance on the part of the individual, will secure the end sought.

Central fire shells only can be reloaded, and the solid-head shells are preferable. They cost a little more than the folded-head, but will last much longer and are therefore cheaper. The first operation is to remove the old primer immediately after firing, then place the shells (at once if possible) in a vessel and wash thoroughly, as the residuum is then soft and will wash off easily and prevent any corrosive action on the metal. Rinse well and see that they are perfectly clean inside as well as outside. Corrosion will soon destroy the shells, and it is impossible to reload when they are not clean inside. Dry them slowly after washing and be sure that there is no moisture left in them. Corrosion inside of a shell of 50grs. capacity will displace 5grs. of powder, and it will make a bullet fit tight enough to expand the muzzle of the shell, so that it will not enter chamber. The action of corrosion on powder will moisten and destroy it; therefore, the first requirement for good work is clean shells.

When about to reload, first, open the mouth of the shell so that the bullet will enter without scraping or cutting it. The beginner generally proceeds to force the bullet into the contracted muzzle of the shell, and the consequence is the shaving off of one side of the bullet, or the squeezing of the lead over the shell and distorting it and making about as bad a looking cartridge as one could imagine, suggestive of inaccuracy and imperfect loading. Implement, which he proceeds to condemn at once, when the whole trouble is in himself. The mouth of the shell must be opened so as to admit the base of the bullet. After expanding the shell comes the operation of recapping. Note on the box of factory cartridges or shells originally purchased, the number of primer recommended for use, and if possible use no other. In seating the primer be sure it is at the bottom of the pocket in the shell, as this will secure certain fire. Otherwise it will act as a cushion under the firing-pin and may not explode. Be sure and have the primer below the surface of the head, for if it is not, it may cause premature explosion by interfering with the action of the arm.

Outside lubricated cartridges, such as .32cal. short, long and extra long, .38cal. short and long; Colt's .41, etc., cannot have the bullets fastened by crimping the shell, and they can only be held by fitting the shell tightly. The edge of the shell that are turned inward should be chamfered with a knife, so as to allow the bullet to enter without scraping or cutting the lead.

The shells are now ready for the charge of powder. Generally the advice given on the cartridge box is good and should be followed. As there is a difference in the branding of powder by the several companies, it may be well to note the advice of one of the leading manufacturers of ammunition, which is as follows:

For powder to be used in rifle cartridges containing 50 to 120grs., we recommend the following brands and sizes of grains as giving the best results:

American Powder Company's Rifle Cartridge, F. G. Hazard Powder Company's Sea Shooting, F. G. E. I. DuPont & Co.'s DuPont Rifle, F. G. Latin & Rand Powder Company's Orange Rifle, F. G.

In rifle cartridges containing from 25 to 50grs., use one size smaller of the same brands.

In pistol cartridges two sizes smaller of the above brands will give the best results.

The American Powder Mills have just put a new brand of powder on the market, called "Rifle Cartridge Powder." This, as its name implies, is made especially for use in rifle cartridges.

Where powder is to be compressed in a shell, we earnestly recommend this brand and DuPont Rifle, F. G. as being United States Government standard.

FG is the size suitable for use in the .50-95 Express, .45-70 or Government, .45-60 and .40-60 cartridges.

FG is suitable for .44, .38 and .32caliber, Winchester, Marlin and Colt's.

In such cartridges none of the high grades of powder should be used; we refer to such brands as Hazard's Electric, DuPont's Diamond Grain, etc. These powders (most excellent for use in shotguns) owe their quick burning properties to their peculiar manufacture; they are not hard pressed powders, and, when compressed in a cartridge shell, they cake the bullet more than the harder pressed brands, and give high initial pressure and very irregular shooting, without greatly increased velocity.

In charging the shells with powder, dip the scoop full of powder, scraping the top off even, and pour into each shell, then enter the bullet into the mouth of the shell with the fingers as securely as possible, and then place in the loading chamber and press the shell until it reaches the head. A good firm pressure should be all that is required to do this, and by so doing the cartridge cannot be forced to the head, there is too much powder in the

shell. Crowding in too much powder will distort the shell and prevent the cartridge from entering the chamber of the arm. We have known individuals to fill the shell level with the muzzle and then enter a bullet that is required to be seated nearly three-quarters of an inch in the shell, and then tug and squeeze, crushing the powder so as to pulverize it, and then find fault because they did not get good results. The powder should be packed but never crushed, and should always receive the same pressure to insure regular and accurate shooting.

The casting of bullets requires a little patience and practice. The first requirements is a small iron kettle or pot for melting the metal in, and a regular, steady fire to keep it at the proper temperature, not red hot one minute and so cold that it will not flow the next. A percentage of tin with pure lead will make the metal flow better and produce a harder bullet. About one part tin to forty of lead will make a good mixture for the average bullet. If a harder bullet is required add more tin; but one part of tin to sixteen of lead will be found hard enough for the hardest bullet. The metal should be hot enough to flow freely; a red heat oxidizes the lead rapidly, forming much dross which is objectionable. New moulds will not cast good bullets until they have been used long enough to get the mould very hot. The first dozen or two cast should be returned to the kettle, as it will take at least that many to get the mould the right temper to do good work. In pouring, the ideal dipper will be found indispensable. With it there is no spilling of metal. The nozzle is turned round and will fit the pouring hole of any mould, and the pressure of the weight of the metal in the dipper above the bullet in the mould, will force the air out, fill the mould perfectly, insuring a good, smooth, full-sized bullet. If the metal is too hot, the melting pot are the best to use, but any good even fire will answer. As soon as the lead is melted and tin added, heat the dipper in kettle, drop a piece of rosin, beeswax, or tallow, the size of a hazelnut, into the mixture and stir rapidly with dipper. This will flux the metal and cause it to flow better. If too much smoke arises, dip in a lighted match and burn it off. A trifle of beeswax applied to the hinge of the metal while hot will keep the joint working smoothly. It is best to have moulds that will cast the bullets a little above size, and after the lubrication is in the grooves force the bullets through a sizing die. This will force the lubrication solidly into the grooves and wipe off all the surplus grease, and at the same time make the bullets perfectly round and uniform and of the proper size. The ideal reloading die is having a bullet sized and mould all complete makes them superior to others. To lubricate grooved bullets properly, use a shallow basin with a flat bottom, and melt the lubricating material. Care should be taken not to get it too hot; dip the bullets base downward far enough into the grease to cover all the grooves, do this quickly so as not to heat the bullet and the grease will set at once and not run. If the grooves are not level full dip them over again, then force them through the die, and you will find them equal to the factory made bullets. A little practice will soon overcome all troubles. A good lubrication can be made as follows: Beeswax and common cylinder oil, three parts wax to two of oil; also, beef tallow with enough vaseline mixed with it to soften it as desired. These general instructions if followed by the beginner will save him much time and trouble, and will place him so that he can, with a little experimenting, soon arrive at the best results.

RANGE AND GALLERY.

BOSTON, March 22.—The regular weekly shoot of the Massachusetts Rifle Association was held to-day, the shooting conditions were unfavorable, there being an unsteady wind from N. to N. E. and a dark rainstorm making it hard to see the bulls-eye. Mr. Daniels's 115 at rest is the highest score made this year at this range. Following are the best scores finished to-day; distance 200 yds., standard American target:

P Fitz	85	C H Eastman	79	F Bowman	70
S C Sydney	80	T G George	80		
W G Hussey	81	S C Sydney	75	S F Hawley	70

HIGH GALLERY SCORES.—Every available inch of Hansen's Montgomery street range, Jersey City, was occupied by marksmen from the various rifle organizations hereabouts on the evening of March 19 to witness the second shoot of the best two out of three series between the invincible Our Own team, of Newark, and the Excelsior, of Jersey City. The first shoot occurred in Newark last week and was won quite handsly by the Our Owns. The score of to-night's shoot follows:

Excelsior	Our Own		
Wm Webber	221	M Dorrier	236
J Spricker	238	P Bell	237
L P Hansen	232	G Weigman	238
C Bauble	237	J Bauder	234
W H Hollowell	231	O Krauss	225
Wm Hennessey	223	F Schmidt	220
B Clark	213	W Watts	225
W J Channing	222	E Felting	230
J Hauck	222	J Stadler	228
Thos Stiff	214	F A Friessner	231

MARION, N. J., March 17.—At the regular weekly shoot of the Hudson Rifle Club, of Marion, N. J., held to-day, the following scores were made:

J Ingram	230	J Rebhan	217	C Ebe	192
H Hansen	228	M Hoff	212	H Robel	187
T A Reynolds	221	T T Reynolds	202	W Evans	185
R Hoesley	220	S Middleton	201	J Logan	179
R Ingram	217	H Ebe	195		

The club is now down to a very strong working order. It has its own club house, and the prospects are exceedingly bright. Its membership is increasing steadily, as well as speedily, and it is hoped that before long—and the prospects are very bright that it will—the club will be heard from. There is some excellent talent in this club, some of its members having scores to their credit of 240 to 246 out of a possible 250 points and there are a large number of them having scores of over 230.

NEW YORK, March 20.—At the regular weekly shoot of the Turtle Bay Rifle Club, at Strun's Gallery, 340 East Forty-sixth street, the following scores were made out of a possible 300 points:

G B Jantzer	57 58 58 58 58	289	H Steffan	47 50 48 51 49	248
A Straub	57 57 55 56 53	278	H W Tamm	43 48 46 49 48	223
C H Plate	53 53 57 54 51	268	J Georlitz	37 41 45 40 47	206
T Coyne	52 54 48 46 49	249	T Fitzpatrick	32 44 37 50 35	205

NEW YORK RIFLE CLUB.—Application was made on March 19 to Judge O'Gorman, of the Superior Court, for a voluntary dissolution of the New York Rifle Club, organized in December, 1879. It was stated as the ground of the application that there had been a falling off in interest in the objects for which the club was organized, and that it was deemed ill advised to endeavor to keep it alive any longer. There was also the additional statement that the club is free from debt. An order was signed by Judge O'Gorman for the publication of the usual notice in such cases. The trustees are W. Herberich, T. J. Dolan, James Duane, H. O'Donnell, J. S. Shepherd, John B. Hydenburg, L. V. Sone, M. Herrington and John McCnley.

PERPENDICULAR RIFLE BALL.—Some time ago a correspondent of FOREST AND STREAM made an inquiry of the height a rifle ball would attain if shot perpendicularly in the air. It took about 52 sec. from the time the rifle was fired until the ball reached the water. According to theory it takes as long for the ball to go up as it does to fall, then in falling the time would be 26 sec. Leaving out atmosphere, etc., the following formula may be taken: $S = 16t^2$, where S = space passed over, t = gravity (about 32), t^2 = square of time; then $S = 16 \times (26)^2 = 10,816$ ft., or over 2 miles high. Theoretically the ball went over two miles high.—E.

NEWARK, N. J.—The Our Own Rifle Club has elected the following gentlemen to office for six months: President, Henry Uhl; Vice-President, Charles Weeks; Corresponding Secretary, John Stadelhofer; Financial Secretary, Charles Miller; Treasurer, William Dreier; Sergeant-at-Arms, F. Freisenhner; Captain, E. A. C. Benckhuysen; Assistant Captain, F. Fetting; Rifle Scorer, John Bander; Assistant Rifle Scorer, Marcus W. Kiefer; John Copper-smith, Executive Committee, A. O. Kiefer, J. M. Kiefer, A. Hunziker, C. Miller and Fred Yetting.

BRATTLEBORO, Vt., March 20.—Scores made by members of the Estey Guard Rifle Team, at Oak Grove Range, March 15; 200 yds. off-hand, Creedmore target, 10 shots; Record match—Clark 45, Colt 38, Coane 36. Re-entry: Colt 46, Clark 43, Coane 34.—W. C. C.

THE TRAP.

As this journal is the only one having a representative with the East and West team tourists, our readers will be given the best, brightest, fullest, most accurate and most satisfactory reports of the progress of the enterprise.

FIXTURES.

April 19.—Tolley's Trap-Shooting Contest. Grand all-day shoot; opening new grounds, at Catskill, N. Y. Geo. F. Tolley, Sec'y. April 30—May 5.—A. S. A. Tournament, Columbus, O. May 7—9.—A. S. A. Tournament, Lexington, Ind. May 14—16.—A. S. A. Tournament, St. Louis, Mo. May 21—23.—A. S. A. Tournament, Kansas City, Mo. May 29—30.—A. S. A. Tournament, Minneapolis, Minn.

THE U. S. CARTRIDGE CO.'S TOUR.

[From Our Own Representative.]

CHICAGO, Ill., March 17.—The Iolanthe reached Chicago Saturday morning and was deserted early. Messrs. Stice, Tucker and Cahoon left for their respective towns to try to get acquainted with their families, and the hospitable Chicago sportsmen took charge of others of the party. No regular plan of entertainment was formulated, and this released from all restraints, the boys took a good rest, which was what they needed above all things. Sunday was passed quietly at the car, which lay at the Rock Island depot, having been transferred from the Union Depot. On account of the long time occupied in the transfer, many of the occupants of the car and many would-be visitors lost track of the car, and hardly knew where to find it. It was really in convenient location. There being no siding at Grand Crossing where the car could be left undisturbed, it was left in the depot, and this morning at 8:50 the boys went down to Grand Crossing via the Lake Shore. The weather was warmer but cloudy, with a raw wind. It has been very cold here for the past few days.

By 11 o'clock a small crowd had gathered, among whom were Messrs. Charles Willard, C. S. Bolton, F. H. Anderson, E. Foss, J. E. Price, P. E. Stone, W. E. Phillips and a number of others who got out on the early trains. Messrs. Hart, Haywood and Maillet were up from the Crown Point Club. Messrs. W. P. Mussey, W. L. Shepard, M. J. Eich, Dr. Hutchinson and a lot of the other boys got out during the conclusion of the target race, and swelled the total crowd to something over a hundred.

At 12 o'clock the regular team race Mr. Dimick had not appeared, and Whitney, of the Eastern team, was also missing. After some argument it was agreed to shoot four men on each team, Mr. Quimby, the Eastern substitute, being declared by his captain too sick to shoot. Stice therefore held his score, and so did Mr. Lord ("Hollister"), of the Chicago team of five, who had appeared to shoot in friendly competition with the boys. The three men of the respective teams then shot six birds instead of thirty, and thus caught up. The trapping was slow to-day, and the race dragged unexpectably. It was 3 P. M. when it closed, and the day had by that time become cold and raw. The West again led in the singles, but fell down in the doubles, and lost the day as usual. The East is now winners of the series, but are more than six or eight races more to be shot in all probability. Mr. John Watson, the veteran landlord of the Grand Crossing grounds, refereed the race. Score, regular blue-rock race:

H McMurphy	11 10 11 11 10—36
W Woltencroft	11 11 11 11 10—34
E E Perry	10 10 11 11 11—35
W B Perry	10 10 11 11 11—35
H B Whitney	10 11 11 11 10—37

C W Budd	10 11 11 11 11—37
J A Ruble	10 11 11 11 11—37
R O Heikes	10 10 10 11 11—33
C E Cahoon	00 10 10 10 00—31
J R Stice	00 11 01 11 37—175

B Rock	11 00 01 10 00—32
H A Foss	10 01 00 10 01—25
Dago	00 00 00 01 01—25
W E Phillips	11 10 11 11 11—31
F B Dick	10 10 11 11 11—31

According to the programme Chicago was to shoot the visitors a live bird match, and the grounds were therefore cleared as early as possible for this event, the conditions of which were 10 men teams, 10 live birds, new American rules. Mr. C. W. Dimick and Mr. C. E. Willard acted as judges, Mr. John Watson referee. Score:

M J Eich (10ga. "E Mussey")	201221111—9
J E Price (10ga. Daly)	201121010—5
W L Sheppard (10ga. Lefever)	221220123—8

J R Stice (10ga. Parker)	011212121—9

there is no use shooting against a crowd that has a pet coon for a mascot. Chicago, above all things, needs a good shooting park. It is unpleasant to announce that the late park enterprise has had cold water thrown upon it and may possibly not survive. We will see in the spring.

To-night Robert Jackson, the head porter of the Iolanthe, who has more than anybody directly contributed to the comfort of the party during this long trip, is sick and absent at his home in Englewood, and may not be able to go East with his car. The fact is, Robert has been overworked, through his own anxiety to please, and has not had four hours' sleep any day since he started. The boys were not always very thoughtful about his comfort. The Pullman Company has no better man in its service than Robert, who has been faithful to his employers and to those whose material comfort has fallen so largely in his charge.

To-day Whitney had a surgical operation performed on his right eye, which has for three months been troubling by reason of accident that happened while Whitney was loading some shells. He undertook to push the primer from an empty shell, and in some way it exploded and a piece, as was supposed, struck him just above the eye. Inflammation and discharge of pus have been intermittent since then, but no part of the primer was thought to be left in the wound. To-day the surgeon found the whole primer in the boy's face, just above the eye, and much to everybody's surprise fished it out. Whitney has done his remarkably well shooting on the long trip, but that primer over his eye. No wonder he was loaded all the time.

Some of the party go on East with regret, others with pleasure, at the thought of soon being home. It is probable that the close of the month will see the trip ended.

The Jenney & Graham Gun Co. of Chicago offered one dozen fine pocket knives to the team winning in the Chicago live bird race. The knives were to be given to the boys along the route. Each knife is of the best quality, one can keep house with, and it was very thoughtful of Mr. Jenney to have a good corkscrew in each.

Mr. Dimick is joined at Chicago by Mrs. Dimick, who will go on East to Boston with the Iolanthe.

Toledo, O., March 12.—The party arrived at Toledo in time for a late breakfast. No organized reception was planned here, in the party was well received. Many friends of the shooters were met here, including Charlie Strawn, of Jacksonville, Ill., and the veteran old-time Bensentons, better known as "Ben," who is part of every Ohio shoot of consequence. The writer wished to meet Mr. Cunkel, of the Sunset Club, but he was unfortunately out at home studying up a fish lie for the next general passenger agents' meeting, so that pleasure was lost.

Toledo is a pretty good shooting town, and a very fair crowd, probably amounting to 300, was on hand this afternoon. The shooting was at Speranza Park, a locality rather closely shut in by houses. This park is fed by a street car line over which a bob-tail one-horse hearse runs every once in a while.

Operations began about 2 P. M. Mr. Quimby was assisted at the traps by Mr. Damm, of the Cleveland Target Co., who did the pulling. Mr. Quimby is nearly sick with severe cold, contracted in the Milwaukee blizzard.

The race to-day was a tie. The East led three birds in the singles, but for a wonder the West gained. Had Whitney been up to his usual place in the doubles the East would have won. Whitney had one double, but he did not shoot at it. The straightaway bird swung to the left somewhat, and he concluded not to accept the pair, not being positive the pair was perfect. They were so, and he lost them. Score, 30 single blue-rocks and 5 pairs:

H McMurphy	11 10 11 11 10—35
W Woltencroft	11 11 11 11 10—37
W B Perry	10 10 11 11 11—35
W S Perry	10 10 11 11 11—35
H B Whitney	10 10 10 10 10—34

At the close of the race a hurried run was made for the traps, which had been held 30 minutes in order to pull the Iolanthe up to Detroit. We are on the way at this writing.

Detroit, Mich., March 13.—It was snowing hard when the occupants of the Iolanthe awoke, and though later in the day the snow fall ceased, the weather remained cold and raw, with an ugly wind blowing. Before breakfast was served on the car a number of Detroit sportsmen were on hand, on hospitable plans intent. Among these were Messrs. J. W. Garrison, J. Klein, J. R. Brooks, Frank Wherry, E. Hebel, Wm. Renick and many others, all of whom were very interesting reports of the late Detroit tournament, which seems to have been attended more largely here, than any of recent date, and which will be duly reported in these columns through the courtesy of Mr. Garrison. After breakfast the boys rounded up at the sporting goods headquarters. At Mr. J. B. Field's emporium the writer found in Mr. Field and Mr. Eddy two gentlemen pleasantly met last fall at Chatham field near New Bedford, Mass., and who were now on their way to Wayne county, who assists Mr. Garrison in all the big tournaments here, joins the latter gentleman in laying out a very pleasant programme for FOREST AND STREAM on a visit to the many big duck clubs of Detroit and vicinity this spring, and doubtless this programme will be carried out. This is a great shooting, fishing and boating town, and to cover the field of its sports and its sportsmen in a very creditable manner is simply impossible.

The party has been admirably received here, and the full purposes of the tour seem to be fully understood here. The assemblage at the Detroit Club grounds to-day, while not so large as good weather would have brought out, was very satisfactory to the management.

The grounds in question lie at the foot of a steepish little hill, and face directly upon the green and blue Detroit River, within sight of the St. Clair Straits. The traps are so set that the birds fall nearly in the water, and the locality is a very pretty and pleasant one. The warm little club house was fully appreciated to-day.

The five Detroit gentlemen who shot against the Pan-American veterans, Stice, McMurphy, Budd, Woltencroft and Whitney, were very creditable, especially to the doubles, and it is no discredit they did not beat the harden and the boys above named. This race added interest to the occasion, as always.

The East won to-day by one bird. W. E. Perry fell all to pieces to-day for the first time on the trip. No reason can be found for this, except that it just wasn't his day. Followers of this tour know that in a shooting match nothing is so certain as the uncertainty. W. S. Perry, who is improving nicely, beat his namesake to-day and held the team to win. The West seems pretty much demoralized, and couldn't win if it had twelve men instead of five. The East is eight races ahead and is winner of the series.

The funny event of the day occurred on Budd's sixth bird. Charlie shot at a piece and missed it, whereupon Mr. Tucker, who was refereeing, called out "Another bird!" Tucker had in mind that one of the new American rules which say that in doubles both birds must be perfect ones. As Mr. Tucker was one of the framers of these rules, and is one of the Advisory Board of the Association, his decision on Charlie's lost piece struck the crowd as being hugely funny, and they yelled.

Following is the score in full, each race being shot at 30 single blue-rocks and 5 pairs:

H McMurphy	11 10 11 11 10—36
W Woltencroft	11 11 11 11 10—34
W B Perry	10 10 11 11 11—35
W S Perry	10 10 11 11 11—35
H B Whitney	10 11 11 11 10—37

U. S. Cartridge Co.'s team, 5 men, named before match: Stice..... 36 Woltencroft..... 36 McMurphy..... 36 Whitney..... 37—179 Budd..... 34 It will thus be seen that the tourists beat the Detroit gentlemen 19 birds. The flight of the birds to-day was rather erratic, owing to the gusty wind. The car left Detroit at 6:30 and until that time was thronged with a fully crowded of Detroiters and visitors from other cities. Among the latter was Mr. Held, of Saginaw, who came all the way over to see this shoot.

LONG BRANCH, March 22.—There were four sweepstake shoots at bluebirds to-day on the Central Gun Club grounds. There was only one money in each event. The first was at six targets. Philip Daly, Jr., and Wm. C. Price broke 8 each and divided the money. The second event was at 6 targets. Daly took the money with a score of 5. The third match was at 5 bluebirds. Philip Daly, Jr., and Edward Reid made clean scores and divided the money. Elisha West Price took the money in the last event, with a straight score of 5. In shooting up scores in the club shoot, for the first time, Wm. C. Price broke 9, Edward Reid 8, and Philip Daly 7. Price each broke 7 out of 10, Frederick Beale 9 out of 15, Edward Reid 16 out of 20, Wm. C. Price 21 out of 23, and Charles Morris 17 out of 30.

SAN FRANCISCO, March 16.—The California Wing-shooting Club held its first monthly shoot for the season of 1890 at Oakland Trotting Park this morning. A larger crowd than is generally present at pigeon shoots was present on the grounds and seemed to enjoy the sport greatly. This was the first shoot held on the Trotting Park grounds, and the club members are highly delighted with the place. The shooting stand, which is new and commodious, has been placed near the center of the area, inclosed by the track and stables, facing south, and comfortable seats for shooters and spectators, and large tables for scorers and judges have been arranged, making it the best appointed trap-shooting ground in the neighborhood of this city. The club shoot was called at 10 o'clock, and every one of the eighteen members responded. American Shooting Association rules. S. I. Kellogg, judge. The scores were as follows at 12 birds:

Slade	10	Thompson	11	Schroeder	11
Randall	10	Lewis	4	Fay	11
C. Hoeth	9	De Vaul	7	Eddy	10
Golcher	11	Johns	11	Lake	9
Schwerin	10	A. Heeth	5	Monroe	12
Haas	10	Francen	7		

A sweepstake at \$2.50 entrance was then arranged, the stakes being divided into three prizes of 50, 30 and 20 per cent. J. D. Vaul acted as judge.

Randall	6	Eddy	5	Golcher	7
Munroe	6	Carl	4	Coykendall	4
Haas	7	Slade	5	Schroeder	5

Haas and Golcher div. first and second money and Monroe and Randall did likewise with third. This closed the sport for the day. The officers of the club are: C. M. Osborn, Acting Pres., and William P. de Vaul, Sec.-Treas. The club will shoot on these grounds on the third Saturday in each month.

AYR, Ont.—A gun club has been organized at Ayr, with thirty members, to be known as the Ayr Gun Club, with the following officers: Pres., Geo. Blaker; Vice-Pres., Thos. Taylor; Captain, A. W. Murray; Sec.-Treas., W. E. Gammon; Committee, S. Thomas, W. Rutherford, H. Walder, Y. Rutherford and C. Bolton.

TORONTO, March 19.—The Toronto Gun Club held their regular shoot to-day at the Wondabine. With the exception of Messrs. Felsted and Sawdon, those who shot all belonged to the fourth class. Being novices their scores are very creditable, but with practice they will doubtless improve upon them. Club shoot at 20 birds:

Felsted	18	Mitchell	11	Greener	5
Sawdon	14	Conder	4	Peardon	5
Panton	10	George	8		

Sweeps at 10 birds: No. 1: George 4, Peardon 3, Mitchell 3, Conder 5, Mitchell 4. No. 2: George 6, Mitchell 6, Peardon 5, Panton 7, Conger 7. No. 3: George 7, Mitchell 4, Panton 5, Sawdon 8.

OTTAWA, Ont.—The executive committee of the St. Hubert Gun Club have arranged the programme for their Queen's birthday tournament. They intend, in view of the strong teams of the Torontos, Stanleys, Montreals, Cote St. Paul, St. Johns, Lachine and eastern clubs, increasing the prize list very considerably and giving some big prizes for teams and individuals. The home club expect great things from the Western men, whom, rumor whispers, are doing big work in preparation.

ST. LOUIS, March 22.—The Western Gun Club held their annual election Thursday evening, March 20, when the following officers were elected: E. C. Miltenberger, President; Robert Benecke, Vice-President; Thos. Siebenman, Secretary and Treasurer; Geo. E. Le Faivre, Captain. It was decided to shoot under American Association rules, using three traps and the bluecock pigeons as targets.—THOS. SIEBENMAN, Secretary.

Every week we are obliged to defer to the next week trap scores which come in too late for publication in the current issue. It is particularly requested that scores be sent us as early as possible.

Yachting.

"West India Hurricanes and the Great March Breeze." By Everett Hayden, U. S. Hydrographic Office. Large quarto, with 25 lithographic plates. Price \$1. Contains full history of the great storm of March, 1853, with practical information how to handle a vessel in a cyclone; use of oil at sea, etc.

THE 70FT. CHALLENGE.

THE following letters have been made public by Mr. Stephen Peabody, the last being quite a surprise, as it was not known that Yarana as well as Valkyrie was included in the invitation to cross the Atlantic. The entire correspondence relating to the proposed races is as follows:

Mr. Stephen Peabody, No. 45 Exchange Place, New York City:
DAR SIR—We the owners of the 70ft. sloops Titania, Katrina, Shamrock and Gracie hereby authorize you to arrange with Lord Dunraven for a series of races with the Valkyrie as set forth in the letter drawn up by and hereunto annexed. And we do further authorize you to tender the same terms and conditions to Mr. Paul A. Hall, owner of the cutter Yarana, and we wish you success in your negotiations. Yours very truly,

C. OLIVER ISELIN.
E. S. & H. D. AUCHINCLOSS,
J. ROGERS MAXWELL,
JOSEPH P. EARLE.

NEW YORK, March 14, 1890.
To the Right Hon. the Earl of Dunraven, K. P., No. 20 St. James Square, London, S. W., England:

MY LORD—Inferring from the personal correspondence of yourself and James D. Smith, Esq., also with General Paine, during the past year, that you desired to race the Valkyrie on this side, and as you have written that you "attach no importance to the nature of the prizes," it gives me pleasure to advise you that I am authorized by C. Oliver Iselin, Esq., the Messrs. Auchincloss, J. Rogers Maxwell, Esq., and J. P. Earle, Esq., owners of our four best 70ft. sloops, viz., Titania, Katrina, Shamrock and Gracie (classed by the New York Y. C. as third-class sloops), to arrange with you a friendly contest to decide the respective merits of the Valkyrie and the four yachts named.

I propose to you, on behalf of these gentlemen, a series of races, best two out of three, or three out of five, with a representative yacht selected from the four, or a match race with each yacht, to be sailed at New York, outside of Sandy Hook, during either July or August, course fifteen knots to windward and return, with an agreed time limit. New York Y. C. racing rules. You govern the regatta committee of the club to have charge of the fixtures.

Should you elect to sail only our best yacht the regatta committee shall name her ten days before the first race, and the prize will be a subscription cup of \$1,000 value from our four yachts. In case you prefer to sail a match race or a series of best two out of three with each yacht, the prize for each match or series will be a cup of the value of \$250.

I am authorized by Mr. Ogden Golet to invite you to compete for the sloop yacht prize offered by him, valued at \$500, which will be sailed for during August, off Newport, R. I.

There are many matters of detail to be arranged should you accept this proposition which will require time, and therefore I trust that you will favor me with an early reply. I beg to assure you of my best services, to arrange any matters in connection with this offer, and hoping to receive a favorable answer, I have the honor to remain yours truly,

STEPHEN PEABODY.

KNICKERBOCKER CLUB, New York, March 14, 1890.

To Paul A. Hall, Esq.:
DEAR SIR—I inclose herewith a copy of an offer to sail a series of races, sent this day by registered mail to Lord Dunraven by me on behalf of the owners of the 70ft. sloop yachts Titania, Katrina, Shamrock and Gracie.

I beg to say that they would be pleased to offer you the same terms for a race or a series of races should you find it convenient to come to this side during the coming summer with the Yarana. Hoping that you will find yourself at liberty to accept the foregoing suggestion, and begging to tender my services to arrange any matter of detail for you prior to your arrival, I have the honor to remain yours truly,

STEPHEN PEABODY.

The terms offered are certainly liberal enough, and no better opportunity could be offered to Lord Dunraven. Valkyrie is 69.5ft. l.w.l., 11ft. beam, and carries 6,588sq. ft. of sail by Y. R. A. rule. By Seawanhaka rule she would measure about 75ft. Yarana is 66.5ft. l.w.l., 14.5ft. beam, with 5,000ft. of sail, making by Seawanhaka rule about 70ft. Both are keel boats, designed by Watson and built by Fay & Co., of Southampton, of composite construction, the latter in 1888 and the former in 1889.

CORINTHIAN Y. C. OF MARBLEHEAD.

THE racing programme for the season of 1890 has just been sent out by the regatta committee, Messrs. W. P. Fowle, G. W. Mansfield, A. G. Van Nostrand and John H. Paine. A large number of races is promised, and the club evidently means to add to the good reputation made last year as a racing club. The various fixtures are as follows:

June 17, pennant races, classes 21ft. and under. June 21, club races, cash prizes. July 12, classes 21ft. and under. July 26, first championship. Aug. 9, 11 and 12, club tournament for the 21 and 25ft. classes. Aug. 23, 25 and 26, midsummer series for the 30 and 40ft. classes. Sept. 1, second championship. Sept. 13, championship sail-off. Ladies day races to be announced. The regulations for the handicap races for cruising yachts, on June 21, July 26 and Sept. 1 are as follows: "Special class, 21ft. and not over 31ft. waterline. The regatta committee, in order to encourage racing by yacht-owners who do not usually start their yachts in the races, will offer prizes for competition by yachts sailing in cruising trim. In these races yachts will be restricted to lower working for fore and aft topsails, shall not haul out for cleaning within a week before the race and shall not strip for the race; i. e., shall sail with usual cruising outfit aboard. The regatta committee will reserve the right to reject any entry made for this class and will adjust the handicaps."

It is by no means an easy matter to lay down regulations for cruising craft or to enforce them under all circumstances, but such racing is so valuable to many owners, whose craft are no longer the first flight of the fleet, that it is well worth the effort. The first meeting will be a hearty support on the part of owners.

A special feature of the season will be the club tournament on Aug. 9, 11 and 12, for yachts of the 25ft. and 21ft. classes. The prizes will be a cup for the 25ft. class, value \$100; one for the 21ft. keel class, value \$100 (offered by a member of the club), and one for the 21ft. catboat class, value \$75. Second prizes of \$10 will be awarded in each race to yachts winning second place. The tournament will consist of two races and a sail-off. A yacht winning twice shall own the cup offered for her class. These races will be open to club yachts only and will be governed by the sailing rules of the Corinthian Y. C. The regular club courses will be sailed.

The success of the midsummer series of races for the 40ft. and 30ft. classes last year has led to a repetition, and a similar series will be sailed on Aug. 23, 25 and 26, for yachts of the Atlantic, Corinthian of New York, Eastern, Larchmont, New York, Portland, Rhode Island and Seawanhaka Corinthian yacht clubs. The prizes will be the Corinthian Y. C. cup for 40-footers, value, \$300, offered for competition in the 40ft. class by Messrs. Hemenway and Bayard Thayer. Also the Corinthian Y. C. cup for 30-footers, value, \$125, offered by a member of the club for competition in the 30ft. class. The series will consist of two races and a sail-off. A yacht winning twice shall own the cup offered for her class. All courses will be open sea courses, off Marblehead, free from tides and shoals. The courses will be alternately to windward or leeward and return, and triangular. A supplementary circular will be issued, containing courses to be sailed and other particulars. The addresses of the regatta committee are: Wm. P. Fowle, 11 Commercial street, Boston; Geo. W. Mansfield, Secretary, Salem, Mass.

CORINTHIAN Y. C. OF NEW YORK.

THIS club, which has sailed all of its races under a classification by corrected length, has recently adopted the following division of classes, the same heretofore in use temporarily: Class A, under 20ft.; Class B, 20 to 25ft.; Class C, 25 to 30ft.; Class D, 30 to 40ft.; Class E, 40 to 50ft.; Class F, 50 to 65ft. These classes will apply to the C. Y. C.'s spring regatta, on Wednesday, June 18, over the regular club course, start 11 A. M. (below Fort Wadsworth). The formula for "corrected length" is the well-known

$$L \sqrt{W} \div \sqrt{S} A.$$

These classes were adopted (after full consideration, a year ago, experimentally, and have been demonstrated by the past year's experience as being not unsuitable to present conditions of boat building. They embrace within their limits (in the same class) such of present boats as are active competitors among themselves, and also permit any English boats of corresponding size and power to race in the classes to which they properly belong. For example, a class of from 40 to 45ft. (c. l.) would probably shut out the ten-raters and also Kathleen (who would have to race with the forties, which disparity of size and sail area could not be compensated for by any but an utterly extravagant time allowance). That the system of sailing both size and sail plan component factors in the actual classification of boats for racing purposes, and not merely factors in determining the amount of time allowance, is one tending to develop knowledge and skill in designing, and closer (and therefore more interesting) races seems to be more and more generally thought, and judging by the active discussions of the past upon the subject, may be looked upon as a step which deserves careful and extended experiment before rejection.

THE AMERICA'S CUP.

THE Field comments as follows on the rumors concerning a challenge for the Cup:

"We thought the present generation at least had heard the last of the America's Cup, and that any attempt to bring it back to life again. However, we do not think there is a shadow of a ground for stating that any present owner of a crack yacht belonging to this country will challenge for the Cup; nor do we see how any British yacht club could back such a challenge so long as the new deed of gift exists. The most prominent yacht clubs have condemned the deed, and it is difficult to see how any other course could now be adopted. There is again a talk of establishing an international trophy of great value in this country in order to induce American yacht owners to compete for it. But we do not believe in challenge cups of great value, and we would much rather see a joint committee of British and American yachtsmen (representatives, say, of the New York Y. C. and Royal Y. C. S.) formed to draw up rules for future contests for the America's Cup. We really think this is the only way to settle the matter. The original and only legal deed of gift will admit of no such being done, and in the interests of international rivalry the New York Y. C. ought to take the initiative."

Had the New York Y. C. in drawing up a new deed of gift after the Thistle races, invited the cooperation in this important matter of the leading American and foreign yacht clubs, it would at the same time have been able to lay down any conditions it pleased within the limits of fair play, with the certainty that its action would have been indorsed by the yachting world. Unfortunately the New York Y. C. is too great a body to do business in this way, and it chose the alternative of quietly loading down the Cup with a lot of one-sided restrictions, which have killed all racing. The only easy way out of it is matter for the New York Y. C. is by the aid of Lord Dunraven or some equally obliging Englishman, who will challenge without any regard to the fairness of the conditions. Failing this, there can be no more races for the Cup until the illegal deed is repudiated and new conditions in accordance with the spirit of the only real deed of gift, and at the same time providing for contingencies not foreseen in 1857 have been laid down.

CANVAS BOATS.

Editor Forest and Stream:
Noticing the recent communications appearing in your journal relative to canvas boats and in view of the fact that the boating season is now open, I feel like adding my mite. I have owned a boat of one kind or another for nearly twenty years, but never had experience with a canvas boat until the past season, and I am fully convinced now that an investment of a like amount in a good canvas boat will yield larger returns to a sportsman than in anything else in his outfit. It matters not whether he be a devotee of the rod and gun or a canoeist, or either. I can see great pleasure in him owning a canvas boat. It can be carried in a buggy or buckboard or light platform spring wagon with other paraphernalia to lakes and streams inaccessible in other ways; lakes and ponds where there are no boats and where from the very nature of things we find the best shooting and fishing, out of the regular beaten paths, to places rarely visited by the multitude; places where the sportsman reaps the reward of his skill and is undisturbed in his communion with nature as well.

We are not all favored in living on the banks of some beautiful lake or stream; but few of us there are who have not easy access to some such place, if, when we got there, we could be sure of having a comfortable boat for the day's pleasure. The boat I am about to describe I have found to fill the bill. It was first brought to my notice through an advertisement which appeared in the Forest and Stream about a year ago, a sportsman friend and myself concluded to write to the manufacturer, and, if possible, get one here on trial. This request was granted by the maker, Mr. C. W. King, of Kalamazoo, Mich., and it is needless to say

it never went back. The boat purchased by us is 11ft. long, weighing with paddles and board 120 lbs., and with a single row of four men, it is a two-man boat; it is as safe and sure, I believe, as any boat can be made of that size, and it is every inch a boat. The deck covers permit of stowing away (one in each end) the duffle of two men, blankets, lunch baskets, fishing tackle, etc.; the ribs and knees are all of steel wire galvanized, and when the canvas is stretched over them it is as tight as a drum; it takes parrel and about seven minutes to set it up, and about half that time to take it down; it makes a bundle about 4ft. long and 7 or 8 in. in diameter. The bag or wrapper is full length of the boat and can be stretched over the bottom of boat as an extra protection or may be used in case of rain in the reverse way; and the seats, which are novel to say the least, are one of the greatest comforts in a boat it has been my good fortune to meet with. By their use you have a back which always fits, no matter whether you are lying, paddling or fishing; and, if not wanted, fold them up and they are out of your way.

One trip which my friend and I made last summer was to a small lake some ten miles away where there was no boat. We had excellent fishing up till about the noon hour, when it became so still and hot we ran our boat up to the shore in the Hly pads and also in the shade of the trees on the bank to eat our lunch, not daring to take it away from the shore, as the water was so near from the rank vegetation. After eating our lunch and indulging in a smoke, we felt drowsy, and, folding up our seats, stretched out our blankets and laid down in our boat and had a delightful nap. Before lying down I put a fresh mainwail on my hook and cast far out over the Hly pads. I know not how long we might have slept had it not been for a tapping of my rod on the edge of the boat, which awakened me, and, picking the paddle I pushed out in clear water and had a sharp fight with a five-pound pickerel, my companion only waking up in time to net him for me. We have fished, shot ducks and canoed with this boat, and in our camping parties we find it indispensable, and as I said at the outset, we get more comfort out of it for the amount of money invested than from any of our belongings in the sportsman's line. I write you this to say, benefit my brothers of the gun and the rod.

LANSING, March 15. LAUNY THOMPSON.

Editor Forest and Stream:

Information is asked from your correspondents relative to canvas boats. I made the first I ever saw, and long ago, more than thirty years. I have, as I remember, described it in your columns some years ago. It was about 11ft. long by 3ft. beam, and 11in. deep, sharp at bow and stern, but modeled after the shape of a duck. I never saw its equal for ascending swift water or for running rapids. You might run it straight at a rock until quite near, and a slight motion of the paddle would send it past without touching. The frame was of oak strips and basket stuff. If it struck a rock it would rebound like a basket, and without injury; and the only hurt it ever received was from much hauling over the rough granite rocks of the Northern lakes, which (the rocks, not the lakes) scratch like a curry comb. It was good in a sea-way, though it had no deck or coaming. I have crossed Lake Winnipeg and other lakes with two men (one very heavy), and perhaps 200lbs. of dunnage, and though heavy swells were common we never shipped much water. The weight was, I think, 40 to 50lbs. After some years of good service it was stolen.

I cannot speak from experience of the folding boats, though I do not doubt their safety and durability. I think of giving them a trial; though a year or two ago I thought that my canoeing days were over. Still I may here remark that while I can handle a paddle, wave a rod, or draw a bead on a rifle, I do not intend to give up my outings of my own accord.

Of one thing your correspondent may rest assured, that it is the same with boats as guns, of which Mr. Leffingwell truly says that no reputable maker will sell you a poor one at any price.

CENTRAL LAKE, Mich., March 18.

KELPJE.

Editor Forest and Stream:

I notice that in last week's FOREST AND STREAM "Clarion" asks for the experience of those who have used canvas boats. I own a fifty-dollar one, but would not accept another of that make, and agree to use it, if presented to me and the price of it in cash with it.

GRAND RAPIDS, Mich., March 19.

ARTHUR WOOD.

AMERICAN VS. ENGLISH SAILS.

THE refusal of Laphorne of Cowes, Eng., to make headsails for the Adams forty was the topic of an interview between Mr. Edward Burgess and the writer yesterday.

"What is your opinion as regards the sails made on this side and in England?" Mr. Burgess asked.

"The American sails," he replied; "can be made as good as the British, and the international races prove that our sails were better. Last year the Minerva had the best suit of sails I ever saw, and this, of course, was an advantage. Laphorne's prices are very high, much higher than ours, but you can get just as good sails here if you pay as high price."

"Then you claim that Laphorne is not ahead of our sail-makers?"

"Personally, I should never order a suit of sails made on the other side, and never gave a direct order. On Commodore Morgan's order, a drawing of a job was made, and this sail was made by Laphorne for the then sloop Mayflower. It was used but a few times and then put aside, and the job made in this country was used, and gave much better satisfaction. The Messrs. Adams in a letter requested Laphorne to make headsails for their craft, which order was refused."

"Do you think either in cut or material they are ahead of us on the other side?"

"I think they are ahead of us on spinners; in fact, all the spinners on British yachts which I have seen were, without exception, better than ours; they are cut better. As good material can be made in this country as anywhere, and our manufacturers are improving every year, and it is for their interest to produce the best yacht duck in the world; and they can do it. If the proper amount of labor and attention is put into the making of yacht duck, The Puritan, after the international races, had three English job sails, and Commodore Forbes, but as I said before, no personal order for non-American sails ever has been made. I should not import sails from the other side if allowed by any of my clients. No, our American sailmakers are not surpassed by any."

Our leading American sailmakers have a strong friend in Mr. Burgess, and they will read his opinions with a good deal of satisfaction.—BOSTON HERALD.

In 1887 Messrs. Laphorne and Ratsey purchased a large amount of American cotton duck in New York. We understand that some of the Laphorne sails that have lately been so much admired on this side are made of American duck, woven in the United States.]

THE ADAMS 40-FOOTER.—The Boston Herald describes the new boat as follows: "The Adams 40, from which so much is expected, is timbered out and a good idea of her can now be had. She has a strong rake to her sternpost, is well cut away underneath and the forefoot less than on any other Burgess forty. She differs greatly from the rest of the Burgess 40ft. fleet, and looks 'quite English.' The strong hard bilge and very hollow garboards of the Chiquita and Marquita are not seen in this boat; in fact, experts say she is of the 'form easy to drive with small sail spread.' After last year's experience, sensible people are making no predictions between the Minerva and this boat, though some are leaning so decidedly in favor of the Thistle people have found this out. The Ventura, Mr. Foster's forty, will be ready for the water in two weeks. The two new thirtyers are about completed. Mr. Ferguson's 36-footer, from Mr. Philip Elsworth's design, is laid down, and the lead keel will be run this week. The frames are being moulded, and Lawley expects to have her timbered out within ten days. Work on the third Burgess 30-footer has been started and next week will see her set up."

COMET.—It is not so many years since the announcement that such a yacht as the schooner Comet was to have a keel with real lead in it would have convulsed the whole yachting community. On the general changes that time has wrought are shown by the fact that such a keel after having been made as a matter of course without exciting any special comment, Comet is now hauled up at Poillon's yard, where an oak keel with about 10 tons of lead has been added. Comet was built in 1874 by Alonzo E. Smith from an Ellsworth model and has always been owned by Mr. W. H. Langley. Although once famous as a racer she has not been raced for a number of years.

CORINTHIAN NAVY.—The following are proposed for membership in the Corinthian Navy: Nicholas R. Cottman, James R. Steers, Jr., Daniel H. Hall, E. W. Smith, Ralph Lane, E. Hart Penn, Mr. Middleton, John J. Booke, C. H. Doughty, Mr. J. Frederick Tams, of Seawanhaka. Corinthian Y. C. will deliver a lecture to the members of the Corinthian Navy at the Marlborough Hotel, Broadway and Thirty-sixth street, April 29, at 8 P. M.

A FIRST EXPERIENCE IN BOAT SAILING

plain unvarnished tales which we read every day of the experiences of our fellow sportsmen, no matter how ordinary and commonplace, seem to have the power to awaken in the heart of the reader a feeling of good will toward mankind. As we put the book or paper aside and dream of day in fields or woods. And now some humorous episode thrusts itself forward; and see, he smiles, his eyes twinkle, his sides shake, and as he claps his hands down with a loud "haw, haw," he exclaims, "Well, well, if these depicted accounts can arouse such pleasant memories in me, there are others like me, and I will contribute my share toward the good work, at least I'll try."

We read some incident that recalls one in our own history at some period of our lives, perhaps when we were boys. It may be serious or perhaps humorous; but as we sit and look back into the past and live it over again in imagination, what a study is the face of the dreamer. A far away look in his eye, entirely unconscious of his surroundings, he does not even hear the wintry storm beating viciously against the window panes; it is not winter with him; he is perchance sailing over mirrored waters or luring the wary fish from his haunts, mayhap shouldering his gun for a day in fields or woods. And now some humorous episode thrusts itself forward; and see, he smiles, his eyes twinkle, his sides shake, and as he claps his hands down with a loud "haw, haw," he exclaims, "Well, well, if these depicted accounts can arouse such pleasant memories in me, there are others like me, and I will contribute my share toward the good work, at least I'll try."

It was only a few years ago that my brother and I conceived the idea of having a sail in a real sailboat, and that we must sail it ourselves exclusively. We must command the craft, no hired boatman should dictate to us where we should go or how we should steer our course and withhold all the delight of handling the tiller and sheet. Having arrived at this conclusion, we con-

sulted our pockets and found our wealth amounted to about \$1.50—enough to hire a boat for the afternoon, we considered—and off we went, so impatient to be afloat that we did not even leave word at home as to our grand project.

Arriving at the boat house which was located near Gowanus, South Brooklyn, we interviewed the boatman, and in answer to his inquiries as to our ability to manage a sail boat, we assured him that we were old hands at the business, in short had been brought up on the element. He became convinced and we went down for the necessary coin, and were checked at the outset by his demand for two dollars deposit outside of the rental charge. But we eventually compromised the matter by leaving our waistcoats in his keeping until our return with the boat. He would have preferred our coats, but as the air was not too warm, we yet prevailed upon him to consider the exposure, and finally embarked minus waistcoats.

Our vessel was an open one with a short deck forward, forming a cuddy in the bow, and through this the mast was stepped. She was rigged as a catboat with a medium-sized sail in which was not a single reef point, a circumstance which did not trouble us in the least at the time. The air was not too warm, and in the stern completed her interior. We had seen boats sailed and had also been on board of them when under way, and really knew the general principles of handling such craft. As to practical experience, we had none. Disdaining any assistance in getting up sail we spread our canvas, cast off from the float and fell away before a light N.W. breeze, and with a clear blue sky above us glided promptly on toward the broad waters of New York Bay. As the breeze freshened and our speed increased, we looked with contempt on the two oars that lay on the thwarts, and shortly after indignantly stowed them in the bottom of the boat.

The question now arose as to where we should go. "Is there any fishing tackle on board?" asked my brother, who, being my senior by two years and consequently allowed to be more of a sea dog than I, had elected himself captain.

I produced the apparatus, which consisted of a heavy hand line and several assorted hooks, also a sinker. The Captain gazed around at the sky with a knowing squint, looked up at the sail which was bellying to the breeze, and then at me. Evidently he had an idea. In fact such was the case, and he immediately gave orders to the first mate to have sheets trimmed and the anchor catied, after which, being well on our way to sea, he unfolded his proposed destination.

Sheepshead Bay was a favorite resort with us during the summer, and we had spent many a happy day on its waters, gathering in the foolish flounder, the blackfish and chirping sea robin. There was also to be lured at certain spots, fluke, kingfish, sea bass, blue and weakfish, of course all in their respective seasons. It being the early part of May that we set sail on this occasion, the captain proposed that we should run around to the above-named place and gobble up the blackfish, which were now swarming in that location, especially at the "stone pile" off Manhattan Beach.

I was agreeable, seconded the motion, and the proposal was carried unanimously. I merely suggested that it might be too long a trip to do in an afternoon, and that we might not be home in time for supper. The captain, however, was paid no attention, so that we were not in a flat-bottomed rowboat now. "With a breeze like this," said he, affecting a sea air and cocking his head to one side, with one eye closed and the other looking skyward, "we can make Point Breeze Inlet inside of two hours easy, have an hour's fishing, and allowing three hours to run back—pooh, clear away there and keep as harp lookout forward; back in time for supper, indeed."

With boom well off to port and an increasing N.W. wind we fell down to the Narrows, past the fleet of yachts at anchor off the Atlantic Y. C., then by Owl's Head and Fort Hamilton, and out into Gravesend Bay we sped, and bore away for Norton's Point. The water was smooth, for the wind was blowing with the tide, which was running ebb. But as we neared the point we began to encounter long swells, and we paid no attention, then further than to enjoy the sensation of rising and falling to their undulations. As to the cause of the disturbed condition of the water we did not trouble ourselves in the least.

Once past the point we began to receive a tremendous tossing about, as we became entangled in the tide rips of the "Potato Patch," and considerable water was taken into the boat, but was as quickly thrown out. It was here we became aware we were carrying too much sail. The wind had been steadily increasing, although running before it its force was not alarmingly apparent; but as we jibed and laid our course along the Coney Island shore, we got the breeze almost abeam, and the little boat began to lay over and show her heels at a great rate. The sea was rolling in its large waves, that broke several hundred feet from the beach.

We kept about a half mile off shore and had to run in the trough, but the boat was light, not having a pound of ballast in her besides ourselves, and she mounted the peaks of the waves like a cork. We know now that the awful sea that was lashing Coney Island's shores that day was the effect of heavy gales at sea, but we did not know it then, nor did we wonder at it or think that it was anything unusual, strange as it may seem, and the idea of turning back never even suggested itself to us. As we proceeded we became aware that our main sheet was too short. It was simply a single line made fast at the outer end of the boom, and no blocks or other purchase than what could be devised. In rising to the tops of the waves the wind would strike the sail with such force that we were in peril of being capsized as each succeeding mass of foamy water rolled beneath us. In order to lessen the force of the pressure on the sail, the sheet

was let run to the end, but even then the wind could not spill out of the sail, and we dare not be luffing toward the beach all the time, or we would get into the breakers. After being nearly turned bottom up a number of times, we got the young hawser off the anchor and bent it on to the end of the sheet, and although it was over an inch in diameter it served our purpose, and we continued on our course. If I say we laughed, sang songs, and joked nearly all the time, enjoying the situation immensely, the reader may say I am telling a "fairy story." Such, however, was the case, believe it or not. Ignorance of our danger alone made us fearless, though I have since gone over the same ground in a much larger craft, and one more capable of combating with such conditions, and been half scared to death.

I do not recollect how long it took us after rounding Norton's Point to reach Point Breeze Inlet, at the eastern end of the island, but I don't think it was much over an hour. Off Brighton Beach and the iron pier the sea was the highest. When we fell between the waves it seemed like a valley or gorge, with a fair-sized mountain on each hand, and as one receded and the other approached and we ascended sidewise to its summit, we found ourselves perched on a sharp edge over which, with the vigorous aid of the wind, we tumbled and rushed headlong down the other side.

As we approached the inlet, which is sheltered by Dry Bar, the sea became less troublesome, but we also noticed that the wind was changing; and we were forced to haul the sheet closer, in consequence of which she labored hard, pounding and tumbling over continually and shipping so much water that I was ordered to bail unceasingly. We attempted to reduce sail by dropping the peak, but no headway could be made thus against the strong tide, which was still running out from the bay through the inlet; so we

hoisted it up again, and held her at it for all she was worth in a hard struggle to beat through against the current.

Back and forth we rushed, making but little progress and getting very wet. It had begun to blow fiercely from N.E. Suddenly she struck bottom and rolled clear over on her beam ends, throwing us both into the water. Quickly gaining our feet, we found the water was about 12 in. deep and we were on a sandbar on one side of the channel, over which the waves were rolling in a mass of foam. Our boat lay on her side, with the sail partly in the water, while the waves broke against her bottom, throwing the foam and spray high in the air, while she drifted further on to the bar at every blow. This would never do, and we immediately set about saving ourselves and the boat.

The first thing we did was to get the anchor out and firmly hooked into the sand. We then got the sail down, by which time the anchor had brought her head to the wind and she partly righted of her own accord. Getting into her, we proceeded to bail out the water, which was up to the seats; receiving in the meantime a great shaking as the boat dropped on the sand between every wave, threatening to break the bottom in. After the water was got out she rode much better, not touching so hard, and we held a consultation as to our next move.

We decided to hold on where we were until the tide rose a little, so that we could navigate into deep water, as it was impossible to do so while the boat was hammering on the bottom. For an hour we sat there shivering as each successive wave sent its spray in our faces. At last the tide turned and enabled us to escape from our predicament. The sail was hoisted and the anchor brought on board. We had little trouble in getting in the inlet now, as the force of the current hurried us along into the bay and we were soon sailing merrily up toward the village. It was strange that after coming all the way round here to fish, we

should neglect to do so after having arrived safely. However, an idea took possession of us, that it would be a good thing to sail up to Capt. E.'s boat-letting establishment, where we had been accustomed to hire a rowboat for fishing purposes, and exhibit ourselves as being in command of a sailing craft. We decided that his astonishment and wonder at the spectacle would be a greater satisfaction to us, than all the blackfish we could carry home. Accordingly we headed for his dock and prepared to witness his confusion. But confused he was not, strange as it seemed, surprised he was to some extent.

"How long are you down for?" he asked.
"Oh just for the afternoon," we answered lightly.
"And do you expect to get home to-night in that boat?" he exclaimed.

"Certainly we did, why not?"
"Take my advice," said he, "and stay where you are to-night, perhaps by to-morrow the sea will be down. As it is, I would not go around to-night in my boat (a 27 ft. deck cabin sloop), I am surprised that you got down here in that shell at all."

As we believed he was trying to frighten us, we put but little stock in his warning and started down the bay with the intention of returning home. Unnoticed by either of us the tide had flown by, until it was now nearly sunset. As we perceived this fact, some misgivings as to our prospects of making the voyage home before dark began to assail us and my brother was the first to suggest that we wait until morning.

"I think it will be best anyhow," said he. "We can fish until dark, and then bunk up in the old shanty on Plum Beach." "But we have nothing to eat," said I; "and no money to buy any-

thing with." "Oh, we'll catch some fish for supper." The result was we concluded to make a night of it. Since our ducking the sun had pretty well dried us out, and we had no misgivings about putting in a comfortable night in an old shanty on Plum Beach.

It was still blowing hard and we flew along at a lively pace with the lee gunwale constantly awash. Arriving at a favorite fishing spot of ours we cast anchor, and proceeded to entice our supper to come into the boat. We cut the only line we had in two parts, so that we each had tackle. A piece of iron was improvised for one sinker, and of hooks we had enough for both. In the course of an hour we had a dozen small blackfish and several flounders. By this time it was becoming dark, and we wound up our lines and sailed around to the beach in front of our hotel, where we landed and secured the boat by carrying the anchor up some distance from the water and hooking it firmly in the ground.

Confining up to the shanty, which stood at the top of a knoll, surrounded by long grass and several stunted cedar trees, we began to make preparations for passing the night. There were two windows and a door in the front side of the building, but as the glass had long since disappeared from the sashes, slight drafts might be expected. On account of the settling of the structure at the back, the front floor required the united strength of both of us to close it. A door in the rear led to small porch, and an idea struck us that this article would do more good if unbanded and placed against one of the open windows, which was accordingly done. As to blankets or covering we had none, nor did we consider we would need any. A thick plank was moved to one end of the apartment to be used as a pillow, for we concluded we would like to have our heads elevated a little.

Hungry as we had become, all these preparations were made before we thought of cooking supper. The remains of a stove lay half buried in the sand outside at the eastern end of the building, and on investigation disclosed the fact that it was minus several doors and lids, also grate, and was kept from falling apart more from the banking of sand around it than from rivets.

We stood and viewed it thoughtfully and in silence until my brother broke the stillness by exclaiming, "Well, here's the stove, but how in thunder are we going to cook those fish?"

Realizing the absence of kitchen utensils so forcibly, as we looked about on the barren waste which lay before us, and on which not even a tin cover or broken dish of any description was visible, we began to feel our appetites. In fact, "I don't know, I'm sure," said I faintly; "we've got no salt either."

"Oh, Lord! say, do you think you can pull through until morning?"

"I can stand it as long as you can."

"Well, I tell you what we'll do. You get hold of the other end, there, and we will just move this furnace where its heat will be appreciated."

I understood that the stove was to be taken in the house, and laid hold. At the first lift the whole top rose from its resting place, leaving the iron sides standing. Somewhat surprised, but not discouraged, we carried it in, and after several more trips, discovering other flaws in the construction at each lift, we at last had all the pieces transferred, and with the aid of some broken bricks erected a fireplace near the middle of the floor. Into this we heaped wood and started her going. And she did go.

"No danger of us freezing," said I.

"Good draft there," remarked the captain.

"Most too much, ain't there?" said I, as several flames touched the ceiling and the smoke began pouring out through a small back window so thick that one could scarce see it.

"Rather more than actually necessary," said he, extinguishing a small blaze on the floor.

We soon realized that our fire was liable to make things too warm for comfort, as each gust of wind sent the sparks and coals flying all about the room, and when flames began to spring up in various quarters of the apartment, I was dispatched for the bailer and water. In the meantime my companion threw sand on the crackling mass. The fire was soon extinguished, and when we could hear no more of creaking and the wind fairly howled without. My brother was sleeping like a log. As I found it impossible to get to sleep again on account of my chilled condition, I at last awoke the captain, who also became aware that he was not smothered in blankets. He looked out of the window as though he expected to see it snowing. We held a consultation to devise some means of finishing the night in comfort. Suddenly a brilliant idea dawned upon me. "The sail!" said I.

I received a slap on the back that sent the chills clean out of my body, and we both leaped to our feet and rushed down to the boat, removed the mast, unrove the halliards and slipped the hoops off the spar. Bringing sail, boom and gaff with us, we returned to the house, and, spreading it on the floor, lay down on it and lapped the gaff over to where the boom lay, and then we were "as snug as a bug in a rug."

The remainder of the night was passed in unconsciousness. When we awoke the sun was struggling up through a mass of oily looking clouds, but the wind had moderated a little. Our first thoughts were confined to our stomachs, and after a short run on the beach to get the blood in circulation we got several of the small flounders and prepared them for cooking. We must eat something, salt or no salt. A fire was built and a piece of iron laid on it to receive the fish, which were soon frizzling away at a great rate. But alas! when we endeavored to turn them over they stuck fast, and so they remained until we removed the iron slab and proceeded to eat what was not burned to a crisp. A highly unsatisfactory meal was partaken of, and in disgust we gathered up the sail and returned to our boat.

Stepping the mast we set sail and started up the bay without any definite object in view. Captain E.'s warning had impressed us more than either of us would admit, especially after our unpleasant night, and in our shaky condition our courage and determination was fast oozing away, and the roaring of the surf on the beach did not tend to banish our gloomy spirits. No doubt our hungry and faint condition was the cause of our depression more than aught else. As we neared Captain E.'s place he hailed us

and inquired how we had fared, and asked us to come up to his house and have a cup of hot coffee.

Oh what a temptation, what an opportunity. But no, while our stomachs were crying in anguish for the stimulant, our foolish pride forbade us admitting that we were unavoidably fasting, or that we required any refreshment. Thankfully declining we bided our time, and when we had asked him what he thought of our prospects for a run around the island, which he emphatically said were slim.

"There is more sea out there this morning than there was yesterday, but I'll tell you what you can do if your boat is not too beamy."

"What?"

"Push her through Coney Island Creek to Gravesend Bay."

"Why so we can," said I, looking at the captain.

"Is there water enough?" we asked of our adviser.

"You may have to get out and push in some places, but most of the way I think you will float all right. Just haul in here and lower your mast, for that won't go under the bridges."

We were not too proud to comply with his instructions now, and in a few moments we had pulled the despised oars out of the bottom of the boat and were rowing away toward the entrance to the stream of water which divides Coney Island from the mainland.

Our first adventure on reaching this creek was to stick in the mud, and we got out and pushed and pulled. In one spot a log lay directly across the channel, and we had to drag her over it bodily, which was a severe test of our strength. After this we went along all right until we came to the trestle work of the rail-

W. H. R., Phoenix, R. I.—To your question in last week's issue, asking where you can obtain gray rabbits for stocking purposes, we add that they can be had of E. B. Woodward, No. 174 Chambers street, New York. Price, \$12 per dozen.

J. B. N., Nichols, Conn.—Please inform me where I can obtain pheasants' eggs for hatching and price. Ans. E. B. Woodward, of 174 Chambers street, New York, can import them if an order should be given for 100 dozen. Correspond with him.

A. H. C., Cincinnati, O.—Canoe tents were described in *FOREST AND STREAM* of March 14, 1889, also in previous numbers. There are several good patterns of high rowlocks for boats, which are kept in stock by the leading dealers. We can recommend no special make.

J. H. Lyme, Ct.—I want to find a place South (say in Georgia or Florida) free from malaria and where I can get some shooting—ducks, etc. What is your opinion of Brunswick, Ga.? Ans. We imagine Brunswick would be a good place to make headquarters, making trips from that point. No ducks there now, however.

SEVERAL ANGLERS, New York.—In your last issue you mentioned that the open season for trout commenced May 1. Please state if the correct date is not April 1. Ans. This statement was intended to apply only to the Adirondack region or North Woods. For the rest of the State the date is April 1.

A. F. M., Minnehaha Falls, Minn.—What is the trajectory of the Winchester rifle cartridge .38 W. C. F. Ans. We have never tested it. That of the Winchester .40-80-210 is 2.3 in. at 50 yds. in 100 yds. test and 11 1/2 in. at 100 yds. in 200 yds. test. Trajectory of .38 would be higher. See *FOREST AND STREAM'S* "Trajectories of Hunting Rifles."

SPORTSMAN, Kingston, N. B.—I have just had a new applewood stock put on my gun. Will you please give me the best method of staining it? Perhaps staining would not do, as oiling or some other method would be better. Ans. Dissolve a few crystals of permanganate of potash in water and rub well into the wood. Alkanet root steeped in linseed oil is sometimes used, the oil, after it has become bright red, being rubbed into the wood.

J. S. H., Wyalusing, Pa.—1. Can you tell me where the English rabbit or hare, such as Lorrain imported and are now plentiful in New Jersey, can be found for sale? We want them for restocking. 2. Will wild rice and celery thrive in the creeks, ponds and rivers of northern Pennsylvania, and can it be found for sale any place? Ans. 1. Write to E. B. Woodward, 174 Chambers street, New York. 2. Rice will grow, but it is doubtful about celery. Correspond with Chas. Gilchrist, Port Hope, Ont., and R. Valentine, Janesville, Wis.

INFORMATION WANTED.

W. S. wishes address of some one who can tell him about the hunting and trapping in St. Louis county, Minn., near the Duluth & Iron Range R. R.

New Publications.

INTELLIGENCE OF ANIMALS.*

IN his "Glimpses of Animal Life" Mr. Jones has collected an extremely interesting series of examples of the intelligence of

*Glimpses of Animal Life. [A Naturalist's Observations on the Habits and Intelligence of Animals.] By William Jones, F.S.A., [Author of] "The Treasures of the Earth," "The Broad, Broad Ocean," etc. [Quotation] London: [Ellis Stock, 62 Paternoster Row, 1889.] 12mo., pp. 229. Forest and Stream Pub. Co. Price \$1.50.

all sorts of animals. The most narrow-minded person, after reading through this book, will scarcely deny to animals, or at all events to vertebrate animals, intelligence and reasoning powers of a much higher order than is usually attributed to them.

This book is divided into seven chapters, which deal with the "Playfulness of Animals," "Animal Training," "Musical Fishes," "Nest-Building and Walking Fishes," "Luminous Animals," "Birds' Nests in Curious Places," and "The Mole."

The book does not profess to be more than a compilation of the most interesting accounts that have been written, giving examples of animal intelligence, and of curiosities of animal life. In the first chapter the author discusses the sense of humor, or more properly of fun, as it exists in animals. Familiar examples of this are the playfulness of puppies, of kittens and of colts, but Mr. Jones gives a great number of instances of this spirit in a variety of animals, of birds, and even of insects. In the chapter on "Animal Training," Mr. Jones has collected a great deal of very interesting material. He tells us of the elephants, written of by Suetonius, who danced the tight rope, and of the tame beasts trained by Robert de Beun in the twelfth century, as well as of the trained mammals, birds and insects of modern days.

Fishes actually musical are perhaps mythical and to be classed with nymphs and mermaids; yet there are unquestionably fishes which emit sounds. The well-known drumfish (*Pogonias*) is one of these, and the grunt another. Even more interesting are the accounts of the nest-building and walking fishes, whose extraordinary habits are known to naturalists, but to few others. Many of our well known fish prepare spawning beds to receive their eggs, but there are some fish which construct very elaborate nests from the twigs of seaweed or other water plants. The climbing perch and some other walking fish have also long been known to science, but of their curious habits but few of the general public know much.

Glowworms and fireflies are among the most common of the luminous animals, but they are not the only ones. A gecko lizard, earthworms and centipedes, together with many fishes and marine animals, emit light under favorable circumstances. An interesting account of birds' nests in unusual places and the chapter on the mole concludes this book, which is really a valuable one. The author's style is very pleasant and the book on all accounts abundantly worth reading. No one who is fond of animals or of nature ought to be without it.

LIFE OUT OF DOORS.*

WE know of few books which hold more charming pictures of country life than Mr. Knight's "Idylls of the Field." They are pictures of still life, so to speak, sketches drawn by an observer, who goes about with his eyes wide open, and who has a keen appreciation of all that is beautiful and that is interesting in nature. A flash of sunlight, a track in the snow, the rustling of an animal in the dry grass, the song of a bird, all tell their story to him, and it is the sum of these stories that he gives us in his delightful book. Here is a fine picture of dawn on a winter's morning on the seashore:

"On the sands below a few oystercatchers and a redshank or two wander up and down along the lines of weed that are left as the tide goes out, or explore the little heaps of foam that are lightly tossed this way and that by the wind. The gulls are mostly out at sea, or scattered over the fields inland, in company with curlews and plovers, who have left the frozen sands to forage in the furrows. Suddenly, in a hopew among the sandhills, whose hoary sedges seem still whiter in this pallid light, there is a stir

as of some moving animal. There is a hasty gallop of light feet behind a ridge of sand, and then—a fox leaps lightly down upon the shore, joined half a second later by another, following in hot pursuit. Fine fellows they are, with their thick brushes tipped with white, and with a tinge of gray upon their winter coats. One behind the other they canter easily down to the edge of the water, as if in hopes of picking up for breakfast some wounded teal or mallard that may have drifted in with the tide. They leap over a little promontory of rock and disappear behind the sandhills. Here they come again, racing along side by side. Now they pause upon the sand, and turn and face each other, and leap and dance, and snarl playfully like two unthinking cubs, forgetful altogether of dignity and decorum. Now one turns and dashes off, followed instantly by the other, and round and round they go, now in line, now side by side, as full of fun and as intent upon their game as if there were no bounds in the county and a view-halloo was a thing forgotten. But alas! they stop short; they hold their heads high and look round with eager suspicion. * * * They are gone, and the beach once more is empty and deserted. Suddenly, as swift as thought, along the jagged edge of yonder purple clouds there flashes out a thin line of gold. Over it hovers a thin ethereal fan of light like the herald banner of the day. Bladder grows the fringe of gold, swiftly running left and right along the cloudy heights and reddening as it goes. Tiny cloudlets, unseen before, are touched with glowing fire and float like attendant spirits clad in burnished gold. It is the gold of Paradise. No ore of earthly mine ever shone with a luster a hundredth part so fair.

"Now the broadening glow has kindled into flame, glorious, dazzling, unsurpassable. Now look again. Round and fair the sun has arisen on the waking world. And lo! the cold earth, as by the wand of a magician, is transfigured by its light. All the color has gone out of the cloudbank that, but a few moments since, stood out against the glowing east a rampart as solid as the Alps. It is there still, but the eye can scarcely trace its shadowy outline on the sky. * * *

"The sea that was so cold and dark is shot with green and purple, while the wet sand shines like a very opal. Wandering sea birds catch the light upon their shining wings. The dark plumage of a solitary cormorant—as still as if carved out of the basalt on which he stands—shines with added gloss as the sun glances on his dusky wings. Just beyond him a flock of pintails—the sea pheasants of the fishermen—are making for the shore, diving as they drift along. Further out a fleet of elder ducks ride lazily on the heaving wave."

Of such pictures we find many in this delightful book, which contains the following chapters: A Wintry Dawn, Winter in the Marshes, Footprints in the Snow, A Secret of the Hills, Herals of the Spring, His Island Home, Castles in the Air, Meadows of Asphodel, When all the World is Young, The Postum Gate, At the Bond of the River, Their First Appearance, The Gift of Song, A Robber Stronghold, A Seabird's Haunt, Flower-de-luce, Cheddar Cliffs, In the Heart of the Mountains, In the Heart of the Forest, A New Face at the Door, His Native Heath, etc. The fine illustrations, of great beauty and softness, add much to the interest of this book.

O. FRINK, 234 5th Ave, New York.

When a sportsman finds anything which adds to his pleasure, without increasing his labor, he wants all his brother hunters and anglers to know of it and share with him the newly discovered "helper."

WHAT WE CLAIM FOR
The Automatic Reel.

FIRST.—It will wind up the line a hundred times as fast as any other reel in the world.
SECOND.—It will wind up the line slowly if the angler chooses.
THIRD.—No fish can ever get slack line with it.
FOURTH.—It will save more fish than any other reel.
FIFTH. It will prevent tips, lines and snells from being broken by large fish.
SIXTH.—It enables the angler, and makes it desirable, to use lighter tackle.
These claims have been substantiated by the most skillful fishermen in America and Europe.

The reel is manipulated entirely by the hand that holds the rod.

The Old Reliable and Popular Blue Rock Pigeons & Traps.

Every Target made by us is plainly stamped "BLUE ROCK PIGEON."

A worthless imitation of our justly celebrated "BLUE ROCK" is being put on the market, and if parties who receive these imitations on orders given for "BLUE ROCKS" will refuse to accept them and notify us by whom they were shipped, they will confer a great favor. We warn all dealers not to sell as "BLUE ROCKS" any of these worthless imitations.

The cut of our trap shows it to be the most compact and perfect target trap ever devised. As will be seen by the following list of carload buyers, our goods are handled by all the leading dealers in Sporting Goods, and you will find it to your interest to buy from them, as they can give you factory prices and save you delay and breakage in transportation.

Canoe and Camp Cookery.

By "SENECA."

A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 98 pages. Price \$1.00.

THE TROUT OPENING.

THE ice king is losing his grasp on elevated lake and mountain dell in his restricted dominion. "On low seas over night the spring comes gently walking."

Mossy banks are fragrant with the pink petals of the trailing arbutus, and the blue hepatica is smiling on sunny hillsides. The purple grackle is pouring out liquid notes from the tops of the maples. Robins are hopping in squads over the grassy levels whereon the untimely worm is dragging his slow length along, or are trying their unpracticed notes from budding branches. The glossy bluebird is twittering to his mate, and the cheery note of the song sparrow salutes the early morning hour. There are sounds in the air like the humming of bees and the busy calls of nest builders. Something is going to happen, indeed is now in progress.

This activity and bustle on meadow and hillside correspond with a movement from the mysterious depths of lake and ocean into the clear shallows and sheltered pools of sunlit streams—a movement now swift but noiseless, now slow and sly. There are men who cannot see this "living arrow of the mountain stream," as there are people who cannot find trailing arbutus or the nest of whip-poor-will; but the disciple of the gentle art is abroad to-day, and he is rejoicing in the recognition of his fleet favorite.

For him the vermilion spots of Fontinalis glow on their background of burnished silver and sparkle from dark mottled sides. And what would our dappled warrior be without his spots, his stripes of velvety black and milky white, and his blushes of rosy orange? We have seen him coming from briny bays, leaving the rout of minnow and silverside to seek the estuaries and upper waters of swollen streams, possessing the form of Fontinalis but lacking his rich livery, while we mourned his rusticity and lack of spirit. In this plight he is beguiled to his death by a damp, cold, wrinkled, squirming thing known by the prosaic name of worm—a wriggling tube, "of the earth earthy." A little further on his journey the somber mantle is flung aside and the full glory of the crafty warrior shines forth.

The salt-streams of Cape Cod, the Vineyard and Long Island know him now. The historic Marshpee feeds and shelters him. In a little while he may be sought for in the rapid brooks of Wayne and Pike counties, in Penn-

sylvania, and later in the North Woods and the lakes of Maine and New Hampshire. Moosehead is preparing to shake off its fetters, and Winnipiseogee feels a thrill of spring. The winter has been open, water abundant and ice has not disturbed the spawning beds and smothered the fish. Continued heavy rains may fill the streams with food so that the most tempting lure of the angler will remain untouched; but the patient fly-fisherman will have his reward when the flood subsides and the gentle south wind blows from a sky tempered by warm gray clouds. The sea-run trout are playing back and forth with the tide in small streams of Long Island, Connecticut and Massachusetts, and the large and brightly-colored flies are bringing them to creel. Already the coddung and coachman, the professor and the ibis, with a cloud of bright hackles, have lured the sullen trout from their deep pools. Among them, brother of the angle, you may see a mother fish not yet free from the duties of maternity. Surely you will restore her to the gravelly rapids to complete the round of her existence. So shall your eye be quick to see the rise, your wrist prompt, but gentle to strike, your alertness and skill in playing the fastened prize superior to his desperate struggles for liberty.

And now, lawyer, physician, capitalist, professor, artist, merchant, fisher of men, clad in waterproof and defying a possible unlucky turn of the weather, we follow you down the rushing brook, while birds' songs thrill you and the modest wind flower nods you greeting, but for a while we cannot go with you except in spirit. For us there is now only the trout in death or in captivity—beautiful to look upon, but shorn of its chief glory.

WYOMING HIDE HUNTING.

IN another column a correspondent calls attention to the slaughter of elk which is now going on in the wildest part of Wyoming, and urges that something be done to stop it by enforcing the law which forbids the shipment of hides out of the Territory.

This butchery of elk is a matter which appears to be wholly within the power of the railways to control. If they would give stringent orders to all their station agents to refuse to receive any hides, this traffic would inevitably stop, and with the stoppage of the traffic would stop the destruction of the game. We have been assured by officials of the Northern Pacific R. R. that they have for years employed every means in their power to check such shipments over their lines, and so far as we can learn from outside sources, very few hides, if any, are shipped over this road. The Union Pacific R. R. and its subsidiary lines on the other hand constantly ship, we are informed, large numbers of hides. Some time ago we communicated with this corporation, calling its attention to the laws of certain of the Territories through which its lines run, and suggesting the desirability of contributing to the enforcement of these laws by means of their station agents. So far we have had no reply from them.

It would appear to the average man a perfectly plain proposition that it is to the interest of the railway corporations running through wild regions, where game is to be found, to do all in their power to preserve that game. The knowledge that there is fish or game, large or small, in any section of the country, is the strongest possible inducement to a large class of people to travel over the railway lines which traverse that country. That the railways understand this as well as any one, is shown by the prominence given in their advertisements to statements about the shooting and fishing resorts along their lines. It seems strange, therefore, that the managers of any road should for the sake of the very trifling returns received on a few bales, or a few carloads of hides, be willing to view with equanimity the destruction of an attraction of the country, which, if preserved, would bring over their lines a constantly increasing number of travelers.

It is easy to see why the inhabitants of Wyoming in many sections disregard the laws and pay no attention to the elk skimmers. That is quite in line with the action of the public in many parts of the country. What is everybody's business is attended to by no one, and the busy traders think more of the present profit of a dollar on an elk hide than they do of the 20 or 30 per cent of profit on a large bill of provisions and camp equipage sold next year, and perhaps every year for ten years thereafter, to a camping party.

The existence of this feeling among the citizens of the

Territory may be well enough understood, but the managers of a great railway corporation ought to see a little further ahead than this.

THE YELLOWSTONE PARK BILL.

THE hearing had on Monday before the Public Lands Committee of the House gives some indication of what its report may be.

There seemed to be a feeling in the committee that a way for a railroad to Cooke City should be granted, and the line that has always been urged by the Cooke City miners is along Soda Butte Creek and the Yellowstone River. The friends of the Park—in Congress and out of it—will never consent to allow the granting of a franchise to a railroad to run through the Park, and these friends are strong enough to kill any bill which proposes to grant such a franchise.

As a compromise measure, and rather than to see this bill fail, they are willing if necessary to have the north-east corner of the Park cut off and thrown again into the public domain, so that the proposed railroad may be built wholly without the Park. Such a cut off will destroy one of the great game ranges of the Park, but this is perhaps better than to have no bill at all.

It seems likely that the report will take this shape, but however the Public Lands Committee may act, it is certain that no bill can pass which permits a railway in the Park. Rather than that this should happen, the fight will be kept up for years, with the result of making Cooke City wait a long time for any railway which should run along the Yellowstone River.

SNAP SHOTS.

IT IS understood to be Secretary Windom's purpose to appoint Mr. Henry W. Elliott special agent to visit Behring Sea and the Seal Islands of Alaska to collect all possible information upon the present condition of the Alaskan seal fisheries as a source of revenue, the effect and extent of whatever injury has been inflicted upon them by pelagic sealing, the status of the sea otter industry, and kindred lines of inquiry. No better selection could be made, for no one is better qualified to deal with this matter than Mr. Elliott. He has spent years on the Pribyloff Islands, and is the author of an admirable monograph on the seals and sea lions of the Northwest Coast.

The beautiful city of Louisville, Ky., is in ruins and in sorrow, a prey to the fury of the elements, whose temper could not be guessed from the placidness we have all so often enjoyed and described with pleasure. Nature may be calm, and nature may present us spectacles upon which to build figures of speech indicative of rage the most tremendous and most terrifying. The city of Louisville held within its gates many noble and hospitable sportsmen. We trust the great disaster has not involved or robbed us of too many of these friends.

It was in Louisville that the Kentucky Fish and Game Club, the worthy organization of which we have often had something to say, was projected and pushed to much of its present proportions. While hinting at the question of uniform laws we might add that it has been part of the plan of this organization to secure as much uniformity as possible in the game laws in the three States of Kentucky, Tennessee and Missouri. The strongest protective association of Tennessee has written to the Kentucky Club for advice in the matter of coöperation, and similar steps have been made by the leaders of such work in the State of Missouri.

We have correspondence at this office bearing upon the numbers of sportsmen's clubs in some of our larger cities. Our columns have already shown something of the extensive club system of great and busy Chicago. Detroit, not far distant from that point, is the home of many large and vigorous organizations of a similar nature. The city of Pittsburgh, Pa., has a remarkable number of shooting and fishing clubs, much greater than is generally known. San Francisco is another great seat for large and wealthy organizations of sportsmen fond of the field and stream. Indeed, the growth of the club system in our larger cities seems very general.

Mr. Coggeshall's bill for the revision and codification of the laws relating to the protection and preservation of fish, shellfish, birds and quadrupeds, No. 222, has gone to Governor Hill for approval.

The Sportsman Tourist.

ATTRACTIVE TO PHOTOGRAPHERS.

THE beauties of Lake Champlain have been made well-known to readers of FOREST AND STREAM through the charming sketches of Mr. R. E. Robinson, published in the paper and in the two books, "Uncle Lisha's Shop" and "Sam Lovell's Camps," and they are coming to be known to others. In *Anthony's Photographic Bulletin* Mr. W. E. Partridge writes with enthusiasm of this lovely region, and his remarks are especially interesting to canoeists. He says:

"To those who use the canoe there are joys and pictures of which other mortals can only dream. They can sail up the Hudson and go through the Champlain Canal. This canal is almost an unexplored region and is a perpetual delight to the artist. The lake, from Whitehall to Ticonderoga, and the great south bay near the former town, are as unknown photographically as the heart of Africa. And, moreover, they are full of pictures. Whitehall itself is well worthy of investigation. It is not like any other town in New England. A seaport set upon shelves on the mountain sides is a novelty. Forenoon and afternoon, noon tide and evening, all present the best of lights. Even the man without a boat might find it worth while to leave the train and spend a day or two with this quiet, sleepy little town on the hillsides.

"Just beyond Rutland there is another town or village worth a day's visit. As the trains do not always make close connections at Rutland, the stop may be made there and an excursion made to Proctor, or Sutherland Falls, as it was formerly called. The distance is perhaps five or six miles.

"At this point the Otter Creek plunges down over a ledge of rocks upward of a hundred feet in about the same horizontal distance. Among the things which the tourist will wish to have are the falls from above, and below, stretches of vine-covered river banks, the view down the valley of Otter Creek (looking north), and the marble quarries. In the marble yards, the mills, etc., there are no end of good things to be found for the hand camera. The station is in the midst of them. And they are so compact that one can walk from end to end of them all in ten minutes. Good things are on every hand. It is almost impossible to go astray. And there is an air of novelty about the whole place which is very attractive and makes the pictures especially interesting.

"The view down the valley from the falls, including the village of Pittsford, will test the amateur's ability to get distant mountains, villages, broad meadows and vigorous foreground all upon one plate, and with printing density. For this the afternoon or evening light is the best. A whole day can be well spent here and a week would not exhaust the points of interest which can be reached in half an hour's walk from the station.

"The valley of Otter Creek from here northward is charmingly beautiful, and if one had unlimited plates, is worth exploration. North Ferrisburgh is the goal, however. The village is at a distance from the lake, and though it contains many pretty bits, is not worth spending time upon if the visit is to be short. But before leaving one excursion should be made to the base of Mount Philo. Here, looking west, a panorama should be taken of the lake, the Adirondacks stretching away for 100 miles and the fertile Champlain Valley for a foreground. The drive up over the low foothills to the base of the mountain gives a series of the most beautiful and grandest views to be found in our country. It is far finer from the artistic standpoint than that from the hills behind Burlington.

"Using the hotel as headquarters, the next spot to be reached is Thompson's Point. This is a summer camping ground, where people from all parts of the country have cottages and tents. The 'Point' belongs to the town of Charlotte. Note the fact that the name is pronounced Shalott, with the accent on the last syllable. It is a part of the 'town farm,' and the ground is not sold nor even leased. People obtain permission to occupy the ground or build cottages from the Selectmen, and are tenants at will or for so long a time as they obey the regulations.

"The hotel keeper at North Ferrisburgh can furnish the necessary transportation, and once at the 'Point,' it is not difficult to make friends, with whose aid the remainder of the undertaking is easy.

"The first view to be taken is of a gorge or clove near the end of the 'Point.' Best time, morning. A view looking out into the lake is very satisfactory. If the water is low, go down to the beach at the bottom. It is worth three plates at least. Through the woods to the north shore of the 'Point' will, in eight or ten minutes, bring one to a vertical bluff whose headlands will account for half a dozen plates.

"If a boat can be borrowed or hired, start from the little steamboat dock and go around the 'Point' toward the north. One cannot go fifty strokes without finding something which is well worth a plate. In times of low water a half-submerged rock off the lower end of the 'Point' affords a rest for the tripod and 'standing room only' for its owner. But the view toward the north is worth all the trouble it takes to obtain it. The larger the plate the better. Use a small stop, go in the morning, and if possible get Steamboat Island and its mate clean enough to print. During the past year the water has been very high and the rock has been entirely covered. There are several little beaches only accessible by water that should be visited for the sake of unique views to be had from them. Gnarled trees and rocky headlands, with glimpses of the lake, are some of the characteristics.

"One can easily make a dozen exposures, and then come back the next day and make as many more. The changing light constantly suggests new pictures and new points of view. A panorama across the lake is very nice, and if made with a long-focus lens is picturesque.

"But no matter how much one may be enamored of the 'Point,' he must not fail to make a trip across the lake to Split Rock. 'Tis said the distance is a mile and it seems but half as much. Two views of the rock—one of the lighthouse and a panorama of the Vermont shore with the long-focus lens. In the afternoon, when the steamer is going up, she makes a pretty incident in the open space beyond the rock. Take a day for the trip and come home happy and tired.

"Here is richness, but the field is not exhausted. The

work is only begun. An excursion by boat to the mouth of Little Otter Creek should not be omitted. The island opposite the mouth on the way over is worth a plate and so are the pond-lily beds. The scenery at the mouths of the three streams that enter the lake at this point is very different from anything in the neighborhood of the 'Point.'

"The mouth of Otter Creek is a mile further south. It is, like all the other streams coming into the great bay south of Thompson's Point, well worth exploration. The whole of the great shore line will well repay a cruise around it.

"But the artist who has not time to explore will find abundant subjects wherever he directs his instrument. If, on the other hand, he has time to make studies, seek the rarer combinations and go to the more distant or difficult places, the rewards obtained seem boundless.

"One of the most satisfying things about a collection of photographs made in this neighborhood is that they are not like the pictures usually found in the landscape photographer's album. They have a charm of novelty as well as of intrinsic value which is delightful. As pictures they attract the attention of the artist.

"Of the old City of Vergennes something should be said, and also of beautiful Burlington. None of them, however, has the same photographic charm as the lake shore. Yet both of them will repay a week or more investigation with the camera. But both can be explored in the usual way, and the good services of one's host are not needed in obtaining boats and transportation.

"I have some twenty negatives of the Champlain shores, taken within a distance of a mile or two. My only regret is that I have not seventy-five more taken in the same charming region. I have not been able to get a negative of the strange, steamer-like little islands both north and south of the 'Point,' nor have I photographed the depths of the beautiful bays whose park-like shores stretch away for miles beyond and within the bold headlands.

"Champlain, the artistic, is easily the grandest, most picturesque, most beautiful, most satisfying and most fascinating body of water on the North American Continent. Every amateur photographer in the land ought to be among its life-long devotees."

VOICES AND TINTS OF NATURE.

Editor Forest and Stream:

Many of the readers of your paper besides myself have probably at various times observed two phenomena and perhaps never given the subjects but little thought afterward. First, that natural sounds are very different in the colder than in the warmer months of the year, and secondly, that waters have different tints during the colder and warmer months.

In illustration of the first, we will take a number of examples. Many of us have noticed the contrast in the noise of the wind in different seasons when it blows around the corner of the house; in summer what a soft, mellow tone it has, and in winter what a harsh, rough whistle!

Then again, let us stroll along the banks of a stream in May, June or July, and we will observe that the water will then make a gentle, babbling sound, while in November or winter it will, with no greater volume, make a hoarse, gurgling noise.

Still again, if we ramble in the woods during late spring or early summer, we cannot but notice what a softness and mildness the wind has when blowing through the tops of the trees; on the other hand, what a roaring it makes in cold weather. Perhaps the trees being with or without foliage may cause some difference, but it will be observed in May before the leaves are out to any extent there is even then a marked difference between that time and December. Often we have heard it along telegraph wires during summer and winter and have noted the contrast.

Again, listen to the waterfall or mill dams. The water in the warm season seems to fall in smooth, murmuring tones; but in cold weather it seems harsh enough to make the chills run down one's spine. Then take the ocean: many of us know while strolling along the beach or sitting on the sand during the warm season, with what a mellow sound the waves plash upon the sandy beach, while in winter, with no higher tide, what a roaring and hissing they make!

Even among birds we observe a contrast in their notes, being mellow in spring and summer, but harsh in cold weather; it may be owing to the difference in their love, feeding, call or migration notes.

There is also a corresponding difference in the notes of insects.

A musician once told me that to his ear the sounds of winds and waters were nearly all in the key of B flat. Perhaps some of the readers of FOREST AND STREAM who have good ears for music could tell us through the paper if they are so.

Then, secondly, we will take notes of the various tints that waters have during different seasons. For example, let us commence by taking the brook again. As we ramble along its banks in June or July we see that the water has a silvery white look as it merrily dances on its way, but in cold weather it has more or less of a bluish tint, on some days quite a dark blue. The same is true of lakes and ponds. What a soft silvery appearance they have in early summer; then in November or December what a dull leaden color!

Still again, take water-falls or mill-dams, then the waters seem to fall in a glistening white sheet during the warm season, but in winter they have more or less of the blue tint again, sometimes real dark; although at Niagara Falls I never recollect of seeing any other but the two colors, emerald green and white—the white greatly predominating in early summer, but more of the green in late fall. I have never seen the Falls later in the year than November; even they, too, may have the bluish tints during the winter.

And lastly, take the ocean; we have noted particularly the difference in aspect there, in summer pale green and silvery; in summer a much darker shade of green or a dark blue.

But whichever way these voices and tints of nature are, we all like to hear and to see them, don't we?

A. L. L.

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will make free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-Tales," giving a table of contents and specimen illustrations from the volume.—*Adm.*

Natural History.

A WINTER TRIP TO MONTAUK.

[Read before the Linnean Society of New York, Dec. 6, 1889.]

IN company with one of the naturalists of the American Museum of Natural History, Central Park, New York city, the writer made a winter trip to Montauk Point, Long Island, N. Y., in February, 1889. The notes here given were all made between Amagansett and Montauk, a distance of 17 miles. The territory covered is the long narrow peninsula at the extreme southeastern end of Long Island. The character of the country is mostly a barren waste of rolling, but very poor, pasture land, interspersed with ponds of various sizes, laurel thickets, brambles, beach grass, cranberry bogs, and with two considerable groves, one of pines and the other of dwarfed oaks. The time occupied by the trip was eight days, Feb. 16 to 24, during which we experienced a hard easterly storm, accompanied by a gale of wind, also a day when the temperature was very near the zero mark. These unfavorable circumstances had a marked effect on the results of our observations, which were as follows:

MAMMALS NOTED.

1. *Vulpes vulgaris pennsylvanicus*—Red Fox.—During a tramp over the Montauk Hills, Feb. 20, one was disturbed while feeding and was seen for a short time while it ran over a bare hillside to cover. They were reported by Capt. Scott, of the lighthouse, and some members of the crew of the Hether Plain Life-Saving Station, to be very common on the hills.

2. *Phoca vitulina*—Harbor Seal.—This seal was reported to be not uncommon about the Point every winter. One was seen on the 19th just before we reached the Point, and on the 20th one was observed asleep on a large rock near the lighthouse. An attempt was made to shoot it, but being a very long gunshot from the shore, which afforded no cover, the attempt was not successful. A third individual came up to breathe near our boat while we were out for ducks on the 21st. Capt. Scott had a fine skin of one which he shot during the winter of '88 and '89.

3. *Sciurus carolinensis leucotis*—Gray Squirrel.—One pair were seen on the 16th playfully running about on the sward at the bases of some large trees, having no doubt been tempted from their winter quarters by the mildness of the day. On our return, one week later, when the mercury had dropped nearly to zero, we looked for them but they were not seen, being undoubtedly coiled snugly in their nests. We were informed that a "black" gray squirrel had been shot in that vicinity some years before.

Some large dark-colored mice were seen in an extensive patch of low blackberry bushes on the Montauk Hills, but none were secured. Species not ascertained.

BIRDS NOTED.

1. (3)* *Colymbus auritus*—Horned Grebe.—Were not

*The numbers in () are those of the American Ornithologists' Union Check List of North American Birds.

uncommon off the Point, a few being seen while we were on the ocean on the 21st. They seemed to prefer the shoaler water near the shore more than did the great mass of other water fowl seen.

2. (7) *Urinator imber*—Loon.—Were seen off the Point in about the same numbers as the preceding, but were oftener seen flying and did not seem to be confined to a near proximity to the surf line.

3. (40) *Rissa tridactyla*—Kittiwake.—Were seen but once during the trip; then a small flock flew over us while we were on the narrow strip of low beach which divides Fort Pond from the ocean. They were within easy gun shot and were positively identified.

4. (51a) *Larus argentatus smithsonianus*—American Herring Gull.—A few were seen flying along the surf off the Amagansett station on the 18th. On the 19th, as we went eastward, they became more plentiful, while at the Point they were very common. Large numbers could be seen flying, or at low tide resting on the beach. Birds in full adult plumage seemed to be very much more numerous than the darker-colored immature individuals. When a body of the adult birds were grouped on the beach they looked in the distance like a mass of foam sparkling in the sunlight. While at the taxidermist shop in Sag Harbor we saw a number of skins of this species, some of which we thought were the European form, *L. argentatus*.

5. (130) *Merganser serrator*—Red-breasted Merganser.—Very few of this species were seen. On the 20th a small flock was seen on the ocean near Oyster Pond, where they were in the habit of feeding when it was not frozen over.

6. (133) *Anas obscura*—Black Duck.—None were seen. While looking over the lighthouse record book I found the following note: "September 1, 1875, At 11:45 P. M. a flock of black ducks flew against the light. Broke out one storm pane. Three killed. Wind fresh northeast. J. A. Miller, Keeper." This species is probably the only one, with the exception of the wood duck (*Aix sponsa*) that still breeds on Long Island. Capt. Scott saw a small flock of half-grown black ducks on one of the ponds on the 24th and 25th of June, 1889.

7. (154) *Clangula hyemalis*—Old Squaw.—A few were seen near the surf line at intervals, all the way from Amagansett to Montauk, where they were very abundant. Hundreds could be seen in the offing either resting in great flocks or flying from place to place in search of food. Northeast from the point, commencing about a mile from the beach, seemed to be the favorite feeding ground of all the deep-water ducks. Thousands could be seen at any time. As they fed, the tides would carry them off the feeding ground. As soon as they reached what seemed to be the outside edge of the favored locality, bodies of birds would rise up and fly back, only to repeat the same action again. Associated with the old squaws were great numbers of the "coots" of the Long Island gunners and baymen. With a glass, what looked to the naked eye from the bluffs like a long dark line resting on the water, was seen to be a flock of several thousands of ducks. Among this great body of water-fowl we found when we rowed out among them on the 21st a few—

8. (162) *Somateria spectabilis*—King Eiders.—We saw twelve that we were satisfied were of this species, three of which were very nearly in adult male plumage. The large size and rich brown plumage of the females and young males makes them very easy to distinguish from the old squaw and scoters. It is probable that there

were many more scattered among the large numbers of other ducks, but none came near enough to us to positively identify. Those seen were not in one flock, but in small ones of three and four birds, generally a male and two or three of the brown-plumaged individuals.

9. (163) *Oidemia americana*—American Scoter. 10. (165) *O. deglandi*—White-winged Scoter. 11. (166) *O. perspicillata*—Surf Scoter.—The so-called "coots" could be counted by the thousands as before noted. The white-winged scoter was the most numerous, probably from 65 to 70 per cent. being of this species, about 30 per cent. were surf scoters and the balance were American scoters. These figures of course must be taken as approximate, being based on the identification of the male birds; the females of these three species being so nearly alike that I do not think it possible to identify them except when in hand.

12. (217) *Crex crex*—Corn Crake.—Capt. Scott gave me the greater portion of the skin of one of these birds, that had been shot by a boy about Nov. 1, 1888, while shooting quail. It was secured on a low marshy meadow about three miles west of the point, near the Conkling farm house. This is the third specimen of this species that I have in my collection from Long Island. For previous records see *The Auk*, Vol. III., p. 435, and Vol. V., p. 177. In the *Ornithologist and Oologist*, Vol. XIII., p. 46, a specimen is recorded from Connecticut. The number of records of this species from the middle Eastern Atlantic coast would seem to indicate that *Crex* would soon have to be removed from the list of stragglers and placed among the rare class.

13. (273) *Egialitis vocifera*—Killdeer.—An individual of this species of plover was twice seen Feb. 17 on a plowed field, between the village of Amagansett and the beach. It is improbable that it had migrated from the south so early in the season, and we must therefore conclude that it had remained on the island during the winter, it more than likely being one of those that came in the great flight of killdeers that occurred in the latter part of November, 1888, as recorded by Dr. Arthur P. Chadbourne in *The Auk*, Vol. VI., p. 255. My correspondents from the eastern end of Long Island reported them in great numbers at that time, and also that the bulk of them remained but very few days.

14. Hawks (Sp?).—But two hawks were seen during the trip, both on Montauk, and both too far off to identify. One was very large. We supposed it to be either an American rough-legged hawk or a goshawk, probably the former. The other one was undoubtedly a sharp-shinned hawk.

15. (373) *Megascops asio*—Screech Owl.—None were seen, but one individual was heard during the night of the 10th uttering its doleful cry from the boughs of an apple tree close by the hotel at Amagansett.

16. (412) *Colaptes auratus*—Flicker.—A pair of these woodpeckers were seen in a dense thicket of scrub oaks at the top of the beach just west of the Amagansett Life-Saving Station. The crew informed us that a few individuals of this species remained there every winter. Another one was seen on the 20th inst. in a close, warm cover on the borders of Reed Pond, at Montauk.

17. (474) *Otocoris alpestris*—Horned Lark.—While passing over the Shinnecock Hills, from the car window we saw a large flock of these birds flush from a sandy knoll; another large body of them were seen the same day (16th) on Amagansett beach. During the hard rain storm of the 18th and 19th inst. none were seen, although we tramped on both days over the same locality where we saw so many on the 16th inst. A large number of them were seen feeding in the roadway on Napeague Beach, much after the manner of the English sparrow in the streets of this city. The fondness that this species has for feeding in the highways I have noticed in other localities. At Montauk the horned larks were abundant, frequenting the gravelly hills and edges of the beach, especially in places covered with a sparse growth of grass. They were rarely if ever seen on the bare sand flats, which localities were left for the snowflakes, although these latter were often found with the horned larks in their favorite spots. No *pratensis* were found, all being true *alpestris*.

18. (477) *Cyanocitta cristata*—Bluejay.—In the fringe of scrub oaks on the Amagansett Beach a number of these birds were seen and others were heard while we remained there. The members of the Life Saving crew told us that the jays remained there all winter, feeding on the acorns, which were plenty.

19. (488) *Corvus americanus*—American Crow.—During the whole trip, from Long Island City to Amagansett, crows were seen at intervals, but not in large numbers. On the 19th, early in the morning, a very large body of them were seen flying from an extensive tract of woods northeast from Amagansett village. It was evidently a roosting place, from which they were just starting out on their daily foraging expedition. When we were at Montauk we did not see a crow and we were informed by Capt. Scott that they were never very plenty there. None were seen again until we were near Amagansett on our return.

20. (501) *Sturnella magna*—Meadowlark.—These were seen singly and in flocks at various places as we journeyed toward Amagansett. At this place on the morning of the 17th they were heard singing, notwithstanding the stormy weather and the total absence of anything that indicated that the spring had come. During our whole trip these birds were seen in varying numbers, but at all times could be considered common. The character of the country at the eastern end of the island is especially adapted to the wants of the meadowlark. I am inclined to think that they have a local migration every fall from the higher portions of the island, where they largely spend the summer and breed, to the beaches and meadows adjoining, where they spend the colder months of the year. During this time they become largely gregarious in their habits, sometimes being seen in very large flocks.

21. (534) *Plectrophenax nivalis*—Snowflake.—None of these birds were seen until we reached Amagansett Beach, when we found one flock among the sand dunes quietly feeding, notwithstanding a hard northeasterly storm. Their tracks in the sand could be followed from place to place where they had run among the dunes and hollows. At Montauk they were very common indeed, flocks containing several hundred being seen, especially where large tracts of bare white sand occurred. It was almost impossible to locate them when the sun was shining brightly. A sudden swirl of birds jumping up before you in a scat-

tered flock would be the first notice of their presence. They usually flew but a short distance, when they would settle and commence to run about, so it was almost impossible to get more than a pair at one shot.

22. (541) *Ammodramus princeps*—Ipswich Sparrow.—When we reached the true abode of this species of sparrow, we found them as expected. This was first at Amagansett Beach, where some were secured on the inside of the beach hills, and the low grassy swales adjoining them. They were also seen in similar places at Montauk. The secretive habits of these birds are such that they are never seen unless special search is made for them. Even then they will be overlooked unless the collector is well acquainted with their habits and the particular surroundings they favor.

23. (559) *Spizella monticola*—Tree Sparrow.—This sparrow, which we might naturally expect to be common, was not found except on three occasions, and then only in very small numbers. A great many thickets and other localities where they are usually found during the winter months were examined, but for some reason they were absent. During the whole trip not more than a score were observed.

24. (581) *Melospiza fasciata*—Song Sparrow.—A small number of these sparrows were seen on the 17th inst. in a thicket near the Amagansett Life Saving Station, where some of them were cheerily singing while perched upon the topmost twigs of low bushes. This habit of the song sparrows of introducing their spring song while winter yet lingers with us, goes far toward making them the great favorites they are with all who love nature in its many varying moods.

25. (621) *Lanius borealis*—Northern Shrike.—Shrikes were seen almost every day during our trip, and could fairly be considered common.

26. (728) *Sitta canadensis*—Red-breasted Nuthatch.—In the large tract of pines at the west end of Napeague Beach we secured a few specimens while driving through it on our way east on the 19th inst. It is probable that if the whole area had been examined they would have been found in considerable numbers.

27. (735) *Parus atricapillus*—Chickadee.—Associated with the preceding, but in much greater numbers, chickadees were found. They were also seen earlier on the same day in a tract of second growth of deciduous trees.

WILLIAM DUTCHER.

NEW YORK CITY.

A WHITE BLUEBIRD.—Elsah, Ill.—Among the bluebirds that returned to this locality in the spring of '88, was a curiosity. It was an albino, a milk-white specimen, and from the distance at which it allowed itself to be inspected, not a feather of a darker shade could be seen. Paradoxical as it may seem, it was a white bluebird, and yet it was not a bluebird, because it was a whitebird. Its song and habits were identical with others of the same species. On three different occasions we were within a few yards of it, but were unable to determine its sex, or whether it paired with any other bird of its kind during the breeding season. It was often seen during the summer of that year and during the months of October and November was in its favorite haunts nearly every week, and sometimes every day, but nearly always in company with bluebirds. It seemed enamored of the sunny slopes and deep, cool, wooded ravines along the bluffs of the Mississippi River at that point. Late in the fall, when the frosty nights proclaimed the summer ended, it would flit about its favorite trees, dashing in and out of the yellow sunshine with its feathered friends that were getting together to seek winter quarters, and we wished it a safe and speedy journey to its balmy Southern home, little expecting to ever see it again. But it returned the following spring, spent the second summer with us and remained until December, when with others of its kind it was evidently preparing for its annual migration to warmer climes. We trust it has not fallen by the gun of the pot-hunter or the taxidermist, and we often ask ourselves, "Will it come again?"—CAMERON.

NATIONAL ZOOLOGICAL PARK APPROPRIATION.—The House of Representatives has just passed by a vote of 117 to 66, the bill appropriating \$92,000 for the organization, improvement and maintenance of the Zoological Park. An amendment was adopted requiring the District of Columbia to pay half the amount appropriated, but otherwise the bill was passed precisely as introduced in the Senate. The Senate will no doubt concur in the House amendment, and within a few days more the bill may become a law. The Park is placed under the direction of the Regents of the Smithsonian Institution, and all the living animals now in the custody of the Institution are to be turned over to the Park at once, and as rapidly as possible transferred to the Park grounds. The passage of the bill may well be regarded as a victory for popular science, and we are informed that the attitude of a large majority of the members of both houses of Congress toward this particular measure has been highly complimentary to the cause at stake. The National Zoological Park is thus given a fair start in the world, and much may be expected of it. The triumphant passage of this appropriation bill so early in the session is a high compliment to the Park, and is due to the merits of the cause, combined with great energy and good management on the part of Professor S. P. Langley, the Secretary of the Smithsonian, and Mr. W. T. Hornaday, the Superintendent of the Park.

NOTES OF SPRING.—Snow, ice and frost about gone, but there is plenty of mud and wind. Snipe should be on. Bluebirds and robins have been here for two weeks. Some ducks and geese, but these do not stay long as they are pounded at all the time, night and day.—W. A. C. (Saratoga Springs, N. Y., March 28.)

NORTHWOOD, N. Y., March 27.—*Editor Forest and Stream:* Robins, crows, hawks and ducks have arrived here. Roads are very muddy. Fairly good sugar weather. Some snow on the ground, but not enough for sleighing. Woodpeckers have been here for a week or more.—WOODHUCK.

NORTHERN NEW YORK.—March 31.—While riding yesterday I saw a meadowlark (*Sturnella magna*), and today a friend mentioned having seen one this A. M. in an entirely different part of the village, so I take it there must be more than one here. I believe this to be a rather early appearance of this bird in this section. Robins are quite common.—OSCEOLA.

Game Bag and Gun.

"FOREST AND STREAM" GUN TESTS.

THE following guns have been tested at the FOREST AND STREAM Range, and reported upon in the issues named. Copies of any date will be sent on receipt of price, ten cents:

COLT 12, July 25.	PARKER 12, hammerless, June 6.
COLT 10 and 12, Oct. 24.	REMINGTON 16, May 30.
FOLSON 10 and 12, Sept. 26.	REMINGTON 12, Dec. 5, Feb. 6.
FRANCOTTE 12, Dec. 12.	REMINGTON 10, Dec. 26.
GREENER 12, Aug. 1.	SCOTT 10, Sept. 5.
GREENER 10, Sept. 12, Sept. 19.	L. C. SMITH 12, Oct. 10.
HOLLIS 10, Nov. 7.	WHITNEY SAFETY 12, March 6.
LEFEVER 12, March 13.	WINCHESTER 10 and 12, Oct. 3.
PARKER 10, hammer, June 6.	

THE PARK BILL HEARING.

ON Monday last a meeting of the House Public Lands Committee was held to consider the bill for the protection of the Yellowstone Park. Of the Committee Mr. Payson, of Illinois, was not present. Among the friends of the Park present were Gen. B. H. Bristow, Hon. Theodore Roosevelt, Mr. Arnold Hague, of the Geological Survey, Mr. W. Hallett Phillips, Captain F. A. Bontelle, Superintendent of the National Park, and others. After some informal talk the hearing was opened by a strong speech by Gen. Bristow, in favor of the bill. He urged the importance of having a law for the Park and a commissioner to carry out this law, and under the circumstances favored making the Yellowstone River the boundary on the north side of the Park. Mr. Carey, delegate from Wyoming, followed and made a telling speech on the same side, enforcing very cogently many of the reasons why this bill should at once be passed.

Mr. Carter of Montana made a set speech in favor of a railway from Cooke City to Cinnabar, and urged the importance of giving the miners of that camp an outlet for their ore. His remarks indicated that he and those whom he represented would be satisfied with a railway line outside of the Park. Mr. Hague, who was called on, defined the present boundaries of the Park, explained the proposed cut off to which the friends of the Park have consented rather than see this bill fail, and was emphatic in protesting against any right of way for a railroad through the Park. Captain Bontelle made a few remarks, and after some further discussion the whole matter was laid over until the meeting of April 9.

SHALL THE BOY HAVE A GUN?

Editor Forest and Stream:

Parents would discharge a great duty they owe their boys who are desirous of using or who have commenced to use the gun, if they would place in the hands of those boys the FOREST AND STREAM. Boys will have amusements; they, like men, will have a hobby; they naturally take to field sports or the range. They ordinarily prefer amusements of a robust character. Their disposition for such sports ought to be cultivated. Such a hobby will attract them from vicious pastimes; such sports will develop their physical and mental powers. To deprive them of vigorous amusement is to dwarf their energies, to make them simply "hewers of wood and drawers of water"—underlings.

Such papers are interesting to boys; they will read, pore over, study them when they will study nothing else. Through such a medium they will learn the experience of men accustomed to the use of the firearm; learn the proper method of handling it in the field and elsewhere; learn sportsmen's maxims, such as, "never allow your gun, loaded or unloaded, to look at yourself, nor at any other person, nor allow another person's gun to look at you," and other kindred maxims of the sportsman and of those accustomed to the use of that arm. Such reading will make a strong, a lasting impression on the mind. The boys will believe what they read; they will become educated before they take to the field.

A very great majority of gunshot accidents happen to boys, and to those who are ignorant of the proper use of the arm. They are accidents arising from carelessness. One great act of carelessness, I may say the greatest act, is taking the gun by the muzzle. I would no sooner expect to see a boy who has been accustomed to read a sporting paper take his gun by the muzzle, than I would to see a boy who has been well educated in the etiquette of the table take his fork by the tines and feed himself with the handle.

Such study a boy will carry into practice; the proper method of handling his gun will become second nature; he will learn from it that the true sportsman, the sportsman of experience, will never bring his gun into camp with a cartridge in the barrel, nor allow his companions to do so; never get into a wagon with his gun loaded; will never fire at an object supposing it to be game; will fire only when he knows to a certainty it is game; will take no chances of the object being a companion or a stranger. Such and kindred rules will burn into his memory; they will be in his mind's eye; whenever his gun is in his hands he will be forewarned. If a boy wants a gun, get it for him, but be sure you furnish him the paper. Do not delay. You may delay getting the gun, but he will have it sooner or later—have it, may be, when not educated in its proper use—and then, possibly, when too late, the parent may regret not having helped to educate his child. Early impressions, early habits, are the most enduring, the most effective.

Abstract study, as a rule, is not liked by boys. Object lessons are the most effective methods of teaching them. The great elements of success in life are attention, observation, will and energy. In the field the mind of the boy is intensely concentrated, his energy untiring, his determination unyielding, his whole soul is absorbed in his work. By field sports the germ of these elements commence a healthy growth, and mature in a successful business man.

H. L.

SPRING FLIGHT AT ST. LOUIS.—St. Louis, Mo., March 28.—The weather has been quite mild in these parts for the past ten days, and a few snipe have made their appearance to the delight of the sportsmen. Bluewings are still due, but if the present weather continues they will certainly be here in a few days. Large ducks, such as mallards, pintails, blackjack, etc., have about left us for this season, and very few have been bagged since the fore part of the present month.—UNSER FRITZ.

CARIBOU HUNTING.

LIVERMORE FALLS, Me., Jan. 6, 1890.—In response to many earnest requests of neighboring sportsmen who read my letter to the FOREST AND STREAM which appeared June 17, 1889, giving a description of the new camps in Caribou Valley, where several new camps have since been built, I again report through your columns the prospects and results of the new camps recently built there. As a general reply I submit the following, together with a letter received from Mr. A. S. Thompson, who took part in the caribou hunt of which he gives a good account. As all of the readers know, there are but few who have been fortunate enough to get a shot and carry home with them a specimen of our large game such as moose, deer and caribou, all of which are so rapidly increasing throughout this section of the State.

This winter the open season has in most sections been quite unfavorable for still-hunting, as our first snows were followed by rain, the crust making it a little noisy for the near approach to game, especially so for our favorite, the caribou. I have for several years taken much interest in this noble game, and I attribute their rapid increase over that of moose and deer to the fact that they do not yard in winter, for however deep the snow may be, their spreading feet enable them to roam at will. And they seldom fall a prey to poachers as do moose and deer after the deep snow has crusted over in March.

With these brief remarks I submit to you the letter received from Mr. Thompson.
W. H. ALLEN.

MAPLEWOOD FARM, Jay, Me., Dec. 20, 1889.—Mr. Wm. H. Allen, Livermore Falls: Dear Sir—The following is a description of our caribou hunt, of which I promised you a full report. A full record of game taken at Caribou Valley and Blue Range Camp will be given the FOREST AND STREAM at the close of the season. On Dec. 3 I invited Messrs. E. E. Goding, of the M. C. R. R., S. E. Perkins, merchant, and J. M. Riggs, all of Livermore Falls. I preceded the party two days to see that the camps were in condition for the reception of my guests, and locate some of the large herd of game as a pleasant surprise. For while they were all good shots with wing and small game, they confessed themselves tenderfeet as to large game, as was clearly shown by their surprise and wonder when they saw the snow tramped down by such herds of forest cattle. Wednesday morning at 9 o'clock John Shepard, the guide, and myself came out to meet our guests, who would arrive from Phillips, a distance of nine miles, by team. After the usual detail of unloading and packing camp necessities, snowshoes, blankets, etc., we took the trail to camp, which we soon reached. In the afternoon we put on our snowshoes and took a stroll, soon coming upon tracks of herds, varying from five to twenty, but as the recent snow (about 10 in.) was crusted by rain, it was useless to follow. We returned to camp, content to wait until some friendly cloud might give us a few inches of snow to muffle our tread and cover up previous tracks. Thursday opened fine but cold, and again we strolled into the forest, Shepard, the guide, taking most of the party under his direction. Fresh tracks had crossed ours, made the previous night, and our guests were so eager to sight the game that they were soon on the trail. At 10:30 I struck the trail of a large herd of caribou, and was not aware until 12:30, when I stopped at a spring of water to eat my lunch, that I was alone. This spring was evidently the general watering place of that section of the range, as most of the water was then frozen. The snow for acres around it was completely trodden down with paths coming in and leading out. So recent had they been there that the water was yet roily.

I soon found the path taken by the herd. Taking off my snowshoes I proceeded cautiously along the trail, following the winding path among the mountains. The sun was obscured and flakes of snow soon came whirling among the heavy black growth. At about 2 P. M. I came suddenly upon a straggler in the rear of the herd, which was evidently halting to feed. It was an easy shot, but as there were eight or ten in the band, and knowing that my shot would cause a general stampede, I lowered my rifle, turned my back to the game, and started for the camp. Strange to say, I had not until then realized that I was alone in the mountains, in a dense snowstorm, without axe or compass, but as I had only to follow the path in its windings back to the spring, I was so far right. Again, putting on my snowshoes, I took my course, and at 4:20 reached the camp to find the boys all in, and as glad to see me as I was to arrive. They had also followed their herd by a circuitous route to my spring, and finding I had preceded them, and observing the storm coming on, had at once returned to camp expecting to find me there. A joyous party did justice to our camp supper that night, while mirth and song was in order, and not until a late hour were we rolled in our blankets on soft bough beds, to dream of the joys of the morrow.

Friday at 6 A. M. all were ready for breakfast. Dippers of smoking coffee hot and viands rare showed that the cook had something of the "Old Spartan" in his nature, inasmuch as he had prepared us a feast before going to battle. A joyous party filed out of camp to see the sun's first rays stream through the snow-clad forest. Four inches of snow had fallen. A morning made to order could not have been better, knowing as we did that the game I had left the night before could not go far in the storm. The programme was quickly arranged and we were soon on the march, and by a short route reached the spot, not far from which, to our excited joy, we found eight profiles in the snow, telling us the number of the caribou.

With muffled tread and longing eyes we crept along. Within thirty minutes we came in sight of three caribou quietly feeding along among some fallen spruces. The storm had rendered an easy and near approach possible. At a signal the still mountain woods echoed with the reports of our rifles, and those three forest beauties were soon stretched on the snow. Not until then did the

shouts of the party "make the wild woods ring." We left them where they fell, and arrived at the camp at 12:30.

Next morning (Saturday) we brought them all to camp, and with team from there to Phillips. A pleasant Sunday was spent at the hospitable farmhouse of our guide, where congratulating friends gave us a cordial greeting. Monday we took the 9:30 train from Phillips for home, bringing our trophies with us. The motto of our camps is "Welcome to all sportsmen," and "The latch string is always out." As Jan. 1 closes the game season, the small lakes and mountain streams, which are full of trout, will be the spring and summer attraction. This month (December) there have been six caribou taken from our camps.
A. S. THOMPSON.

THE OLYMPIC RANGE.

Editor Forest and Stream:

Is there any place to-day in the United States but what you can find at least one man who can tell you all about it? Perhaps not, but to all appearances the Olympic range in the extreme western part of the new State of Washington is one.

I have lived within sight of these mountains for nearly two years, and never, in spite of frequent questioning, have I found any one who had the faintest idea of their

Male Woodland Caribou.

characteristics. I dare say that if this assertion were to appear in your widely-read columns there would be several who would smile condescendingly at my ignorance, as they recalled that trip throughout their length and breadth in the year so and so. Be this as it may, I have many a time looked out over Puget Sound and miles of pathless forest at these mountains. When sharply defined against the bright red of the setting sun they make, I think, the most beautiful picture of scenic wonder that I have ever seen. In looking at them I have imagined what there was in that unknown region; what gold and silver lodes, what coal and iron, what fertile valleys, only awaiting discovery to make the adventurous pioneer rich beyond the most extravagant hopes, and last, but not least, what grand shooting. Undoubtedly one could find the latter if not the former. No doubt elk, deer and bear are numerous in these mountains, for they are fairly plentiful in the country immediately surrounding the Sound, which has been settled more or less for twenty-five years.

Let no one though think that they are going to win the glory of a Stanley easily. Savage human foes he need not, I think, fear, although there are rumors that the native Indians of these parts are disposed to resent intrusion, and twenty-five years ago the Sound tribes killed a third of the settlers in this country; still the chances are the inhabitants there (if any) would be peaceable. But any one who has traveled through the virgin forest with no trail, has only to imagine trees running as large as 24 or even 30 ft. in circumference lying in all directions on the ground, interspersed with the thickest kind of underbrush, often thorny, and he will have some idea of the reason why the Olympic range is but little known. As far as one can judge with a powerful glass, the traveling would be easier when one got well up in the foothills, and when half way up the mountains, which are from four to eight thousand feet high, the timber seems to die out entirely, and apparently an abomination of desolation succeeds. It is to be presumed the fauna of these mountains is similar to that of the California coast range, in which, if I am not much mistaken, the grizzly bear is not found, only the black, and I am told the brown bear, but whether the latter is only the same as the black at a different stage of coat I do not know. The elk, as I mentioned before, is undoubtedly plentiful, also the common deer, black bear, mountain lion or cougar, wildcat, otter, and among smaller fry rabbits, grouse, partridge, California quail.

Now who is going to be the adventurous man to enlighten us on all these subjects. Any one attempting it could start from Seattle to Hood's Canal, which is a narrow arm of the Sound, running back near the foothills of the mountains. This he could do in a stern-wheel steamer which makes three trips a week up that channel. On arriving at what seems to be the best place to start from, he could perhaps find a trail to some homestead claim near the water which would take a mile or so from the severe journey entered on. If he struck one of the fertile valleys common to this country, the going might be

passable for quite a time, but these valleys have an annoying way of ending up with an impassable cliff. Any one starting on this journey should have experience in mountain travel and be prepared to rough it in every way. Very little baggage could be taken, as going very light indeed a mile an hour would be very fast traveling through the woods. One thing favorable is that in summer rain is very rare in this country, yet the heat is not great and there is plenty of water throughout.

There would be no trouble in keeping the larder well supplied. In the summer of course game is out of season, but the woods are full of streams, which in turn are full of trout, and if the fall was chosen, during which generally the weather is grand, an almost unlimited variety of birds and beasts could be shot for the table. The expenses would not be necessarily heavy, as no one knows the region, a guide could not be had even if desired, but no one who has not an instinct for the woods should ever undertake the job of exploring the Olympic range.
CHARLES POWER.

BUTCHERY IN WYOMING.

Editor Forest and Stream:

Several articles have appeared in FOREST AND STREAM this winter in reference to the game laws of Wyoming. I would like to add my mite to this subject. Late this fall, in company with Ira Dodge and John Kirby, I came from Montana through Targee Pass into Idaho. From there we went through the Teton Basin, over the mountains to Jackson's Hole.

We camped near Jenny's Lake. One day while we were returning from a ride to Jackson's Lake we found the carcasses of six elk in a space of a few rods square, while from the actions of the eagles, ravens and "meat birds" which we saw rise up in the vicinity, we made up our minds there were many more carcasses near at hand. The sight of these six large fellows lying there was enough. I did not care to investigate any further. Now, the hides only had been taken from these elk. Not an ounce of flesh had been removed, except what the birds and the beasts had taken. As far as I can ascertain this is only one of many instances of a similar character. In fact we saw many more elk in that region that had been killed for their hides only.

A person traveling along the Oregon Short Line to the Union Pacific can see bale after bale of elk, deer and antelope hides at the little way stations along the line.

Now as I understand the law, a non-resident is forbidden to hunt in Wyoming, or to ship any game or trophies from there. Why, then, is there not something done to stop this practice of skin hunting in the Territory? As long as it is permitted to country merchants and Indian traders to ship these hides from the Territory, just so long will individuals be found who will kill the game for their hides. The destruction of game by these people is enough to make any one who is interested in these matters sick at heart. A person who has hunted elk where they are abundant knows how easy a matter it would be after getting a stand on a large band, to kill ten, fifteen or

more. Some may say that this is an impossibility, but I know of over thirty being killed out of one band. A couple of hide hunters who know the first elements of hunting, and can shoot a little bit, will kill more game in one hunt than a dozen sportsmen would kill in two dozen years.

I for one would like to see a few statistics from the railroad companies as to the number of bales of hides annually shipped from Wyoming, to say nothing of hides obtained in Wyoming and shipped from Idaho.

At the rate the elk have been killed off in Wyoming for the past few years by skin hunters, five years more will see the last of these magnificent animals outside the National Park. The better policy would be to look after the hide hunters, stop the shipment of hides from the Territory, and let resident sportsmen or non-resident sportsmen kill what they want for camp use.

One party of sportsmen outfitting in Wyoming will leave more money in the Territory for guides, horses, provisions, and so on, than all the hide hunters in that country.

Then again, the Eastern sportsmen are not game butchers, and many of them could not kill much game even were they so disposed.

The moral I would draw is this: Stop the shipment of hides from Wyoming and save the elk, the antelope and the deer. This and nothing else will preserve the game.
WATERTOWN, N. Y., March 28. HARRY N. CANDEE.

COURAGE OF A GROUSE.—Editor Forest and Stream: On one occasion, in company with my brother, I had gone to the woods and was there to wait for a farmer, at whose house we had stopped over night, and who was to come on later with foxhounds, for we were to try for reynard that day. We had got out of the road which ran through the forest, and over a rail fence, and were standing under a large hemlock when we heard a ruffed grouse in the distance. He came directly toward us, and alighted on the ground about 40 ft. away. There was a small gully or water course between us and the bird. Before he struck the ground he had taken about two-thirds of a circle to break his lightning-like flight. As soon as he lit he straightened up and took a survey. He soon saw us, but instead of again flying he swelled up in a most pompous manner. Never had I seen a grouse appear larger or more magnificent. My brother looked at me and I suggested that he snap a cap at him. Neither of our muzzleloaders were charged. At the sound of the first cap the grouse slightly shook himself, but seemed to swell his breast out more. My brother continued taking caps from his pocket and snapping them at the grouse, bringing his gun up each time and taking deliberate aim until nine were exploded. The grouse seemed to like the sound and to be fascinated by it, and the scene generally. The man coming down the road with the dogs alarmed him, and turning he ran several feet and took wing, and we heard him going through the thick evergreens away in the distance.—DORF (Schenectady, N. Y.).

FROM A LUMBER CAMP.

Editor Forest and Stream:

Up to March 1 the winter here was exceptionally mild for this part of the world. Since then it has made up for lost time, and to-day the snow is 3ft. deep, weather cold and blustering. All lumbermen have broken camp on account of the deep snow, and although the sleighing is good in the main roads it is impossible to skid logs in this deep snow to advantage. Quite a number of deer have wintered near our camp, and I have seen from three to eight every few days since the first of January. They are quite tame now and begin to look thin. I have heard of two or three being shot for wolf bait, but have not heard of a wolf being caught this winter, although there are quite a number about. We see their tracks and hear them howl, but they are too cute to trap or take poisoned meat. I have captured this winter one bald eagle, one golden eagle alive, in a common mink trap. I sent them to a friend in Grand Rapids, Mich. I have also taken one wildcat, seven mink, two ravens and eight rabbits. I am having two bear traps made, and expect to get a bear as soon as the snow goes off. I got one last spring by watching for him three nights in succession. I hunt and trap just for amusement and to break the monotony of camp life, and have enough of the sportsman spirit in me as not to desire to exterminate all the game in season and out of season.

I see Mr. Loring speaks of fire or night shooting here. I have been here four years, and know something of it. I have tried it just for the novelty, but it is not practiced now as much as usual, and there is not one deer killed now where there were ten killed four years ago. The first fall I came here, September 1885, there were over 500 deer shipped from this one station. I saw 67 carcasses in one car, shipped by one hunting party. Last fall there were less than 50 deer shipped from here. The deer have been thinned out, and the Michigan game laws have something to do with it. One man here showed me a .44 Winchester rifle, with which he claims to have a record of 630 deer killed within the past eight years. He has taken his R. R. velocipede, run down the road three miles and return, and killed seven deer with headlight, and got in before 12 o'clock at night.

Ten or twelve years ago this was a wonderful place for deer, brook trout and game of all kinds. Three years ago I saw three men catch with hook and line 170 brook trout in three-quarters of a day in a stream that had not been fished much; but the saw logs, blasting ice with dynamite, building dams, etc., have destroyed those fishing grounds. B. B.

METROPOLITAN, Mich. March 28.

DUCKING TRIP IN MINNESOTA.

IT was a damp October morning when we left Detroit City, Minn., for a seventy-mile drive to Rice Lake, in Beltrami county. Reports had reached us that ducks were numerous there, especially mallards, hence our trip. There were four of us and we had a boat, tent and camping outfit, including provisions and ourselves, all packed on a platform spring express wagon. We reached Richwood, on the Buffalo River, in time for dinner, and at 3 o'clock in the afternoon arrived at White Earth Indian Agency. The Professor here discovered that he had no handkerchief, so we halted while he procured a flaming red one of vast size.

Just opposite the agency buildings a group of about twenty-five squaws were seated on the ground and new arrivals were frequent—evidently a squaw party was in progress—not a buck was in sight. The squaws were very picturesque, their bright blankets and dresses being brought out in full relief against the brown grass.

About three miles beyond the agency we left the main road and took to the "tote road" to Red Lake, a road that was bad at the start and continually grew worse. As we entered the timber the roughness of the way increased. Hills were sharp and of frequent occurrence, strewn with boulders and now and then a mud hole of unknown depth. I found all my skill as a driver taxed to prevent a smash-up or a tip-over of our heavily loaded wagon. On and on, every mile seemed five, darkness soon began to settle down and we resolved to camp for the night, although we were four or five miles from the place we intended making; the roughness of the road deterred us from attempting it in the dark. Stephens and I pitched the tents for ourselves and horses, while Professor and Bowling went to a small lake that was in sight, for some water. There an adventure befell Bowling, which came near being very serious. The lake was a sink hole of black, treacherous mud; B. slipped from a piece of wood on which he was standing, and all that prevented him from disappearing forever in the slimy depths, was his throwing one hand out as he fell and chancing to catch hold of a small tamarac pole that was lying in the mud. The Professor by great effort extricated him, and brought him to camp to be stripped and reclad. It may be remarked that Bowling, with a genius that commanded our admiration, fell into some pond, lake or river every day while we were gone.

With the morning light we went on our way over a road that for badness cannot be described. But we had ample compensation in the superb scenery along the route, now going through a fine hard wood timber, now winding around some beautiful lake, then driving for a long distance along a hog back, through magnificent pine woods, one of nature's grand boulevards. Occasionally we passed an Indian's house; sometimes it was a tepee covered with birch bark and sometimes a log house, in which case there was always a large tepee in the yard, and by tepee and house alike there were birch bark canoes and fish strung on poles hung up to dry. At 11 o'clock A. M. we passed between Twin Lakes, and shortly after arrived at Tyler Warren's, one mile from whose place is Sunken Lake, where last summer a party of five from Detroit caught over 600 black bass—small-mouthed—in a day and a half's fishing. We bought some potatoes off Warren, and went on until 1 o'clock P. M., when we left the tote road and took a slight trail that led us through the pines for three miles and brought us to the banks of Rice River, at the dam which the Indians had built to raise the water so that they could float their logs down to the sawmill a few miles below. The lake was a short distance up the river, but we set up our camp at the dam, and here put in a few pleasant days of camp life.

These days were varied and made interesting by Bowling's getting dumped from a canoe with a regularity that was surprising, until at length he refused to go on the

water any more in any kind of craft; by the wonderful shots made, and the ducks brought down from great distances that could never be found. I might relate in detail how Stephens and I swam the team across the river, and went miles through the woods and across marshes to find a hay meadow of which we had heard to get some hay for the horses, of the hay bridge we built, and the facility with which we alighted from an overturning load of hay; of the two hunters going north after deer, who camped near us a day and night and told wonderful yarns; of the old Indian and his family, children and grandchildren, who set up their tepee near us; of the beautiful birch-bark canoe they had; of the dinner Stephens and I took with the two Indians on the south shore of Rice Lake; of the fact that we did not get but one solitary mallard but found lots of black duck—butterballs; of the great flock of these that Stephens and I came upon as we were coming to camp late one afternoon, and the shooting we had for a few minutes; all of these and much more I might tell of if I had time. They are pleasant memories these long winter months.

All too soon came the breaking up of our camp and the return—the stay over night at the Headquarters Hotel at White Earth Agency, where Stephens and I took the office floor for our bed, while Professor and Bowling—like the pampered red-plush fellows that they are—took the only feather bed in the house. But home we came at last, minus mallards or any great quantity of game, but having had a royal good time. MYRON COOLEY.

DETROIT CITY, Minnesota.

THE SUPERVISOR'S DEER.

Editor Forest and Stream:

Two of the members of our board of county supervisors are noted marksmen, both having a record to be proud of. The venerable chairman of the board is also a capital angler, while the charming ex-chairman is particularly noted for his passion for ducks. The latter gentleman is one of the proprietors of the Canvasback, a pretty little pleasure steamer owned by the Sacramento Gun Club, and it requires a serious condition of county roads, wrecked bridges, etc., to keep him at his post when this little boat makes a trip up the river to the lakes rented by the club.

But the sportsman of whom we are particularly proud is our talented county clerk. This gentleman has an almost world-wide reputation as a bear slayer. He has been an extensive traveler both among the Andes and Sierra Nevada, as well as Rocky Mountains, and wherever his footsteps have wandered an almost complete annihilation of the bruin family is said to have followed in his wake.

Some two years since this noted gentleman, in company with our venerable chairman before mentioned, made a tour of the Sierras in quest of deer. Now our clerk, like Capt. Toby, of the "Court Rangers," is perfectly familiar with every mountain, gulch and trail of the entire range, and our hunters were soon snugly domiciled in Uncle Billy Vaughan's cabin, near Eleven Pines, in El Dorado county, in close proximity to one of the finest deer licks west of the Rockies. Not being built exactly on the pedestrian plan, one being decidedly portly, the other not portly enough, and painfully short of breath as well, some means had to be resorted to by which they could obviate the necessity of any great amount of traveling, even if they had to take an unfair advantage of their prey. Therefore, laying aside all conscientious scruples, a large drygoods box was obtained and securely fastened in the branches of a lofty pine tree some 30ft. from the ground, where our brave hunters could perch secure from the eyes of the timid deer, and at the same time obtain a good view of the lick. The following night one of them was to go aloft and watch for game, while the other was to remain in the cabin with the host, in readiness to appear upon the scene at sound of the watcher's gun. The time came for the ascent, and the question arose as to which gentleman should take the elevated position; and our clerk plead his cause with such a degree of simplicity and eloquence that the chairman of course gave way to him. Why not? He had youth, experience, as well as beauty in his favor, while the senior member was on the shady side of fifty, and, as I said before, out of breath. Well, the ascent was soon made, and a rope which had previously been made secure to the clerk's waist was let down, and his gun, ammunition, blankets, etc., were hauled aloft, and the stalwart hunter with his 210lbs. avoirdupois was neatly stowed away inside the box and gently swaying in the soft mountain breeze.

Upon taking his departure, the chairman had cautioned his youthful friend to "keep his eye on the lick and not go to sleep." "Sleep! who could think of sleep in so exalted a position! No indeed! I am here after venison," replied that high-strung individual.

It was a beautiful moonlight night, the lights and shadows waving in the gulch below; the almost awful stillness and the soothing "Rock a-bye baby in the tree-top" movement, was simply enchanting. Our friend was soon lost in the contemplation of nature. The sensation was new and novel, how he wished he was a poet, that he might in one grand poem portray the beauties he now beheld, or an artist, that he might paint them. But alas! of these accomplishments he could not boast! The breeze continued to blow, the cradle to rock and the watcher was soon asleep. His dreams taking a retrospective flight, hastily carried him back to childhood.

Clasped in his mother's loving arms, listening to her low, sweet lullaby, he calmly, sweetly slumbered the sleep of innocence. But earthly joys are fleeting, a sound from the lower regions penetrated his elevated retreat and he started from his dozing posture, almost precipitating his fairy form into the depths below. "Great Scott! What did he behold! An immense buck was quietly licking the salt almost directly underneath his perch, innocent of the proximity of his enemy.

Admiration, vain wishes, childhood dreams, where were they? Gone like all earthly happiness, vanished with a puff of wind, and our watcher is a hunter again.

Bang went the trusty rifle, down came the deer, as well as the deer slayer. In his excitement the descent was made without his usual precaution, yet he landed with safety upon a projecting branch some ten or fifteen feet from the ground. An unfortunate rent in his buckskin nether garments had caught upon the cruel branch and firmly held his fragile form suspended in midair. In vain he struggled for freedom; it was no use, he was there for good. But the inmates of the cabin, having

heard the report of the gun, soon rushed upon the scene. The moment was an exciting one, the wounded deer must be dispatched to prevent his making his escape, for the rescuing party took in the situation at a glance, and had no fears of the other victim getting away, and he was left to pine upon the tree until the venison was secure. Then a ladder was brought from the cabin and the hunter rescued from his perilous position, and—but I'll not attempt to quote him here.

The deer was hastily dissected and taken to the cabin, where a sumptuous banquet was enjoyed by all parties concerned. MARION.

SACRAMENTO, Cal.

THE WINTER IN ILLINOIS.—Elsah.—Ducks and geese have been very scarce this winter in this section of the Mississippi Valley, and but few of our shooters have made a creditable bag. "What has become of the game?" is the question often heard in shooting circles; "it was so plenty twenty-five years ago." Aye, that's the question. The wildfowl are sharing the fate of the buffalo and other game and are being gradually exterminated. They are persecuted unto death. Spring shooting and hunting out of season is getting in its work. We learn there have been a few days of duck shooting in the vicinity of Browning, on the Illinois River. One market-shooter is reported to have killed 117 ducks in one day, shooting over decoys, for the Chicago market. The principal line of annual flight now seems to be far west of the Mississippi, but we can remember when the Missouri and Mississippi rivers, the great arteries of the continent, were literally swarming with wildfowl in their passage to and from their breeding grounds in the far north. Last February a bald eagle was brought to bag in St. Charles county, Mo., on the south branch of the Mississippi. It measured 5ft. 6in. from tip to tip, being the first one killed in this vicinity for twenty years. Club house property and stock is on the down grade in this and other counties along the rivers, that were favorite breeding grounds for ducks and geese a few years ago.—CAMERON.

GAME AND FISH PROTECTION IN CENTRAL N. Y.—On the evening of March 18 a meeting of business men and professors of Cornell University was held at the office of C. C. Vankirk, in Ithaca, at which the Game and Fish Protective Association of Tompkins County was organized. The following officers were elected: Dr. A. H. Fowler, Pres.; C. C. Vankirk, Vice-Pres.; Prof. J. O. Griffin, Sec.; H. L. Haslin, Treas. By-laws were adopted and subscribed by the following-named gentlemen: A. H. Fowler, C. C. Vankirk, Prof. J. O. Griffin, H. L. Haslin, Levi Kenney, Wm. H. Willson, Sam'l Tisdell, Dr. E. J. Morgan, Sr., Prof. Geo. P. Bristol, A. B. Stamp, J. E. VanNatta, Dr. C. M. Sharp, H. H. Angell, C. B. Brown, J. H. McCormick, E. H. Bostwick. The annual fees were fixed at \$1. All sportsmen, farmers and others interested in the propagation and protection of fish and game, resident of Tompkins county, were invited to send their names to the secretary. Committees were appointed to canvass the woods and streams of this county and to report to the association desirable locations for planting fish fry or game birds. The association hopes to interest farmers and owners of woodlands and streams in the objects sought for by this organization, one of the most important of which is the total prohibition of unlawful fishing. The association now has about forty members, and it is hoped to increase it to at least one hundred.

THREE AT A SHOT.—One Sunday morning in November the old man, who always was up at the crack of the day, saw four deer, a buck and three does, feeding side by side not 100yds. from his cabin. In a moment he had his trusty rifle down from its pegs and was sighting across its glossy surface. A moment later and the trigger was pulled. Great was the old man's astonishment to see two of the animals, a buck and a doe, fall on the spot, as well as another doe a few rods away. An examination showed that the bullet had passed through the first one's head, through the spine of the second and had severed the jugular vein of the third. The short distance and the position of the deer combined with the shooting qualities of the gun made such a shot possible. The above can be vouched for by many old residents.—G. J. (Smith's Mills, Pa.).

MADISON COUNTY, N. Y.—The season for birds, which closed here Dec. 31, was the poorest in many years. There were scarcely any flight woodcock last fall, and grouse were very wild and scarce. More birds were killed during December than any other month, and even then four or five was a good bag in one day. Foxes were plenty. Two of Earlville's best nimrods have gathered in twelve. One man has killed about half that number still-hunting them. Rabbits are not plenty, although a few remain in the largest swamps. We have had very little snow here, and the tracking has been poor. I spoke of still-hunting foxes; I would like to hear through the columns of FOREST AND STREAM from any one that knows of its being successfully done. In trap-shooting the county trophy stands a tie between Eaton and Oneida.—G. F. B.

THANK YOU.—*Editor Forest and Stream:* There is in 1890, as I suppose, a larger number than ever before of young fellows who aspire to future distinction as sportsmen—sportsmen that is, in the true sense of the term, as now understood by the foremost people of our land. To such I would say, as an old woodsman, angler and business man, that there is more condensed wisdom in the editorial page of FOREST AND STREAM of March 20 than can be gathered from the reading of many books devoted to the enlightenment of the novice in woodcraft and angling. It is no wonder that your paper is successful.—KELPIE.

BEAVER, Pa., March 30.—Ducks are coming in, some staying a day or so and then going on northwest. Some six were persuaded to remain with us. Several flocks of geese passed over last week; two hundred were counted in one day. A friend while on a tramp last week within a mile of town, put up a fine woodcock.—G. A. S.

CORRECTION.—By an error of the types we were made to say in our last issue that a bill had been passed by the Massachusetts Legislature establishing an open season for grouse, woodcock and quail from Sept. 15 to Dec. 15. This bill has only been reported by the Committee on Fish and Game, not passed by the House.

Sea and River Fishing.

COM. BLACKFORD'S OPENING DAY.

YOU know what a lovely day it was this morning, don't you? Just a thin mantle of snow on the ground and the sun shining on it with the warmth of early spring.

I felt all over as if I must go out, and you may imagine my delight, when in the midst of breakfast, mamma said, "This is the opening day of the fishing season, and I should like to go to Fulton Market and see Commissioner Blackford's show of trout, he always makes a fine display on opening day. What do you say, Alice?"

What did I say? I believe I said, "O, you darling," or something spontaneous like that, but you should rather ask what I did. I just jumped up and flung my arms around her neck, and was going to give her a hearty kiss, when she drew back and said, "Don't, Alice, there's egg on your lips."

Of course that froze all my enthusiasm in that direction, but, all the same, the blood coursed like quicksilver through my veins, and I could hardly sit still on the cars on the way down. We knew Commissioner Blackford, too, and he's such a nice man, and so ready to answer all my questions about fish; and that makes it so much more delightful.

When we got there the place was so crowded that it was hardly possible to get near the stands the fish were laid out on, and everybody was talking at once.

"That," said one, pointing to a large speckled trout, "is the very picture of one I landed at the second dam last September—turned the scales at 3½ lbs. Say," this to the man in attendance, "what does this fish weigh?"

"Four and three-quarter pounds," came the reply.

"Well," said the first speaker, "he doesn't look a bigger fish than mine. Ain't you mistaken?"

"Young man," came a voice from the crowd, "don't you know that a fish you have just landed with a 10oz. rod photographs a bigger picture on your mind's eye than a fish of the same size exposed on a stall in the market?" and immediately the Commissioner stepped forward, and recognizing mamma and me, greeted us cordially, and smiled pleasantly at mamma's congratulations on his beautiful display of fish.

I left him to mamma at first, and looking round I saw a monstrous great tank with thousands of live fish swimming about and gliding past each other like partners in a reel, and they looked such little fish that I couldn't help turning to the Commissioner and exclaiming, "Oh, Mr. Blackford, you have been violating the fishing laws and catching trout under 7in.!"

"Well, they do look small," said the Commissioner, glancing at them a moment, "but appearances are sometimes deceitful. Many a fisherman has caught a basket of fish that looked no bigger than these in the water, but which he has been able to describe later as 'nice little fish, about three or four to the pound.'"

"Yes, I know," replied I, catching the scintillation of a merry twinkle in the corner of the Commissioner's eye, "but it isn't the fish that are deceitful; it's the fishermen."

"I wouldn't like to say that," rejoined the Commissioner. "I don't think a genuine fisherman would ever tell a real lie about his catch, at least not anything more than a white one with a tinge of color, but the fact is there is a great deal of elasticity about fish in respect both to weight and measurement."

People were talking all around us, and the Commissioner, even while he was talking, couldn't help listening to what was said about the fish. For the most part there was nothing but expressions of admiration to fall on the listening ear, but presently some one said: "There is not a fish in all the collection with the bright colors that our brook trout to home in Vermont has got."

The Commissioner paused in his discourse; for one instant his eye scanned the broad array of wild trout, brown trout, salmon trout, rainbow trout, with innumerable hybrids from the hatcheries of Caledonia and Long Island; his form seemed to swell with indignation, the sternness of the glance as he fixed it upon the offender became almost terrible; then turning to his foreman he issued his orders as a wizard might have called up spirits from the vasty deep—"Frank; show the gentleman some Vermont brook trout."

"Young man," continued the Commissioner as he witnessed the chagrin of the Vermonter, "observe more closely in future. The brilliant iridescence of the newly-caught trout is not peculiar to the sparkling brooks that roll merrily about the feet of your green mountains, but is common to the trout everywhere. You may as well look for the love light in a maiden's eye after she has tilted you for another, as look for the brilliant hues of life in a dead fish."

Mamma apologized to the Commissioner for occupying so much of his time, and said she would now select a fish and go. "I should like this," she said, pointing to a beautifully-spotted brown trout, about 7 or 8 lbs. weight. We had it for dinner and it was delicious.

ALICE DE MUREST.

P. S.—Please spell my name correctly this time. Is there really a devil in every printer's office who makes all the mistakes?

FISH PROTECTION IN KENTUCKY.

ONLY a few days since the Circuit Judge at Frankfort, Ky., fined five men \$20 each for violating the fish laws of the State by using dynamite for the purpose of catching fish in Elkhorn Creek. Half a dozen more have been indicted by the Grand Jury and will be fined at the next sitting of the court. The Kentucky Fish and Game Club has done much to stop the illegal killing of fish in streams of this State by offering rewards for any information that will lead to the prosecution of men for a violation of these laws. The money comes from the treasury of the club, and the cases recently brought up at Frankfort are the first cases disposed of in six months. A damper was put on the illegal manner of catching fish last September when a large number were successfully prosecuted by the club.

At a meeting of the club, held March 6, Secretary Berry presented the names of the offenders in a number of cases where the laws were violated. The Grand Jury will investigate the matter at the coming term, and there is hardly a doubt that the violators will be prosecuted and

heavily fined. In Louisville the indignation is very strong against the killing of fish by means of dynamite.

LOUISVILLE, March 7.

ANGLING NOTES.

WE often hear people speak in a joking way of "educated trout," but there is no doubt whatever that fish do become educated very quickly when much fished for. In the beginning of the season, after a long rest and a long fast, they are very easily taken, but it does not require many days of persistent fishing before they seem to be able to discover the difference between real and artificial flies and baits.

An acquaintance of ours built and stocked a small trout pond some years ago, the pond was not over 100ft. in diameter, and he left it undisturbed for two or three seasons. Not being much of a fisherman he invited the writer and a friend to try the trout with the fly. We found the fish so tame and used to being fed that there was no sport in catching them. We used a cast of three flies and every fly took a fish, and if we had used a dozen it would have made no difference, they would rush for them the moment they touched the water and follow the cast until every fly had a trout on. Finally we used one large salmon fly, and they took that just as quick as they did the smaller ones.

A few months afterward we tried that pond again, but a great change had come over the fish. We could no longer stand on the edge of the bank and use salmon flies, but had to stand well back and use very delicate tackle; even then they were suspicious and slow to rise. They had become educated.

As a rule black bass are much more shy than trout, and not so easily fooled with artificial flies. They require a long cast and seldom come to the surface, but take the fly well under water, as old and experienced trout do. Some years ago I had an order to paint a trout pool near Ralston, Pa. It was a wild, romantic spot, far from any dwelling or sight of civilization. In order to get a good view it was necessary to sit on the edge of the stream with one leg of easel in the water. While working here day after day I had every opportunity to watch the actions of the trout; they would run out from under the falls and play in the shallows like a lot of kittens, chasing one another and snapping at each other's tails. If a bit of a twig or leaf fell on the water, one or more of them would dart up to it instantly, and often slap at it with their tails as if disappointed in not finding it good to eat. At lunch time they declined at first all attempts at feeding them, but after a day or two they became quite tame and would swim up to within a few feet for a crumb of bread or cracker.

The ordinary little minnows or killies found in the fresh water ditches can be easily tamed if kept in a glass globe, such as goldfish are confined in, and after a few days will jump clear out of water for a house fly held in one's finger. Care should be taken to keep a bit of netting over the globe, or they will jump out and die.

To look at Newtown Creek now, no one would ever think that it was possible that speckled trout ever could have lived in it; but there are people in this city who in days long past, used to enjoy very excellent trout fishing there. It is only a few years ago that a Brooklyn angler used to visit a little brook at East New York every spring for trout fishing. Now there are none to be caught nearer than Freeport—and very few there.

The famous Castalia Club, near Cleveland, Ohio, opened the season on March 15 in a howling blizzard. Thermometer + 15° and yet quite a number of trout were taken, notwithstanding it snowed so that one could hardly distinguish the flies, and the lines froze as stiff as wire.

One of the noted Saranac Lake guides has just written a letter to an angler in this city, stating that the ice showed signs of breaking and that he expected to be able to telegraph him in a week or so that the lakes were clear.

The Brooklyn Water Works are repairing and fixing up Massapequa Pond. They have let off the water, and the trout are all gathered in a few holes. It seems a pity that the fish should be disturbed until the pond is filled again. Very few permits were given this season, and they say that they are going to be much more strict, and the permits will be very limited and difficult to obtain.

The usual number of New Yorkers visited the various clubs on the island on the first. Mr. Austin Corbin placed a special car at the disposal of his fellow members of the South Side Sportsmen's Club, who were his guests on this occasion. It was filled by a large party of jolly anglers.

The Hudson River seems to be full of fine striped bass; many of these fish running up to 10lbs. in weight have been taken in nets. But we have not heard of any being killed with rod and reel yet.

HERRING AND SALMON.—On the 8th of March an unusually large school of herring was seen off Lewis Cove, in Maine, and a few days later the salmon fishermen at Liverpool, Nova Scotia, were beginning to throw their nets. In May and June the Pacific herring makes its appearance on the coast of southern Alaska in great shoals, for the purpose of spawning, and in its train come the species of salmon, beginning with the quinnat, king or chowichee—the most highly prized by the angler because of its fine flavor and its game qualities. There seems to be very little doubt that the herring determines the sea movements of the salmon to a considerable extent, and we are indebted to this common commercial fish for the approach of the salmon to the coast in advance of its spawning season.

SEINES, NETS of every description. American Net & Twine Co. Mrs., 34 Commercial st. Boston, or 199 Fulton st., N. Y.—Adv.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price \$2.50. For sale by FOREST AND STREAM.

TEXAS FISHING.

THIS coming April a year ago found a party composed of the writer, two other gentlemen, B. and A., with their families, a young lady, and a young gentleman or two, making in all a party of about eighteen, camped on the beach on the beautiful Mission Bay, at the mouth of Mission River, forty miles below Beeville. We had just reached there after being lost about a day, having missed the road, and were all hands busy getting ready our tackle with the expectation of catching enough redfish for dinner, but after working hard for several hours came off with the usual fisherman's luck, which was a great disappointment, as most of us had fished in these waters before and always with grand success. While discussing the situation some boatmen landed from a schooner that was anchored off some distance from shore, and informed us that the water was too fresh from recent heavy rain which caused the rivers to run in more water than usual and to verify their statement we were called upon to drink some of the water, which proved quite fresh and not brackish, as we supposed, so we decided to seek salt water nearer the Gulf of Mexico. The boat's crew, consisting of Bill and Ed., proposed giving us a sail out to deep water, which was accepted at \$5 a day, and accordingly the next morning we were off betimes, skimming the briny on the five-tonner, the Dixie, of Galveston.

The first day out we reached a point of land reaching out from Rockport and camped for the night, having caught a big string of redfish and trout, and having hooked a large tarpon or two. My friend Scott came near landing a big tarpon at the pass from Mission to Saint Mary's bays, where the water is some 15ft. in depth; but for the tangling up of his line in the reel he would have doubtless landed Mr. Silver King in grand style. The evening was spent pleasantly and several large redfish were caught after nightfall; the only disadvantage labored under was that our cooking had to be done on board ship and transferred by canoes to shore, where our camps were, as no wood was found within reach.

Some large schools of mullet were here found, which greatly increased our supply of bait, as this bait is generally used here for redfish and almost all species, though the trout take artificial flies and other trolling baits. If of interest I will tell in a future issue some incidents of the trip further on and how the Dixie weathered a gale.

BEEVILLE, Texas, March 4.

T. J. S.

RANDOM CASTS.

WHEN fishing in the surf always carry a metal squid in your pocket, one of the wide double hooked ones. It will frequently be found unexpectedly useful.

In casting from the reel, either with live bait or sinker, the manipulation of the line with the thumb, as it passes off the reel, is the secret of the long cast. When well understood, all other points that at first appear difficult, are easily overcome.

Few fish exceed the long and deep runs of the cavalli when hooked; his powers of endurance are such that a 10lb. fish on a 10oz. fly-rod will give the angler all the sport he can wish for. From the time of hooking to when he comes to the top exhausted, the best part of an hour will have passed.

A bright day with a smooth sea and you will catch bluefish, but bass lose their timidity and come near the shore when the conditions are the opposite.

A properly made split-bamboo is the acme of rods, one of poor material and workmanship (and the markets are flooded with this trash) is worthless. It is dishonest at all points.

BIG REEL.

THE SALMON OF ALASKA.

FOR eighteen centuries literature has noted the passage from sea to stream of the andromeda salmon. Nobody knows whence it came. No one can tell whither it strays. River and lake, perhaps since Tertiary times, have furnished it a birthplace and a scant subsistence, while generous ocean has given it sea room and ample nourishment, converting it gradually into a thing of beauty, majesty and mystery—the crowning reward of the angler's skill and a prime recompense of the toil of fishery.

No principal division of the earth's surface, within Arctic and temperate limits, except South America, lacks representatives of the salmon family. Even in South America man has attempted to supply what nature has omitted; but we are not yet informed of the result of the experiment. Tasmania and New Zealand have demonstrated the practicability of acclimatizing the river trout and sea trout of England, while France and Germany are congratulating themselves upon the successful introduction into their waters of our rainbow trout and quinnat salmon from California.

In the distribution of the *Salmonidae* Alaska received a generous share. Lying entirely within the area in which the family is indigenous, plentifully supplied with long water courses, rapid snow-fed streams and cool, deep lakes glistening in mountain valleys over beds of clean gravel and boulders intermingled with sheltering water plants, free from obstructions to the movements of the migratory species, its invitation to the salmon to come in and possess the waters and multiply therein was readily accepted.

Ichthyologists at present recognize about 100 species in the family under discussion, divided among the genera of true whitefishes, *nelma* whitefishes, grayling, Pacific and Atlantic salmon, brook trout, the short-lived *ari* of Japan and the *tenok* of Siberian rivers and lakes. All of these genera except the last two occur in our outlying province, and they are represented by 17 known species, or about 1/3 of the entire number.

In Alaskan lakes and rivers there are five kinds of whitefish, one of them being very much like the common species of our Great Lakes and reaching a weight of 30lbs. This is one of the most important food fishes of the Territory. The round whitefish, or shad waiter, of New England and the upper Great Lakes, extends through Northwest Territory and other parts of British Columbia into Alaska. Specimens have been obtained as far north as the Putnam or Kuwuk river, a tributary of Hotham Inlet. This is a small fish, seldom exceeding 2lbs. in weight, but is very abundant and well flavored, and consequently valuable for food. The Lauretta whitefish has

been obtained from the Bristol Bay region to Point Barrow. It is an excellent food species, a little larger than the last, but does not much exceed 3lbs. in weight, and bears a resemblance to our so-called lake herring. The other two whitefishes are less valuable than those already mentioned, but they constitute a large part of the food of the natives and of their dogs.

A large and handsome fish, intermediate between the whitefish and the salmon, is the *inconnu* or Mackenzie River salmon—the *nelma* of the Russians. On account of the strongly projecting lower jaw the species has received the additional name of shovel-jawed whitefish. This is one of the finest fishes of the region and grows very large, attaining to a length of 5ft. and the weight of 50lbs.

The grayling is very abundant in Alaska, especially northward, and is one of the most beautiful fishes outside of tropical waters. Until recently it was reputed to be the only fish in the fresh waters of the Territory that could be caught with hook and line.

The brook trout of California, perhaps better known as the Dolly Varden, is one of the commonest fishes of Alaska, and in the silvery sea-run condition forms a staple article of commerce under the name of salmon trout. The species grows very large, increasing in size northward, so that individuals measuring 30in. are not infrequent. From the skins of this trout natives make waterproof clothing.

and prepared for him entirely by his frivolous wife, he needs merely to touch a match to the tail of a dried ulikon and light himself to bed. In addition to their value directly as food for man these allies of the salmon play a very important part in attracting the larger commercial fishes of the salmon family to certain localities.

The largest and finest of the Alaska salmon is the king, or chowichee, known also as the Takou, Columbia River, Chinook and quinnat. This valuable fish occurs in the large rivers as a rule, but runs into some of the small streams also, notably the Karluk and some of the rivers of Cook's Inlet. The Yukon and the Nushagak are the greatest king salmon rivers in Alaska. The average weight of this salmon is above 20lbs., and individuals weighing upward of 100lbs. are on record. At St. Paul, Kadiak, Mr. B. G. McIntyre weighed one which registered 87½lbs. without its viscera, and the entire fish must have exceeded 100lbs. Capt. Wm. Kohl has recently told me that he once obtained reliable information in Cook's Inlet of a salmon weighing about 140lbs., and individuals of equal size are reported in the Yukon. These large fish are interesting in connection with the solution of the problem whether all king salmon die after spawning, as some competent observers positively assert they do. The flesh of this species is superior in flavor to that of all the rest. In Alaska the bellies are salted but the fish is chiefly used in the fresh state and for canning. Three of these salmon will make a case of 48lbs. This is

breeding season, is the most abundant salmon of Alaska, and doubtless of the world. It has given rise to more tales suspected of being fish stories than any other fish of the Territory. L. M. Turner, in the Norton Sound district, speaking of its advent from the sea, remarked that "they appear at the surface of the water like the pin drops of an April shower." A gentleman who lived at Karluk eight years informed me that about July 6, 1880, and continuing for five weeks there was in Karluk River a glut of humpbacks, which kept all other salmon out of the stream. It was impossible to pull a boat across the river. A haul was made with a 90ft. seine at 6 A. M. and the men were dressing fish from that haul until 6 P. M., caring for 140 barrels or 11,200 fish during twelve hours. After this they were occupied three hours in clearing the seine, in which the remaining salmon were about 4ft. deep. I do not think of any way of intensifying the statement of fact here recorded—for it is a fact repeatedly observed and abundantly verified. When the humpbacks enter a stream in force they simply fill the water from shore to shore and from bottom to top, and the late comer must indeed hump himself to keep the pace set for him by his predecessors. This is the smallest of the Pacific salmon, averaging about 5lbs. in weight and seldom reaching 10lbs., but it makes up in numbers what it lacks in size, and it occurs throughout the Territory and eastward to the Mackenzie River. As a food fish in the sea-run condition it is excellent. It is salted

NORTHERN GRAYLING.

DOLLY VARDEN TROUT.

GAIRDNER'S TROUT—YOUNG.

LAKE TROUT.

RAINBOW TROUT—YOUNG.

RED-THROATED TROUT.

The Mackinaw or Namaycush trout of the Great Lakes and the region to the eastward and northeastward has recently been brought down from the Putnam or Kuwuk River, where it is a finely developed and handsome fish. This is undoubtedly the largest trout of North America and is probably the most widely distributed.

The rainbow trout of California seems to extend northward at least to Sitka, but is not abundant and, consequently, has little importance in Alaska.

The steel-head salmon, or Gairdner's trout, known to Russian speaking people as the *soomgah*, is one of the large species of the Territory and extends northward to the Bristol Bay region. Although as big as the average Atlantic salmon of the east coast, it has not yet acquired much importance commercially. At the great canning stations it is still practically wasted. If it were not further distant than the Columbia River, a limited quantity would find its way to our Eastern market and sell readily under the trade name of Kennebec salmon.

Clark's trout, also styled the red-throat, is abundant in southeast Alaska. Its northern limit is said to be the peninsula of Alaska. This is an excellent food fish and reaches a weight of 20lbs. or more. Its southern representatives are widely distributed and very abundant in the Rocky Mountain region, and are familiar to explorers and tourists, its black spots and crimson dash around the throat making it conspicuous.

Before passing to a review of the Pacific salmon, we must recall the fact that Alaska has a bountiful supply of small fishes which are closely related to the *Salmonidae*. A true smelt and two kinds of surf smelt are among the common fishes, the first being a food fish of considerable value. The capelin abounds on all parts of the coast, and is one of the most important food species of the cod and salmon. The eulachon, or candle fish, is extremely abundant in southern Alaska, and is considered one of the finest pan fishes known. A kind of fat is expressed from it, which the Indians use as a substitute for butter, and some pharmacists in the place of cod liver oil. The species is so full of oil that when dried it will burn with a bright flame, so that when the overworked Indian has finished a bountiful supper of fish, doubtless procured

one of the greatest travelers in the Territory, ascending the Yukon more than 1,500 miles from its mouth. The natives of Karluk watch from the headlands for its arrival in May, and set up a great shout when they have discovered this pioneer of the salmon hosts. Like the other species it can be seen about 1½ miles off shore in great schools, which break up before approaching closer to the land.

The dog salmon (*hyko* of the Russians) is not used by the Americans, but is one of the most important species to the natives. It is found chiefly in the small rivers and creeks, and is usually abundant in all parts of the Territory as far north as Hotham Inlet, and probably Point Barrow. When it arrives from the sea its flesh has a beautiful red color, but it deteriorates rapidly in fresh water. The jaws become enlarged and distorted during the breeding season, and the flesh unpalatable. To the exaggerated size of the teeth at this time is due the name dog salmon. The average size of the species is about 12lbs., but individuals of 20lbs. are not uncommon. Early in July the fish-drying frames on the shores of Cook's Inlet are brilliant with the flesh of the dog salmon. The natives cut off the head, split the fish in halves, which remain attached at the tail, remove the back bone, and gash the sides at short intervals to facilitate the drying process. The fur traders lay in a large stock of this dried salmon, which is known as *ukali*. Many small streams of Alaska never contain any other salmon than dog salmon and humpbacks, and for the very good reason that when these fish begin to run in they occupy the whole of the water, and sometimes a narrow strip of the adjacent land besides.

The silver salmon is not so highly esteemed in northern Alaska as it is in the Puget Sound region; it is used to some extent for canning, but is far less important for this purpose than the red salmon. Its average weight is less than 15lbs., and the maximum about 30. Running late in the fall when the fishing season is nearly closed it is not much sought after by the whites. The natives, however, dry it in large quantities.

The humpback, so-called because of the enormous hump developed on the back of the male during the

in moderate quantities for disposal in San Francisco and other markets. Natives dry it either with or without salting and store up vast numbers for use in winter.

The red salmon or redfish, also known as the blueback, sawquit—the Krasnya Ryba of the Russians—next to the humpback is the most abundant salmon of the Territory. Commercially it is the most important fish, and indeed the most valuable product, of Alaska. The Government has a prospective revenue of \$1,000,000 annually from its seal islands. The people engaged in the salmon fishing last year took about \$3,000,000 worth of fish from Alaskan waters, and they were chiefly the red salmon. This is not a large fish, for it averages only 7 or 8lbs. in weight; individuals weighing 15lbs. are occasionally seen. Like the king salmon it travels the whole length of rivers, pushing on to their sources, but unlike its big relative, it spawns chiefly in lakes. We have traced it with certainty as far north as the Yukon. It is said that the species will not enter a river which does not arise from a lake and abounds only in snow-fed streams.

T. H. BEAN.

[TO BE CONCLUDED NEXT WEEK.]

AMERICAN FISHERIES SOCIETY.—The annual meeting of the American Fisheries Society will be held at Put-In-Bay on May 14 and 15. The executive committee met in Mr. E. G. Blackford's office March 24, and made preliminary arrangements for the meeting. The State of Ohio has given its Fish Commission an appropriation for a steamer which will carry all who attend the meeting from Sandusky to the island, and will be at the service of the Fisheries Society during their stay. Hon. Emory D. Potter, of the Ohio Commission, will present a paper on the Fresh Water Fisheries and Dr. J. A. Henshall has promised an article on the same subject. Other papers will be announced in the printed circulars to be issued in April.

THE BEST FISHING TACKLE IN THE WORLD is to be found at the salesroom of Thos. J. Conroy, 65 Fulton street, N. Y. See advertisement opposite first page of reading matter.—Adv.

SURF FISHING FOR STRIPED BASS

ON THE JERSEY COAST.

DO you ever catch anything worth your while so near shore as that?

How often has that question been put to me when fishing from the beach in the surf. To those who have never tried this mode of fishing it appears to be a settled matter that to catch anything is the merest chance. True, if without previous knowledge you cast your bait just where you happen to come on the beach, the chances are decidedly against success; but knowing something of the habits of the fish you wish to catch, you select your position carefully, and unless the season and all the conditions of weather and water are unfavorable, you will generally meet with success, although most frequently not up to one's anticipations.

This most healthful and invigorating of all methods of using the rod and reel is fast gaining in popularity, and for those who have never tried, or who have done but little of it, I now propose to give my experience, and trust that the manner in which I put my ideas in print will be clear enough to enable intending anglers to overcome many of the annoyances to which they would otherwise be subject had they to get their experience by actual labor and outlay.

Tackle.—Buy the best, which does not necessarily always signify that it should be the most expensive, and having fastened to a large fish you will have the satisfaction of knowing that through no fault of your tools did he succeed in breaking away. A string and a pole will land the small fry, but it is of too rare an occurrence to hook a large fish, say from 20 to 40 lbs., to take the chances with the cheap trash that has flooded the markets of late.

The Reel.—This is the most important article in all your outfit, and, therefore, if your purse will not permit of a rubber and German silver steel pivot of the first grade, it would be far better to purchase a plain brass steel pivot at about half the price than to throw your money away on a miserable nicked affair or a second grade rubber and German silver one; the two latter are sure to be found wanting sooner or later, and in all probability just when most needed. Have one of sufficient size to carry 600 ft. of line with ease of the size sold as No. 15, not that you will need that quantity, but as 400 ft. are sometimes necessary, it is well to know that you have plenty of reserve when that big bass makes a bee line for the coast of Africa at a gait that seems to mean business for some minutes to come. And by having a large reel your fish is more easily controlled, you being able to gather in line more quickly than with a smaller one.

A number 3-0 is a size much used, but a number 4-0 is preferable; for my own fishing I find a 5-0 is none too large, and for casting the metal squid it is unequalled by anything smaller. Those who have cast for bluefish in the surf soon recognize the great advantage derived from the larger spool of the reel in not having to turn the handle so frequently or so fast in order to keep the squid as near the top of the water as is required. Bluefish are not bottom feeders, and therefore a squid on the bottom is useless. With a small reel it is next to impossible to obtain the proper speed at which the squid should come toward you, and if this is not obtained the lame arm you have for your pains in trying to accomplish the desired result may turn you from the sport in disgust.

Before beginning to fish always see that the pivots are well oiled; you may otherwise regret the experience you will have gained in finding it stop short, and to all appearances never to revolve again. If from inattention, or other cause, sand gets in, and this will quickly be noticed the moment the handle is turned, take it apart at once and clean thoroughly, or the best-made reel may be soon ruined. It is a simple remedy, and as the mechanism is not complicated, also an easy one.

Reels for surf fishing, as generally to be found in the tackle stores, are too wide between the plates, causing a deal of unnecessary trouble in order to guide the line properly on the spool to prevent bunching; they are to be had narrow if insisted upon, and is there any good reason why we should be expected to take our pleasures as our fathers did when by calling for what we want we can obtain an article infinitely better suited to our purposes? Mine, although nearly $\frac{1}{4}$ in. in diameter, is but $\frac{1}{16}$ in. between the plates. One experience with a reel of this build is generally sufficient; the wider ones then appear awkward, and indeed are so.

For the protection of the thumb in controlling the line when casting I find a piece of oil-tanned rawhide far preferable to the leather that is generally fastened to the reel, because it is soft and somewhat oily, and will therefore benefit the line instead of wearing it. It is sufficiently durable to last most people through a season, is of small cost and easily sewn on the bar of the reel. The objection to a thumb-stall is its habit of secreting sand, which to many is a very disagreeable feature.

Occasionally examine the metal band by which the reel is held on the butt plate, to see that it sets firmly, and thereby avoid the mortification of seeing the reel go to sea upon making your cast. The larger the reel the greater the necessity for providing against the possibility of such a mishap.

The Rod.—Contrary to the generally formed idea it is neither necessary nor agreeable to use a "broomstick" for surf fishing. The proper calibers are, considering the heavy work required, smaller in proportion than many used for bay fishing where a 10 lb. fish is a rarity. Where the elements have full play and the bass run large, it is of course desirable to be able to cope, at all times, with the prevailing conditions; that cannot be done with a black bass rod, but with proper skill it is astonishing how a comparatively light rod can be made to control a large fish and at the same time overcome the great additional strain caused by a heavy sea.

A tip from 6 ft. to 6 ft. 3 in. I find will give the best results; in diameter from $\frac{1}{8}$ in. where it enters the butt ferrule to $\frac{1}{4}$ in. at the tip, in one piece. To this one piece joint add a short butt of from 18 to 21 in., according to fancy, and you have a rod measuring over all from $7\frac{1}{2}$ to 8 ft. After years of this kind of fishing I have adopted the 21 in. butt as giving a better purchase and control in casting; if you are of the average size in stature and not too lightly built, you will find that after sufficient practice so as to become used to the rod, a longer cast can be made than with the shorter butt, owing to the increased leverage.

Greenheart and snakewood are the most serviceable

THE STRIPED BASS (*Morone saxatilis*).

and at the same time handsome; they are strong, quick of action and will stand rough handling without a murmur; and fishing day in and day out, in a northeaster with its accompanying rain squalls, does not affect them in the least. Lancewood has not backbone enough, and split-bamboo requires too much care; the latter is unequalled in its steel-like spring if of first quality and make, as long as the weather is fair and dry, but for bad weather, and that is when the largest bass are generally caught, I have yet to find one that does not lose a deal of its elasticity, and if not laid by soon becomes no better than ordinary lancewood.

For one who fishes only occasionally and at the same time does not care to go to the expense of a first-class greenheart or snakewood, costing from \$20 to \$25, with the two tips and agate tube top, a plain Calcutta male bamboo is strong, quick and serviceable. For strength and work endeavor to get the male cane; it can generally be known by the lumps and indentures at the joints, they being much more marked than in the female; it is as strong again as the other, although apparently less so to the eye.

Jointed rods, and I refer to those which in addition to the butt piece are composed of two or more joints, are a delusion where much fishing is done, for when least expected they will break just above or below the ferrule, and this will frequently happen without the first symptom of a shaky spot having manifested itself. Sea water has a tendency to rot anything with which it frequently comes in contact, and as every cast causes a strain and more or less of an opening at the spot where the ferrule and wood come together, it thereby permits moisture to enter. The moment the strain is lessened the metal closes over the wet spot and the disintegration of the fibers commences.

The guides should be large. Some use agate from an impression that the friction is less than with those of metal; size for size that is undoubtedly the case, but agate guides are always small, and therefore cause more friction than the German silver ones I am now using. Two sets are all that are needed to a trip, those next to the butt being $\frac{1}{4}$ in. high and the upper ones $\frac{1}{8}$ in. Through these a knot will pass with ease.

To prove the lessened friction put your rod together and fasten on the reel, pass the line through the guides and out at the tube top; now, by putting enough strain on the line to make it taut, you will see that the line passes through the guides without touching them. The abrupt angle caused by the ordinary guides is now entirely overcome, and the reason of frequent over-running with its inevitable snarl is greatly lessened.

To avoid the inconvenience in carrying a rod with these large guides, they are made detachable in such a way that to put them on and take them off is but a matter of a couple of seconds.

Another angle to be overcome is where the line passes through the tube top, and for this I use one $\frac{1}{4}$ in. in diameter on the inside of the agate.

By occasionally oiling the rod with a cloth it will last longer and always look better.

Lines.—Use nothing but linen and of the best obtainable; a dollar saved here is the poorest economy. Have the line plain or natural color, as it is called; waterproofing or coloring is of no advantage, in fact these processes only tend to injure, either by weakening or preventing the proper rendering. For fishing in this section a heavier line is absolutely more necessary than would be used down East, we having the sharp sand to contend with, whereas there the fishing is usually done among the rocks and off the bottom. Few have any idea of how quickly the sea and sand will weaken even the strongest line, therefore daily test the last 10 ft. especially, and throw aside any part that shows the first signs of weakness. The size generally used is known as No. 15, of eighteen threads, but recently there has been put on the market a line called the Belmar bass line, comprised of twenty-one threads, that is nearly as thin as the regular fifteen thread, and at the same time almost as strong as the eighteen thread; it is superior, for the purpose, to any other line obtainable to-day.

The advantages to be derived from using a thin line where the movements of wind and wave play such an important part are so obvious that to be able to obtain an equal strength with diminished diameter is something much to be desired. This line will stand a steady pull of about 30 lbs., and as no one can hold a rod, when fishing, to near that, all the strength needed is to be found here. To always dry your line after the day's fishing may seem unnecessary for me to suggest, but how often is this important matter neglected until the next day, or the one following, when you expect to have more time; by then it has heated and the seeds of consumption are sown. If at any time it becomes necessary to join the line use the double water knot, it will hold well and the ends can be cut off close to prevent fraying.

Leaders.—Don't buy a tightly twisted leader, such as are like a line in compactness and where the gut lengths are put together by a splice. They are much weakened by the process and the flat gut not being easily seen, are always weaker than they look. A leader composed of four lengths, each length containing four strands slightly twisted by hand, is the best, and although the breaking point is much in excess of any strain that will be put upon it in fishing, it is desirable to have this reserve strength

to overcome the chafing of the sand. With proper handling, even in a heavy surf, two strands of round and strong gut are ample, but if these, or one of them, becomes frayed and the defect should not be noticed in time, the consequences might be anything but agreeable. A stained leader is useless as far as invisibility is concerned, because on the light sandy bottom the contrast becomes too marked. Four strands make ugly looking knots where the lengths are joined, but when in use this apparent drawback does not exist, as they then appear as the pebbles of which the bottom is thickly composed. In Massachusetts and Maine the leader is dispensed with, the hook being tied by three half hitches to the end of the line and the weight of the bait being sufficient to cast; but as in these parts the bait is entirely too light, a sinker has to be used, this is tied to the end of the line. About nine inches above attach the leader and in order that it may not twist too much upon the line, gut is the material used; it is comparatively stiff and stands off from the line better than anything else. The advantage of placing the leader about nine inches above the sinker is that you are more apt to feel your fish before he notices the resistance of the lead when moving off with the bait; the chances of hooking are therefore increased. If placed much higher on the line it is more liable to twist and is also less handy to cast.

Hooks.—Sizes equal to the 60 and 70 Sproat or O'Shaughnessy are good, the former when the kingfish are running.

A poor quality of hook, and the stores are full of them, is an abomination, for nothing is more discouraging than to hook a large bass in the plate of the mouth and find your hook come back either broken or bent out almost straight. For driving qualities the Sproat stands at the head, but it is weak at the barb and bend; the O'Shaughnessy is strong enough for anything, the trouble here is its liability to drag or tear along a hard surface caused by the outward turn of the point. To overcome these weaknesses I have recently had a hook made; it drives fully as well as the sproat and has all the strength of the O'Shaughnessy, it is hand forged. Bass are frequently landed with this hook driven clear through the plate, more than that no one can wish for.

There are times of course when any kind or grade of hook will successfully hold the fish, but surely it is bad policy to buy a poor article of such small cost at any time, and more especially where the bass run of large size. The snell that is usually tied to a hook of from 8 to 10 in. in length is a disadvantage, as it frays out long before the hook becomes useless; so in ordering have them tied with a short gut loop composed of four strands, slightly twisted; this presents a comparatively unyielding surface and is therefore more lasting and better adapted to the heavy work demanded of it.

When through fishing for the day, rub your hook with an oily cloth and it will not be rough from rust when you next need it.

Swivels.—With the exception of the adjustable swivels I know of none that will turn after being used for an hour or so in surf fishing on a sandy bottom; they very soon become so clogged as to be useless for the purposes intended. Use nothing but brass.

Sinkers.—Those known as "bass casting swivel sinkers," called also "swivel drop sinkers," are the most desirable, being easy in casting and less liable to imbed themselves in the sand than most other kinds; there is also an advantage gained by the ease in which the surf moves them from one spot to another. Three and one-quarter ounces is the best weight, as it will serve under all conditions of wind and sea. The objection to the egg and the hollow or running sinker is that they become filled with sand and soon chafe the line, so that it breaks in casting, to the great danger of those in your vicinity. Serious accidents have happened from this cause. Some will say that it is useless to attempt to keep so light a weight out in a heavy sea, but it can be done with ease if you do not hold your line too taut, otherwise a 5 lb. sinker would be of as little service. With a somewhat slack line the 3 oz. lead will move in and out with each successive wave, and you can feel your fish just as easily and at the same time be surer of having him well hooked.

The Rod Holder.—This is one of the most useful articles in the angler's outfit where the fishing is done from a sandy beach; it keeps the tackle free from grit and obviates all risk of having it stepped upon. It greatly facilitates the baiting process, as the rod is held in an upright position, leaving thus both hands free to manipulate the hook. The dimensions of mine and the material of which it is well to have it made are as follows: Take a piece of brass tubing 9 in. in length and $\frac{1}{4}$ in. in diameter. One end should be made solid, to which screw in a brass rod of the length of the tube and about $\frac{1}{8}$ in. in diameter. In carrying, the rod is unscrewed and placed in the tube out of the way. When stuck in the sand it is ready for use at all times.

Bait.—By all odds the blood or white worm is the most taking, and although it may appear rank heresy to talk against the luscious shedder crab of our ancestors, I have caught and seen caught two bass to one on the former bait. They are always to be had in New York in season, and although apparently expensive, will do greater execution than twice their value in other bait. To keep them alive is, however, no easy matter in hot weather, but

placed in a tight tin can with rock weed or sea salad and kept in a cool place, they will live about as long as other baits. Where the conveniences are at hand a box, say 4-ft. square by 18 in. in height, should be made and sunk just above low water mark, so that the tide will ebb and flow over it; fill to within 3 in. of the top with the sand in which the worms were found and they can be kept through the whole summer. They will grow in size without attention or feeding, and by placing mussels or soft clams on top of the sand will soon get fat. Such a box will hold 600 without crowding. Think of the advantage of always having your bait lively and ready. The box must have holes in the bottom and sides, covered with fine brass wire netting to permit the water to run off as the tide falls. A tolerably tight fitting cover is very necessary, or fish will enter and root out every worm in the box, and those little nuisances of crabs hardly larger than a dime will find their way in and nip the worms as they come up to feed and, of course, kill them. Always use plenty of bait, two worms at least on a hook; the larger fish are more likely to be attracted. And then if you have a strike and fail to hook your fish it is reasonable to suppose that there is still some bait remaining; you thus avoid at a critical moment the necessity of reeling in to bait up again. In putting on the worm let half of it wriggle, the plan adopted by some of stringing the worm as they would a lot of beads prevents any movement and is therefore less attractive. The price in the city is from twenty to twenty-five cents per dozen, but if you fish anywhere near where they are found, a man can generally be had who will dig them for you at about \$1 per hundred.

In the Shrewsbury, Navesink, Shark and Manasquan rivers they are plentiful, so that when possible get them on the spot. A dead bloodworm, or even one nearly so (they seem to die by inches, commencing at the tail), is not only almost useless, but a very rank and disagreeable thing to handle. Look out for those that are freshly dug, they are vicious, and will bite quicker than most people have any idea of, leaving a red spot about the size of a small pin's head, which, with some, rapidly swells and becomes very painful.

Bait Box.—A crescent-shaped one made of heavy leather is preferable to those of tin as usually sold. Being to a certain extent porous, the worms keep in better shape on a hot day. Always scour well with sand after using.

SANDWORM (*Nereis pelagica*).

The tin squid will often tempt the bass, and there are times when all other baits are steadily refused, such as when they are seen breaking water in pursuit of the mullet. The ordinary long, thin trolling squid, such as is used for bluefishing from a moving vessel, is next to useless for rod and reel fishing, not offering sufficient surface to the water; it sinks too rapidly. The squid most successfully used on this coast is somewhat flatter and much wider and boatlike in shape; it is made with two hooks set side by side in the tin, the points being about 4 in. apart. It is in squidding for bluefish more particularly where the advantage of the double hook shows itself, preventing the fish from so easily freeing himself when he jumps. With this arrangement one beaches at least two fish to one with the old style.

When a bass or bluefish takes your squid there is no time to strike, and to get the fish he must hook himself. With the style of hook used in the squids generally to be found in the tackle stores, the chances are much against the fish doing this; so No. 8-0 Sproats or Limericks are used instead with good results.

Casting.—To cast ordinarily well is soon learned, and a distance of from 125 to 150 ft. is quickly mastered, but to be able to put out your sinker 200 ft. and upward, and within a reasonable distance of where it is intended to go, is no child's play. In addition to a certain dexterity acquired only after much practice, considerable strength of arm is necessary. It is not done by any sudden movement any more than by a long steady swing of the rod, but by a certain unexplainable knack, which when once found is never forgotten. Some cast underhand from the left or from the right side, others overhand, and as the method best adapted is different in almost every one, more is learned in a few minutes by carefully noting the movements of a good caster than can be taught by reading volumes. Always remember, however, that if your reel is poor you cannot make long casts. Many make little of distance casting, possibly because of their inability to accomplish it, but there are times, and they occur quite frequently, when the long caster alone gets the fish.

When and Where to Fish.—The most favorable time to fish is from sunrise to about 10 A. M. and from about 4 P. M. until dark. Night fishing is sometimes attended with good results, but except for the enthusiast it hardly pays.

As to location, select in preference the bay that always forms on the north side of an inlet, and fish as near along the edge of the bars as you can get. After making the cast raise the tip of your rod, and if the sinker moves heavily repeat the operation until you find that it comes easily toward you. Your bait will now be in one of the many depressions where the bass are likely to be found feeding; your chances for a strike are now much increased. Although a trifling matter, this is a point of much importance and known to but few. At times the fish are within 50 ft. of the shore, but only when the surf is heavy; more frequently they feed on the inner edge of the outer bar, beyond the reach of the ordinary cast. As an instance of the advantage of a long cast, the following speaks for itself: Three gentlemen, after having fished for some hours with but a solitary 3-pound bass to show for their trouble, were astonished to see a new-comer take five bass in seven casts, and after fishing for about three hours go home with nine from the same spot and all of them over 3 lbs. each; he simply cast about 50 ft. further

than they could, reaching the feeding place of the fish. Unless the sea is tolerably heavy, bass fishing is not likely to afford much sport; but just after a northeast storm, when the waters are much agitated and somewhat discolored, look out for the big ones. On a bright hot day and smooth sea, the better plan is to go in bathing; the fish are too far out in deep water to be reached. As to the stages of the tides, the last half of the ebb to the first half of the flood are generally the best.

If unable to fish near an inlet, select a spot on the open beach where a current sets in or out along the edge of a bar, and although the chances of catching many fish are smaller, you may possibly fasten on to a 30-pounder.

As the conditions of a sandy beach are always changing, and the bass follow these changes, so is there always an uncertainty about finding the fish in the same spot on two successive days. Surf fishing, in this respect, is not different from other methods, and as there is no royal road to fortune in fishing, so must we seek in order to find. When annoyed by crabs taking the bait it is a pretty good sign that the bass are not around, but the moment his majesty arrives these little plagues disappear as if by magic; therefore, if the crabs do not disturb it is well to persevere, although no signs of fish are apparent, the chances are in favor of bass being in the neighborhood if you have selected a likely spot. Also, the presence of sea robins, dogfish and skate are signs of the absence of bass. When, finally, after much waiting and disappointment you fasten to a large bass, don't be in a hurry to land him; if well hooked he is reasonably safe, and the sport of lightly playing him will amply repay you; if lightly hooked, forcing will cause the hook to tear out, and you have nothing but regrets for your pains. After tiring him so that he rolls on the top of each wave it is time to land him; do so as soon as the proper opportunity presents itself. We have now reached the most critical moment, and unless a good deal of care is exercised the loss of the fish is not an improbability. When within about 50 ft. of the beach the motion of the sea must be closely watched, and as he comes nearer line must be given with each receding wave until being near enough, you put on all the strain your tackle will bear and bring the fish in on the incoming breaker. If, as frequently happens, the wave fails to send him up far enough on the beach to be reached with the hand, you must wait for the next one, giving line or holding steady, as the circumstances demand, when, at the proper moment, he will be washed up to your feet. Now put your hand in his gills and drag him out of reach of the sea. Kill your fish as soon as beached, they keep and eat better, then place them in your basket or cover them with the sand away from the weather and flies.

Rubber Hip Boots are a necessity, and be sure to get hip boots. Avoid the red or blue lining, as they are apt to be injurious; ask for and insist upon getting those with gray lining.

Snarl Hook.—This is simply a copper nail about 1 1/4 in. long, bent close to the end and sharpened to a dull point. It is one of the indispensable things in an outfit. When your reel has overrun and the line becomes tangled, an occurrence that is bound to happen sooner or later, you will at once recognize the great advantage of having something that will pick out the snarl in the shortest time, whereas, with nothing but your fingers, a seat on the beach and plenty of patience are the only remedies.

Rod Belt.—This is not an absolute necessity, but where the bass are liable to run large it is a great comfort and a preventive against injury to the stomach or groin, something not to be made light of.

Don't.—Don't fish too near your neighbor.

Don't cast across his line.

Don't be in his way when he is fast to a big fish, but reel in and wait until he has him well under control.

Don't lose your temper if your line becomes entangled with another's.

Don't keep bass of less than 2 lbs., but return them to the water at once if uninjured in the gills.

Don't carry liquid bait when you go surf fishing.

Don't mind a waiting, sea-water will not give you cold.

Don't make a noise or move around too frequently; bass are timid and exceedingly quick-sighted.

Don't take your dog along, he will be a nuisance to everybody, and perhaps some novice in casting may mistake his ear for space.

Don't be selfish about what you know but help your neighbor to have a little sport. You won't be giving much away, as the saying is, for the longer you study the habits of bass when in the sea the less you will seem to know about them. Don't swear at any one who fishes near you, but if you must say naughty words let them be at the seiners, and in that event it would be just as well to say all you know and think the rest.

It is impossible to obtain all the things mentioned in this article at any one tackle store, but if any reader who has not the time to find out for himself will write me, care of FOREST AND STREAM, I will direct him where certain articles are only to be obtained.

To conclude, I wish to say that I am looked upon as a "crank" by many dealers when I venture to suggest anything like an innovation by a little argument and much persistence; they generally end up by complying with my desires. As it is generally the "crank" (and their number increases apace) who forces many improvements on the manufacturer, which otherwise would not be brought out, so long as a too confiding public would take his goods as he presents them, whether the most suitable for the purpose or not, so I take it that he who helps along the cause in this manner is doing a service to those who have not the time or inclination to trouble themselves in the matter.

BIG REEL.

TARPON SCORE FROM FLORIDA.—We hear from Punta Rassa, Florida, under the date of the 23d ult., that Mr. Thomas J. Falls, one of the subscribers of the FOREST AND STREAM, on board his yacht Gypsy, of New York, has made a score of ten tarpon up to that date. The highest score of any other sportsman was five.

TROUT FRY FOR LEWIS COUNTY, N. Y.—The Lewis County Sportsman's Association have sent in an application for one hundred and fifty thousand brook trout fry, the same to be placed in the natural trout ponds and streams of the county. —OSCEOLA.

Messrs. R. H. Macy & Co., a firm celebrated for the low price at which they sell their goods, advertise in this issue a lot of fishing tackle at prices which are very low. —ADG.

SAWDUST LEGISLATION.—The Massachusetts Legislature has passed a bill to regulate the discharge of sawdust into brooks or streams. The bill which is a substitute for another and more stringent one will be Chapter 129 of the laws of 1890, and reads as follows: "An act to prevent injury to fish in brooks and streams by sawdust. Section 1. When the board of commissioners on inland fisheries and game shall decide that the fish of any brook or stream in this Commonwealth are of sufficient value to warrant the prohibition or regulation of the discharge of sawdust from saw-mills into such brooks or stream, and that the discharge thereof from any particular saw-mill materially injures such fish, they shall by written order to the owner or tenant of such saw-mill prohibit or regulate the discharge of sawdust from such mill into such brook or stream. Such order may be revoked or modified by the board of commissioners on inland fisheries and game at any time. Sec. 2. Any person so notified who shall discharge, or suffer or permit to be discharged from such saw-mill while under his control, any sawdust into any brook or stream contrary to the order of the board of commissioners on inland fisheries and game, shall be punished by a fine not exceeding twenty-five dollars." Approved March 28, 1890.

A PENNSYLVANIA SALMON.—Beaver, Pa., March 30.—A short time ago one Graham, of Beaver Falls, this county, took with wire loop a "white" salmon weighing 13 lbs. in the race of the mill in which he works. The salmon was a female and very heavy with roe. It was evidently seeking some place to spawn. Fish Warden Hague was notified and came down to arrest the young man, who recognized Hague as he entered the works and made his escape by virtue of possessing a better pair of legs than the warden. If the young man only knew our warden, he, like Davy Crockett's coon, "would come down," for it is only a matter of time until he will have to.—G. A. S.

PROTECTING JAMAICA BAY.—The bill to prohibit net fishing in Jamaica Bay has been passed to a third reading in the Senate. This will be welcome news to a large class of people who depend for recreation on angling in these waters. It is reported that the prospects are good for the passage of the bill.

Fishculture.

NEW SHAD-HATCHING STATION.

AT Gloucester, N. J., the U. S. Fish Commission hopes to have a new shad-hatching station equipped and ready for work during the coming season if an appropriation is made in time. Mr. W. J. Thompson has agreed to furnish gratis a suitable building and the necessary water-supply for a period of five years, with the privilege of renewal if desired. The station will be provided with 200 McDonald jars, having a capacity of 20,000 shad eggs at one hatching and making it practical to develop 100,000,000 eggs in a single season. Arrangements have been made in connection with the Pennsylvania Fish Commission to transport fry to the upper waters of the Delaware, and if necessary to the Susquehanna. Plans and specifications for the Gloucester station are now in course of preparation.

LOBSTER CULTURE.—We omitted to state in our remarks on lobster culture, March 20, that the hatching apparatus employed in Newfoundland was copied from that in use by the U. S. Fish Commission at Woods Holl, Mass., and the fishculture expert engaged in this lobster work was trained at the Woods Holl station while in the employment of the U. S. Fish Commission.

SALMON TROUT FRY FOR COOPERSTOWN.—Mr. Elihu Phinney, of this place, has received from the U. S. Fish Commission through State Fish Commission Blackford, 50,000 salmon trout fry. —(Cooperstown, N. Y.)

The Kennel.

FIXTURES.

DOG SHOWS.

April 1 to 4.—Sixth Annual Dog Show of the New England Kennel Club, at Boston, Mass. J. W. Newman, Secretary.

April 15 to 18.—Show of the Buffalo Kennel Club, Buffalo, N. Y. A. W. Smith, Secretary.

May 6 to 9.—Second Annual Dog Show of the Southern California Kennel Club, at Los Angeles, Cal. H. W. Wilson, Superintendent.

Sept. 9 to 12.—Second Annual Dog Show of the Toledo Kennel Company, at Toledo, O. C. E. Rowland, Secretary.

Oct. 8 to 11.—Ninth Annual Dog Show of the Danbury Agricultural Society, at Danbury, Conn. B. C. Lynes, Secretary.

FIELD TRIALS.

Nov. 17.—Twelfth Annual Field Trials of the Eastern Field Trials Club, at Otterburn Springs, Va. W. A. Coster, Saratoga Springs, N. Y., Secretary.

Dec. 1.—Second Annual Field Trials of the Central Field Trials Club, at Lexington, N. C. O. H. Odell, Mills Building, New York, Secretary.

1891.

Jan. 19.—Eighth Annual Field Trials of the Pacific Kennel Club, at Bakersfield, Cal. H. H. Briggs, Secretary.

Feb. 2.—Third Annual Field Trials of the Southern Field Trials Club. T. M. Brunby, Secretary, Marietta, Ga.

MASTIFFS AT THE CHICAGO SHOW.—Editor Forest and Stream: In your issue of this week, under the heading of "Mastiffs at the Chicago Show," I notice my good friend, Wm. Wade, of Hulton, Pa., mentions Duke of Connaught and gives his sire as Mr. Amidon's Ashmont Nero (Hero II.—Lorna Doone). This is a mistake. Ashmont Nero, sire of Connaught, is a brindle dog of 170 lbs. weight, owned by Mr. Bernard Stroh, a banker and brewer of Detroit, Mich., and won vhc. at the Detroit bench show in 1887. He is by champion Ilford Cromwell and out of Ashmont Queen, and I believe has never been registered. Kinloch, the dam of Connaught, is a brindle, owned by Dr. Edward L. Kimball, of Jackson, Mich. She is by champion Ilford Cromwell out of Ashmont Vera, bred by Dr. Perry ("Ashmont") and presented by him to Dr. Kimball. It is only another instance of mistakes occurring from the unfortunate habit of giving more than one dog the same name. I purchased Duke of Connaught at the late Chicago show, where he took third prize in the open class, and as he is rather a promising dog I am anxious that no question shall arise regarding his breeding.—GEO. B. AYRES (Omaha, Neb.).

A COYOTE HUNT.

Editor Forest and Stream:

IN FOREST AND STREAM of March 6 a correspondent signing himself "Hal," of Worcester, Mass., writing of the feat accomplished by "Dave," in shooting a running fox out of a buggy when the team was running, makes us boys laugh. Here in North Dakota we hunt coyotes out of low sleighs in the winter and geese in the summer in buggies, and shoot when the team is running. I will give you the points of a wolf hunt I had a part in a few weeks ago. One day coming from town I saw a pair of coyotes asleep on an old straw stack, and made up my mind to have a hunt. Nearing Frank's and seeing him at work I thought it would be pretty hard to get him to go, but as soon as running down a wolf was mentioned the job was left to rest until another day.

After dinner we saddled up three broncos and put the harness on another team hitched close to a sled and started. Each man and boy carried a rifle or a shotgun, and we were soon in sight of our game. As soon as we were within 300 yds. the wolves started and we after them. W. and myself being on horses, took after the wolves then for a run of three straight miles, when we had the misfortune to let our wolf run into the brush along the river, but not so with the other fellows, they could keep theirs on the open prairie and J. having a good horse kept the wolf interested, so the boys in the sleigh could cut across the circle and catch up to the game. Then for the fun, putting the horses to a good stiff run, helped on by the use of a little long oats, it was not long before the game was in range. Then Frank opened up the ball with his Winchester and the sixth shot stopped all further running, but it was fun to see that wolf climb when the shots began to drop around it. As this was on plowed ground, "Hal" can see the difference in shooting with a shotgun and a rifle. I will next tell you how we hunt geese; it will be a little different from lying in a pit and seeing them flying just out of gunshot. TAXIE.

DOGS OF THE DAY.

WHEN I received my voting list for associate members' officers, a few days ago, I was prompted by curiosity to compare it with the list which was made up on Jan. 20, to see how many of the 116 members then on the list were members of kennel clubs. The result was a surprise, at least to me, and I think it will be to every one else. There are just 13 names less on the second list. It is just possible that one or two of this number may have given notice that they would not accept office, but I hardly think so, the only one I have any doubt about being Mr. G. P. Berry. The others whose names are omitted from the voting list are Messrs. W. J. Comstock, H. B. Cromwell, R. P. H. Durkee, F. R. Hitchcock, A. D. Lewis, James Mortimer, J. Pfeister, R. J. Sawyer, T. H. Terry, C. J. Thompson, Max Wenzel and A. L. Weston.

There is another point I am still more curious about, but I don't suppose I shall be satisfied in that respect. It is to know the entire vote—not who every man voted for, but how many votes each man had that had a vote cast for him. I don't know but that we might learn something by knowing a little more than the mere names of those elected. It would help us, for instance, when we come to vote for another delegate, which we will have to do ere long. No one cares to throw away his vote, and if we are advised when this vote is declared how the next two or three unsuccessful candidates stood, it would give us some clue as to who not to vote for when another delegate is to be elected.

Another thing I am getting interested in is whose business it is to see that the A. K. C. rules are not infringed. Who keeps check of dogs eligible for the challenge class and see that ineligible dogs are not shown in that class, and that dogs that have won four firsts are not shown in the open class? This point was brought to my notice by the beagle Belle of Woodbrook being transferred to the open class at Baltimore after having won the challenge class prize at New York. On turning up the New York catalogue I find her winnings are given as first, Boston and Syracuse, 1888, Utica and Rochester, 1889. The first named was not an A. K. C. show, and on the above record she was not eligible for the challenge class. But was she disqualified? It doesn't appear so in the official prize list, and I have seen no notice of such action. Here then arises a rather peculiar legal case. Has a club a right to correct another club's official list of awards? The A. K. C. rules prohibit a club from disqualifying a thief for what he has done at another show, and I fail to see that that is not a worse crime than the showing a dog in the wrong class. Mind, I do not say that the Maryland club was not in equity justified in taking the step it did, and I have for a long time fought to give a club the right to suspend a man for dirty work no matter where done. And why wasn't it found out before? Is it no business of any A. K. C. official to look for just such things?

To continue with the M. K. C.—Mr. Diffenderfer will please understand I am not finding fault with him—I find that Rule III. of the A. K. C. was broken times without number in the catalogue. The rule says, "Should any of these particulars [date of birth, etc.] be unknown to the exhibitors it must be so stated in the entry blank and inserted in the catalogue." The catalogue does not contain one instance of carrying out that rule that I have come across. Now if I mention any man's dog I will be wiped out with a Louisville tornado. What can I do? Ah! Here's one man. I can fix him if he comes with blood in his eye and his right hand feeling for his hip pocket—"J. H. Winslow, Robertson, reg." Of course a dog with such a name cannot catch Mr. Wise, but that isn't the point. Why did such an entry appear in the catalogue in contravention of the rule and what is the A. K. C. going to do about it?

I had better tell how I am going to pacify Mr. Winslow for mentioning Robertson. This is a wrinkle I learned at Baltimore. I shall give my right hand a semi-circular wave, putting on my most winning smile and say "Mr. Lanagan." I don't go to Baltimore for nothing even if I wasn't one of the "milk route" party. With my friend, "the prince of good fellows," I took a drive quite in a contrary direction, and in place of milk we came back loaded with information regarding Orange Blossom colts, pedigree Jerseys, Dorking fowls, and I met with the additional information of how to stand off the Maryland tollkeeper. It was the "Mr. Lanagan" trick that did that.

To come back to the A. K. C. rule breakers. There is a club, a member of the A. K. C., which advertised a closing date, and after that date had passed announced a subsequent date. At the time the rule of expulsion was passed for this offense Mr. Vredenburg was its strongest upholder, nothing short of expulsion would suit him. Well, what will he do with the club I refer to? He must know which it is, and if he does not a line to my address will elicit the information. I was not a delegate to the A. K. C. when that rule was passed, but when Mr. Anthony asked me what I thought of it I said, "If you make it too severe you won't enforce it. Expulsion will not enforce, a fine you doubtless will." But a fine would not satisfy the majority, and again I ask what will the A. K. C. do about?

While on the subject of rules and catalogues I would like to call the attention of A. K. C. delegates to the habit the clubs have got into of omitting all mention of prizes already won by the open class entries. It is not the easiest thing in the world to keep track of these prize winners and know

when each one is entitled to go into the challenge class. I really think it would be well to have first prize winners mentioned in the case of open class entries, limiting them of course to A. K. C. qualifying shows.

In the report of Baltimore show it should have read that Mr. Jas. F. Pearson judged Chesapeake Bay dogs, Mr. Norris not arriving until evening. I am indebted to Mr. Malcolm, who was ring steward, for this correction. Mr. Malcolm adds that if I had only gone on the "Tally-ho" I would certainly have agreed with him regarding Belmont being the best Gordon setter. That only adds additional regret that duty made me decline.

Mr. Mitchell Harrison has been confined to his house for almost a week now. Something of a la grippe seems to be the trouble, although he tells me he had an attack of that while in England.

Mr. Crowell tells me he is going over to the other side again this summer, and so is Mr. Frank Dole.

It is not improbable that the bull bitch Young Dolly will be seen over here ere long. Her owner, Mr. Preece, died very suddenly at Liverpool during the late coursing meeting, and Young Dolly with the rest of his kennel is for sale. J. W.

THE EGOTISM OF FANCIERS.

BEFORE the advent of bench shows, dogs were valued almost entirely according to their merit for practical purposes, except of course in the case of the pet breeds. At that time the setter, pointer and spaniel were expected to find game, the bounds to trail, the collie to drive, the fox-terrier to go to earth, the mastiff to watch, the St. Bernard to go out into the storm, the bull-terrier to take his death, the greyhound to course, the deerhound to run down his quarry, the various breeds of terriers to kill vermin, and so on. This standard of practical utility was the principal one that guided breeders in the selection of stud dogs and brood bitches.

With the establishment of bench shows this was changed. The fetish "type" was set up, and fanciers, big and small, fell down before it and blindly worship. Type is supposed to be as stable as the mountains, while in reality it is constantly changing. The winning setters, pointers, mastiffs, collies, etc., of to-day are quite different from those of even ten years ago, and ten years hence the typical specimens will undoubtedly differ as much from the present winners. "But," some fanciers will say, "this is because we have improved these breeds that they differ from the old-time specimens." Whether this alteration of form from the primitive stock is an improvement or not is simply a matter of opinion. This changing of type or improving the breed, or whatever other name it may be called by, is going on all the time, and will continue as long as bench shows are held. As new judges and new doggy critics take the places of the old ones the "type" of the breeds will be made to conform to the ideas of the most popular of the new authorities. After all, it is the judge and the bench show reporter who mould the doggy ideas of the great majority of fanciers.

Now, I am not opposed to type, but I do disapprove of sacrificing all a dog's useful qualities for an artificial standard. No matter how near a hunting dog is to the present idea of the breed, if he is gunshy and otherwise useless in the field he should never be given a prize on the bench. A dog of this sort who wins the name of champion does more harm by being extensively used in the stud than can be undone in a lifetime. As regards a remedy, it is a difficult problem to solve, and I do not at present care to offer suggestions. But the fact remains that bench shows are encouraging more than anything else the breeding of non-sporting sporting dogs, and gradually turning into house pets many other useful breeds.

Our English cousins were the first people to set up an ideal standard for the different breeds of dogs. Here is where the egotism of fanciers shows itself. After settling upon the type for their native dogs, they import bassets from France, fix up an ideal standard and insist upon the Frenchmen conforming to it. From Germany they get dachshunds, and as the primitive types seen there do not altogether meet with their approval, they lengthen the body by selective breeding and produce an animal the like of which is not to be found in the native country of the breed. The same applies to the St. Bernard, Newfoundland, great Danes and a few other foreign breeds.

The fanciers of America are just about the same. The average Irish and Gordon setter met with in this country is built after a different type from those of England. The same holds good with the foxhound and beagle. As we grow older and depend less on the mother country for our prize winners, the lines of distinction in these and other breeds will become more sharply defined.

The evolution of a type of the American foxhound is now going on among the packs of Pennsylvania. Only a few years ago the meet clubs cared nothing for the looks of the hounds; it was field work they considered of account. Now, there is a decided effort to get packs together that look alike. Some fancy the tri-color, some the black and tan and others the blue ticked, but they all want them to be of equal weight and of the same general appearance. It will only be a few years before there will be a uniform type established and the packs will be pleasanter to look at even if they are not so good after reynard. HIBERNIA.

KENNEL CLUB FOR ST. LOUIS.—St. Louis, Mo., March 28.—A preliminary meeting was held the past week at J. C. Meyer's sporting goods house on Fourth street, for the purpose of organizing a kennel club. Quite a number of prominent dog owners were present, and all were most enthusiastic upon the subject. There is now no doubt whatever but that the club will be a go, and that it will have a large membership goes without saying, because there is ample material here to support such an organization. Next week temporary officers are to be elected and a committee appointed to draft a constitution and by-laws. The matter has taken such shape now that a kennel club in this city is a certainty.—UNSER FRITZ.

SALE OF LORD CLOVER.—Lansing, Mich., March 29.—I have this day sold one-half interest and shipped to Geo. Gillivan, East Lake Pug Kennels, West Jefferson, Ohio, the stud pug dog Lord Clover, by champion Loris, champion Diamond—champion Queen Rose; dam Goulding's Nellie, by champion Stingo Sniffles—champion Little Dorritt. Lord Clover will be at stud during 1890 at Mr. Gillivan's kennels.—L. S. HUDSON.

COLLIE CLUB—SPECIAL NOTICE.—The second section of the Collie Club Stakes for 1890, will be judged at the Hempstead Farm Kennels, June 4, 1890. Mr. James Mortimer has been invited to judge. The committee having special charge of the arrangements will give due notice as to the hour for judging and time of trains leaving New York. Blanks for the Collie Sweepstakes can be obtained by addressing J. D. SHOTWELL, Sec'y (Rahway, N. J.).

EASTERN FIELD TRIALS CLUB.—The adjourned meeting of the Eastern Field Trials Club will be held at Mr. F. R. Hitchcock's office, 44 Broadway, New York city, on Tuesday, April 8, at 3 o'clock P. M.—W. A. COSTER, Sec'y.

BOSTON DOG SHOW.

THE sixth annual dog show of the New England Kennel Club opened to-day under favorable weather conditions, and the attendance has been good. The quality of the dogs is very good indeed, and some of the classes are the best of the season. The judging began soon after 10 o'clock and was finished before dark. Below is a full list of the

AWARDS.

MASTIFFS.—CHALLENGE—Dogs: 1st, E. B. Sears's Sears' Monarch. Bitches: No entries.—OPEN—Dogs: 1st, Taunton & Winchell's Beaufort; 2d, 3d and 4th, E. H. Moore's Ilford Chancellor, Melrose Caution and Orion. Very high com., W. A. Powers's Ilford Caution. High com., H. Pratt's Pratt's Bruce, and J. A. Waterman's Dago. Com., R. Crossley's Don. Bitches: 1st, 3d and 4th and very high com., E. H. Moore's Cambrian Princess, Lady Phyllis, Lady Beatrice and Lady Amelia; 2d, E. B. Sears' Countess of Dunsmore.—PUPPIES—Dogs: Withheld. Bitches: No entries.—NOVICE—1st, withheld; 2d, W. A. Powers's Greenwood Juno; 3d, F. W. Connolly's Gyp.

ST. BERNARDS.—ROUGH-COATED—CHALLENGE—Dogs: 1st, E. H. Moore's Ben Lombard; 2d, E. B. Sears's Plinlimmon, Jr. Bitches: 1st, E. B. Sears's Lady Wellington; 2d, E. H. Moore's Miranda.—OPEN—Dogs: 1st, E. B. Sears's Hesper; 2d and very high com., C. G. Wheelock's Scotch Bonny and Home Ruler; 3d, F. Enken's Roland; 4th, E. B. Sears's Plinlimmon. Com., H. K. Langdon's Merchant Prince Jr. and C. T. Barney's Montrose. Bitches: 1st, Namquoit Kennels' Maon; 2d, C. W. Brickford's Zara; 3d, E. H. Moore's Recluse; 4th, Merry Mount Kennels' Berlin. Com., T. Boomer's Elva and J. P. Barnard's Greta II.—PUPPIES—Dogs: 1st, A. Bernard's Nero Bernard; 2d, E. Schoop's Wiedland; 3d, H. Dainty's Leo. Very high com., F. Housman's Roderic Dhu. Bitches: 1st, Tot Kennels' Lady Eleanor; 2d, withheld; 3d, W. Housman's May Queen.—SMOOTH-COATED—CHALLENGE—Dogs: 1st, Hospice Kennels' Hector; 2d, Elmwood Kennels' Beauchamp. Reserve, E. B. Sears's Victor Joseph. Bitches: 1st, Wentworth Kennels' Thibse.—OPEN—Dogs: 1st, J. Poag's Watch; 2d and very high com., C. T. Barney's Nevis and Macgregor; 3d, Contocook Kennels' Parson; 4th, T. Burke's Duke of Saratoga. High com., E. Schoop's Rascal II. Bitches: 1st, D. Mann's Cleopatra; 2d and 4th, Contocook Kennels' Regina and Empress or Contocook; 3d, P. H. Hurley's Lady Bernard. Very high com., E. B. Sears's Alpine Queen.—PUPPIES—Dogs: 1st, W. Fairbank's Champ; 2d, R. Barry's Balfie; 3d, L. P. Allen's Beaufort. Bitches: 1st and 2d, Contocook Kennels' Empress of Contocook and Gem of Contocook.—NOVICE—1st, Contocook Kennels' Empress of Contocook; 2d, R. Barry's Balfie.

BLOODHOUNDS.—Dogs: 1st, Brough & Winchell's Burghie, Jr. Bitches: 1st, Brough & Winchell's Duthess of Ripple; 2d, E. H. Moore's Pembroke Star.

GREAT DANES.—Dogs: 1st, 3d and high com., (2), G. Leihbacher's Pascha, Hector, Marko and Nero; 2d, E. Kelly's Great Caesar; reserve, Mr. Martin's Hanness. Very high com., C. Heimerle's Prinz. High com., Wetz & Zerwick's Nero. Com., Kammerer & Rothfuss' Roland II. Bitches: 1st, C. Heimerle's Irene; 2d, G. Leihbacher's Bella; 3d, withheld.

NEWFOUNDLANDS.—1st and 2d, withheld; 3d, J. Power's Bruno.

DEERHOUNDS.—CHALLENGE—Dogs: 1st and 2d, J. E. Thayer's Chief and Robber Chief. Bitches: 1st and 2d, J. E. Thayer's Ramona. OPEN.—Dogs: 1st and 2d, J. E. Thayer's Hillside Vindicator and Danes; 1st, 2d and 3d, J. E. Thayer's Duke and very high com., J. E. Thayer's Theodora, Pride of the Heather, Lorna Secunda, Brazen and Berga. Puppies: 1st and 2d, J. E. Thayer's Alfred the Great and Hillside Harold.

GREYHOUNDS.—CHALLENGE.—1st, H. W. Huntington's Balkis. OPEN.—Dogs: 1st, Rookwood Landseer Kennels' Master Rich; 2d, Devon Kennels' Conspirator. Reserve, Cedar Lodge Shooting Club's Peacock. Bitches: 1st, Rookwood Landseer Kennels' Miss Rare; 2d, J. H. Watson's Drytime. High com., W. J. Middleton's Rialto Spice. Puppies: 1st, W. Middleton's Miss Rialto; 2d, S. N. Burbank's Barnum. Very high com., C. T. Olney's Chastelard.

CHESAPEAKE BAY DOGS.—Absent.

POINTERS.—LARGE—CHALLENGE—Dogs: 1st, C. Heath's Graphie; 2d, Westminster Kennel Club's Lad of Bow. Bitches: 1st, H. Heath's Keyhole. OPEN—Dogs: 1st, L. Gardner's Duke of Devon; 2d, E. Bellman's Graphie; 3d, Tell Kennels' Duke; 4th, G. W. Lovell's Beaufort H. Reserve, J. Martin's Vim. Very high com., C. H. Winslow's Ponsel and W. L. and H. C. Harris's Peter. High com., G. W. Cushing's Max and Fleet View & Reading Pointer Kennels' Sir Hector. Com., E. C. Alden's Croftstone, W. G. Cotton's Fin and W. N. Tuttle's Major. Bitches: 1st, 3d, Westminster Kennel Club's Luckstone and Westminster W. H. Winslow's Sally Brax; 2d, Tell Kennels' Lady. Reserve, Fleet View & Reading Pointer Kennels' Bell Randolph. Very high com., G. T. Corman's Luna T.—SMALL—CHALLENGE—Dogs: 1st, Hempstead Farm Kennels' Duke of Hessen; 2d, Westminster Kennel Club's Nasa of Kippen. Bitches: 1st, E. R. Bellman's Stella B; 2d, Westminster Kennel Club's Glaucia.—OPEN—Dogs: 1st, C. Heath's Lancelot; 2d, W. H. Hyland's Ossington; 3d, W. H. Winslow's Nasa Peshall; 4th, G. W. Lovell's Sir Lancelot. Reserve, Fleet View & Reading Pointer Kennels' Spot Dash. Very high com., Don Quixote Kennels' Don Quixote. High com., E. G. Peterson's Glenarm. Com., J. L. Wells's Spot. Bitches: 1st, J. A. Hether's Fan N; 2d, G. W. Lovell's May B; 3d, G. V. Neal's Mam'zelle; 4th, H. L. Rice's Nasa Belle. Reserve, L. Gardner's Miss Freedom. Very high com., Hempstead Farm Kennels' Stella, W. H. Winslow's Nasa Peshall, and Tell Kennels' Lady. High com., W. H. Hyland's Graphie's Lady, E. R. Bellman's Stella B, G. Massey's Rose, C. Heath's Bloom, and Eaton & Richards' Lassie Jean Beaufort. Com., W. L. & H. A. Harris's Belle.—PUPPIES—Dogs: 1st and 2d, reserve, Westminster Kennel Club's Westminster Glitter, Westminster Drake and Westminster Gladstone; 3d, Tell Kennels' Monty C. Very high com., C. A. Loring's Westcott. Bitches: 1st, G. W. Lovell's Fairy Queen; 2d, J. H. Kendall's Cavalier's Lady.—NOVICE—1st, Fleet View & Reading Pointer Kennels' Nadya of Nasa; 2d, Tell Kennels' Lucile H.; 3d, Eaton & Richards' Lassie Jean Beaufort.

ENGLISH SETTERS.—CHALLENGE—Dogs: 1st, Dr. Wm. Jarvis's Count Howard. Bitches: 1st, G. W. Neal's Daisy Foreman.—OPEN—Dogs: 1st and 2d, Cohannet Kennels' Kent II. and Royal Kent; 2d, E. E. Hawes's Gus Bondhu. Reserve, Dr. P. F. Gavin's Foreman's Nepal. Very high com., J. L. Wells's Ben Bondhu. High com., Dr. F. B. Greenough's Burr. Com., A. T. Hoyt's Cap and M. M. Hackett's Ghyllie. Bitches: 1st, H. Yates's Chautauque Belle; 2d, G. J. Gale's Suzanna; 3d, P. Wolfenden's Mount Harriet; 4th, W. A. Neidmeyer's Pearl Bondhu. Reserve, Roscroft Kennels' Alice Grey. Very high com., N. McIntosh's Blue Jennie. High com., Dr. H. A. Baker's Bessie and E. H. Clark's Nellie Noble. Com., A. S. Aborn's Rural Neva.—PUPPIES—Dogs: 1st, Roscroft Kennels' Domingo; 2d, G. A. Colman's Brush Bondhu; 3d, Cohannet Kennels' Duke of Kent. High com., A. E. Davis's Forest Trust. Com., A. H. Houghton's Young Gath, Jr. Bitches: 1st, Roscroft Kennels' Dominion; 2d, W. R. Richmond's Inn; 3d, Cohannet Kennels' Lady Kent.—NOVICE—1st, P. Wolfenden's Blink Bonnie; 2d, Roscroft Kennels' Alice Grey; 3d, N. McIntosh's Blue Jennie. Reserve, J. L. Wells's Boy Blue. Very high com., P. S. Roberts' Diana.

IRISH SETTERS.—CHALLENGE—Dogs: 1st, Dr. Wm. Jarvis's Elcho Jr.; 2d, E. W. Clark, Jr.'s Barney. Bitches: 1st, W. L. Washington's Laura B.—OPEN—Dogs: 1st, C. E. Gilchrist's Dan Mylrea; 2d, F. L. Cheney's Henmore Shamrock; 3d, N. Brewer, Jr.'s Huntington; 4th, F. Pendergast's Sarsfield, Jr. Reserve, F. H. Gaffney's Jacqueminot. Very high com., A. W. Pearsall's Rastone, J. W. Gale's Blue and E. H. Gaffney's Sunset. High com., W. L. Washington's Sarsfield. Com., A. W. Pearsall's Look Malone and Mrs. H. A. Rumrill's Captain. Bitches: 1st, W. L. Washington's Ruby Glenmore; 2d, 3d and 4th, J. J. Scanlan's Lulu III, Hazelnut II. and Hazelnut III. Reserve, F. H. Perry's Nino. Very high com., A. W. Pearsall's Belle Ida and Oriole Kennels' Jeannette. High com., A. W. Pearsall's Lady Noreen, N. McIntosh's Onota Belle, E. H. Gaffney's Belle, Com., J. E. Brown's Beauty.—PUPPIES—Dogs: 1st, G. E. Slickney's Sagamore; 2d and 3d, M. Flynn, Jr.'s Tamore and Mulcahey. Bitches: 1st, W. L. Washington's Septime. NOVICE.—1st, N. Brewer, Jr.'s Huntington; 2d, F. H. Gaffney's Jacqueminot; 3d, W. L. Washington's Sarsfield. Reserve, A. L. Finney's Belle. High com., G. E. Slickney's Sagamore. Com., G. Dana's Connaught.

GORDON SETTERS.—CHALLENGE—Dogs: 1st, S. G. Dixon's Little Boy; 2d, Beaumont Kennels' Beaumont. Bitches: 1st, Beaumont Kennels' Belmont; 2d, W. S. Hammett's Rose.—OPEN—Dogs: 1st, F. R. Pease's Tyrus; 2d, H. F. Smith's King Item; 3d, P. Sica's Dan; 4th, C. H. Leonard's Sport. High com., Mrs. J. H. Dixon's Rob Roy. Very high com., J. R. Lawrence's Sport. High com., Mrs. John Buchan's Nero. Com., G. W. Langdon's Rab II. Bitches: 1st and 3d, H. F. Smith's Countess Roxie and Daisy; 2d, Mrs. John Buchan's Neva; 4th, M. Murray's Ven. Reserve, G. E. Brown's Jessica. Very high com., D. L. Bennett's American Girl. High

com. N. Seabury's Sweet Lavender.—**PUPPIES**—**Dogs**: 1st, C. T. Brownell's Grout; 2d, E. W. Morris's Rexmont; 3d, Mrs. John Buchanan's Bruce. **Bitches**: 1st, E. W. Morris's Salmont; 2d, Mrs. John Buchanan's Flora. **NOVICE**—1st, E. Dupee's Yax; 2d, S. G. Dixon's Rob Roy; 3d, J. Salisbury's Nigger. Very high com. N. Seabury's Sweet Lavender.

FIELD SPANIELS.—**CHALLENGE**—No entries. **OPEN**—**BLACK**—**Dogs**: 1st, G. W. Folsom's Baron; 2d, A. Pope's Timbo. **Bitches**: 1st, A. C. Wilmerding's Lassie; 2d, R. P. Keasby's Miss Bon d'Or; 3d, E. B. Bowers's Jessie Stubbs; high com. W. Hamner-Ledy's Boodle. **ANY OTHER COLOR**—**Dogs**: No entries. **Bitches**: 1st, withheld; 2d, G. E. Sedgwick's Flirt.

CLUMBER SPANIELS.—1st, Mercer & Weston's Lass of Beauty.

IRISH WATER SPANIELS.—1st, J. P. Lewis's Patsy O'Connor; 2d, Hornell-Harmony Kennels' Capt. Muldoon.

COCKER SPANIELS.—**CHALLENGE**—1st, A. C. Wilmerding's Dot; 2d, and reserve, J. P. Willey's Jersey and Dolly Obo. **OPEN**—**BLACK**—**Dogs**: 1st, A. Laidlaw's Rabbi; 2d, Woodland Kennels' Black Duke; Cedar Lodge Shooting Club's Prince. High com. J. Williams' Prince Obo. Com. O. B. Gilman's Towser. **Bitches**: 1st and 2d, J. P. Willey's Little Nell and Black Duchess; 3d, High Rock Cocker Kennels' High Rock Jet. High com. O. B. Gilman's Lady Nemo. **ANY OTHER COLOR**: 1st, C. B. Brown's Cherry Boy; 2d, G. H. Whitehead's La Tosca; 3d, W. Barnes' Red Doc. Reserve, C. M. Nelles' Brantford Red Jacket. Very high com. O. B. Gilman's Slick. **Puppies**: 1st, J. P. Willey's Little Nell; 2d, J. Williams' Ardell; 3d, O. B. Gilman's Titus. **NOVICE**—1st, J. Willey's Little Nell; 2d, O. B. Gilman's Slick; 3d, F. F. Dole's La La.

BEAGLES.—**CHALLENGE**—**Dogs**: 1st, C. F. Judson's Little Duke. **Bitches**: 1st, W. D. Hughes' Lou. **OPEN**—**Dogs**: 1st, C. F. Judson's Racer Jr.; 2d, W. P. Whitman's Rally. Reserve, W. Ledyard's The Rambler. Very high com. E. L. Walling's Little Duke. High com. M. L. Brown's Captain. Com. W. Ledyard's Rabbi. **Bitches**: 1st, R. A. Smith's Whisper; 2d, W. P. Whitman's Merry Maid. Reserve, E. C. Barrett's Tone. Very high com. G. A. Jones' Hatter. **Puppies**: 1st, C. A. Schaffer's Topsy S; 2d, M. L. Brown's Bessie. Reserve, H. H. Donnell's Ginx. Very high com. M. Lewis's Bell Ross. High com. F. W. Chapman's Twint-one.

DACHSHUND.—1st and 2d, G. P. Berry's Daisy B. and Nigger K. 3d, C. Miller's Gesche.

FOXHOUNDS.—**AMERICAN**—**Dogs**: 1st, 2d, 3d, reserve, very high com., high com. and com. Brunswick Fur Club's Joe Forester, Jack of Diamonds, Bugle, Hayes Brave, Drive, Leads All and Waltham Jewell. **Bitches**: 1st, 2d, 3d, reserve and very high com. (2), Brunswick Fur Club's Modest Girl, Flora Temple, Mollie T., Flora and Duster. High com., A. E. Peck's Bess. Com., W. C. Smith's Kate.

COLLIES.—**CHALLENGE**—**Dogs**: 1st and 2d, Chestnut Hill Kennels' Scollia and Charolier II. **Bitches**: 1st and 2d, Chestnut Hill Kennels' Flurry II. **OPEN**—**Dogs**: 1st and 3d, Chestnut Hill Kennels' Roslyn Wilke and Scollia II; 2d, Hempstead Farm Kennels' Zena; 4th, J. Vasey's Prince Charlie. Reserve and very high com. G. A. Fletcher's Scotson and Moonstone II. High com., R. J. Strange's Scotland Yet. Com., R. B. Palfrey's Royal Scott. **Bitches**: 1st, 2d and 4th, Chestnut Hill Kennels' Roslyn Queen, Jakyr Dean and Roslyn Gaylass; 3d, F. R. Carswell's Miss Nancy. Very high com., G. A. Fletcher's Moonlight. High com., J. Roper's Highland Lassie. **PUPPIES**—**Dogs**: 1st, Chestnut Hill Kennels' Roslyn Exile 2d, G. A. Fletcher's Moonstone II; 3d, J. Watson's Blar Athol. High com., J. Duncan's Realty. **Bitches**: 1st and 3d, Chestnut Hill Kennels' Roslyn Queen and Roslyn Parole; 2d, F. R. Carswell's Miss Nancy. Very high com., J. P. & W. W. Gray's Gemma. **NOVICE**—1st and 2d, Chestnut Hill Kennels' Roslyn Exile and Roslyn Queen; 3d, J. Watson's Prince Charlie. Very high com., G. A. Fletcher's Moonstone II.

POODLES.—1st and 3d, F. E. Perkins's Jack and Pauline; 2d, C. E. Leland's Jess. Very high com. and high com., F. E. Perkins's Pix and Floss.

BULLDOGS.—**CHALLENGE**—**Dogs**: 1st, J. H. Mathew's Portwood Tiger; 2d, J. Leckie's Lion. Reserve, J. P. Barnard's Hillside. **Bitches**: 1st and 2d, W. J. Leckie's Soudan and Carmen. Reserve, T. R. Varick's Josephine. **OPEN**—**Dogs**: 1st, R. B. Sawyer's Harrier; 2d and 3d, Retnor Kennels' Monarch, J. and Oswego. Very high com., S. Porter's Gairbrooke. High com., W. Louzee's Fillmore. **Bitches**: 1st, Retnor Kennels' Dimple; 2d, W. J. Comstock's Naiad. Com., J. W. Louzee, Jr.'s Gilt. **Puppies**: 1st, J. P. Barnard, Jr.'s Jack Horner.

BULL-TERRIERS.—**CHALLENGE**—**Dogs**: 1st, W. F. Hobbie's Cairo; 2d, W. L. & H. A. Harris's Jubilee. **Bitches**: 1st, C. A. Stevens's Royal Rose; 2d, W. L. & H. A. Harris's Marguerite. **OPEN**—**LARGE**—**Dogs**: 1st, W. L. & H. A. Harris's Beryll; 2d, Retnor Kennels' Diamond King; 3d, F. F. Dole's Don Pedro. Very high com., W. Mariner's Harvester and F. P. Kirby's White Stubb. **Bitches**: 1st, W. Mariner's Attraction; 2d, W. F. Hobbie's Enterprise; 3d, F. F. Dole's Kensington. Reserve, W. L. & H. A. Harris's Queen. Very high com., R. B. Sawyer's King of the Stream. Com., W. L. & H. A. Harris's Con's Nell and Miss Norah and F. P. Kirby's Meg Merrilies. **SMALL**—1st, E. D. Hayes's Chessett's Flyer; 2d, Retnor Kennels' Dusty Miller; 3d, F. F. Dole's Protection. **Puppies**: 1st, F. F. Dole's Protection; 2d, J. C. Mahler's Yale; 3d, withheld. **ROUND-HEADED**—**OVER 20 LBS.**—**Dogs**: 1st and 2d, Round Head Kennels' Jack and Mike II; 3d, W. L. & H. A. Harris's Reserve. H. J. Hix's Black and Suffolk Cornet; 3d, W. C. Hook's Doctor. Com., H. W. Richard's Stubb's. **POST 20 LBS.**—1st, Round Head Kennels' Topsy; 2d, R. H. Post's Topsy; 3d, W. J. Leckie, Jr.'s Queen. **UNDER 20 LBS.**—**Dogs**: 1st and 2d, Round Head Kennels' Sir Vera and Gladstone; 3d, L. H. Dos Passos' Tiger. **Bitches**: 1st, Round Head Kennels' Topsy; 2d, Miss A. M. Daniel's Doria. **Puppies**: 1st, A. Hook's Topsy; 2d, A. A. Knapp's Dandy; 3d, W. C. Hook's Rattler.

FOX-TERRIERS.—**CHALLENGE**—**Dogs**: 1st, J. E. Thayer's Baby Mixer; 2d and reserve, Blemton Kennels' Blemton Rubicon and Lucifer. **Bitches**: 1st, Blemton Kennels' Rachel; 2d, J. E. Thayer's Richmond Dazzle. **OPEN**—**Dogs**: 1st and 4th, Blemton Kennels' Blemton Rackett and Blemton Volunteer; 2d and very high com., J. Mortimer's Suffolk Brawl and Suffolk Cornet; 3d, A. H. Warren's Tramp. Reserve, J. E. Thayer's Reckoner. Very high com., C. Rathbone's Beverwyck Rebel. **Bitches**: 1st and 4th, J. Mortimer's Suffolk Brawl and Suffolk Cornet; 2d and very high com., Blemton Kennels' Blemton Brilliant and Blemton Enid; 3d, Wheelock Davey's Empress. Very high com., J. E. Thayer's Rosa Cayning and C. Rathbone's Beverwyck Rebecca. Reserve, J. E. Thayer's Hillside Model. Com., E. Porter's Winning Hand and M. Taylor's Warren Ino. **PUPPIES**—**Dogs**: 1st and 2d, Blemton Kennels' Blemton Rackett and Blemton Brawler; 3d, M. Taylor's Woodale Rustic. Reserve, very high com. and com., J. E. Thayer's Hillside Rascal, Hillside Artful and Hillside Fancy. Very high com., C. Rathbone's Beverwyck Rebel. **Bitches**: 1st, J. Mortimer's Suffolk Brawl; 2d, Blemton Kennels' Blemton Toit; 3d, Wheeler & Davey's Empress. Very high com., C. Rathbone's Beverwyck Rebecca and Oriole Kennels' Blemton Comely. High com. (2) and com., J. E. Thayer's Hillside Gaudy, Hillside Crafty and Hillside Treasure. **WIRE-HAIRED**—1st and 2d, J. Mortimer's Suffolk Tobey and Suffolk Settler; 3d, Tuller & Townsend's Capsicum. Reserve, R. G. Shaw's Oxford Dandy. Com., J. H. Hunt's Beauty. **NOVICE**—1st, Blemton Kennels' Blemton Brawler; 2d, J. Mortimer's Inognat; 3d, C. Rathbone's Beverwyck Rebel. Reserve, Oriole Kennels' Blemton Comely. High com., J. E. Thayer's Hillside Treasure and J. H. Hunt's Beauty.

SCOTCH TERRIERS.—1st, L. C. Blodgett, Jr.'s Lowrie Dunbar.

IRISH TERRIERS.—**CHALLENGE**—1st, Lewis & Jarrett's Burnside. **OPEN**—**Dogs**: 1st, W. J. Comstock's Mars; 2d, W. L. & H. A. Harris's Master. Reserve, C. E. Leland's Obo. Very high com. Chestnut Hill Kennels' Roslyn Murphy. High com., T. Pulverstat's Adventurer. **Bitches**: 1st, C. F. Sullivan's Nora; 2d, E. Lever's Kathleen; 3d, T. Pulverstat's Little Vixen. Very high com., P. F. Clancey's Eileen II. High com., W. S. Clark's Sandycroft Shona. Com., W. A. Dupee's Breda Chanc. **Puppies**: 1st, Chestnut Hill Kennels' Roslyn Murphy; 2d, P. F. Clancey's Eileen II. Very high com., Miss Nellie Sullivan's Kerry.

DANDIE DINMONT TERRIERS.—1st, F. R. Hitchcock's Border Wang.

BLACK AND TAN TERRIERS.—**CHALLENGE**—1st, Rochelle Kennels' Meersbrook Maiden. **OPEN**—**Dogs**: 1st, J. F. Campbell's Kaiser; 2d, Miss A. L. Ballou's Rochelle Knickerbocker. High com., G. Duncan's Meersbrook Diamond. **Bitches**: 1st, J. F. Campbell's Desdemona; 2d, Rochelle Kennels' Rochelle Nady.

SKYE TERRIERS.—1st, W. W. Silver's Sir Stafford; 2d, withheld; 3d and com., C. H. Smith's Gamp II. and Toddles.

YORKSHIRE TERRIERS.—**CHALLENGE**—1st, P. H. Coombs' Bradford Harry. **OPEN**—**Dogs**: 1st, P. H. Coombs' Lancashire Ben; 2d, 3d and high com., North Fields Yorkshire Kennels' Toons Royal, Prince A. I. and Harry. **Bitches**: 1st, 2d and 3d, North Fields Yorkshire Kennels' Jenny, Venus and Gypsy. **UNDER 15 LBS.**—1st, 2d, very high com., high com. and com., North Fields Yorkshire Kennels' Daisy. Fishpool Gem, Little Sister, Toons Bright and Princess Toon. **Puppies**: 1st, withheld; 2d, P. Gough's Lucy.

PUGS.—**CHALLENGE**—**Dogs**: 1st, Dr. M. H. Cryer's Max. **Bitches**: 1st, Dr. M. H. Cryer's Bessie. **OPEN**—**Dogs**: 1st, Dr. M. H. Cryer's Bob Ivy; 2d, A. L. Wilson's Little Jewell; 3d, Mrs. J. Smith's Budge. **Bitches**: 1st, Dr. M. H. Cryer's Myrtle; 2d, Miss Grace M. Hall's Dot. High com., R. T. Harrison's Nelly Bly. **Puppies**: 1st, R. T. Harrison's Nelly Bly.

KING CHARLES SPANIELS.—**CHALLENGE**—1st, W. Phillips's Roscius. **OPEN**—1st, E. Bradford's Fannie; 2d, G. W. Field's Don II; 3d, Mrs. Frank B. Lucy's Don Pedro. Very high com., M. Gougherty's Panchinello. Com., G. M. Smith's Pansy.

OTHER TOY SPANIELS.—**CHALLENGE**—1st, W. Phillips's King Pippin; 2d, F. Blackwood Fay's Exeter Beauty. **OPEN**—**Dogs**: 1st, F. J. Comstock's Naoki-Poo; 2d, F. B. Fay's Exeter Earl. **Bitches**: 1st, Miss Edith R. Catlin's Sweet Vix; 2d, W. Phillips's Jenny Lind. Very high com., E. Bradford's Rosie.

SCHIPPERKES.—1st and 2d, W. J. Comstock's Midnight and Darkness; 3d, E. R. Spaulding's Pick, Jr. Reserve, Chestnut Hill Kennels' Othello. Very high com., F. F. Dole's Daybreak.

MEXICAN HAIRLESS.—1st, Mrs. L. D. Hurd's Peppo.

MISCELLANEOUS.—1st, C. B. Gilbert's basket hound Bertrand; 2d, E. F. Burns's white English terrier White Prince; 3d, W. M. Cleaver's bob-tailed sheep dog Orson. Very high com., J. Woodward's toy terrier Dot and Mrs. W. W. Prentice's Maltese Koko. High com., O. H. O. Abbott's Mexican spaniels Manf and Midget and S. J. Wilde's Maltese Dot.

BULL-TERRIER IMPORTATION.—North Wilmington, Mass., March 31.—*Editor Forest and Stream*: We have just received from Mr. Frederick Hinks per steamer City of Berlin, the celebrated bull-terriers White Wonder and White Violet. White Wonder is by Gully the Great out of Kit, and is pronounced by Mr. Hinks to be the best bull-terrier alive. White Violet is by Charlie out of Rose, and is also a good one, having won first at Birmingham, 1889, first and special at Edinburgh, 1889, and twice first at the Aquarium terrier show, London. As we intend to retire champion Jubilee from exhibition and devote him to stud purposes exclusively, we trust that we shall find in White Wonder a worthy successor.—W. L. & H. A. HARRIS.

CHESAPEAKE BAY DOGS AT BALTIMORE.—*Editor Forest and Stream*: The Chesapeake classes at our show were particularly well filled, and created a new interest in this much neglected breed. Unfortunately there was some misunderstanding in the classifications, so many good dogs were wrongly entered. Among them were Jay F. Townner's Polly, Henry W. Archer's Beaver and Rose, T. M. Jenkins's June, and Harry Hall's Surf. The owners failed to have their dogs transferred to the proper class, therefore they were not judged. We are forming a Chesapeake Bay Dog Club, and will make a correct standard for all to breed to.—W. STEWART DIFFENDERFER.

FIELD TRIALS AND CELEBRATED DOGS.—We have now on sale a fine series of large handsome photographs of field scenes and celebrated dogs from paintings by Mr. J. M. Tracy, which cannot fail to interest sportsmen and dog lovers. There are more than forty different subjects and the pictures are of large size and suitable for framing. Thirty-seven of the subjects—all photographs—are about 22x35 inches, and the others—artotypes and photographs—are about 16x20. The price is \$3 for the large size and \$1 for the small. On application, a circular giving list of subjects will be forwarded.

EASTERN FIELD TRIALS DERBY.—Entries for this event close May 1, 1890, as elsewhere stated. The purse of \$1,000 cash or cups will no doubt attract a large entry list.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

Prepared Blanks sent free on application.

Phyllis B. By Eberhart Pug Kennels, Cincinnati, O., for silver fawn pug bitch, whelped Oct. 15, 1889, by Rochester (Othello) Tring out of Dido.

Princess Lass. By C. C. Greene, Providence, R. I., for black and white ticked English setter bitch, whelped March 22, 1890, by Royal Albert out of Foreman's Lass.

Alpine Ben. By James F. Hall, Philadelphia, Pa., for orange and white rough-coated St. Bernard dog, whelped Aug. 17, 1889, by Marquis of Stafford (Save-Miss Plinlimmon) out of Hecla (Topeka-Ny).

Hopea-Bay. By R. E. Rowley, Topeka, Kan., for black, white and tan beagle dog, whelped Jan. 2, 1890, by Speculation (Ringwood-Fanny) out of Velda W. (Cameron's Racket-Pussie).

BRED.

Prepared Blanks sent free on application.

Nellie E.—Bradford Ruby II. O. D. Eisenhard's (Fostoria, O.) pug bitch Nellie E. (champion Kash-Puss B.) to Eberhart Pug Kennels' Bradford Ruby II. (champion Bradford Ruby-Puss B.), March 19 and 20.

Toppy—Bradford Ruby II. H. J. Bramlage's (Cincinnati, O.) pug bitch Topy, to Eberhart Pug Kennels' Bradford Ruby II. (champion Bradford Ruby-Puss B.), March 2 and 3.

Champion Bradford Ruby II. R. B. Duncan's (Chicago, Ill.) pug bitch Coozie (Pudgie-Beauty) to Eberhart Pug Kennels' Bradford Ruby II. (champion Bradford Ruby-Puss B.), March 20 and 21.

Lulu IV.—O'Donovan Rossa. W. F. Van Buskirk's (Odell, Ill.) Irish setter bitch Lulu IV. (Shay's Dick-Lulu II.) to Glendyne Kennels' O'Donovan Rossa (Sarsfield-Nino), March 24.

Daisy.—Berkley II. F. L. Cheney's (Pittsfield, Pa.) Irish setter bitch Daisy (champion Chief-Leigh Doane), to Alden S. Swan's Berkley II. (champion Chief-champion Gussie), March 6 and 7.

WHELPS.

Prepared Blanks sent free on application.

Lorraine—Marquis of Stafford, Mrs. F. Smyth's (Germantown, Pa.) rough-coated St. Bernard bitch Lorraine, March 1, eight (two dogs), by James F. Hall's Marquis of Stafford (Save-Miss Plinlimmon).

Bess III.—Beaumont. Dr. Lordy's (New York city) Gordon setter bitch Bess III. (A. K. R. 6983), March 27, twelve (seven dogs), by Beaumont Kennels' Beaumont (Donald III.—champion Floss).

SALES.

Prepared Blanks sent free on application.

Topeka Boy. Black, white and tan beagle dog, whelped Jan. 2, 1890, by Speculation out of Velda W., by F. M. Shelley, Sheridan, N. Y., to R. E. Rowley, Topeka, Kan.

Mulechey. Dark red Irish setter dog, whelped Aug. 19, 1890, by Blaze out of Gladys, by Glendyne Kennels, Bristol, R. I., to Wm. Willie, Fort Niobrara, Nebraska.

Clipper—Lady Watson whelp. Sable and white collie dog, whelped Dec. 12, 1889, by C. G. Hinckley, Oak Shade Kennels, Lee, Mass., to Wm. S. Hopkins, Newark, N. J.

Crocket-Loo whelp. Apricot fawn pug bitch, whelped Nov. 25, 1889, by C. G. Hinckley, Oak Shade Kennels, Lee, Mass., to Howard Brothers, Columbus, O.

Synaul. Black, white and tan beagle bitch, whelped July 13, 1889, by Kennell's Lee out of Tone, by F. W. Chapman, Melrose, Mass., to Kuehl & Prefountain, Manistee, Mich.

Princess Lass. Black and white ticked English setter bitch, whelped March 22, 1889, by Royal Albert out of Foreman's Lass, by Harry Waldron, Providence, R. I., to C. C. Greene, same place.

Lil. White St. Bernard bitch, whelped Feb. 24, 1889, by Marquis of Stafford out of Ebon, by James F. Hall, Philadelphia, Pa., to Thos. Carroll, Germantown, Pa.

Lady Rosalind. Orange and white St. Bernard bitch, whelped June 23, 1885, by Plinlimmon out of Lady Burghley, by James F. Hall, Philadelphia, Pa., to Nashville Kennels, Nashville, Tenn.

Phyllis B. Silver fawn pug bitch, whelped Oct. 15, 1889, by Rochester out of Dido, by Eberhart Pug Kennels, Cincinnati, O., to H. L. Brindle, Sharon, Pa.

Dude of Monroe. Silver fawn pug dog, whelped May 23, 1889, by champion Kash out of Lady Thora, by Eberhart Pug Kennels, Cincinnati, O., to Mrs. H. A. Spaulding, Chicago, Ill.

KENNEL MANAGEMENT.

No Notice Taken of Anonymous Correspondents.

F. C. Southampton, L. I.—My setter, 10 years old, has sores which he bites and scratches. They are scaly and red and turn the hair red also. Ans. Put 5 drops of Fowler's solution of arsenic in the food night and morning. Use zinc oxide ointment on the sores and reddened spots. Exercise, keep the bowels open and feed very little meat.

C. T. L., Fryeburg, Me.—I have a hound dog that has what I call bloody diarrhoea about once in two weeks. He is all right and has a good appetite except the day he has that. Ans. Have some 3-grain pills of ergot made and give one night and morning concealed in a morsel of meat. Keep bowels easy by syrup of buckthorn in teaspoonful doses.

W. O. M., Erie, Pa.—I have a very nice setter puppy, 4 months old; have noticed several small bare spots on different parts of his body. They do not seem to bother him any, as there is no irritation noticeable, although there is a small pimple upon one or two of the spots. He is fed regularly and carefully. The little fellow is very bright and full of life, and does not act in the least dumpy or indisposed. Ans. Feed three times daily instead of four times. Give teaspoon of syrup of buckthorn every other day. Rub a little oxide of zinc ointment into the sore spots. Give a 2-grain quinine pill concealed in a morsel of meat night and morning. Feed very little meat.

Rifle and Trap Shooting.

RANGE AND GALLERY.

BOSTON, March 23.—The regular weekly shoot of the Massachusetts Rifle Association was held at its range to-day, but owing to the very unfavorable weather, the scores made were much below average. Following are the scores finished to-day, distance 200yds., Standard American target.

THE DETROIT TOURNAMENT.

DETROIT, March 23.—Though very late in making up the report, we send you story of our shoot, which took place here on March 11, 12 and 13. It was our third tournament and was completed, and in spite of the fact that three more unpleasant days could not have been selected; yet the attendance, we think, was the largest on record and would have been greater, but for the fact that no one could have been blamed for staying indoors and avoiding the wetting, which many did.

Much of the success is due to Mr. H. A. Penrose, of Corry, Pa., who gave us all his time and worked like a Trojan, instructing all hands as to working of the Keystone rapid firing system, which under his management was a perfect success. Let us tell the record of three lively days:

March 11.—The day opened wet and rainy, and a more discouraged set of men, and more men, could not be found. Mr. Penrose had nothing to say, for once. A meeting was held to decide "for or against" a postponement and it was finally decided (as we had seen a few duck hunters around who looked as if they would shoot) to go ahead. So headquarters were telephoned to and word passed around that the tournament would be carried through, the \$750 guaranteed purses and all, even if only one shooter appeared. After a half hour ride on the horse car the grounds were reached, and between the drops a score book was opened and the tournament began. Name after name was entered, and when the scorer had recovered his equilibrium a total of 55 contestants were on hand and entered for the first race. What do you think of that? Look at the score and see how they stood to it all day, and in spite of the fact that there was not a dry (outside) spot to be found on a single side of the house, the crowd came to and fro, and the day was a success. All went home at night well pleased and hoping for a good day to-morrow. The leading scores ran:

Event No. 1, 10 bluebirds, 5 traps, entrance \$1: Straun, 10; Spross, Skinner, Livingston, Parker, Renick, Andrews, Wendt, Hebel, Repp, Leitch, Rockworth, 9; Tristen, Edwards, Burkhardt, Osborn, G. Hilsendegen, Smith, Friend, Pike, Sawyer, Youngblood, Wendt, Jennings, Bole, Miller, D. Smith, Tristen, Gaskill, Willis, Loshbough, Carter, A. Keller, Benschoten, Klein, Watts, Julien, 7; Doyle, M. A. Keller, Cotter, Mills, Heal, 6; Valentine, Crowell, Monroe, Balmer, Grandpaw, Predhomme, Drullard, 5; Tim Pigeon, Cassidy, 4; Hinds, Dowder, 3; Norton, Ray, 2.

Event No. 2, 15 singles: Youngblood and Carpenter leading with 14.

Event No. 3, 10 singles: Osborn, Benschoten, G. Hilsendegen, Andrews, Hebel and Carpenter 10 each.

Event No. 4, \$100 guaranteed purse: Livingston, Spross, 15; Emend, Brooks, Crowell, Carpenter, 14; Parker, Hebel, Osborn, Carter, Benschoten, Sawyer, Balmer, Pike, 13; Valentine, Youngblood, Edwards, G. Hilsendegen, Loshbough, Doyle, Duceit, M. A. Keller, Straun, Miller, Repp, Cotter, Fleisher, 12; Edward, Brown, Wendt, Jennings, Bole, Miller, D. Smith, Tristen, Gaskill, Willis, Leitch, 11; Willis, Scott, Rockworth, Laskill, Stanton, Andrews, Skinner, Hinds, Cassidy, Julien, A. Keller, 10; Monroe, Heal, McDonald, 9; Brea, Norton, Renick, 8; Gauthier, Wakefield, Walton, Adams, Stenius, Jager, 7; Burkhardt, 6.

Event No. 5, 5 singles and 5 pairs: Pike led with 14.

Event No. 6, 10 single bluebirds: Benschoten, Andrews, Heal, Edwards, Hebel, with 10 each.

Event No. 7, \$100 guaranteed, 20 singles, entrance \$3: Crowell 20, Spross and Youngblood 19, Parker and Fleisher 18, Edwards, Osborn, Cotter, Willis, Carpenter, Straun, Benschoten, Tristen and Jennings 17; Mills, McKee, Hebel, Andrews, Emend, McDonald and Hinds 16; Wheeler, Rumel, Klein, Leitch, G. Hilsendegen, Balmer, Burkhardt, A. Keller and Livingston 15; Skinner and Benoit 14; Carter, Doyle and 13; Pike, Rockworth, Walton, Balmer and Julien 12; M. A. Keller, Sawyer and Duceit 11; Cassidy, Scott, Renick and Loshbough 10; Morton 9, Monroe, Gaskill and Ray 8.

Event No. 8, 10 singles: Emend, McDonald, Edwards, Balmer, Carpenter, Parker, Carter, Tristen, Spross, Hebel and Fleisher 10 each.

Event No. 9, \$100 guaranteed purse, 20 live birds, entrance \$3: Crowell 20, Hebel 19, Pike, Leitch, Parker, Carter, Youngblood and Benschoten 18; Andrews, Willis, Livingston, Osborn and McDonald 17; Fleisher, Mills, Watts, Carpenter, Emend, G. Hilsendegen and Straun 16; Spross, Cassidy, Michie, Tristen, Brooks, Rumel, Balmer, A. Keller, Cotter and Renick 15; Hinds, Edwards, Julien, Benoit, Klein and McKee 14; Skinner 12, Burkhardt and Sawyer 11, Rockworth 10.

Event No. 10, miss and out, Parker won with 15.

March 12.—Still raining and attendance not quite as large as yesterday, but still the ones who are left are happy, and the "pop" of the wood powder and the "whang bang" of the black is unrelenting, as the contestants hurry around the score and "walk the plank" from trap to trap. Mud ankle deep is no impediment to the snipe and the birds are in the air and around the score in the "shanty" are so "dry," that the wet ones soon forget it ever rained. The scores ran:

Event No. 1, at 10 singles, entrance \$1: Livingston and Andrews 10 each, Benoit, Mills, Hebel, Cassidy, G. Hilsendegen, Balmer, McKee, Wheeler and Spross 9 each, Edwards, Benschoten, Leitch, Burkhardt, Youngblood, Straun, Rockworth, Jennings, Osborn and Brumitt 8 each, Skinner 7, Hebel, Bole, Rossmore, 6; Parker, North, Cotter, M. A. Keller and Fleisher 7 each, Willis, Tristen, Adams, A. Keller, Hinds, Rumel, Klein, McDonald, Windt, Carpenter, Julien and Sawyer 6 each, Jager, Michie, Gaskill, Loshbough, Doyle, Best and Ray 5 each, Morton, Ford and Pike 4 each.

Event No. 2, at 15 singles: Livingston and Hebel 15 each.

Event No. 3, at 10 singles: Youngblood and Edwards 10 each.

Event No. 4, \$50 guaranteed: Renick and Andrews 15 each.

Event No. 5, at 5 singles and 5 pairs: Hebel and Osborn 14 each.

Event No. 6, at 10 singles: Hilsendegen, Wendt, Straun, Hebel and Andrews 10 each.

Event No. 7, guaranteed (\$100) purse of \$100: Hebel, Watts, McDonald, Benschoten, Spross and Rockworth 19 each.

Event No. 8, at 10 singles: Hebel, Tristen, Andrews, Hebel, Spross, Edwards, G. Hilsendegen and Livingston 9 each.

Event No. 9, guaranteed \$100 purse: Benschoten winner with full score of 20.

March 13.—Again as the opening hour draws near, it is seen that we are destined to have more rain, and though when the first shooter goes to the score no rain is falling, yet it is in the air and about the score. The snipe hangs over the traps and all are longing for a breath of air. When it comes in earnest, bringing a shower with it, and so strongly that the man at the score has to brace himself against it, and as the storm beats in his face endeavors to make the trap puller hear him give the word. This, however, only lasts a short time, and it begins to get colder. Once in a while the sun peeps out, much to the disgust (on one account) of the "boys," as the rays are so bright in contrast to the preceding gloom that it is difficult to locate the targets.

All look forward to the \$100 donation of Mr. E. W. Voigt, and the "dead heads" around the stove begin to get out their guns which have heretofore been idle, preparatory to enter the event which does not demand an entrance fee. Hope is seen on every face, as each one is sure of getting a slice of the prize. One by one and five enter the race, and the men who have been shooting right along look blue again when they think of all this "free for all" crowd coming in for a share. However, it is quickly seen that the great majority stand no show. Twenty-five birds are being shot at, and 20 is no good for a place. So one by one the "adventurers" fall, until about the same names appear as winners, as have been repeated over and over again during the tournament.

The team contests are shot off as rapidly as possible. The Jackson team are shooting under protest, and though they win, yet the protest is sustained and the cup is finally won by the Bachelor Club of Detroit.

So closes to us the latest tournament we have ever seen, and all are glad to get it over and wish for its repetition in the fall.

Our division of guaranteed purses in all our tournaments is somewhat different from others, and as it gives general satisfaction and does away with necessity for handicapping, we consider it the best system yet introduced. The surplus from guaranteed purses, amounting to \$64, was divided into five moneys, going to five best averages for the three days: Event No. 1, \$100; Event No. 2, \$50; Event No. 3, \$25; Event No. 4, \$10; Event No. 5, \$5. S. Benschoten, Shirock, G. Hilsendegen, H. M. Livingston, Saratoga, N. Y., fifth.

The final day's score stood: Event No. 1, at 10 singles: Benschoten, Pike, Fleisher and Youngblood 10 each.

Event No. 2, at 15 singles: Livingston 15.

Event No. 3, guaranteed purse \$50, 15 birds: Youngblood, Parker, Wendt and Pike 14 each.

Event No. 4, 5 singles and 5 pairs: Hebel 14.

Event No. 5, Voigt \$100 purse, 25 bluebirds, 5 traps, 5 moneys: Wherry, 25; Crowell, Gregory, Pike and Watts 24 each; Carpenter, Livingston, McDonald, Youngblood and Andrews 23 each; Fleisher, Rockworth, Leitch, Spross and Klein 22 each; G. Hilsendegen, Parker, Benschoten, Straun, Howard and Hebel 21 each.

Event No. 6, \$100 guaranteed purse, 20 birds: Palmer, Dayton and Hebel 20 each.

Event No. 7, Sunday News trophy, teams of 3, 25 bluebirds per man:

Johnson G. C., Jackson, Mich.	23	Buchanan G. C., Buchanan.	23

Fleisher. 80 Courtney. 32

G. Hilsendegen, Youngblood, L. Hilsendegen, Klein, Gaskill, McDonald, Livingston and Mills withdrew.

Fifty singles for absolute final possession: Parker 46, Renick 43, Cotter 37. Renick was the winner of the medal last March. Cotter captured it in August and Parker this time in 100 bird races.

The above race was for the purpose of making final disposition of the medal, and was again won by Parker, thus making it his absolutely, and entitling him to the honor of champion of Michigan.

GARRY.

CLAREMONT SHOOTING GROUNDS, N. J., March 29.—The uncertainty of trap-shooting was illustrated to-day on these grounds in an emphatic fashion. The champions and the local opposing team all fell down, way down. Why? Let us answer. A

glance at the scores shows some queer things. The grand team of five, composed of Messrs. Miller, Sigler, J. Von Lengerke, Briental and Cranmer, all 91 men, and as strong a team as could be gotten up anywhere in this country, broke the fewest bluebirds, viz.: 121 out of 200 shot at, the champions broke 132 each team, while the balance of the local talent, apparently the weakest of the lot, made the best score, 134 out of 200. There was a fair attendance at the grounds, probably over 300, and lively shooting was carried on all day from 9:30 to sundown. The next monthly tournament will be held April 25 and 26, the first day live birds, the second day bluebird targets. Below are scores of sweep events at 10 birds each:

Briental.	8	7	7	8	6	7	8	9	10	11	12	13	14	15	16	17	18

AD VANCE.

PHILADELPHIA, March 27.—A challenge shoot took place this afternoon on the grounds of the Wingcocking Gun Club. Unionville, between two teams of members of that organization and a few outsiders, among the latter being William Wolstencroft, champion shot of the Eastern, and J. Ruble and R. O. Heikes of the Western Team of touring trapshooters. The shoot was at Keystone targets, 15 singles and 5 pair of doubles. Wolstencroft made the best individual score, breaking 15 singles and 4 doubles, Heikes coming in second with 15 singles and 7 out of the 10 of his doubles:

Wm Wolstencroft.	15	8	R O Heikes.	15	7
H Thurman.	13	9	J Thurman.	10	7
J Ware.	8	5	P Foster.	10	6

W Pence.	11	8	Dr Howe.	5	3
J Stees.	5	5	J Ruble.	10	6
J Wolstencroft.	13	5			

BREWER IN AUSTRALIA.—The third of the pigeon-shooting contests between Captain Brewer, of the United States, and Mr. L. Clarke, of this Colony, took place on the grounds of the Melbourne Gun Club yesterday (Feb. 17), and resulted in a draw match, each shooter making the fine score of 95 birds out of a possible 100. On the occasion of the first match, which was an even term one, Captain Brewer won rather easily, and he then conceded Mr. Clarke a handicap of 3yds. in the second match, which he lost 11 to 9. Yesterday both competitors shot from the 3yds. mark, and both were in fine form. It is probable that they did not actually miss more than one or two birds each, for in Captain Brewer's case, and also in Mr. Clarke's, three birds were shot dead, but they fell outside the boundary line and counted as misses in the score. Mr. Clarke's victory seemed certain, for he was one bird to the good when very near the 100, but he missed his 98th, and thus the score was equalized and the match was drawn. Mr. Clarke does not want to shoot any more matches against Captain Brewer, as he considers that he has performed all that can be expected of him in shooting three matches, which he has done to endeavor to uphold the reputation of shooting men in Australia. Captain Brewer, on arriving from the United States, issued an open challenge, and Mr. Clarke, no longer thinking that the Captain should be able to say that he could not get any one to shoot against him in Australia, accepted, and has fired three matches, with the results of which he is satisfied.—*Melbourne Argus*.

PLEASANTVILLE, N. J., March 14.—This afternoon the Pleasantville Gun Club made the following score, bluebird clay-pigeons being used, each man shooting at 25 pigeons: Elwood Adams 19, Mark Saunders 18, George Adams 18, Elmer Lewis 18, Robert M. W. 18, J. B. Conover 9, D. M. Ingersoll 8, William Z. Adams 8, and Edward Adams broke 10 out of 15. Last week the club erected a club house with a room so arranged that the members can shoot from it during bad weather, and handsomely fitted-up quarters to entertain visiting clubs which visit here from all parts of the country.

TORONTO, March 22.—The Stanley Gun Club held their regular weekly prize shoot to-day at the Woodbine with the following results:

Emond.	17	Harrison.	14	Tracy.	12
Henry.	16	Caruthers.	14	Bayles.	10
Winchell.	15	Jawdon, Jr.	12		

The Toronto Gun Club held their regular weekly shoot at artificial birds to-day at the Woodbine with the following results:

Dodge.	16	Dicks.	12	Bayles.	9
Martin.	14	Bugg.	12	Caldwell.	9
Andrews.	11	James.	11	Gibson.	8
Henry.	15				

The members of the Toronto Gun Club held the fourth shoot in connection with the Verity medal to-day at the Woodbine, Mr. Black winning the handsome trophy for good, having won the first and last shoots; 15 sparrows per man:

D. Black.	13	Dodge.	11	H Gibson.	8
W McDowall.	12	G. Henry.	10	J James.	7

MINNEAPOLIS, March 27.—The opening shoot of the Minneapolis Gun Club for badges occurred to-day. The weather was the worst imaginable, a driving snow storm with the wind directly out of the north made perfect shooting out of the question. The club has added fifteen new members to its already large membership, with the prospect of a still larger increase. New buildings have been erected, making the grounds the most perfect and complete of any in the country. The amateurs were a little timid and not one of them turned out to contest for their badge. Hereafter they will have Tuesdays to themselves and this should be a sufficient inducement to turn out a good crowd. Dr. Kilvington has donated an elegant badge to the club and known as the Senior Badge, to become the property of the member making the highest average in badge events during the season, but the member must attend and take part in at least twelve badge events before an average will be considered. Following are the scores at 15 singles and 5 pairs:

Knap (J.)001110010111110	10	10	10	00	10-4-14

SALT LAKE CITY, March 28.—The regular weekly shoot of the Salt Lake City Gun Club was held to-day—a most lovely day, propitious for good averages and a good time—and was attended by about 25 spectators. This was an encouraging and a much better public attendance than was present at the first regular match. An improvement is noticed in the scores, and the shooting was more even than at the last match. The club is gaining new members daily, and with regular practice at the traps this summer, expects to become a power in this land of many clubs and associations. Several of the members have indicated their intention to attend the Rocky Mountain Sportsman's Association tournament, to be held at Cheyenne, June 1st. The new traps have not yet reached us, but the old ones worked very well to-day, very few birds being broken. The boys all champion the good points of bluecock traps and bluecock pigeons. Following are the scores:

Regular match, 20 singles and 5 pairs bluecocks, three traps, national rules:						
A. B. Brown111100011010111101	00	11	10	10	10-19
Sam Browning01110000110010101101	10	10	10	10	10-16

THE DIANA SPORTSMAN'S CLUB, of Brooklyn, held its third monthly shoot of the half year at P. Koch's Bay View Park, Bay Ridge, March 25. Only one-half of the members put in an appearance. Shooting at bluecocks and glass balls occupied the entire afternoon, and the marksmen did not leave the traps until darkness prevented further shooting. The bluecock shooting was extremely difficult, the targets rising on the wind and the distance being further than usual. A. Boty captured the gold medal in Class A on the bluecock targets with a total of 11 out of 13. J. Schaff, who was tied with him, broke only 2 on the shoot off or 10 out of 13. In the glass ball competition D. Froeligh leads at present in Class A with 14, and Ring in Class B with 7 out of 15 shot at. The events following the regular shoot, D. Mone, J. Schaff, C. Koch and D. Froeligh being the winners.

DUNELLEN, N. J., March 24.—Many local crack shots were present at the Middlesex Gun Club's grounds at Dunellen to-day, when there was some lively shooting at both clay-pigeons and live birds. The first event was a sweepstake, 10 bluecocks each, fifty cents entrance fee, with 11 entries. Apgar broke 9, C. Smith, E. Miller and Manning each smashed 8, Brantingham and Soper tied on 7. Event No. 2 was a repetition of No. 1, with 14 entries. Miller and C. Smith broke 10 straight. Darby broke 9, Manning, Robinson, Venencie and Nelson tied on 8. Next came a special event, the "Black Duck" shoot, with 10 entries, both of which, who shot at 25 birds each for \$150 a side. "Lester" (Samuel Allen) shot out on the 21st bird. Terry scored 5 ahead and captured the stake. Regular events Nos. 3 and 4 were live-bird sweepstakes at four birds each, \$3 entrance fee. In No. 3 W. Terry killed 4 straight and took first money. C. Smith killed 3 and took second money. In No. 4 Smith killed 5 straight. Miller and Apgar tied on 3 and divided second money.

AUGUSTA GUN CLUB, Augusta, Ga., March 26.—At the sixth annual meeting of the Augusta Gun Club, held at the office of Mr. S. H. Myers, March 25, the following officers were elected: L. A. Berckmans, Pres.; W. H. Harts, Sec.; and Treas., R. J. Porter, Ordinance officer. Executive Committee, Fred E. Pope, Salem Dutcher, Allie Berckmans. The club made a fine showing for the past season and four new members were elected. These swelled the membership to seventy-one. A committee of two were appointed to make arrangements for a grand tournament to be held on April 26.—R. J. PORTER.

BROOKLYN, March 26.—The second monthly shooting of the Erie Gun Club at Woodlawn Park, Long Island, to-day, was attended by eleven members, and, although the shooting was not of the best description, yet the score of the winner of the club badge and first money, Ike Hyde, the veteran wing shot, was equal to any well known amateur. He killed 9 out of 10, and hit his bird with both barrels on the tenth. The second prize was won by C. Plate and W. Schiller.

PRINCETON, N. J., March 25.—At a meeting of the Princeton Gun Club held to-day the following officers were elected for the ensuing year: Pres., A. B. Gladwin, '91; Sec.-Treas., J. L. Williams, '92. Executive Committee, L. Adams, '91; A. Spruance, '91; A. Moses, '91. It was decided to hold a tournament on Saturday, April 12, at the close of which gold and silver medals will be awarded to the winners. March 26.—An interesting shooting contest took place between C. A. McKinney, '92; H. S. Forman, '93; O. J. Edwards, '94; and F. E. Smith, '95. McKinney and Adams tied, each breaking 10 out of 14 clay-pigeons. Edwards killed 8 and Forman 6.

NEW YORK, March 7.—This evening the Turtle Bay Rifle Club elected the following officers: C. H. Flate, Pres.; M. Heiser, Vice-Pres.; A. Straub, Treas.; H. Steffan, Sec'y. After the meeting their weekly shoot took place when the following scores were made: A. Straub 269, G. E. Jantzer 260, C. H. Flate 260, H. W. Tamm 258, H. Steffan 215, C. Beck 205, C. Unland 190, T. Fitzpatrick 183.

BROOKLYN, March 26.—The last monthly shoot of the Glenmore Rod and Gun Club, was held at Cypress Hills, L. I., only eight shooters going to the score. W. Levens won the Midas badge, with 6 out of 7. Two sweeps followed the regular shoot, 3 birds each, then miss and out. The second one was especially well-contested. The scores: Club shoot, modified Long Island rules, at 7 birds: E. Heigans, 29yds., 4, W. Selover, 27yds., 2, W. Levens, 29yds., 6, A. Eppig, 26yds., 3, J. Ochs, 27yds., 3, J. Boehm, 29yds., 4, J. Simson, 29yds., 4, H. Schlichtner, 29yds., 5.

TRENTON FALLS, N. J., March 23.—There was some good shooting here to-day at pigeons, a strong wind and strong birds making difficult work. First event was a sweep, \$10 entrance, 4 entries, H. and T. traps, at 10 birds: Dean Magee and Frank Heyer divided the money when each had killed 7 out of 9, Joseph Atkinson and Harry Reed, the other contestants, having only 4 and 5 respectively. A \$2 sweep followed, at 3 birds each: Frank Heyer killed 5 and got the money. Third event, at 3 birds, \$2 entrance, Magee won with a straight score. Fourth event, at 3 birds, \$2 entrance: Heyer won with 3.

LONG BRANCH, N. J., March 24.—The Central Gun Club held its regular business meeting to-day. The club decided to accept the challenge of the Riverside Gun Club, shot at live and clay-pigeons, two matches to be shot, one at Red Bank and the other on the Central's grounds. Each team will be composed of ten men, and the first match will be shot at 10 live birds per man on May 6 at Long Branch. The other shoot will be at 25 bluecocks per man, the match to be shot at Red Bank on May 20.

BROOKLYN, March 28.—One-half of the members of the Crescent Gun Club turned out to-day for the regular monthly shoot at Dexter Parker, although it rained nearly the entire afternoon. The cyclone which swept over the neighborhood of New York did not interrupt the shooting in the least, the marksmen blazing away at the birds to their hearts' content, until darkness set in and prevented further shooting. Walter Gilman won the club badge from the 23rd, mark with a clean score of 7. Four sweepstakes at 3 birds each were shot off later on; in the most closely-contested one Gilman, Simmons, Vagts and Cromelin killed 3 each; Matthews and Hopkins 2. Score of the club shoot: Gilman 7, Simmons 5, Matthews 5, Vagts 4, Cromelin 4, Hopkins 6.

FRANKLINVILLE, N. J., March 27.—Representatives of the different South Jersey gun clubs gathered in strength at Franklinville, near Clayton, this afternoon and contested for several prizes, ranging from \$100 to \$50, at live pigeons, and the teams were Chas. Doughty and W. H. Ward, of Millville; M. Morgan and Jake Polhemus, of Vineland; and W. Hand, of May's Landing, and others from Linwood and Clayton. The conditions were 21yds. rise and 80yds. boundary and double birds. The May's Landing team killed 45 out of 50, Millville 46 and Vineland 44. Hand, of May's Landing, has challenged any man in South Jersey for \$1,000 a side at live birds.

EMERALD GUN CLUB, March 26.—Prospects for a good day's shooting drew quite a number of ardent sportsmen to Sam Burbank's grounds at New Dorp to-day. It was the regular monthly shoot of the Emerald Gun Club. Ten birds were allotted to each man. The prizes shot for were gold medals, gold, silver and bronze. In shooting for the gold medal (Class A) Mr. V. Schroeder and Mr. J. Maesel, Jr., tied. Mr. Maesel, who has already won it once, won it again on the shoot-off. The silver medal in Class B was won by Mr. G. Newark, he having killed 8 out of 10. Mr. L. Ryan was the only one to shoot in Class C, and he therefore was the winner of the bronze medal. His score was only 2 out of 19.

PARKERSVILLE, L. I., March 26.—A well-contested match at bluecocks took place to-day on the Tremont Gun Club's grounds, between H. Blackley and E. Ossmann, at 25 bluecocks, 29yds. rise, Association rules. Blackley allowed his opponent 3 targets. H. Meissner, of the Erie Gun Club, also took part in the contest. Ossmann won with 17, the other two shooters breaking 15 each. The club at their monthly shoot made the following score at 20 glass balls: H. Blackley 12, H. Meissner 12, E. Miller 12, E. Bennett 11. The man making the best average through the season will win the handsome prize given for competition.

PINE BROOK, N. J., March 27.—Beautiful weather and first-class sport rewarded the many trap shooters and their friends who had undertaken the journey to Frank Class' place to-day. The attraction of the day was a match at 50 birds between F. Class and S. Van Camp, the stakes being \$250 a side. Hardly less interesting was another match between G. Griffin and W. Wheaton, both members of the Newark Gun Club, and well known to the trap and field shooting fraternity of New Jersey. In the first match Frank Class beat Van Camp by a score of 43 to 34, his longest straight run being 25 to his adversary's 13. In the other match the veteran was victorious, defeating young Wheaton with 41 to 34 out of fifty. Some well contested sweepstakes followed the matches.

RED BANK, N. J., March 28.—The Riverside Gun Club held their weekly shoot to-day. Clay birds were used. The opening event was at 10 singles, 50 cents entrance, and was won by E. W. Throckmorton and O. Hess with 9. John Cooper, second, E. M. Cooper and James Cooper, Jr., third. Second event, E. Beal and E. W. Throckmorton, first money. Third event, at 5 pairs doubles, was won by Ed. Cooper with 9. Fourth event, team shoot, three men, 10 singles, John Cooper, Dr. Field and Ed. Throckmorton won with 21; E. M. Cooper, James Cooper and E. Beal, 19. Fifth event, team shoot, three men, 5 singles; E. M. Cooper, James Cooper and E. Beal won with 9; John Cooper, Dr. Field and E. W. Throckmorton, 8.

Mr. C. G. BRAXMAR, of 47 Cortlandt street, has recently issued a new catalogue and price list of badges and medals. It is handsomely gotten up work printed in blue ink on good paper, and copiously illustrated by a multitude of cuts and designs. The average man has no idea, until he looks over a catalogue of this kind, how many and how beautiful are the designs adopted in this branch of work. The catalogue will be sent post free on receipt of 25 cents.—Adm.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices of any change of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

1,500 MILES IN AN ADIRONDACK BOAT.

PART XIV.

LAKE CHAMPLAIN, Oct. 13, Wednesday.—My supper last evening consisted mainly of pancakes, and being withal rather a heavy one, I went down a few rapids, etc., during the night, and in the morning found the blankets far out of reach. This cold was instrumental in rousing a very stiff man in the morning, otherwise I should have slept until 10 o'clock. We had pancakes for breakfast, too, at 7, and I did my full share especially favoring the maple syrup, made near by. The farmer was a nice old man, with a large and happy family, Yankee in every particular, true "Green Mountain Boys."

It froze hard during the night, and the day was rendered cloudless by a strong west wind. A guide for a party camped across the lake stayed here all night, as he was afraid to risk rowing across in the wind. His skiff would have held two like mine, and I had a good laugh at the fellow. I got off at 8, with a big lot of Porter apples and some Durham milk. Rowed straight up the lake, south, and for six miles experienced a head-on sea, which made the boat quite wet. Passed Port Henry on the west side, its houses looking like clothes hung out to dry on the great mountain side. There were numerous hell divers around, and they as well as the ducks and gulls were very tame, being evidently aware I had no gun.

At Westport the lake widened out again to a width of four or five miles, till just below Port Henry, where it takes a turn through a narrow strait and thenceforward resembled a river, at first one mile wide, then narrowing down to one-half and one-quarter mile, and thus continuing about thirty miles to Whitehall, where it ends. The wind gave me much trouble in the wide part of the water, but the views I had of Mount Mansfield, Vermont and Whiteface and Mount Hurricane in New York State, quite compensated for all such inconveniences, as they were perfectly grand, towering aloft with white summits far into the clear atmosphere. Above Chimney Point, where Champlain finally narrows, I was fooled by Bulwagga Bay; which, of equal width, seems to be but a continuation of the lake; and, the strait at the Point being but one-eighth of a mile wide, is easily overlooked. Consequently I went some distance out of the way.

Henceforward the Whitehall and Crown Point mountains and Crown Point the lower Adirondack ranges around Lake George loom up instead. The Otter River, flowing into the lake on the Vermont side, is navigable as far as Vergennes, 20 miles. Near Split Rock Mountain and Point the lake is exceedingly deep, and has never been correctly fathomed, though several attempts have been made. Boats tightly corked have been sunk to a great depth and coming up have been found to be full of water, though still corked. Crown Point has 3,000 people, and I noticed the promontory of that name whereon the French, in 1731, built Fort Frederic, which the English took in 1759, and which was finally captured by Ethan Allen. At 1:30 P. M., after rowing 26 miles since starting, I reached a little hotel on the west shore opposite the ruins of Fort Ticonderoga, where a capital dinner was prepared for me, and a genuine New England country music, and a good strum on a little old-fashioned piano in the sitting-room. The hotel was in a very beautiful spot, commanding good views of the mountains of Lake George and "Fort Ti," as they call Ticonderoga hereabouts.

Starting on about 3 o'clock, I rowed around a bend, and passing near the ruins of the old fort entered the outlet of Lake George, a stream as large as the Whitehall at Philadelphia, but with quite a current. The scenery here was enchanting, consisting of broad valleys, meadowlands and fine trees, while the rugged mountains, covered with bright colors, hung over the valleys. The wind had gone down, and when I bid farewell to the noble lake not a ripple disturbed its placid bosom. Lake Champlain is properly 40 miles long, one picture of varied beauty and magnificence. It is not to be expected, however, that the lake, the bloodiest wars which have disturbed this country have been waged around and on all sides of it. While passing the majestic ruins of the fort, three cheers were given for the memory of Ethan Allen and his Green Mountain boys.

I pulled for a mile up the outlet of Lake George to the little landing, whence I walked to the village of Ticonderoga, half a mile from the lake. The character of the name of the hotel, previously heard of, to cart me across to the lake. It took some time to find him, as he was out of town and engaged in hauling apples. These were fine Rhode Island greenings, but they were less interesting than Fletcher's pretty daughter, who was dressed up and going down town as I arrived, while her plainer sister was doing chores about the little shanty. A sad instance of the fact that the more a woman is educated, the less she goes to the heart. I pitched in and helped with the apples, and then, hitching up a horse to a long backboard truck, we went bowling down through town and over the steep hill beyond, to my boat. I had much ado to keep my feet on the wagon, and our turnout caused some excitement in the little place, which increased materially, however, when we came back with the canoe. Fletcher stood up, straddling the horse, and very grand and noble, eating apples and singing with all my might. Being a vehicle known to the people, and the road none of the smoothest, my dinner was well shaken down while I was generally shaken up. The singing seemed to gratify the inhabitants, judging from their looks, and the "Black Brigade" seemed to touch old Fletcher in a tender spot.

We arrived at the small outlet below the rapids, 1½ miles from below, about sunset. This stream is only 247 feet long, but Lake George being higher than Lake Champlain, by the time we had rowed off through a mass of saw logs one mile to the lake, passing at one place between two rocks where the current is swift enough to entitle it to the name of "The Rapids," given by the settlers. It was now nearly dark. I stopped at a house to get some eggs, and rowed on directly south, past a large mountain. The scenery was dark and very grand and noble, eating apples and singing with all my might. Being a vehicle known to the people, and the road none of the smoothest, my dinner was well shaken down while I was generally shaken up. The singing seemed to gratify the inhabitants, judging from their looks, and the "Black Brigade" seemed to touch old Fletcher in a tender spot.

It was a sheltered little cove, with two or three boulders and huge trunks of trees lying about. The weather was very cold, and my feet being numb and my hands badly chapped, a large fire which was soon roaring skyward was comfortable in the extreme. First of all, I took a refreshing but frigid swim, and then laid myself out on the grass and wrote, sitting cross-legged in the little corner under some rocks, with the fire of the outside of the place was perfectly beautiful, and I felt as if I were in an Adirondack camp once more. The birch trees added not a little to my bivouac, with their white trunks and graceful foliage. At 10 o'clock I retired in the boat, hauled up on the sand a few feet from the water. I rowed to-day 31 miles and portaged 1½ miles.

Lake George, Thursday, Oct. 16.—I was awakened at 3:30 A. M. by the rain, and getting up, slung the tent over the boat and warmed myself by the fire. The rain was very heavy, and the water had risen with the south wind now blowing and the tiny waves were lapping within 3 ft. of me. My second nap lasted until 7:30, when, shaking things out, I rowed two miles to a small house, where they cooked a good breakfast.

The people were French Canadians, and though they could talk English to me they spoke in their own patois to each other. It seemed to me that they were very kind and hospitable, and that the "bad dogs" and "dead rats" came up as I listened to the tales. The old fellow had a very clever and intelligent dog, which could go through some amusing performances. They informed me that some men were hunting for deer a little distance back and quite probably I might come across one swimming in the lake during the morning.

Starting at 9:30, I made for a long point one mile distant, and then rowed straight up the middle of the lake against a little head wind and heavier water than I expected to find, the wind having a sweep of 9 miles here. My boat pounded a great deal, making the rowing difficult. After a hard pull of several miles I stopped at Sabbath Day Point to lay in a pie and to inquire the course. The wind now became exceedingly strong and steady, and the water was very rough. I had to row very hard, and passed several beautiful islands, and at 1:30, when I had reached Black Point, stopped on the lee side of one, where I had dinner, after making some tea and boiling a few eggs and having some revolver practice at some ducks before putting off again.

Not a house was visible from my dinner station, and the outlook was of the wildest description. Two miles further on I came to the narrow and the Hundred Islands, in which were a few more wild ducks. As the day was very cold, and the water warmer than the air, the little paddlers naturally disliked to fly and allowed me to get within a few yards of them without evincing any alarm. Urged more with regard for their future safety than the desire to do them immediate damage I had fired thus at them to convince the hardy paddlers that it was not a healthy life for them.

On emerging from the islands the lake widened, and the wind, having things clear for twelve miles, kicked up a furious sea, the heaviest I ever saw on such a body of water. It was dangerous too, being short and choppy, and I had all that I could do to keep the boat from filling. As it was, within ten minutes both I and the cargo were thoroughly soaked. At each successive wave she pitched up, throwing a bucketful of water over my back. Besides, she ducked in the most extraordinary manner, and twice the waves knocked the oars from my grasp.

The wind was almost a hurricane, and when the gust came it would flatten down the water for a moment, a heavy sea invariably following. Wave after wave broke over the boat, and I heartily wished that the well was covered. Had it not been for the ducking and coming ashore, I should have gone down in a few minutes. With the spray over my head I could laugh at the sea in security. Rowing against such odds was next to impossible, and I could not have kept it up long. Reckoning the chances of cutting across the lake diagonally, I shaped my course for

some islands on the west shore, crossing over near Northwest Bay where the lake is about three miles wide. This was a severe struggle, and at one time I thought surely that my little boat, after braving the great floods and wild waters of the north, was about to fail on this comparatively small body of water, and to lose her commander after all.

Using my best endeavors in the nick of time I gained the lee of the islands, and passing the Sagamore Hotel, now closed, put in the harbor of Green Island to the pier of the Mohican House, where I landed at dusk. The water was already on the floor of my boat, and she would not have held much more. The coming darkness was the instrument saving me from a serious mishap, as it prevented the waves from breaking into the well. The heavy cargo I carried was much against me in the contest, the baggage nearly equaling the weight of another person. Disgusted and sick with my day's experiences, and disappointed in my original conception of the lake, I overhauled my companion on the pier, and taking the dripping cargo repaired to a hotel, where I spent some time in getting warm and dry.

There were seventeen guests here, the Mohican being open all the year around. It is a very small hotel, and prettily situated in a grove of trees overlooking the lake. Among the boarders were two good pianists, and during the evening we had some nice music in the parlor. The water was in its place. The waters of Lake George are clear and silvery almost everywhere, and the scenery superb. The foliage was something quite beyond description, and made a vivid effect in contrast with the dark rocks and cliffs of the mountains which rose on all sides, completely inclosing this gem of water. In fact, the whole lake is transcendently beautiful, from one end to the other. I rowed to-day but 20 miles, but the clear water was so transparently blue, and the foliage so perfect; and though the rain during the night had partially spoiled the brilliancy of the foliage, it was still gorgeous. I rowed 11 miles straight south, to Caldwell, keeping along the west shore and reaching the steamboat landing at the depot of the Delaware and Hudson Canal Co.'s R. R. at 11 A. M.

Champlain Canal, Oct. 17, Friday.—After getting together all of my traps, which quite filled the kitchen, I proceeded on my way at 9 o'clock, the boarders kindly accompanying me down to the boat and waving adieu, giving me many good wishes. The clear water being used for baptism, its color was entirely mended, was perfect; and though the rain during the night had partially spoiled the brilliancy of the foliage, it was still gorgeous. I rowed 11 miles straight south, to Caldwell, keeping along the west shore and reaching the steamboat landing at the depot of the Delaware and Hudson Canal Co.'s R. R. at 11 A. M.

At 2:30 P. M. I left by train for Port Edward, 12 miles distant, with my boat tucked away in the baggage car. There is no exit from the south end of the lake by water. We passed through Glens Falls and Sandy Hill, where I got a view of the Hudson or North River, which was my future highway to New York. I expressed the boat to Port Edward, as it was both cheaper and safer than shipping by freight.

The depot was about one-eighth mile from the Champlain Canal, and an obliging expressman soon carried it thither. The collector took my boat here, Mr. Russell gave me a pass after reading my letters, and I started down at 4 o'clock. The Champlain Canal connects Lake Champlain at Whitehall with Troy and the Erie system, and belongs to the State. It is very narrow, though the locks, all single, are quite large, and I early experienced difficulty in passing the canal boats, sometimes being in danger of being jammed into the bank by them. At many places the width of water was not more than 100 feet, and the boats were very close. The river was full of logs and the water was dark in color.

At Port Edward I met with a remarkably fine lot of apples and chestnuts, which I laid in store; but they all managed to disappear before night.

This canal, from Whitehall to the Junction Lock in Troy, is 64 miles in length. The first level was 5/8 mile long from "Mason's Kill" to Port Edward, then came a 3-mile one to Fort Miller, then one mile further brought another lock; where, after dark, I made tea and ate supper in the lock house, entertained by two old women and one young and rather handsome one. The next level, two miles long, ended in a lock which opened out on the Hudson, just above a dam. The river here, being 3/4 mile wide, this level was only 3/4 mile long, and was succeeded by a 10-mile stretch on which, after rowing two miles I reached Schuylerville at 9 o'clock. It was a dark night, and I had some trouble in finding the entrance of the canal from the river, and in waking up the lock tenders. Being off the rough water, I indulged in the luxury of taking my lamp on the forward deck, instead of, as heretofore, under the dock below. The light caused the captain to give me more room, as they were afraid of running into something big. I frequently hear their remarks while passing and when they discover what the light really is: "Well! Is that all," or "There ain't much to it," etc.

The day has been fine, with a strong west wind, but an ominous sunset at 1 o'clock. The Hudson has not the appearance of being safely navigable, being full of logs, rocks, and shoals, with some rapids; though there were a few long still reaches occasionally. At Sandy Hill is a dam 100 ft wide, forming a great water-power. My course to-day has been nearly due south, and I have come as follows: Rowed on Lake George, 11 miles; on Champlain Canal, 14 miles, and by railroad portage, 12 miles.

PHILADELPHIA, PA. M. B.

TIPPY C. C.—The spring meeting of the Tippy C. C. was held on March 22 at the residence of Mr. J. B. Keogh, and was marked by an unusually large attendance and display of oldtime enthusiasm. Several foreign members who have left the forests for the haunts of the canoeist were present and entered into plans for the coming season with a zest that bodes well for good times afloat and ashore. A committee was appointed to arrange a programme for the opening of the boating season on Decoration Day, which will include an invitation to brother canoeists, a regatta, and a series of weekly races during the summer for classes B and C. Differences to be adjusted by arbitrary handicaps, was proposed and met with hearty approval. Business over, all present fell to, and in true canoeist style disposed of an ideal lunch, after which "torches" were lighted and the club entertained with some choice music on the zither by Mr. Keogh and on the guitar by Mr. Kircho. Interests were given, a general exchange of reminiscences of the past and dreams of the future. The foresters are to be an active one, and with three new Class C canoes, and each a "world beater," added to the fleet, good races and enjoyable cruises may be expected. The officers for the year are: Captain, D. H. Orane; Mate, W. M. Dunham; Purser, C. W. Lee.

CANVAS BOATS.—Editor Forest and Stream: For the information of your reader desirous of facts in regard to canvas boats, will state that either the Stranahan or the Acme will meet his requirements for good, portable, light, and serviceable boats. I have used both, and speak from the card. The Acme is more easily rolled into smaller compass than the other, but the Stranahan for an all-around boat suits me the best of any that I have seen; for the reason that I use the Allen bow-facing oars, and when ordered for such the gunwale is especially made stiffer to permit use, but which cannot be done with the Acme. Both are shapely and neat in appearance. I beg the summer for the annual experience of the seaworthy qualities of my 12 ft. Stranahan, having been in pretty rough water with it.—E. S. WHITTAKER.

A. C. A. REGATTA COMMITTEE.—To the members of the A. C. A.: Please take notice that Edwin L. French, Esq., of 234 Jersey street, Buffalo, N. Y., has been appointed chairman of the regatta committee in the place of Robert Shaw Oliver, resigned.—HENRY STANTON, Commodore.

CONNECTICUT RIVER.—Information concerning the Connecticut River, especially in the upper portion, will be found in the FOREST AND STREAM of May 24, 31; Aug 2, Dec. 13, 27, 1883; and Oct. 2, 1884.

A. C. A. MEMBERSHIP.—Northern Division: Panson Sherwood, Brockville, Ont. Central Division: C. Avery, Rochester, N. Y.; J. F. S. Crane, Dayton, Ohio.

NEW YORK C. C.—An informal reception will be held on April 4 at 19 West Twenty-fourth street, at 8 P. M.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is prepared by J. Van Sant, "Glean," "Dick Swivel," "Syllable" and other competent authorities to be the best treatise on the subject extant.

Yachting.

"West India Hurricanes and the Great March Blizzard." By Everett Hayden, U. S. Hydrographic Office. Large quarto, with 33 topographic plates. Price \$1. Contains full history of the great storm of March, 1883, with practical information how to handle a vessel in a cyclone; use of oil at sea, etc.

FIXTURES.

A CRUISE FOR HEALTH;

OR, THE WATER-CURE TREATMENT FOR RHYPOCHONDRIA.

DR. W. (now deceased) was at the head of his profession, a scientist and a yachtsman. He contemplated having a yacht built on his own lines, but before doing so desired to be better informed on the subject of design, construction, rig and seamanship. I furnished him for the season's use a cabin yacht that two men could handle and a sailing down to salt water, and he commenced in the early spring and closed late in the fall. His yacht was built in the following winter, and when not cruising he moored her to the eastward of Smith's Island in the Delaware River, off Philadelphia. He frequently pulled up to my boat house, a mile or more away, in his light rowing yawl. Of course we had many boat talks and confidential chats. "Doctor," said I, "why don't you prescribe the medicine you are taking, fresh air and exercise, to your patients?" "Because they are too lazy," he said, "and then turning around on me suddenly, he asked, 'Can you salt a hypo?' 'What's the matter, man? Are you sick?' 'No; but the hypo is a good fellow, who imagines he has all sorts of diseases, carries a medicine chest with him and doctors himself. Now I want you to take him down to salt water, make him work or drown him, and in some way get rid of his nerves, valet, and smash his medicine chest, and—well, you understand. Take a drop, you look pale.' I took a drop and it revived me, and though horror-stricken, made out to reply: 'Very well; I will try.' And so it was fixed to start the following Monday, Oct. 7.

Great Scott! so I'm a pill monger and a child's nurse, am I? At that moment I would have given five years of my life for five minutes ashore with that hearty, robust doctor; but it was too late. "Heave short, boys, and get the mainsail on her, and show this black devil how to sweat the sail up." "Mr. Captain, I've chap-arooned for de boss, and he's sick abed. Fo de love ob Heben—" But a light tap sent him sprawling down into the cabin. As the yacht sailed away I thought I heard five years of my life for five minutes ashore with that hearty, robust doctor; but it was too late. "Heave short, boys, and get the mainsail on her, and show this black devil how to sweat the sail up." "Mr. Captain, I've chap-arooned for de boss, and he's sick abed. Fo de love ob Heben—" But a light tap sent him sprawling down into the cabin. As the yacht sailed away I thought I heard five years of my life for five minutes ashore with that hearty, robust doctor; but it was too late. "Heave short, boys, and get the mainsail on her, and show this black devil how to sweat the sail up." "Mr. Captain, I've chap-arooned for de boss, and he's sick abed. Fo de love ob Heben—" But a light tap sent him sprawling down into the cabin. "Heave short, boys, and get the mainsail on her, and show this black devil how to sweat the sail up." "Mr. Captain, I've chap-arooned for de boss, and he's sick abed. Fo de love ob Heben—" But a light tap sent him sprawling down into the cabin. As the yacht sailed away I thought I heard five years of my life for five minutes ashore with that hearty, robust doctor; but it was too

from a terrible hallucination, than was in the power of the greatest medical expert.

I will pass over the next few weary days; all we had to do was to renew the chafing gear when necessary. To our surprise the creek was alive with black backed perch and rock; they were so thick that we could turn them up out of the water with the blade of an oar. Being hungry for fish, we improvised a hoop net out of some wire rigging and old maiting, and bailed the fish out of the creek as we would water out of a boat. The ducks were driven completely off the bay and were obliged to take shelter in the inland ponds and streams, where many were killed with sticks and stones.

During the storm we lived high, being well supplied with oysters and game. However, salt pork and "lobscouse" were now Doc's favorite dishes, especially after prolonged exercise. The great showman never had as happy a family as ours.

Oct. 16 was a cold, frosty morning. Doc and I were at the pond by daylight, the birds returning to their old feeding grounds. He is no longer unsteady as he looks along his gun barrels, and voo be to the bird that comes within range. When I miss, he smiles, and begs me to send the cook with him in my place. We have all got to liking him he is so changed. Becoming tired of slaughtering ducks, we longed for a new sport, but the mouth of the creek is sanded and choked up and we must wait until the tide comes in and flow washes it away. Every ebb tide we stir up the sand with oars and poles, and the water deepens.

Oct. 17. We have made our escape and are now bowling along with a close hauled wind for Delaware breakwater. Doc is inspecting a couple of geese he killed the evening before while strolling along the shore hunting for shells and other curiosities thrown up, of which he has a bushel. Anchored under the "Stone Pile" at 3 P. M.

Oct. 18.—Secured two barrels, packed our game, shipped it and wrote home. Wired Dr. W. "Doc has gained 18lbs. of solid fat."

Oct. 19.—Blowing hard N.W. Not a vessel in harbor has moved to-day. 20-h. wind still strong and sea running high, some danger of vessel being blown overboard, but not up as yet, still lying close to the Stone Pile with heavy cable and some chance of a shift of wind, weather moderating, but all hands kept their ground tackle down. 23d, a fine morning, wind due south and air balmy, most of the fleet getting under way, especially those bound up the coast. Still quite a roll outside, but we are going through the water at a rapid rate with lower sails set, bound for Cape May. Anchored at the boat landing at point of Cape May and go ashore. Yacht laid across tide and rolled badly. Made sail and ran around in front of the town, and then stood over for Honoluli with the last of the ebb tide. Came to at our old quarters at the Stone Pile.

Oct. 24.—Wind S. W., made sail and ran down the coast to Rehobeth (Indian River), but as the wind was freshening, ran back to the Breakwater, another delightful sail. Doc steers a pretty good stick now. In fact, he has done all the work if we would let him. He superintends the cooking, and when Jack is busy helps him. I believe he is the strongest man board ship, and most obliging. It is hard to realize he was almost a skeleton scarcely a fortnight ago.

Oct. 25.—Another nice morning. Wind west, air crisp. Off for Slaughter Creek. We anchored at Lewes we made the acquaintance of a farmer living on Slaughter Creek. He gave us a kind invite to shoot over his place (we were armed with the necessary legal documents), and offered also the use of his dogs. We had to sail around for some hours waiting for the tide to rise sufficiently to get in. 26th, weather fine, with a cold N.W. wind. Pulled up to the farm house in the skiff. The old gent was glad to see us and introduced us to his family. Madame is a fine looking hearty old lady, and her two young daughters are very like her. The sixteen-year-old boy is more of the father's build, and with plenty of go in him.

We spent five happy days with these kind, hospitable people, and regretted to leave. On the second day we took the family out sailing down around the Breakwater and back. They were all delighted, especially the boy. The old colored women left in charge of the boat, and a great and good time was had on our return. Doc flatters himself that our set out board ship wasn't so bad, our cook being highly complimented by the ladies.

Nov. 1.—Wind light southeast. Had kedged out of the creek and lay at short cable with mainsail set, when our friend the farmer came on board in a dugout, with a goodly supply of homemade bread, pies and fresh milk. Our cow by this time had nearly run dry. For five days we cruised about, calling at Salem and about Bombay Hook.

Nov. 6.—Wind northeast and blowing a fret close reefed, boarded boats and secured everything on deck. Fetched up to New Castle without a back haul. Encountered a heavy sea, wind blowing directly down northeast reach, which extends up the bay to the hook. We were not breaking or dodging the rough water here. Once or twice our ship was nearly overboard, and we would have turned tail to, but we wouldn't have it that way. "Isn't this perfectly grand," said Doc. Just then a puff whistled his son's wester into the seething water. The duck went next, and Doc would have followed her but for the slack of the leeward jib sheets which he held on to with grim energy. We had just gone around off shore at Deep Water Point when this occurred and she ran a knock down overboard, but we were not long in making her before, with a great deal of trouble and danger, we succeeded in capturing the truant skiff. As we could not reach Cooper's Point that night, concluded to run into Wilmington Creek.

Nov. 7.—Wind northeast and blowing harder than the day before. Doc said he had the mumps and was all broken up. Up to 12 M. had only seen one vessel under way, an oyster schooner close reefed and down wind, sailing through the heavy sea. The making little progress, so we concluded to run up to Wilmington.

Nov. 8.—Will this northeaster never let up? Got under way and came to under the light at the mouth of the creek. Nothing showing cotton to-day.

Nov. 9.—Whew, how it snorted, nothing under way except vessels outward bound, still made up our minds to take a hack at it and found it came down from the north. At times it was only by careful nursing the sheets we were able to make the little ship face the music. The mainsail was wet to the peak and the sea had a nasty fashion of sweeping the deck. Doc's face wore a grave expression, and when an unusual heavy sea came aboard, he clapped a down haul on his brows and took a hitch. Ran in under the hook for smoother water, to take breath and pump ship, for the water was up to the gun deck. The wind had hauled more to the northward and was gradually decreasing, when a wicked one saluted us as a reminder the northeaster was not dead yet.

At Chester the wind was north, growing weaker and water smoother. Shook out reefs at Fort Mifflin and made better progress. Stretched in close to Gloucester and hove to, having been signaled from shore. Doctor W. came on board in a row-boat, which he sent back with the owner. We had written the Doctor from Salem, and so he headed us off. "The first remark he made was, 'You fellows look like a set of toughs.' 'Yes,' replied Doc, 'you big over-grown heathen, and if you will step up here on the cabin top I prove to your satisfaction that—' 'Medicine chests and doctors are no good,' added the Doctor quizzically. Then turning to Jack, he said, 'How many times have you scraped the barnacles off this sea monster?'

Had a rattling sail through the wind's eye to our home moorings, which the Doctor enjoyed very much. After taking a short spin around the point, to stretch our legs and do a little hand-sawing on our home coming and return to civilized life, Doctor W. left us, promising to see us in the morning. Went on board and turned in early, for to-morrow will be the hardest work of our trip.

Nov. 10.—Up with the sun as usual. The wind appeared to be down the mast; no matter, we have no further use for it now. Now it is old memories coming knocking at the door of our brain. When sixteen years old I made my first cruise in a sloop-rigged skiff 9ft. long on the keel, 13ft. over all and 4ft. beam, through the (then) unknown waters of the Delaware River and Bay, to Cape Henlopen, Cape May and return, a distance of 29 miles. During the half century since I have made one or more cruises every consecutive year. Many of them were ripe with interesting detail and stirring events. But the one just brought to a close is more deserving of notice from the fact that a valuable life has been saved. From the first the very helplessness of the man aroused my sympathies, and now, knowing him well, I esteem him not only for his sterling worth, but because he fought the good fight and won. This in a measure was brought about, and I say it without egotism, through the instrumentality of myself and crew. When at last the dreaded time came for Doc to say good-by, big tears that would not down welled upon his eyes, and with a choking "God bless you," he left us. R. G. WILKINS.

COOPER'S POINT, Camden, N. J.

A LONG CRUISE.—The centerboard sloop *Hattie*, of Warwick, R. I., has just returned from a cruise from that port to Jacksonville, Fla.; the trip down occupied two months and the return still longer. Only two weeks were spent at Jacksonville, and the projected cruise down the Florida coast was abandoned. The *Hattie* is a heavily-built "party boat," 35ft. waterline, 14ft. beam and 4ft. draft. She carries a crew of four all told.

INTERNATIONAL RACING.

IN the course of a couple of weeks it will probably be known whether or no there is to be any resumption of international racing this year, but at present the whole matter is in a very mixed and indefinite state. In addition to the replies from Lord Dunraven and Mr. Paul Ralli, which may be here in a week, the news is tumbled from London that a new challenge from Lord Dunraven for the America's Cup is now on its way to New York; besides which the following letter was received on Monday last week, but only made public at the meeting of the New York Y. C. on March 27:

27 NORFOLK STREET, PARK LANE, W., March 11.
DEAR SIR—On Aug. 16 last I wrote a letter to the New York Y. C., in which I stated that if the New York Y. C. and Royal Y. S. arrived at a settlement as to the terms on which the America's Cup should be held in the event of its coming to the possession of the latter club, I hoped my challenge would be considered as merely postponed, and that I was willing to sail *Valkyrie* this year against any vessel that could have been selected to defend the Cup last season.

On Sept. 15 you acknowledged my letter, but since then I have received no further communication on the subject. It will be within your recollection that on June 29 the committee appointed by the Royal Y. S. wrote that they could not confirm my challenge "with condition attached that if the Cup is won by the club challenging it shall be held under and subject to the full terms of the new deed."

On July 16 the committee of the New York Yacht Club wrote that it would be glad to receive my challenge, but that the new deed of gift "would be found susceptible of explanation."

On Aug. 4, the Royal Yacht Squadron cabled: "Your interpretation of deed and suggestion, that objection in our letter of June 29 can be overcome, alters case. Challenge holds good, provided cup can be held subject to challenge under Volunteer-Thistle conditions," to which you replied on the following day: "Cablegram to Smith's received. When you withdraw your challenge America Cup Committee was discharged. Meeting of club cannot now be called until its return from squadron cruise."

No further correspondence on the subject has, I believe, passed between the two clubs.

The position and opinion of the Royal Yacht Squadron, and, I think I may add, of all yacht clubs over here, is, defined in the following terms: "We are glad to know whether the New York Y. C. is able to agree to these terms, and, in that case, whether my challenge of last year holds good according to the meaning of my letter of Aug. 16."

As I shall be fitting out shortly, I should think it a favor if you would let me have a definite reply at your earliest convenience.

Yours faithfully, DUNRAVEN.

To J. V. S. Oddie, Esq., Sec'y, New York Y. C. New York:

A committee including Messrs. J. R. Busk, Lloyd Phoenix, C. J. Paine, Stephen Peabody and Philip Schuyler was appointed to answer the challenge of the New York Y. C. It is reported by cable that both Lord Dunraven and Mr. Ralli have declined the challenge of the 70ft. owners.

The *Field* of March 15 discusses the matter of international racing at some length as follows, but with no other result than to complicate it still further:

There is nothing in the letter of the New York Y. C. Committee to show they intended to be understood that the Royal Yacht Squadron could, if *Valkyrie* won, hold the cup under the Volunteer-Thistle conditions, and, failing that, we think the New York Committee were crediting themselves with extraordinary powers of persuasion if they really believed they could convince Englishmen that their objections to the new deed were purely imaginary.

We understand that Lord Dunraven adheres to his undertaking to defend the *Valkyrie* to be understood that the America Cup, providing the adoption of the new deed is not insisted on, and we cannot help expressing surprise that the New York Y. C. should stand in the way. If they have the power to ignore the new deed, as they did in accepting *Valkyrie's* challenge under the conditions of the old deed, it is clear that the new deed is not a legally-binding document, and a club ought not to be asked to bind itself to accept it. If the New York Y. C. really desire to carry out the intentions of the donors of the cup, they will at once revert to the original deed, and attach to it such regulations as experience has shown are necessary to insure fair and sportsmanlike contests; but any regulation which will render the cup more worth the winning than any ordinary prize should be avoided. These suggested regulations could be submitted to the New York Y. C. and the challenging club, and the latter would, of course, undertake to abide by the regulations in the event of winning the cup.

It has been announced that the owners of the American cutters *Katrina* and *Shamrock* have sent challenges to the owner of *Valkyrie* to sail some matches with the view of testing the merits of American and British 70-footers, but the same authority then goes on to say that the New York Y. C. have declined to accept it. If that is correct—and according to the record of last year's racing, just issued by the New York Y. C., it is correct—it cannot be considered a compliment to challenge the owner of the *Valkyrie* with a second-rate boat. Beyond this the *Shamrock* is said to have been lengthened, so she cannot now be a 70-foot waterline boat. It seems to us that the proper course for the owners of the *Katrina* and *Shamrock* to adopt would be to bring their beautiful vessels here. Their challenges would then be accepted as a matter of certainty, and we should be able to test the merits of their yachts with great exactness. American yachtsmen should endeavor to understand that it is not a very brave or chivalrous act to challenge a man to come 3,000 miles to a match. A challenger should show more boldness than to desire to sail a match in his own waters. It is also, however, to be remembered that the United States she could compete in the match with the Paine champion cup for 70-footers, value \$300. We thought the value of the cup was \$200, but that does not signify; what we wish to point out is that a strange yacht among a fleet of home-built craft would have only a very remote chance of winning the cup in a single race, and then wild peans would rend the air again at his own waters. It is also, however, to be remembered that the United States she could compete in the match with the Paine champion cup for 70-footers, value \$300. We thought the value of the cup was \$200, but that does not signify; what we wish to point out is that a strange yacht among a fleet of home-built craft would have only a very remote chance of winning the cup in a single race, and then wild peans would rend the air again at his own waters. We thought the value of the cup was \$200, but that does not signify; what we wish to point out is that a strange yacht among a fleet of home-built craft would have only a very remote chance of winning the cup in a single race, and then wild peans would rend the air again at his own waters. It is also, however, to be remembered that the United States she could compete in the match with the Paine champion cup for 70-footers, value \$300. We thought the value of the cup was \$200, but that does not signify; what we wish to point out is that a strange yacht among a fleet of home-built craft would have only a very remote chance of winning the cup in a single race, and then wild peans would rend the air again at his own waters. TELLLA.—See notes on Connecticut River in Canoe Department.

J. E. C., Sing Sing, N. Y.—Will you please give the address of Zettler Bros. Ans. No. 207 Bowery, New York.

R. E. S. H., West Farrington, Conn.—What preparation is used for sticking the ends of trout flies and snelling hooks. Ans. Shoemaker's wax and shellac.

N. D., Brooklyn.—Please tell me where I can obtain a catalogue of the .25cal. rifle, as I am especially interested in the .25cal. 20grs. powder. Ans. Write to J. Stevens Arms and Tool Co., Chicopee Falls, Mass.

HYBRID, Mount Vernon, N. Y.—Please tell me in your next issue what is the best kennel bedding. 1. Is excelsior good? Is it as good as anything else? 2. What is generally used at dog shows for bedding? Ans. 1. Excelsior is not to be recommended. Use hay. Dry leaves are good. 2. Straw.

T. R. E., Avoca, Pa.—I own a valuable bitch, and have kept her in confinement this past week, she being in heat. Unfortunately, yesterday she managed to escape and was lined by a cur. Is there any possibility of my rendering the said cur's contamination futile? Ans. In about a week you might try giving large doses of ergot. It would be a dangerous experiment, though.

W. H. R., Nashua, N. H.—Will you kindly inform me through kennel department what is probably ailing the dogs of this city? Within the past week a number of dogs—some very valuable ones among them—have been stricken with what our local vet. calls paralysis and died in about 12 hours. The animal affected appears first to be a little stiff, like a slight attack of rheumatism, shortly afterward the hindquarters become paralyzed, the disease affecting the muscles of the throat also, making it extremely difficult to breathe, and a little later impossible to swallow. The animal's eyes appear bright, nose cold and brain clear. On Wednesday last a terrier belonging to my sister died in this way. We buried him, thinking it would do no good to have a post mortem, as we called the disease paralysis (as did the vet. we called in). Since then dogs have died in various parts of the city in the same way, two of them owned by our immediate neighbors and within 200ft. of my house. It would seem to be a serious epidemic, or else poisoning. If it is epidemic, why do not other dogs kept with those that die have it also? My pointer was the constant companion and playmate of my sister's terrier, and he seems in perfect health. If it is poison, it must be something different from anything we know of as likely to be used by the dog poisoner. The dogs are all in seeming perfect health when attacked and die of exhaustion (apparently). It seems to attack all breeds, as I know of a Newfoundland, setter, English bulldog and terrier that have already had it and died, and have heard of many more, mostly curs. Ans. We should pronounce it poisoning; belladonna or some other depressant, like aconite, Prussic acid, etc. You should by all means have a post mortem and analysis of contents of stomach.

611 HINTS AND HELPS FOR SPORTSMEN. A book of 240 pages. Send for table of contents. Price \$1.50, postpaid, from this office.

FOR A DISORDERED LIVER try BEECHAM'S PILLS.—Adv.

NEW JERSEY Y. C.—The annual meeting of the New Jersey Y. C. was held at their club house foot of 10th street, Hoboken, on March 27, when the following officers were elected for the ensuing year: Com., James B. Scott, yacht Eagle Wing; Vice-Com., John Ortlieb, yacht Henry Gray; Treas., Edward W. Ketcham; Recording Sec., Benjamin A. Dietzen; Corresponding Sec., George E. Gartland; Financial Sec., John D. Goelschius; Meas., Gilbert S. Brown; Regatta Committee, John Ortlieb, Richard S. Greten and Gilbert S. Brown; Trustees, Theophilus Burs, Edwin A. Stevens, Edward W. Ketcham, James Bell and Thomas McArdle; Delegates to N. Y. Yacht Racing Association, George E. Gartland, Theodore H. Rogers and Edward W. Ketcham. The reports of the various outgoing officers were read, that of the Treas. and Treasurer being the most important; the former setting forth the improvements made during the year, and suggesting improvements for the coming season, especially the hauling out facilities, and the deepening of the basin in front of the club house. It was suggested also by the trustees that a row of piles be driven about 60ft. south of the breakwater, so that they could be used to fasten to instead of dropping anchor as heretofore. The suggestion will probably be carried out. The Treasurer's report set forth at length the balance at the beginning of the year and at the end, and shows that the club has a balance of \$500. An exhaustive report was also submitted by Mr. Gartland of the Delegates to the Yacht Racing Association, setting forth at length the history of the same since its organization. Thursday, June 12, 1890, was fixed as the date on which nineteenth annual regatta will be sailed. It will be held over the club course in New York Bay. Several members were elected and several new yachts added to the club's large fleet. Among the latter is the steam yacht Nirvana, lately purchased by Mr. Givernaud. The dimensions of the Nirvana are as follows: Length, extreme, 85ft.; l.w.l., 70ft.; extreme beam, 13ft.; depth, 6ft., and draft, 5ft. 10in. She is fitted with a 13in. x 13 1/2 in. high pressure condensing cylinder and has an 8ft. x 5ft. vertical boiler 45x78in. She will be schooner-rigged and will be called Maitland. Two new cutters are building at Rochester, N. Y., one designed by Com. Newell will be 35ft. over all, 28ft. l.w.l., 9ft. 10in. beam and 6ft. draft, with 4 tons of iron on keel. Her cabin is 11ft. long, with 6ft. 8in. headroom. The boat is excellently built. The other yacht was designed by Mr. Norman Compton and will be 27ft. over all, 18ft. l.w.l., 11ft. 6in. beam and 4ft. 6in. draft, with one ton of iron on keel. Both will be cutter-rigged. Mr. Compton has also designed a cutter for the 30ft. corrected length class of the following dimensions: Over all, 33ft.; l.w.l., 20ft.; beam, 8ft. 6in.; draft, 6ft. 8in., with 6,000lbs. on keel.

NEW YACHTS.—Dr. Chas. W. Bray, Portland Y. C., has a steam yacht now building by C. B. Harrington, at Bath, Me., from a design by J. H. Dyer, of Portland. She will be 55ft. over all, 48ft. l.w.l., 10ft. 6in. beam, 4ft. 8in. draft, with compound engines 64 and 11x8in., designed by Wilson Sprague, and vertical boiler 45x78in. She will be schooner-rigged and will be called Maitland. Two new cutters are building at Rochester, N. Y., one designed by Com. Newell will be 35ft. over all, 28ft. l.w.l., 9ft. 10in. beam and 6ft. draft, with 4 tons of iron on keel. Her cabin is 11ft. long, with 6ft. 8in. headroom. The boat is excellently built. The other yacht was designed by Mr. Norman Compton and will be 27ft. over all, 18ft. l.w.l., 11ft. 6in. beam and 4ft. 6in. draft, with one ton of iron on keel. Both will be cutter-rigged. Mr. Compton has also designed a cutter for the 30ft. corrected length class of the following dimensions: Over all, 33ft.; l.w.l., 20ft.; beam, 8ft. 6in.; draft, 6ft. 8in., with 6,000lbs. on keel.

CORINTHIAN NAVY.—A new squadron has been organized. It will be known as the Staten Island Sound Squadron and will cover the territory lying between the B. & O. Bridge and South Amboy, N. J. At a meeting of the Board of Managers held on March 26, it was decided to rendezvous the fleet off Roslyn and New Rochelle on May 30, next. The Board also decided to make the Spring Regatta a permanent regatta. Mr. George Rae has been appointed a Member. The following names are proposed for membership: Lieut. Vinsendon, L. Cottman, U. S. N., J. H. Stull, Thomas W. Hawkins, M. P. Rogers, W. S. Todd, Mr. Brownell, Mr. Voix.

QUEBEC Y. C.—The sixth annual meeting of the Quebec Y. C. was held on March 18, the managing committee presenting a very satisfactory report, the membership being 234, with a balance in the treasury. Last year, in order to encourage racing, the club decided to secure a design from Mr. Burgess for a yacht adapted to the home waters, the club to build the yacht and then sell it at auction to some member. An order was given, but as the design had not been received up to Feb. 15, it was cancelled. The officers for 1890 are: Com., P. Landry; Vice-Com., J. Piddington; Capt. Albert H. Peters; Sec., Arthur E. Scott; Treas., Geo. C. Scott. Additional Members Managing Committee, Stuart J. Dunn, J. S. Gilmore, Sailing Committee, John Shaw, John Ritchie, J. S. Thom, D. Arcand, E. C. Fry. Club Room Committee, C. W. Phillips, Panet Angers, L. H. Dunn. Auditors, L. S. O'Dell and W. J. Ray.

A NEW 53FT. RACER.—One would hardly look to the Bronx River, a muddy creek unknown to any but the natives of Westchester county, N. Y., to produce a rival to one of the fastest yachts ever turned out on the Clyde; but on this same stream a 53ft. craft is now building to compete with the hitherto unconquered Clara. The design is the work of an amateur, Mr. Henry A. Tenny, who is the owner of the boat. She will be 67ft. over all, 53ft. l.w.l., 13ft. beam, and only 6ft. in draft, though a keel vessel. Her keel will weigh 10 tons. Her mast will be 4ft. 6in. deck to hounds, topmast 33ft., boom 56ft., bowsprit 20ft. outboard. The frames are of hackmatac and the planking of 2in. white oak. She will be named Ventura, the second of the name launched this year, the new 40 built at Lawley's having the same name.

ORIOLE AND IDLER.—A match is proposed between these two schooners, the once famous Idler, owned by Mr. Colgate in New York and for some years owned in Chicago, and the new schooner Oriole, built in 1887 from Mr. A. C. Fry Smith's designs for Mr. George Gooderham, of Toronto. The two met in 1888, when Oriole won easily, at Mackinaw. Overtures have been made on behalf of Idler for a race this season, but nothing can be done until Mr. Gooderham returns from Europe.

CHANGES OF OWNERSHIP.—Verve No. 2, the Watson cutter, owned by Com. Boswell, Royal Canadian Y. C., has been sold to Mr. W. M. Hendrie, of Hamilton. Elf, 30ft. cutter, has been sold to Mr. Howard. Ileen, cutter, has been sold by Mr. Arthur Padelford to Mr. Frederick Gebhardt.

KATHLEEN.—Mr. Wm. Whitlock, who has just returned from England, will be unable to give his time to racing this year on account of business, and has chartered his 30-footer, Kathleen, to Mr. T. C. Zerega, former owner of the Surf, and last year mate of Kathleen's Corinthian crew.

A RACE FOR SCHOONERS.—The American Y. C. proposes to offer a \$250 cup for a race for schooners in cruising trim in connection with the regatta of July 7 at Milton Point.

FOR SALE.

Fast Cruising Yacht

XARA

Cutter rigged. Length over all, 48 feet. Waterline, 40 feet. Draught, 8 feet 4 inches. Beam, 13 feet 2 inches. 14½ tons of lead in keel. No inside ballast. Butternut aft, with two berths and set basin. Cabin and stateroom well finished in cherry and upholstered with best hair. Ample headroom for a tall man in stateroom, cabin and forecabin. Xara was designed by Edward Burgess and built by Lawley in 1888. Lawley was given plenty of time to build her, so that the work was in no way hurried, or slighted. She is as thoroughly built as a boat can be. She will be delivered either in Boston or New York.

For further information, address

J. MEANS,

Box 5, 234. BOSTON, Mass.

Ask your DRUGGIST for it **AT ONCE**. It cost *no more* than others.

If your Druggist does not have **WILLIAMS' SHAVING STICK**, we will mail you one neatly packed, postage paid, for 25c. in stamps. One **WILLIAMS' SHAVING STICK** is enough for 250 shaves. 10 comfortable, refreshing shaves for **ONE CENT**. Try it.

Address **THE J. B. WILLIAMS CO., Glastonbury, Conn.**
Established half a hundred years. Makers of the famous **GENUINE YANKEE SHAVING SOAP**.

THE GREATEST Trap for Throwing Artificial Targets EVER INVENTED

Is at last ready for the market. The trap winds up with a wrench and can be wound up to throw any distance from 15 to 65 yds. The angles are more easily adjusted than any other trap. By revolving the trap one notch it will vary the flight of the target 6 ft. in 50 yds., and can revolve it as many notches as desired with one motion. There is nothing that can get out of order or break, as there is no jar when sprung. The arm starts slowly and gathers speed as it travels, and with our positive delivery of target if a perfect one is used will not break one target in a thousand on delivery. This cut shows the new and improved Keystone target and trap for 1890, and a trial is all that is necessary to convince one of their superiority over all others.

The Glittering Gang Trolling Bait.

Warranted to catch three fish to any other make's one, or we will refund the money if not as represented. The only artificial bait that has the appearance of a live minnow. Entirely different from any other bait made. Recommended by the expert anglers of the United States. Catalogue with testimonials and discount sheet on application. Retail Prices 75 cents, \$1.00 and \$1.25. For sale at A. G. Spalding & Bros.' Sporting Goods Houses in Chicago, Philadelphia and New York, also Dame, Stoddard & Kendall, of Boston. Order direct if your dealer has not them. Ask for our guaranteed Split Bamboo Fish Rods, the best in the United States.

SYRACUSE BAMBOO FURNITURE CO.

(Successors to SYRACUSE FISH ROD CO.)

Syracuse, N. Y., U. S. A.

BROTHERS OF THE ANGLE.

OUR NEW EIGHT-STRIP SPLIT BAMBOO is the "King" of all Fishing Rods. Specifications and dimensions of the "Little Giant" Rod as given us by Dr. Henshall and described by him in FOREST AND STREAM, will be found in our '90 catalogue. Chubb's New Catalogue for 1890 is now ready. In addition to a complete list of angler's supplies it contains articles from the pens of Dr. James A. Henshall, Petronella, W. H. H. Murray, Geo. P. Goff, Norman, Brother Gardner and others. These papers are by the best writers on angling subjects and are very interesting.

Send 25 cents and receive catalogue, post-paid. This amount will be deducted from first order (if accompanied with Coupon in book) for one dollar's worth or more of our goods. Address

THOS. H. CHUBB, The Fishing Rod Manufacturer, POST MILLS, VT. Please mention FOREST AND STREAM.

HENDRYX

Makes Two Hundred and Thirty-seven different styles of FISHING REELS in sizes from twenty-five to three hundred yards.

All styles and sizes of Flush Handle, Rubber Plate and Multipliers are SCREWED REELS constructed with Interchangeable Parts the same as gun or sewing machine parts. Our REELS are made with improved automatic machinery, operated by the best skilled labor, and are Superior in Construction and Finish, and are indisputably the best line of REELS made.

Prices, from 25 Cents to \$14.00. All first-class dealers sell them. Send for our Catalogue, and we will send any kind of Reel by mail on receipt of price.

THE ANDREW B. HENDRYX CO., New Haven, Conn.

CLARK'S CELEBRATED TROLLING ROD.

Hand-made of the best selected Jamaica Lancewood. Mounted with extra heavy shoulder ferrules and double tie guides. Mountings finely nickel plated. The construction of cord-wound hand grasp, as shown in illustration, positively prevents this rod from breaking. For Muskallunge Trolling it is perfect. Equally good for any other heavy fish. Over 300 of these rods sold last season, and the first broken rod is yet to be heard from. Length 8ft. 3in., weight 9oz. Price \$6.50.

THE JOHN WILKINSON COMPANY, 55 State Street, Chicago, Ill.

Spring Tackle Catalogue will be ready March 1. Mailed on receipt of 2-cent stamp.

Manufacturing Jeweler.

MEDALS AND BADGES

A SPECIALTY.

Special Designs furnished on application free of charge.

When a sportsman finds anything which adds to his pleasure, without increasing his labor, he wants all his brother hunters and anglers to know of it and share with him the newly discovered "helper."

WHAT WE CLAIM FOR

The Automatic Reel.

FIRST.—It will wind up the line a hundred times as fast as any other reel in the world.

SECOND.—It will wind up the line slowly if the angler chooses.

THIRD.—No fish can ever get slack line with it.

FOURTH.—It will save more fish than any other reel.

FIFTH.—It will prevent tips, lines and snells from being broken by large fish.

SIXTH.—It enables the angler, and makes it desirable, to use lighter tackle.

These claims have been substantiated by the most skillful fishermen in America and Europe.

The reel is manipulated entirely by the hand that holds the rod.

YAWMAN & ERBE, ROCHESTER, N. Y.

ANSWERS TO CORRESPONDENTS.

LET THE FISH COMMISSION ALONE.

A BILL introduced in the Senate by Mr. Paddock would, if passed, very seriously threaten the usefulness of the U. S. Fish Commission. This bill provides that on and after July 1, 1890, the Fish Commission shall be transferred to the Department of Agriculture, that after that date the Fish Commissioner shall be an officer of that department, that all officers and employees of the Commission "shall be subject to appointment and removal by the Secretary of Agriculture," and that the records, papers and properties of the Commission shall be turned over to the Department of Agriculture and afterward be controlled by the head of that Department.

It is perhaps no exaggeration to say that no department of the U. S. Government has recently done so much in a practical way to benefit the whole country as has the U. S. Fish Commission. Its work has in the most direct way put money into the pockets of the people. It is now proposed by Senator Paddock to change all this and to turn the Fish Commission into a bureau of political rewards, to make positions on the Fish Commission berths for political henchmen, rewards for political services.

The U. S. Fish Commission has always been free from politics, and as we have good reason to know, when Professor Baird years ago was considering the inception of this organization, he regarded politics as the greatest danger which could threaten the work of the Commission. For this reason he had himself placed at its head, because as long as he was its head he could feel sure that politics would not be injected into it.

The work and the relations of the Fish Commission are extremely diverse. It is brought into contact with and uses without expense to the Government, the appliances and the experience of a number of different departments, especially those of the Navy and of the War Department. While practical, and doing practical work, it is also in the highest degree scientific. It has intimate relations with institutions of learning all over the country, and

uses their best men in various branches of special inquiry. It is thus an important factor in the scientific progress of this country both by the material which it collects, and by the opportunity and stimulus which it affords to scientific workers. The Fish Commission is in no sense a bureau. It is a commission constituted by Congress to develop the economic water resources of the country by the application of scientific methods to its work and investigation, and by the actual cultivation of the waters on the part of the Government.

To transfer the U. S. Fish Commission to the Agricultural Department would be to place it on an equal footing with the various divisions of that department, among which are the Pomological Division, the Microscopical Division, the Division of Forestry, the Division of Silk-culture, and so on. These divisions are no doubt very useful, but the work which they have done is in no degree to be compared with that done by the U. S. Fish Commission. The usefulness to the public of this Commission depends upon the preservation of its independence and upon its being kept free from the curse of politics. In this way alone can be secured that broad and aggressive work which gives to the Commission its value to the people.

Congress has cut this Commission loose from any other department and set it by itself. Col. McDonald, its chief, is directly responsible to Congress, and is left the utmost freedom to do the Commission's work in the way which seems best to him. How good that work is those who make their living from the waters of the Atlantic and the Pacific, and from those of the Great Lakes, can best tell.

RESPECT FOR LAW.

THIS seems to be rather a bad season for the netters in New York State, and money from their pockets is flowing quite freely into the hands of the district attorneys of the northern counties. This speaks well for the energy and faithful work of some of the game protectors, and it is very encouraging.

While the conviction of an occasional violator of the fish laws may seem to many people a matter of small importance, the moral effect of such cases is really very far-reaching. For every one of these men that is brought to book, a dozen or twenty are so thoroughly frightened that they either give up their evil courses or, at all events, only continue them in the most secret and stealthy way. Every conviction of this kind encourages the officers of the law to renewed exertions; strengthens the earnestness of purpose of the game protective societies, and—most important of all—diffuses among the great class of people who take no interest in the game and fish laws the knowledge that these laws really mean something.

For there are a vast number of people who live under the impression that laws protecting game and fish are dead letters, statutes which are never enforced and to which no one pays any attention. Such people when they hear of a conviction, by which John Smith or Peter Jones is forced to pay \$100 fine, gain a greatly increased respect for the law. It is just this lack of respect for these particular laws that has made, and still makes, their enforcement a work of great difficulty. Each conviction therefore helps on the good work of game protection far more than most of us realize.

It used to be thought that the New York State game protectors were mere figureheads, and that their positions were political rewards, but in the light of recent events in certain parts of the State, this can be said no longer.

PLANS FOR THE YEAR.

WE approach the awakening time of the year. Nature will soon arise and clothe herself in all her best. The jewels of the streams will be released from winter's custody, and all the finery of the flowers will be called upon to deck the royal garments of another spring. The life of the woods and of the fields will quicken and be glad, and everywhere will be seen the tokens of the wonderful re-birth of the year.

This is the planning time of the year. The merchant bethinks him of the increase of his business, usually attendant upon the season. The lawyer snuffs afar off the battles of the tribune which milder weather has a way of bringing out. Not less than these the sportsman plans. He formulates and re-formulates in his own mind the campaign for the season of field sports. He disposes a dozen times and in a dozen different ways of

the prospective leisure time at his command, and makes vast schemes of severe retrenchment in view of the expenditures of the coming vacation days.

This is preparation time. This is time for planning in more ways than one. There should be double plans in any sportsman's prospectus for the year. He should be glad that he is alive; he should be thankful that he lives in a glorious world like this; and he should use gratefully the pleasures that are offered. He should not only plan the manner in which he will find the season's privileges, but also the manner in which he will enjoy them. He should determine, and keep his determination, to live up even to the letter of the high code of sportsman's morals. No illicit powder smutch should soil his conscience, and no unlawful line, cast albeit deep in the unpatrolled forests, should later drop across the smooth current of his honest sleep. Let him remember that the woods have ears, and that the blue skies see all he does. Planning thus, and living up to his plans, may each good sportsman be happy in the delights of this and many other coming seasons; may he learn fully the sweets of the only stingless pleasures on this earth; and when at last his season is over, may he lie down in good peace, as nature does, as sure as she that there will be yet another awakening, in which the lilies of the field will still be blooming, sweet and undefiled and welcoming.

A ZOOLOGICAL GARDEN.

A BILL was introduced at Albany last Friday by Mr. Hoag to incorporate the New York Zoological and Botanical Gardens, and to provide for the establishment of such gardens in New York city. The incorporators named in the bill include a number of our best-known citizens, and power is given them to establish in the city of New York "zoological and botanical gardens for the purpose of encouraging and advancing zoölogy and botany, original researches in the same and kindred subjects, and of furnishing instruction and recreation to the people." They may purchase and hold animals, plants and specimens, and may possess real estate, the net annual income of which shall not exceed \$50,000. The commissioners of the Sinking Fund are authorized to allot, set aside and appropriate for the use of this corporation any of the lands belonging to the city north of 155th street, but such appropriation shall be revoked unless the proposed gardens shall be established within five years. As soon as any lands are set apart the Mayor and the President of the Department of Parks shall become *ex officio* members of the board of managers of the proposed corporation.

No argument is needed to show the desirability of passing this bill, and giving to the persons named in it as incorporators of this company the right to go ahead, organize and carry out their plans. It has long been a shame and a disgrace to New York city that it has no decent zoölogical collection, while other cities of far less size and commercial importance have such collections, which are in the highest degree creditable to them. That a good collection of wild animals, brought together with judgment and properly cared for, would pay in this great city, is scarcely to be doubted. The crowds which collect about the cages in Central Park offer abundant testimony on this point.

Within the last ten or a dozen years a number of bills of the same general character as this one have been introduced at Albany, but they have either not become laws, or, if enacted, the incorporators have failed to take advantage of the powers granted them. In view, however, of the high standing of the individuals named in Mr. Hoag's bill, it would seem probable that if incorporated, as proposed, the New York Zoölogical and Botanical Gardens would soon be something more than a mere name, and would become before long an organization creditable to this city, and profitable to its stockholders.

ATTENTION is called to the full text of the Wyoming game law which we print in another column. The frightful rapidity with which the big game of that Territory has been destroyed during the last few years, calls for the adoption of stern measures to enforce the law. This can be done only by the residents of the Territory, and their action in this matter will be watched with interest.

THE outlook for a year of great sporting activity was never better.

The Sportsman Tourist.

SLIDE ROCK FROM MANY MOUNTAINS.

V.—NINETEEN SHOTS.

I CANNOT tell you how much I was interested in General Clay's "Record of Twenty-seven Shots." Such a story appeals strongly to the old hunter, who guards his ammunition now as carefully as he used to in the old days when he might find himself 300 miles from the nearest frontier post, with only thirty or forty cartridges to last him for a couple of months. The hunters of to-day, who start out with repeating rifles and with plenty of transportation, do not, I fancy, have any such feeling as the older men who have traveled on the plains and in the mountains of the West before the railroads were built across the continent. Many of these gentlemen begin to shoot as soon as any game is seen, and continue to blaze away as long as it remains in sight. A few pounds of lead more or less is nothing to them.

I dislike this method; not so much because it brings to bag much game, nor because it makes the animals wild, but because it inevitably destroys a great many heads that are never recovered and which die of their wounds later, and merely afford food for the coyotes, eagles, ravens and magpies. Only last year I hunted in the mountains where some young Englishmen had been camped, and it is not too much to say that the mountains in some places fairly stank with the carrion which they had left behind them. In one day I came across three carcasses of animals recently killed and not recovered. Two of these were mountain sheep, one shot through the paunch and another with a hindleg broken high up. The third carcass I did not see, but I smelt it. Game enough is killed for legitimate purposes by these parties of young hunters, and it is a pity that so much more should be wasted. Men should be obliged to learn to shoot before being allowed to hunt.

The necessities of my early training as a hunter made me careful of my ammunition. I used to start off on long expeditions into the wild regions, where of course no ammunition could be purchased, and for these trips it was necessary to cut the weight of all supplies down to the lowest point possible in order to save transportation. Ammunition suffered with all other supplies, and we were always careful not to waste it. Moreover, in the early days of my hunting in the West, the two or three men whose companion I was were wonderfully good shots and most careful hunters.

When the camp required it, they hunted for meat, and they rarely missed a shot. Usually a single ball supplied our immediate wants, and if by mischance an animal was wounded and had to be shot again, the shooter was mortified and felt that he had not done well. Living year after year for months at a time with men whose views were these, I naturally came to feel as they did, and these sentiments still govern my hunting. I rarely shoot at an animal more than 150 yds. distant, and when I do so, have not very much confidence that I am going to hit it. I go out for a trip to last a month or two, and in all that time perhaps do not fire more than a dozen or fifteen shots; just enough to keep meat in camp. I have traveled for weeks through a country swarming with elk, deer and antelope without ever using my rifle.

Last year on a trip that lasted seventeen days I fired nineteen shots, and because the paper already alluded to so greatly interested me I give a brief record of them, thinking that there are some old hunters who may like to go over the list and compare these shots with some of their own.

General Clay had a good and sufficient reason for his misses. I can offer none for mine, except that I am not so good a shot as I might be if I had more practice. I cannot shoot as well now as I could a dozen years ago, when I had a reason for doing more shooting and killing more game.

My trip began Sept. 18, and I fired no shot until the 23d of that month, when I shot five times at four Rocky Mountain goats, killing them all. The distance varied from 40 yds. to 20 ft. Five shots were fired, when four should have sufficed. The reason for this was that my first shot was fired through an evergreen tree at a goat which I could only just see. I was unable to tell her position and had no vital part to fire at. The ball ranged lengthwise through the animal, but as she was still standing after the others had all fallen I shot her again. The killing of these goats was not done in wantonness, but for a purpose which seemed to me sufficient, as will elsewhere appear.

On the day next but one following this holocaust (Sept. 25) I hunted on a different mountain in the hope that I might secure another goat to complete the series that I was getting together. I climbed up to the top of the mountain and then half way down again, stalking a bunch of white everlasting, which Tom, my Indian, and I both took to be a goat, but we saw nothing on four legs big enough to shoot at. On the way down the mountain, a couple of big blue grouse flew up under the horses' noses and alighted in the branches of a couple of tall fir trees. Tom and I after spying about for a while discovered both birds, one standing very erect in one tree and the other lying along a large limb of another. One of the birds was about 40 yds. distant and the other about 60, and both were in trees growing below me on the mountain side. I killed the nearest—the standing bird—cutting its neck just below the head. To shoot at the other I had to maneuver a little so as to get the sun out of my eyes, for the bird was nearly west of me and the sun was low. After a little I found a tree trunk which protected my eyes and sights, and shot. The bird's tail was toward me and I held a little bit too low, the ball having just rubbed the skin of the back and cut the neck.

My next shot was three days later (Sept. 28) at a mountain sheep on the hillside, across a wide valley up which we were traveling. As I rarely attempt long shots, I am a poor hand at judging distances, and this animal being across a cañon made it still harder work. I guessed the sheep to be 500 yds. off, and did not wish to fire at it, but my companion persuaded me to do so. Four men were looking on, and of these, two said that the ball struck at the animal's feet, and two that it struck about four feet above her back. I myself believe that I over-shot, that she was nearer than I supposed. The same afternoon, because we needed meat in camp, I shot twice again at sheep. At the first shot I estimated the animal to be 300 yds. distant, the second was fired at the running

bunch, at perhaps 400 yds. Both were missed. I went to bed that night feeling that I was disgraced, and that I could never retrieve myself.

Three days later (Oct. 1), while riding along a trail high up in the mountain, I came across two single grouse, which flew up into the trees. I clipped the necks of both at about 20 and 30 yds. respectively. Twelve shots, three misses, eight head killed.

The following day I fired four shots, the greatest number of cartridges used any day except the first.

We were traveling through thick timber, and I was back with the packs, while two of the men were ahead on foot, cutting out a trail through the down timber. Presently some one called out, "Here are some grouse," and a moment later I heard my partner's gun speak. I dismounted, and when I had stepped forward to where he was shooting saw quite a number of Franklin's grouse on the ground, and one in a tree not more than twenty feet above me. I cut off his head quite neatly, leaving only the point of the bill hanging to the neck by a thread of skin. The other Franklin's grouse were running away through the timber, and my friend was killing them, but as I stepped about among the dwarf huckleberries, looking to see if there were any others in the trees, I startled two old male blue grouse, which flew up into the trees not more than fifteen or twenty yards away, and with two shots I cut their two necks. This made fifteen shots, of which three had been misses.

We kept on our way up the mountain and made camp under the rocks at the edge of the snow at about 4 o'clock. After the loads were off, the tents up and the fire going, three of us started out to take a prospect for sign along the foot of the rocks. My partner turned off to the right, while Dick and I went to the left. We had not advanced more than 200 or 300 yds., when just as we raised a little ridge, I saw a sheep about 50 yds. distant walking away from a little spring in a meadow. Its buttocks were toward us, so I did not shoot, but lay there flat on the ground until it had passed over the next little rise. Then I ran forward and presently saw it standing broadside on about 75 yds. distant. I killed it with a shot behind the shoulders. Shot No. 16.

Two days later I fired at a sheep at about 200 yds. and missed it. It had been shot at while lying down by my partner, and when I fired was running. Later in the day—toward evening in fact—after a toilsome journey on foot over the rocks, as I was returning toward the horses, I ran on a flock of about twenty-five white-tailed ptarmigan. When I first saw them most of the birds were half buried in the snow, as is their custom when the wind blows hard, lying crouched flat in little hollows that they had scratched out of the drift where they had sought shelter. I fired off-hand at the neck of one of the birds, which was not more than 50 ft. from me, but the furious wind which swept across the mountain top made it impossible for me to hold the gun steady, and I missed. The whole flock rose and flew out of sight over a little ridge, but as I wanted a bird to take into camp to show to one of the men who was unacquainted with this species, I followed them. They had not gone far, and I presently saw them crouched behind rocks on the ground. I shot again at about 80 yds. and killed one by a body shot.

This was my 19th and last shot. Two days later I was laid up by an accident, and hunted no more. A review of these shots shows that there is nothing about them to be proud of. It is true on the one hand that I got an unusual proportion of the game shot at, but on the other, all the successful shots were at very short distances. The longest was about 75 yds. All the shots over 100 yds. I missed. On the whole I think this about a fair measure of my shooting, but I believe I can do with the rifle what will be apparently better than this; that is to say, that if the grouse I shot at short distances had been deer, elk, sheep or antelope, at 100 yds. I should perhaps have killed nearly as many of them as I did of the birds. Yo.

WEST FLORIDA SPORTS.

TWO or three years since I penned an article or two for your paper on West Florida fishing. I thought that some of the lovers of true sport from the cold North would thereby be tempted to visit and acquaint themselves with many facts that I did not write of. I trusted too that among its pilgrims "Nessmuk," Hallock, Henshall, Roosevelt, Murray, or another "Frank Forrester," would do at least a partial justice to this much neglected country, which I must denominate a veritable sportsman's paradise, literally flowing with milk and honey, and having fewer disadvantages than any other section in North America.

West Florida has a long coast line which is indented with many small bays and inlets. Commencing at a point near Mobile, Ala., we have the fine harbor of Pensacola, which in turn has several estuaries or smaller bays; thence east to the Choctawhatchie estuary; further along St. Andrews, a good commodious harbor, as also St. Josephs near by, and then on to Apalachicola Harbor and Bay; all of which are supplied by large and in most instances navigable rivers, and all are fairly swarming with the varieties of fish peculiar to southern waters. In the interior there are numerous lakes and lakelets, notably Ochessu, Armonia, Lake View, De Funiak, Dead Lakes and hundreds of others, nearly all fed by springs and small streams, and all of which have either creeks, rivers or subterranean outlets, forming a complete network of creeks, rivers and lakes, all of which furnish the finest sport. On the gulf coast Spanish mackerel, pompano, sheepshead, mullet, sea bass, red snapper, flounder, redfish, striped bass and other kinds abound. In the rivers, creeks and lakes the black bass, bream, shell-cracker (or large speckled perch), rockfish, yellow, white and black goggle-eyed and sun perch, catfish, suckers, sturgeon, white and hickory shad, are found almost everywhere.

This country is the natural home of nearly all the varieties mentioned, and I venture that they come nearer the sportsman's ideal of perfection than in any other country on earth. I have fished pretty nearly throughout the year in different parts of the State and have conversed with local fishermen, and they claim that they are always in good condition. I have never heard of any disease in fish in any portion of west Florida. The fish are large, gamy and delicious.

And there is still enough large game in the vast swamps and wildernesses of west Florida to tempt the sportsman, when he is cloyed with the profusion of the

finny tribe, to try his hand on the deer, of which there are still plenty, or an occasional bear, and thousands of turkeys, squirrels and smaller game, with ducks in winter.

Accommodations are fairly good; board and lodging at from 50 cents to \$1 per day. The people are hospitable and accommodating; provisions cheap; vegetables and many fruits, as oranges, Peinto peaches, Japanese plums, figs, pears, walnuts, pecans, scuppernon and other grapes, can be had in plenty at several of the most desirable localities. At most points batteaux, sailboats and other craft can be had for almost the asking, and many times the native Floridian will quit his work and kindly tramp a few days through the forests in search of deer, or paddle you in his canoe many, many miles just to accommodate a stranger or guest. Transportation can be had from almost any direction. First, via Savannah, Ga., and Plant System R. R.; second, Columbus, Ga., and Chattahoochee River; third, Montgomery, Ala., and L. & N. R. R., and via Mississippi and New Orleans, Mobile and Pensacola, and by Gulf route steamers or P. & A. R. R.

At the Wewahitchka or Dead Lakes (which by the way I think are the finest fishing grounds of North America) I have been troubled but very little indeed by mosquitoes or other pests, and I have slept many nights within 150 yds. of the lake without a mosquito bar or other protection; yet again there are some localities where you have to guard against them, for they are as ravenous as the proverbial New Jersey article. In conclusion, I, on behalf of many noble-hearted gentlemen, extend a cordial invitation to all true sportsmen to visit this comparatively unknown country, promising you the rarest sport and a happy all-round good time. You need not fear malaria, for a more healthy, contented citizenship never peopled any country than you will find in West Florida. Fishing is good from September to May, seven months; and during December and January ducking and deer stalking or hunting can be indulged in, as both are then in condition.

If I had the leisure I would describe the principal fish mentioned, yet the early January number of this paper leaves nothing unsaid either by correct illustration or vivid description of nearly all the salt-water fishes common alike to the Gulf and Atlantic coasts. I may resume the subject at some other time.

I will cheerfully furnish any information that the readers of this paper may wish, and any inquiries sent the publishers of FOREST AND STREAM will reach me and receive prompt attention. PISCATOR.

THE PERIBONCA.

SOME account of a trip beyond the now famous Lake St. John may not prove uninteresting to your readers. There has been quite enough written of the way to get there, and how the lake looks when one does get there, and about what he finds, or rather what he does not find when he arrives. Probably nine out of every ten men who have visited the lake have come away disappointed. The reasons for this I will not enter into now. Part of the fault lies with the methods of advertising the region, and part is due to the sportsmen themselves.

It seems likely, however, that from this time forward gentlemen who go to the lake will at least have a chance to fish for the famous ouininsche, or ouananische, or vinnanish. The correct spelling of the name seems to be a matter of doubt. Thus far it is not probable that one sportsman in five who has visited the region has caught a single one of these fish, and many have not even got to the fishing ground.

Volumes might be written about this curious basin with its numerous tributaries and its single outlet. No less than seven large rivers flow into this basin and many small ones, while its single outlet, the Grand Discharge, or La Grande Décharge, has an auxiliary, La Petite Décharge, which joins the main body of water some fifteen miles below the lake, and these two form the noble Saguenay. The water comes into the great basin, Lake St. John, from all directions—east, west, north and south. The larger rivers are hundreds of miles long.

A description of the trip in a canoe from the lake, *i. e.*, La Grande Décharge, to Chicoutimi, where one takes steamer for Quebec, would of itself furnish material for an exciting story.

But I am to write of the Peribonca. This is not the largest tributary of the lake, still it is known to have a course of over 300 miles; and beyond that, in Labrador, the deponent saith not. I can speak of only some 50 miles. It would occupy the limits of an ordinary article to describe the method of getting to the mouth of this river. It enters the lake on its eastern side in the midst of a low-lying, desolate country, not yet settled. Indians and loggers alone are familiar with its windings. Few sportsmen have been there. It is a noble river, nearly two miles wide at its mouth and navigable for an ordinary lake steamer up to the first fall or chute, *i. e.*, some 16 miles. The current is swift and the canoes make but slow progress; still, sunset finds us in a beautiful basin or pool at the foot of the first fall. From this point for over fifty miles the river is one succession of beautiful cascades. There is no fall of any considerable height, but at the foot of each cascade is a pool which is the natural home of the ouininsche. There are some fifteen or sixteen portages or carries up to the Lake Tshitagama. This lake is an offset from the river. It is a beautiful sheet of water, surrounded by mountains and nearly 10 miles in length. This is, I believe, the winter home of the ouininsche. This fish lives, during the winter and spring, in the river tributaries of the lake. As the water gets low after the spring floods, he descends the rivers, passes through the lake and finds his food and home in the outlet, *i. e.*, the upper Saguenay. I believe, too, that he goes to sea, for once in the main river, there is nothing to stop him if he wants to. In June, and even the latter part of May, he leaves the rivers. In August he returns to the rivers to spawn and spend the winter. Lake Tshitagama is a favorite spawning ground. The lake is full of these fish in May and September. Not many are found either in rivers or lakes—for Tshitagama is only one of many—in July and early August, while on the other hand, the Grand Discharge is the best fishing ground in these months. Sportsmen then who are going up any of these tributaries in pursuit of this fish will have better luck if they avoid July and early August, and even late June.

The Peribonca at Lake Tshitagama, over fifty miles from its mouth, is about a mile wide. The country nearly up to the lake is rather low-lying. The banks of the river are of clay and in many places quite high, but there are no mountains of any size and only one tributary river of importance. Even this is not shown on the map published by the Department of Crown Lands at Quebec. The country has not been surveyed, and the authorities seem to be quite ignorant of the territory under their control. As we near the lake the country becomes mountainous and very attractive. The forest is primeval. Logging operations have been conducted in this region for many years by the Price Bros., of Chicoutimi, who are large exporters of lumber. The logs are driven down the Peribonca by gangs of men and towed through the lake by a steamer which is stationed most of the time about three miles from the mouth of this river, then the logs are passed down the Little Discharge and so on to the mills not far from Chicoutimi. A Michigan or Maine lumberman would laugh at the little saplings which are considered worthy of being cut and sent to market. The whole forest growth is stunted. It is too far north for heavy wood. The woods are said to contain game—moose, bear, caribou, etc. In a trip of nearly three weeks I did not see the print of a hoof, much less the color of a hide. Mile after mile the clay shores of the river are smooth, unmarked by any foot. One poor little jack rabbit, who was much interested in gnawing a stick and watching the canoes, was allowed to live. But the Indians go up the river in winter and get furs, so there are animals there.

There is no bird life visible. No kingfishers, no hawks, no cranes, only small birds. Even the little crossbills that we look for in Maine and the upper Canadian forests are absent. The shores are bare and deserted.

But fish are plenty. Frost pike grow here to a large size, 3 and 4 ft. in length. I do not speak scientifically, but I suppose they are called in other waters muscalonge. Then doré, yellow-finned and bellied perch, which, like the pike, is caught by trolling. They do not rise to the fly. Both are very good eatings. Next witouche, a white-meated fish like the ordinary chub, but good eating. Some trout. I remember in the quick water below the falls I got a good rise on the first cast, and wondered why he did not come out of water, thinking of course it was a ouinimische, but when the 3-pounder was safe in the net he proved to be a trout. Lastly, the best fighter for his inches in the world, the ouinimische, and plenty of them, as I have said, in June and September. Good fishing in August. One evening at dusk, as the sky cleared after a rainy day in camp, I went out for an hour or so. A foolish ouinimische was playing around in a pool, showing his back fin. The second cast attracted him, and to his surprise he felt himself hooked. Then the battle began. There was plenty of sea room, so to speak, and smooth water. My 8oz. rod never had such a test. He fought every inch. The two canoe men were kept busy holding the boat properly. Nearly half the time the tip of the rod was under water. Slowly, inch by inch, he yielded. At last he simply fell off the hook into the net and the battle was over. It took twenty-three minutes, and a single inch of slack line would have lost him. He weighed 5lbs., and made a beautiful supper for my four guides and myself. E. A. L.

ANTOINE BISSETTE'S LETTERS.

II.

DANVIT, 22 Februaire.—*M'sieu Fores' Strim:* Dar was one ting mek me laft some, some it mek me mad, w'en Ah 'll hear it read in you papier. Ah 'll goin' tol' you what dat was be, but mebbly you 'll ant be glad for have me tol' it.

It be kan o' funny an' kan o' foolish ant it, for mans w'en he tol' story baout hees go huntin' dauck or paterage or some kan o' bird, for call hees gawn "mah Scotch," "mah Greeny," "mah Remiltin," "mah double back-acabin choke-hole Paoky hammerly hol' tomato," or forty probly twenty oder nem.

Or 'f he go hunt wid bullock gawn, he can' say he 'll gat muzzly loadin' or breeches loadin' raffle or rippeter, but he 'll gat call it "mah Mahlins," "mah tirty-two forty twenty Wingchestin," or probly some oder nem so foolish lak dat.

Ah 'll said hees gawn, 'cause Ah 'll siposse dat what he 'll meant. Why 'll ant it say gawn? He shame of it for tink it ant saoun' pooty?

Den he 'll take long wid it "mah Liverlick," "mah Level Ellen." Dat was some kan o' dawg, probly.

W'en he 'll tol' baout go feeshins, he gat call hees feeshpole "mah Lennel," "mah Horvit," "mah Clubb split-bambaloo." Hees leetly clock winder jus' de same, an' tol' who tie up hees fly.

Ah weeshi someboddee tie up all of it, de fly an' de muskitto, too, w'en Ah 'll go feeshin'.

S'pose Ah 'll tol' haow Ah 'll keel dose stunk onder mah haystack las' week wid mah tree-time Bacheldy, evreeboddee know dat was mah peetchfork, ant it?

S'pose 'f Ah 'll tol' Ah chawp daown beeg basshwood an' keel tree, probly four chat sauvaug wid mah Brookes, some noboddee ant tink Ah 'll draounded it on de brooks, but know dat was de nice kan o' nem for mah hax, ant t?

An' who care who mek it mah peetchfork an' mah hax, any more as he care who mek de gawn, or de feeshpole or de dawg, hein?

Ah 'll ant s'pose dem gawn mans an' feeshpole mans geeve dat fellers gawn an' feeshpole for tol' of it more as Bacheldy an' Brookes goin' geeve me fork an' hax. Mebbly dat fellers tink he 'll goin' to 'f he 'll tol' it gret many offin. Ah do' know, me.

Well, Ah b'lieve Ah 'll took motion for see 'f Ah can tol' some huntin' an' feeshin' story, so he 'll ant gat no vulgarly nem for gawn an' feeshpole.

One morny, hairly, de sunrise was risin' on de eas'. Ah do' know what for, 'cause she ant gat for climb 'tater Hill, honly jus' Hog Back 'f she come from de wes'.

Ah 'll took daown mah G. S. R. Tower singly barrel, one a half ninches bore big flint hammerly, an' Ah 'll spik "whew" to mah bobtail Tom Hamlin half splanely, todder half, honly jus' dawg. Bah gosh, Ah had to said it.

An' Ah 'll start for go on Onc' Lasha hol' sugar place, where Onc' Lasha an' bear mos' keel bose of it one odder. De sunstrem was begin run all over de wes' side Danvit, jus' lak she lak de folkses dat side de bes' for pour meli gol' on it, w'en Ah hear mah Tom Hamlin bark,

bark so 'f he was engage for bark up all hees bark in one, probly two nhour.

W'en Ah 'll gat pooty close apart of dat tree, where mah Tom Hamlin be stan' on bees tail of it for gat up hees bark straight, Ah 'll seen somebings big an' black very high up of de graoun, some hide in de leaf.

Ah tink it bear, but Ah 'll don't fraid, me, Ah 'll ant dat kan o' mans.

Ah 'll haim mah G. S. R. Tower singly barrel one a half ninches big flint hammerly, load wid one han'fulls black powders, wad wid one quarters Veregenne *Ver-monty* an' sem measuring B B col' shoot, wad wid some Bullington *Free Press*, dey was bose of it veree good papier for dat, mos' lak waspbee nes'.

Ah 'll bet you head Ah 'll see where mah G. S. R. Tower was pint an' Ah ant shut mah heye.

Ah 'll pool de triggin veree hard, de flint, he say "chick!" de primins, he say "whoof!" G. S. R. Tower say "whoom!" An' bah gosh! haow he 'll jump on mah shoulder. Mos' knock off all mah breeze aout. Wal, sah, he blewed all dat hanimal hees brain off an' he come scrachity, whish, hoomph! on de graoun'.

He ant bear, honly jus' hell hog, or more polite for call forkypine, probly. Ah 'll had to take 'hol' of it, mah Tom Hamlin, an' pull it home for fraid he 'll gat stuck all dat pin in hees skin of it. Dat was de en' of it.

Dah, dat saoun' pooty good, but Ah do' know 'f he ant jus' good 'f Ah call it dat gawn mah hol' muskitt, an' mah dawg mah dawg. 'Less M'sieu G. S. R. Tower goin' geeve me nudder gawn for tol' hees name on it, but Ah 'll spec he 'll dead, for Ah b'lieve mah gran'-gran' pere took dat gawn at Carillon from Anglesies sojer.

If Tom Hamlin goin' geeve me dawg lak dis, Ah sorry Ah 'll spik his nem of it. 'F dem zhontymans sen' me dey two papier, Ah can use it very advantages. Miss Sam Lovel' geeve me dese.

Naow, Ah 'll goin' tol' leetly maght feeshin' story, honly it all true, so he ant mosh feeshin' story. Ah 'll goin' begin.

It was in sprim of year, w'en de squirrel cup was blow jus' hard he can blow all long on de sunshine side of de wood an' de moose flower he 'll begin show white splash on de brown leaf drop las' year.

Bombye, pooty soon Ah beegin feel de feeshin crazy in all mah bone of it, but mos' in mah stommak. Ah 'll feel of it for some specklin' beauty. Ah 'll tol' Ursule, Ah can' stood it no more an' he'll say Ah 'll ant wan' to.

So Ah 'll dig some de Onc' Lasha worm behin' hees hol' shaup. De Danvit specklin' beauty know de tas' of dat worm, kan o' lak solelder an' he lak it bes' of any cep grasshoppit he'll can' get naow. Den Ah 'll took mah Joel Bahlett swamp (dat where Ah 'll get it aout askin') crack cedar, he ant split quat, an' mah Joe Hill wood lot ash, no jint in bose of it honly some leetly crooked in las' one for feesh raoun' corner.

Ah 'll took mah cotten chalk line de capenty geeve me 'cause he ant quat so big 'nough, an' mah prow bent hook Ah sol' a heggs for two of it, an' Ah go, me.

Wal, seh, Ah 'll hear Stony Brook call me, "joogle luge, joogle luge," 'mong de birch and de spruce, an' Ah 'll go dere an' feesh, feesh, feesh, an' Ah 'll ant catch it so much as chub.

Den Beav' Medder he'll call me, "wishity sweely" 'mong de alder an' Ah 'll go dare, jus' de same. Feesh, feesh an' Ah 'll ant gat bit of any feesh cep' one hairy muskitto or hol' one so tough winter can' keel it, try if he can' made me sware.

De feeshin' crazy beegin go off mah bone but de feelin' for specklin' beauty rimmain jus' de same in mah stommak till w'en Ah 'll was goin' home dis-courage Ah fan hol' mud turkey crawl aout for smell of de sprim.

Ah catch she, an' Ah 'll don' care for specklin' beauty some more. Dat hol' mossy back was de mos' beauty Ah 'll ant spec' for see.

An' w'en Ah 'll gat home wid dat good lucky, Ursule he 'll say Ah was preffek feeshmans.

Dat ant moch story, but Ah 'll tol' you he was goin' be true. Ah mos' wish I lied leetly maght, ant it de bes' for story, hein?

ANTOINE BISSETTE.

SCIPPOS.—Ah 'll was goin' wrote gin 'f you want hear of it.—A. B.

Dis was privately.

You s'pose 'f Ah 'll blow hard baout some kan o' gawn, dey 'll geeve me one of it? Ah 'll ant got one but Ah can' tol' what Ah 'll shot wid jus' de same an' keel lot o' paterage, or bear 'f you tink bes'.

What kan o' gawn you tink Ah 'll bes' try for brag of?

Ah do' know 'f M'sieu 'Mumpsin antlak pooty well for have split bambaloo. Helak for feesh pooty well, Sat'day. Ah do' know 'f he ant Sunday. Ah jus' lieve try for it. Ah bet Ah tol' you baout some big feesh Ah 'll catch.

A. B.

NOTE.—I have examined Mr. Bisette's ancient weapon. The inscription engraved on its battered heel-plate, which he takes to be the name of the maker, is "G. R. S., No. 10," and on the lock-plate the word "Tower." I conclude that it is a Tower musket, manufactured in the reign of George II. and belonged to the 10th Regiment, which quite probably participated in Abercrombie's disastrous assault upon Ticonderoga. If so, it may have come into the possession of Mr. Bisette's ancestor (if he had one) in the manner he describes. It is more probable that he himself appropriated the arm during his service in the Papi-neau war. My observations compel the conclusion that, owing to their great longevity, the French Canadians have very few ancestors, and also that the truth may be more easily reached by believing the opposite of any statement made by these people, than by placing implicit confidence in their assertions.—H. M.

AFRICAN BIG GAME.—It is reported that Mr. Royal Cartol, who started some months ago for Zanzibar for the purpose of making a hunt for big game in Masailand, has reached civilization on his return trip. The expedition was very successful, something like 200 head of game having been secured in two months. Lions and elephants are included in the list. Even in that far land people were not exempt from attacks of the grip, and Mr. Cartol's caravan is said to have suffered severely from this disease.

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-Tales," giving a table of contents and specimen illustrations from the volume.—*Adv.*

GIL HINTS AND HELPS FOR SPORTSMEN. A book of 240 pages. Send for table of contents. Price \$1.50, postpaid, from this office.

Natural History.

CALIFORNIA'S HARD WINTER.

UBURN, Cal., March 29.—*Editor Forest and Stream:* In my article headed "Robins and Olives," published in your issue of March 13, the Mexican name of the *Heteromeles arbutifolia* should read "toyon" instead of "toyou." By the way, a Sacramento paper gets after me about that article, and calls me a tenderfoot, and as much as says that I am foolish for making such statements, and proceeds to correct me as to the habits of the robins. Just allow me to say that although I did not come to our beloved State in the fall of '49 or the spring of '50, yet I am no tenderfoot, and during thirteen years residence in the golden State, have I made fair use of close habits of observation. The only trouble with the paper in question is that it misunderstood my remarks, or else could not bear to have it go abroad that snow was ever known within the borders of California. All the world knows that we have all varieties of climate within our own confines, and also that our State is so large that California game notes must be accepted as being accurate only in the locality in which the notes were made, and not as applying to the State at large.

In this sense my notes were entirely accurate, excepting as regards the wild pigeon. This bird is somewhat eccentric in its habits, and sometimes will go pretty far south in its migrations; but yet, in so far as its presence in Placer county, in greater numbers than ever before, is concerned, I am again correct in my statement. As for the varied thrush (*Turdus naevius*), there is no question as to the truth of what I wrote. I do not claim it to be a rare bird in winter in this vicinity, but I unhesitatingly state that never before in the last thirteen years has there been one of these birds seen here for scores that have visited us during this past winter.

In addition to the birds noted in my last article I will now add more. Lewis woodpecker (*Asyndesmus torquatus*) has been a very common bird here during the heavy snows above us, although in all previous years it has been rare. Not only has this bird been common, but contrary to its general habits it has been quite tame and "folksy," alighting on fence posts in town, also on fruit and shade trees, and even on roofs of buildings, like the flickers. On one occasion in the early part of the present month I observed two specimens of Clarke's crow (*Picicorvus columbianus*) busily engaged in opening pine cones one mile out of our little city. This I consider to be a very rare experience, as this bird haunts only the bleak sides of high mountains.

Again, the American dipper or water ouzel (*Cinclus mexicanus*) has been driven down out of the high Sierra by the tremendous depth of snow covering all the smaller streams, and can be found by hundreds up and down our foothill streams, bowing, or rather courtesying its respects to the passer by. This is one of our most interesting birds and one that I have spent hours in watching. I never can overcome the feeling that the little fellow is committing suicide, when I see one of these birds going into the water and deliberately walking beneath its surface. It was always a mysterious proceeding to me, and always will be, I believe.

Another bird that is never a migrant has been driven down out of its home in higher altitudes, and has been with us in this vicinity in such numbers as to seriously crowd our own residents of the same species. This is the crissal towhee bunting, or California towhee (*Pipilo fuscus crissalis*). This quiet, home-keeping bird has been forced out of the higher foothills by the unusual deep snow, contrary to its usual habits, and is so common that every bush seems to shelter an inmate. They are now returning home and becoming visibly fewer every day. This is a very common bird throughout the foothill region, and never leaves its home, excepting under great stress of circumstances.

This has indeed been a hard winter in California. Rain, rain, rain in the valleys and foothills, and snow, snow, snow in the mountains. And even yet it keeps up its steady pace. As I write this, the constant raindrops are beating against my office windows and higher up in the mountains the snow is again threatening our railway communication. To eyes new to the country, a journey from one end of our county to the other must seem strange indeed. Coming into the county on its eastern borders, on the C. P. R. R. at the present time, a traveler is in the midst of Arctic scenery, with snow 20ft. deep yet on a level. This continues over the summit of the Sierra Nevada and until Dutch Flat is reached. There the snow has mostly disappeared and the almond trees are putting forth their bloom through the falling but rapidly melting snow. At Colfax the peach is in full bloom and tender buds are putting forth. At this place the orange, cherry and plum are in bloom, and the peach is pretty well passed out, though a few still show in blossom. In the lower foothills, and down to the western line of the county, early fruit is formed and the oaks are almost in full foliage, and all this within the limits of one county. Truly California is a country of surprise and one that all its sons and daughters, native and adopted, swear by. AREFAR.

ACCLIMATIZATION SOCIETY.—Mount Vernon, New York, March 30.—*Editor Forest and Stream:* A thought has been revolving in my mind lately for the formation of an acclimatization society, in conjunction, if possible, with other scientific societies. It is clearly of as much interest to the sportsman as to the naturalist. Our cousins on the other side have, I understand, a similar society, and it might have been made an international thing. We might, with the help of the general public, acclimatize birds from all parts of the globe. We can command any climate and any kind of country, and to my mind it is beautifully adapted to this idea. Wonderful results have been obtained in Australia and New Zealand, barring rabbits, and such a thing could not happen in this country of sportsmen. Efforts have already been started in this direction, and to the agriculturist, sportsman and naturalist this project might be an inestimable boon. I hope to hear from others on this subject.—HYBRID.

PHEASANT EGGS WANTED.—A gentleman of this city would be glad to learn where he can obtain a few settings of English pheasants' eggs. A line to X. Y. Z., this office, will receive prompt attention.

WAYS OF THE WOODCOCK.

EMPORIA, Kan.—*Editor Forest and Stream:* I have been a reader of your FOREST AND STREAM for a number of years and in that time have read many different opinions of different sportsmen on the woodcock. In your issue of January 6, T. M. Aldrich tells us what he knows about the bird and I see that he must have been a close observer of its habits, as he hits him pretty well.

I think it was the summer of '68 that I commenced to hunt woodcock for market with my father, and for a number of years I did this, commencing on the 3d of July each year and hunting until the 15th of September.

Our hunting grounds were mostly in Otsego county along the Susquehanna River and the streams emptying into it. I have not only shot the bird for market, but have spent days in watching him from the time he made his first appearance in the spring until he left in the fall. He is a funny little fellow and the more one studies him and his ways, the more he will learn, for it cannot be all learned in one season, nor do I think it can in ten. I am surprised that any man who had studied the ways of the woodcock should think that on being flushed, he makes the whistling noise with his bill. He most assuredly makes it with his wings. When a bird is full feathered, he makes the noise when he rises. After he gets as high as he is going he does not move his wings quite as fast, and so does not make the noise, unless he makes a quick turn and then it can be plainly heard, and sometimes when he settles to the ground, on lighting, he will move his wings two or three times quickly, when the whistle is again heard. But you take an old bird when he is molting and the feathers are thin, you will hear the whistling for a long way, because he has to move his wings faster, in order to keep up. The sound most nearly like the whistle of the woodcock's wing, that I ever heard, is made by the wing of a small prairie pigeon we have here in Kansas. The first time I heard it, had I not seen the pigeon, I would have said the noise was made by a woodcock.

As to the song of this bird that some have written about, I have never heard it. The only noise I have ever heard them make was in the spring of the year, just at twilight. I have watched what I took to be the male bird start from the ground and fly up nearly straight until he was a mere speck and then take a circle around, and in that flight I have often heard him make a noise, nearly the same as the English snipe does when he starts to fly. This is a sharp squeak. When the woodcock starts to come down he seems to let loose all at once and comes down with a rush until near the ground, when he spreads his wings and makes a quick whirl, and if you are close to him you will hear a noise such as the night-hawk makes when he makes a quick dart to the ground and then darts up again.

I have spent days, were the time put together, watching them feed, and in that time I have never seen one catch a bug of any kind, nor a worm, although Mr. Aldrich says they feed on them. If so, why do they need such a bill as nature has furnished them, and why run it into the ground at all any more than other birds that feed on bugs and worms, when there are plenty of them to be had without that trouble. In 1870 my father offered \$50 for a woodcock that would eat a worm, or for a woodcock in which a worm could be found when opened. I thought I would take in the money by producing a bird with a worm in it. I took at two different times birds that had just been tipped and kept them for three days and put worms of all sizes, flies and other insects where they could get them. After watching them and not seeing them offer to eat any, being told that they had probably eaten all they wanted when I was not watching, I killed and opened them, but still found no sign of either worm or bug. I have floated down the stream many an evening in a small skiff when the water was low, about sundown, and watched them come out of the alder bushes and feed along the banks. In the soil, where they feed, it takes them from three to six hard thrusts to get their bill in the full length, and as the under part of the bill is almost like gristle, it would be impossible for them to open their bill far enough to take in the smallest kind of a worm. In fact were it not for the hook on the end of the upper bill, which Mr. Aldrich thinks they hook up a worm with, they could not run their bill into the muck as they do because the under bill is too limber and the hook on the upper bill covers the end of the lower, so as to protect it. As the bill has quite a taper to it and is much smaller at the tip than at the head, it would be an easy matter for him to pull it out did he have nothing more than a small worm to pull up.

In my watching them feed I have always seen them come out of the brush on the feeding ground, or light on it from the wing, and after giving themselves a little shake run a few steps and then run their bill into the ground, which seemed to be hard work; then they will step their feet forward, so as to bring one nearly on each side of the head, and then begin to pull as though they were going to pull their heads off, and would ruffle up their feathers so that they looked as large again as when they started to put their bill into the ground, and by close watching I noticed that when the bill got out of the holes in the upper bill, it let loose very easily. I always thought the bird was sucking something from the muck, and that the suction was the cause of the bill coming out so hard. To satisfy myself I have watched them feed for a long time on a number of different occasions, and then have shot them while still feeding and opened them right there, but have never found a sign of a worm or insect of any kind in one of them yet, and I may say that I have dressed a great many woodcock in the last twenty years. After killing the bird on his feeding ground, and finding no worm in him, I have dug down in a number of places to find a worm, and would say that should you want to get worms to go fishing, don't dig for them on the ground where the woodcock feed, for if you do you will hardly find them.

Mr. Aldrich speaks of the gameness of the bird. I have often seen them show fight when they had only had their wings tipped, and but few bird dogs care to pick one up at such a time. He also asks if any one ever knew of their setting after the first of May. In 1872 I was hunting woodcock along the Cherry Valley Creek, in Otsego county, New York, the last of August, when my pointer came to a stand, and when told to put him up tried to flush the bird, but failed. He was pointing by a willow bog, and walked to the other side and came to a point again, but could not flush the bird. So I went to examine

the bog, and there I found two young woodcock, too young to fly, I should say not over two weeks old at the oldest, so this bird must have set in August. I have hunted woodcock in New York State, in Minnesota, Wisconsin, Iowa, Illinois, Missouri, Kentucky, Tennessee and Arkansas, and have found them the same bird with the same habits. I have not seen any yet in Kansas, although I am told they are here. G. C. J.

AN ENGLISH GAME FARM.

BIRD shows have a great fascination for me—not so much those that take place in our cities and towns where some thousands of the winged tribes beat their wings against cages scarcely bigger than themselves—but shows that are presented to view in the free open country, with the sky above and nature smiling around. Bent upon seeing such a show I proceeded to the game farm of Mr. William Burgess at Malvern Wells, England. I cannot say the exact number of acres covered by the aviaries of pheasants, but considering that they extend further than the eye can reach, some idea of the magnitude of the undertaking may be entertained. Mr. John Burgess accompanied me on my tour of inspection, and pointed out the stock birds and those that would ultimately populate coverts. He explained to me the method of hatching them artificially, and informed me how night after night the young birds had to be tended and nursed. He conducted me to the various pens, and as we approached the birds flew wildly about in a frenzied state, startled by my "inky coat." In one pen I saw Chinese pheasants, in another the Japanese, but the bulk of the birds were English. The coloration of the Indian birds was gorgeous in the extreme, and I stood spell-bound in the presence of so magnificent an array of tints as those presented to view. Mr. Burgess is cultivating some valuable foreign varieties in addition to those mentioned, and has met with great success. On all sides I saw birds which moved freely before my delighted eye. They seemed to be in excellent condition, and so they ought to be, considering the great care taken of them. Each year they are transferred to new ground, which means the removal of all the aviaries and their erection elsewhere. The cost of maintenance is considerable.

Pheasants, like all the members of their tribe, are afflicted with many diseases, to combat which requires all the skill of the rearer. The red worm in the windpipe, commonly known as the "gapes," is one of their worst enemies. Mr. Burgess holds that this disease originates from the excrement of cattle, all young cattle being liable to the invasion of the red worm or "husk" in the windpipe. He also told me that he had seen quantities of these worms in stagnant pools of cattle tracks, and unless they were stamped out of the birds they became firmly rooted for years. Another disease is the roup, or consumption, which, Mr. Burgess explained, was brought about by uncleanness and exposure to cold; this disease being contagious. Mr. Burgess, however, has invented special methods of curing these complaints.

He informed me that he experienced no more difficulty in rearing Amberst pheasants or the gold and silver pheasants than other kinds; but they are later in coming into full plumage. Pheasant eggs are sent during the season to all parts of the United Kingdom and abroad, and their absolute safety en route is insured by a highly skillful mode of packing, which has to be performed with the utmost care. In one day as many as 2,000 eggs leave Malvern, so that some idea may be formed as to the number of birds kept. Special methods of transmitting live birds are employed, enabling them to be sent many hundreds of miles without any loss resulting. The pheasant has many enemies in England, and the rat is one that is responsible for much mischief. Nevertheless, the birds are well guarded and protected from all kinds of foes by traps and alarm guns, invented by Mr. Burgess and manufactured in very large quantities for use in all countries. The ingenuity which stamps all the various traps is great, and evidences a keen knowledge of the natural history of the foe which it is desired to overcome. AMERICAN.

BEAVER FOR PRESERVES.—Indian Rock, March 20.—*Editor Forest and Stream:* I notice in FOREST AND STREAM, March 13, the request of "Deacon" in regard to introducing beaver into a preserve. I think, with you, the most difficult part of the work will be to catch and transport them, if they can be caught and put on the preserve. There should be plenty of wood growth for food. The best wood to grow for them is mountain ash and white birch. Also, there should be an inclosure through which they cannot pass, as they often leave their home and travel for miles. Why they do so is not known. It may be from being disturbed or lack of food. I think the best time to catch them would be in autumn, when they are young puppies. They are very shy, yet by patience and close watching a family might be located and caught without injury. I have sat and listened near one of their houses to hear the old one at work and the young cry. I hope "Deacon" will succeed in procuring and locating beaver on his preserve, as I am greatly interested in keeping this country full of every species of game which has a habitat in it.—C. J. RICHARDSON, [Willow, poplar and alder are also favorite woods of the beaver, and are more common than those mentioned by our correspondent. Of course, the beaver must be prevented from wandering.]

CHARLESTOWN, N. H., April 5.—*Editor Forest and Stream:* We have had a regular invasion of birds last night or this morning. I had seen a robin or two, and heard of a bluebird early in the week, but when I went up to the post office this morning after breakfast, the village street was fairly alive with birds, which seem to have come on in yesterday's rainstorm. Robins, sparrows and bluebirds were hopping around under the trees, or fluttering up on to the fences, and my neighbor Paris told me at noon that he thought he had fed twenty robins with bread crumbs on his lawn this morning. They have come to Easter Sunday just as they did in '87, when I wrote you "Springtime is Coming."—VON W.

ANIMALS OF THE MISSISSIPPI BOTTOMS.—In reviewing the report of the Illinois Fish Commission for 1886-1888 (FOREST AND STREAM, Nov. 28, 1889) we referred to Mr. H. Garman's "Preliminary Report on the Animals of the Mississippi Bottoms, near Quincy, Illinois, in August, 1888," which forms an appendix to that report. We now have this paper in its separate form and recommend it

to the attention of all who are interested in the hydrography of the region and its animal life. Particular attention is given to common names and to discussing the habits and interrelations of species.

RECENT ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN.—Purchased: Two lions (*Felis leo*) ♂ and ♀, one Toque monkey (*Macacus pileatus*), two six-banded armadillos (*Dusypus sexcinctus*), two badgers (*Taxidea americana*), two red-headed cardinals (*Paroaria larvata*), two red-crested cardinals (*Paroaria cucullata*), two silver-blue tanagers (*Tanagra cana*), twelve undulated grass parakeets (*Melospilacus undulatus*), one whistling swan (*Cygnus americanus*), one Indigo snake (*Spizotes erbenusius*), eight banded hog-nosed snakes (*Heterodon platyrhinos*), one black snake (*Bascanon constrictor*), two king snakes (*Ophibolus getulus*), one chicken snake (*Coluber quadrivittatus*), two coach-whip snakes (*Bascanon flagelliforme*), and two ground rattlesnakes (*Crotalophorus mitchilli*). Presented: Two opossums (*Didelphys virginiana*), one night heron (*Nycticorax griseus natus*), one screech owl (*Scops asio*), three alligators (*Alligator mississippiensis*), one water snake (*Tropidonotus spideon*), and four garter snakes (*Eutania striata*). Born: One Bactrian camel (*Camelus bactrianus*) ♂, and one axis deer (*Cervus axis*) ♂.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nantit," "Gloam," "Dick Swiveller," "Sybilene" and other competent authorities to be the best treatise on the subject extant.

Game Bag and Gun.

"FOREST AND STREAM" GUN TESTS.

THE following guns have been tested at the FOREST AND STREAM Range, and reported upon in the issues named. Copies of any date will be sent on receipt of price, ten cents:

COLT 12, July 25.	PARKER 12, hammerless, June 6.
COLT 10 and 12, Oct. 24.	REMINGTON 18, May 30.
FOLSOM 10 and 12, Sept. 26.	REMINGTON 12, Dec. 5, Feb. 5.
FRANCOTTE 12, Dec. 12.	REMINGTON 10, Dec. 20.
GREENER 12, Aug. 1.	SCOTT 10, Sept. 5.
GREENER 10, Sept. 12, Sept. 19.	L. C. SMITH 12, Oct. 10.
HOLLAND, Nov. 7.	WHITNEY SAFETY 12, March 6.
LEVETTER 12, March 13.	WINCHESTER 10 and 12, Oct. 3.
PARKER 10, hammer, June 6.	

QUAIL IN MASSACHUSETTS.

IT is interesting to note the results already apparent of the restocking the Massachusetts Fish and Game Protective Association have this season been doing. The only fear is that the quail liberated have become so accustomed to the sight of human beings, during their temporary confinement, that both they and their progeny will fall too easy a prey to the gunners next autumn. The birds liberated, instead of disappearing as expected, have been repeatedly seen. The quail that accidentally escaped from the buildings of Mr. J. O. Frost, of Vernon, Vt., already mentioned in the FOREST AND STREAM, have many times been seen. They come regularly to feed on the grain that has been scattered for them, and they scarcely show proper fear for man. The following letter to Mr. John Fottler, Jr., one of the active workers in the enterprise of restocking, speaks loudly of the danger that the birds are liable to be in unless they change their habits a good deal with the coming of warm weather and the breeding season.

GLENWOOD, Mass., March 25.—*Mr. Fottler:* Dear Sir—Seeing by the papers your efforts to restock with quail the woods and fields of Massachusetts, I am led to write that I was witness to-day of a sight which I think would interest you, particularly if you have liberated any birds in the neighborhood of Medford. Looking out of the office windows of the mill, which is in a fairly well settled neighborhood, I saw two large birds feeding with a flock of English sparrows. When they flew from one feeding spot to another I made up my mind at once they were quail, but was loth to believe it. But upon investigation I found it was a pair of quail. When the sparrows left the ground and flew into the nearest tree the quail also went into a tree, staying there several minutes before flying into a neighboring field. This struck me as a strange companionship. The quail did not seem in the least to understand their strange position. A house was within a few feet of where they were feeding, with persons around, of whom the birds seemed to show no fear. This is why I associate them with your liberated birds. They seemed very tame and out of their natural haunts.—FRANK FALLON.

To this letter Mr. Fottler adds that they were undoubtedly some of the birds liberated by the committee. Other localities are also visited with quail to an extent that surprises the inhabitants. The trouble is pretty sure to begin with a terrible slaughter of these birds in the fall, unless the gunners can be educated up to the necessity of leaving a few to keep up the stock. SPECIAL.

IN ESTES PARK.

ESTES PARK is one of the most lovely spots in all the Rocky Mountains. It is nearly 8,000 feet above the sea level, and at the very foot of Long's Peak. Its scenery is wonderfully beautiful, and the mountains among which it lies offer unending attractions to those who are fond of mountain climbing. The rare atmosphere is clear and life-giving, and the cool brooks which flow down from the banks of perpetual snow shine and sparkle like liquid jewels beneath the sun.

Within a short time Estes Park has become quite a favorite resort of people both in the East and West, yet it is far enough from the railroad to escape the throngs of tourists which flock to those resorts which are directly reached by the railroads. The best way to get to Estes Park is via Denver by the Burlington route to Lyons, a distance of less than fifty miles from Denver. From Lyons a 20-mile stage ride takes one into the Park.

For those visitors who do not care for camping out there are good hotel accommodations in the Park, and besides this there are a number of ranchers there who are glad to take boarders. The hotels charge from \$12 to \$20 per week, or \$2 per day, and I believe that the ranchmen take boarders at prices considerably less. One of the ranches is known as the Elkhorn ranch, from the fact that it is all covered with elk horns taken from animals killed in the neighborhood.

Estes Park used to be a great country for big game, and deer, elk, bear and mountain sheep are still to be found. There are any quantity of grouse or other small game. One party got five bears last season. The fishing is splendid, and trout are so abundant that they are served at the hotel tables twice a day.

There are few places where a man can go for rest and a quiet time that are more attractive than the place I am describing. Last summer I spent some time there with my wife and two boys, and when we came out in September we were all wonderfully improved in health and most enthusiastic about the place. We made the ascent of Long's Peak and some minor mountains, and enjoyed our whole visit.

CHATHAM, N. J.

TURKEY HUNTING IN TEXAS.

Editor Forest and Stream:

As a great many of your readers may be interested in turkey hunting I send you a rough drawing of a caller used by us. We got it from Col. Geo. W. Baylor, of El Paso, Texas, who is one of the best hunters living, and he got it from a Cherokee Indian, I believe. It is by far the most perfect device made to hunt with, as you can imitate a hen or gobbler and never make a mistake, which one is very liable to do with a quill, and then it is a perfect imitation and a quill is not. Now, as how to make it. Get a piece of white pine, or poplar is better, 1in. thick and 2in. wide, and with a chisel and sharp knife make a mortise, as per dotted lines. One side should be left about 1in. wide and the other shaved down till it sounds exactly like a turkey. A slit should be cut in the middle of the thin side to give it a coarse kind of sound. A piece of slate 1in. wide and 3in. long is used on the thin side in about the same way a bow is used on a violin, and by scraping in the middle the gobbler is imitated, and on or near each end a hen is imitated. Great care should be taken to keep the slate scraped on the guard of your gun, so that it will not be too smooth, so as to squeak. In a little while one gets very expert in the use of it, so by one scrape with the slate flat on the edge of the caller, and two with the slate tilted on edge and three flat again you have the perfect call of a turkey, *keow, kee, kee, keow, keow, keow*. If my description has not been clear I will say that the caller is simply a box cut out of a board and held in the left hand and fiddled on with a piece of slate. Any boy with a jack-knife can make one, only go slow when it gets nearly right, as a few cuts too many will spoil it.

I would almost as soon be without my gun as my caller. I do not enjoy much sneaking up under a tree in the dark and potting some luckless old gobbler. Of course, when a fellow is hungry and there is not much meat in camp, he will take any advantage of his adversary, but as for the sport in it there is about as much as there is in going to a hen roost. I have done a good deal of it, however. When I was sixteen a friend of mine and I killed

TURKEY CALLER.

21 one night, but it is not often you can get so many, as they fly after the first few shots. I have known men to kill a wagon load in one night. The way I like to hunt turkeys is to start out about daylight, and if there are any in the country they are calling and yelping. Then I get up as close as possible and let drive at them, and if I have killed any all right, but if not, what I want to do is to scatter them right and left. I then move off a couple of hundred yards and wait a few minutes and begin to call. It will not be long before you get an answer, for there is one thing I have always noticed, turkeys always come back to where they were first scattered, unless they have been hunted much. Now, if a man hides well he can call them right up to him, but he should not call too much, as it makes them suspicious. Neither should he make too many notes at once on the caller. I generally make three or four. By moving around and shooting first at one and then another you can keep them from getting together, and as long as they are separated you can make them answer the caller. A good way is to let two fellows hunt them, one in front waiting to shoot and the other behind calling. The fellow behind can get in a couple of good wing shots if he is quick enough. The best time to use a caller is in the spring when the turkeys are mating. An old gobbler then will come as hard as he can run, the minute he hears it, and a regular foot race will ensue, and if you are well hidden they will run right upon you.

Last November four of us had a glorious hunt up in the hills about 25 miles northwest of San Antonio. Three of the fellows were San Antonio boys, and as jolly a set as you ever saw. We went in an ambulance and took a wagon along to carry provisions, tent, etc. They made me chief commissary and I laid in \$15 worth of provisions, and as we were only going to stay a week the other fellows thought I was crazy. But I had been camping once or twice before and had seen fellows eat.

The first evening we got there we all struck out in different directions. I took the hired boy with me as I wanted to give him a chance to kill a turkey. We had not gone very far before I began to call and a flock answered, then we hid and I called until they came up within 20yds, and the boy let drive and knocked over a fine gobbler. I took a shot at another with my .32 Winchester and missed. Then we went a couple of hundred yards off and called again, a turkey came up and I fired again and knocked a lot of feathers out of him. Well I was so mad I went back to camp and found Shooke with four. He said he had gotten in a flock and gotten a dozen shots, knocking turkeys in all directions and run himself down after the wounded ones, clubbing them with the butt end of his gun. Shooke had never killed any before, so he was very much worked up. He thought that to kill turkeys, all a fellow had to do was to shoot them down and club them to death, but as he did not kill any more on the hunt he found that they were not as easy to kill as he imagined.

Mills and Simpson had found a lot but did not kill any. Next day I loaned Simpson and Mills my caller, and they called a flock up to within 15ft., and fired and did not kill anything. They showed me the place, and you could have touched them with a fishing pole. The next morning I killed a fine fat buck, and we had venison from then on. 'Twas here that Shooke made a name for himself as a cook. He argued that sooner or later it had to be all mixed up anyhow, and he proposed to mix it up at the "jump." So we went to the mess chest and got a

little of everything. I remember only a few: venison, turkey, bacon, garlick, bologna sausage, hindleg of a squirrel, onions, potatoes, some half-cooked beans, etc., and then he fried the whole mess, and we at once pronounced it the best dish we had ever eaten. Simpson wanted to know what it should be called, and I suggested pot-pourri. We told Shooke his fortune was secure, for if he failed in the insurance business we would recommend him to Jean Loustaneau, of the Elite, for a cook.

The day before we had been practicing with our rifles near camp, and we found a dead cow in the creek soon after. I saw the manager of the ranch next day, and told him there was a dead cow near our camp. He said he supposed it had died of blackleg, and would be down to skin it. He came down with a cowboy about 12, and Simpson went to show him where it was. A half hour later he came back with a long face and said, "Boys, you have played the devil; you shot that cow." "By ganny," said I, "where did we hit her?" "In the neck," says Jim. So we all went down to have a look, and there sure enough was old "Sookey" with a clotted bruised-looking place in her neck and a small hole in her hide. Well, it was fun to listen to the talk that followed. I felt particularly bad, as I had asked permission to hunt in the pasture, and had been cautioned against shooting cattle. We all had been shooting, and even poor Mills had been firing at a tree with a small pistol. At last Simpson remarked that Shooke must have done it, whereupon there was quite a scene. Shooke flew into a violent rage, and said sarcastically, "Oh, of course, Shooke did it; Shooke does everything." I cooled them off by remarking that there was only one thing to do, and that was to pay for her, and asked Mr. Russell what she was worth; and he said \$10.

"Well, boys," said I with a rather mournful look, "let's fork out. It's not the money that is hurting me, but it is the looks of the thing. But," I added, "it's one time since I been in the cow business that I am glad prices are low." We started to hand Mr. Russell the money, and then Simpson broke out in a roar, and walked around on the ground saying, "It's all a joke."

Russell and the cowboy laughed too, but Shooke, Mills and I did not crack a smile. Shooke only turned to the jokers and said, "That's a horse on us, let's have a drink." Simpson told that joke all over town when we got back, and Shooke, Mills and I have sworn to get even with him if it takes ninety-nine years.

Well, we knocked around this place and killed fifteen turkeys and then went home. We could have killed double, but they would only have spoiled. There is as fine sport within forty to eighty miles of St. Antonio on any of the three railroads as can be had in America. The cattle men are a big-hearted set that will go to any amount of trouble for their guests and will show you where the best hunting is. As for quail, they are simply here by thousands. It is nothing unusual for two hunters to bag seventy-five to one hundred birds in a day. The largest bag I ever heard of was made last fall by three hunters—241 quail—and that was made about twenty miles from the city.

It seems strange to me why more sportsmen don't come down this way. The climate is so mild you can live in a tent all winter with perfect comfort. A. J. W.

SAN ANTONIO, TEXAS.

SPORT IN TEXAS.

BEEVILLE, Texas, March 11.—I have just finished the perusal of *FOREST AND STREAM*, which does not reach here until Mondays; would like much to have it for Sunday evening reading. It is right amusing to a Texas sportsman to read of passing laws for the protection of rabbits and some other game, when here these pests are a nuisance. I was out a few evenings ago to shoot quail, and I think I must have seen fifty in a space of ten acres. We only kill them with the rifle for sport, shooting their heads off. I verily believe that I have seen a thousand in a two days' hunt, not good days for rabbits either. And again the idea of only killing a dozen or so of quail in half a day's hunt sounds almost unreasonable to us. A party of Houston, Texas, sportsmen were out a few days since and bagged nearly 400 in a day's shoot not over four miles from Beeville. If persons desiring a pleasant as well as successful hunt will communicate with me marked Box 20, Beeville, Texas, I will give all information in my power. Sportsmen seem to have overlooked this part of Uncle Sam's domain in their search for pleasure and game. Ducks are still found on lakes, marshes and creeks in vast numbers and not very shy. Some geese and brant are yet here and seem reluctant to leave, as the winter has been unusually mild. Robin redbreast has put in his appearance in larger numbers than heretofore known. The robin is not as common here as in other Southern States. I heard a gentleman say a short time ago that a crow or raven had never been seen nearer than thirty miles to Beeville, and none west of here to the Rio Grande River.

T. J. S.

GAME IN TOWN.—Albany, N. Y., April 1.—This morning a boy brought me a bird, which he said he had found dead under a telephone wire. He did not know what kind of a bird it was, but on seeing it I recognized one of the finest woodcock I ever saw, in beautiful condition. The bird must have flown against the wire the night before in the lumber district here. I trust I will not break any of the game laws if I eat the unlucky woodcock.—WOODCOCK.

A VERDICT FOR THE PEOPLE.

AN important case was decided last month in Franklin county, New York, in the court before Judge Tappan and a jury. We copy the report of the case from the *Malone Palladium* of March 21:

"One of the most interesting cases tried at this term of court was an action brought by Game Protector Pond, in the name of The People vs. Daniel I. McNeal, Jr., of Waverly, N. Y., to recover \$100 penalty for killing a deer out of season, and having the meat in his possession. This was the second trial. The case was tried in March, 1889, before Judge Putnam and a jury, and the jury rendered a verdict in favor of defendant for no cause of action, and Mr. Pond, by his counsel, W. J. Mears, appealed the case to the general term, where the judgment was immediately reversed on the ground that the verdict was wholly unsupported by the evidence. The presiding judge, Learned, in writing the opinion of the court, expressed himself strongly in favor of the game laws. The case came on again for trial last week before Judge Tappan and a jury, and the trial occupied two days. The plaintiff showed by one Gregory that defendant shot and helped skin the deer at Cold Brook and that the deer was packed in a basket and brought home by defendant. One Pearl swore that he saw venison in the basket. Thos. McNasser, Hutchins and Sherman testified to admissions made by defendant showing that he had venison in the basket. It appeared that after the offense was committed the defendant, in order to get ahead of the game protector, got himself sued before a justice and a settlement was had for ten dollars. The defendant relied on this as a bar, but the court ruled it out. The defendant denied that he killed any deer or had knowledge of any venison. His story was that witness Gregory went hunting and came back into camp saying that he had brought back a nice rabbit in the basket, and that the basket was conveyed by Gregory and defendant's uncle to their home and that he had no knowledge of what was in the basket, although he was one of the party. It was proved that the basket and contents weighed about 60lbs., which was rather heavy for a rabbit, and the jury must have thought so, for they rendered a verdict in favor of plaintiff. The case was tried by J. W. Mears and W. P. Cantwell for plaintiff, and W. J. Webb and J. P. Badger for defendant. Game Protector Pond is entitled to great credit for the diligence and perseverance with which he has prosecuted this and other violations of the game laws. He is a terror to violators, and since he was appointed such violations have become less frequent. He is a faithful public officer and should have the support of all good citizens. The more plenty the game is the more tourists will visit the south part of the county."

AN OBJECT LESSON.—*Editor Forest and Stream:* The enthusiasm of the hunters coming home with their game and narrating the stirring incidents of the day, at length communicated itself to the household, and our mother was heard to express a wish that she might see a ruffed grouse in his native haunts, and hear him as he rose from the ground, the description of his awful roar having been so fully described to her. The latter part of this wish was at length gratified in a manner at once singular and startling. One morning while seated at the breakfast table, a tremendous noise was heard at the rear of the house, which we supposed on the impulse of the moment was occasioned by some part of the building falling. Rushing to the door I beheld a large brown bird within the partially inclosed stoop. He was up against the roof and was attempting to keep himself there by the rapid motion of his wings. Reaching up, I tried to seize him, but he eluded me and finally fell to the floor and ran down five steps to a piazza, and along it to the rear of the building, and secreted himself under a chair in a corner. I picked the bird up and brought him into the house. It proved to be a ruffed grouse, which had thus flown into the building. He was, apparently, entirely uninjured, but quite weary with his unusual exertion. He was an object of great interest to us all. I resolved now to gratify the desire of our mother to see and hear a grouse rise from the ground. Accordingly I invited her and the rest of the family into the yard, and placing the grouse gently on the grass plat, I stepped back a few feet and clapped my hands. At the sound the bird rose with a most tremendous roar, being so near, and with the speed of the winds directed his flight to the "flats" across the Mohawk River. Mother, turning to us, said: "I now cease to wonder that you like to go a hunting."—DORP (Schenectady, N. Y.).

THREE TURKEYS.—Piedras Negras, Mexico, March 24.—*Editor Forest and Stream:* Under the "Odd Shots" I notice that "T. J. S." killed three sandhill cranes at one shot, and another correspondent got three grouse at one shot, using a Winchester rifle. I will say that last fall, while hunting quail on the Rio Escondido, I ran across a flock of wild turkeys, which, probably never having been hunted, were quite tame. I followed them some distance, it being too far to use No. 7 and 8 shot with which I was provided. I finally recollected having a load of No. 5 shot left over from a duck hunt, and slipping this into the gun I headed the flock off as they crossed a ravine, and getting within 40 or 45yds. of them shot at them just as they were entering a thicket, and killed three. The load used was 34drs. Orange Lightning powder behind 14oz. No. 5 chilled shot, out of a 12-gauge Greener ejector weighing 7lbs, 10oz.—H. M. D.

SPRING SNIPE.—Dayton, Ohio, April 8.—Snipe shooting began here the last day of March. The birds are not fat, but with these warm rains will be in numbers for fine sport. Phil Wenz bagged seven snipe the first afternoon and on April 1 Billy Kiefer brought in thirteen. Good duck shooting on the big reservoirs but not much along the rivers. Teal are fat. John Stocklein and a friend were out Friday and killed 27 snipe.—BUCKEYE.

IMPRESSIVE TESTIMONY.—If there be anything in the idea that short speeches are the most impressive, the following direct testimony respecting Humphreys' Veterinary Specifics are to the point and convincing. Palmer Bros., city livery, La Crosse, Wis., write: "We have used Humphreys' Veterinary Specifics for twelve years, and find no cause for regret, and we cheerfully recommend them to our friends." B. F. Howard, of Duluth, Minn., adds: "I had a very sick horse and was recommended to use these Specifics. I did so, and with the most satisfactory results, and since have never been without a good supply. Being actuated by the principle if you know a good thing tell it, and let your friends have the benefit, I never fail to advise their use to all having the care of valuable stock."—*Advs.*

THE WYOMING GAME LAW.

THE following act was passed by the Wyoming Legislature on March 14, 1890:

An act for the protection of wild game and insectivorous birds, and repealing inconsistent acts.

Be it enacted by the Council and House of Representatives of the Territory of Wyoming:

SECTION 1. No person shall kill, net or trap, within this Territory, any snipe, green shank, tatter, godwit, curlew, avoset or other wader or plover, nor quail, lark, whippoorwill, finch, thrush, snowbird, turkey, buzzard, robin or other insectivorous birds, except that partridge, pheasant, prairie chicken, prairie hen or grouse, may be shot from Aug. 15 to Sept. 15 of each year, and sage chickens may be shot from July 15 to Sept. 15 of each year, and if at any time any person shall be found in possession of any partridge, pheasant, prairie hen, prairie chicken or grouse, or sage chicken at any other time than between the dates above mentioned, or any other of the fowls or birds mentioned in this section at any time, it shall be *prima facie* evidence that the same was killed, netted, ensnared or trapped by such person in violation of the provisions of this act: *Provided*, That this section shall not be construed to prohibit any person from importing or dealing in quail, partridge, prairie hen, prairie chicken, sage chicken, pheasant or grouse imported into this Territory from any other State or Territory. Any person who shall violate any of the provisions of this section shall be guilty of a misdemeanor, and upon conviction thereof shall be fined in a sum not less than \$5 nor more than \$50, with costs of suit, and shall be prosecuted and punished in the same manner as in other cases of misdemeanor. One-half of the fine in such cases shall be paid to the person informing against such offender, and the other half to the treasurer of the county in which the offense was committed, and become a part of the school fund; *Provided*, That if such informant shall not demand the same within thirty days after such fine shall be paid and collected, the whole of such fine shall be paid to such treasurer and applied to such school fund.

Sec. 2. No person shall kill within this Territory any wild duck, except from the first day of August to the first day of May of each year, or at any time trap, net or ensnare any of the birds mentioned in this section. Any person violating the provisions of this section shall be guilty of a misdemeanor, and upon conviction thereof be fined as provided in Section 1 of this act.

Sec. 3. It shall be unlawful to pursue, hunt or kill any deer, elk, moose, mountain sheep, mountain goat or antelope for any purpose whatever, and it shall be unlawful to kill or capture by any pit, pitfall or trap any of the above named animals, male or female, at any time of the year. No non-resident of this Territory shall pursue, hunt or kill any of the above named animals by any means whatever; *Provided*, however, Any actual and bona fide resident of the Territory may at any time pursue, hunt and kill any of said animals for the purpose of supplying himself and his family with food in reasonable quantities; but it shall be unlawful to sell directly or indirectly, or offer for sale the carcasses of any such animal, or the head, horns or any part thereof.

Sec. 4. It shall be unlawful for any person or persons to pursue, hunt or kill, by any means, any bison or buffalo for the period of ten years from the fifteenth day of March, eighteen hundred and ninety. Any person violating the provisions of this section shall be guilty of a misdemeanor, and upon conviction thereof shall be subjected to a fine of not less than one hundred dollars nor more than two hundred and fifty dollars for each offense, or to imprisonment in the county jail for a period of not less than ninety days, or to both fine and imprisonment.

Sec. 5. It shall be unlawful for any person or persons to purchase or obtain by barter any green, tanned or untanned hide or hides or horns of any of the animals mentioned in section three, and, furthermore, it shall be unlawful for any corporation, company, person or persons to transport or have in their possession for transportation, any green, tanned or untanned hides or horns of any of the animals mentioned in said section three after the expiration of thirty days from the passage of this act. *Provided*, That none of the provisions of this section shall apply to hides or horns in transit through this Territory from other States or Territories.

Sec. 6. It shall be unlawful for any railroad company, express company or common carrier or any of their agents, employees, or other person or persons, to receive or have in their possession, for transportation, any carcasses or part of carcasses or horns of any of the animals named in section three of this act, or to transport the same, after the passage of this bill; *Provided*, That none of the provision of this section shall apply to game in transit through this Territory from other States or Territories; *Provided*, further, That this section shall not be construed to prohibit the shipping by *bona fide* residents of this Territory of the head or heads of such animals for the purpose of having the same mounted by a taxidermist.

Sec. 7. It shall be unlawful for any person or persons to kill more than three in any one week of any of the animals mentioned in Section 3 of this act, or to kill more than three in any one week, more than three of the animals mentioned in any one section shall be *prima facie* evidence of a violation of the provisions of this section.

Sec. 8. Any corporation, company, person or persons violating any of the provisions of Sections 3, 5, 6 and 7 of this act shall be deemed guilty of a misdemeanor, and on conviction thereof shall be fined in any sum not less than \$100 nor more than \$100 for each offense, or in case of a person or persons be imprisoned in the county jail for a period of not more than ninety days, or both such fine and imprisonment in the discretion of the court.

Sec. 9. Any person or persons giving information of any violation of the provisions of this act to the prosecuting attorney, or any justice of the peace of the county in which such violation occurred, shall be entitled to receive, as a reward, all such fines, the other one-half of such fines, after deducting costs, and prosecution shall be paid into the county school fund, and in case said informer shall not demand one-half of said fine within thirty days, then the whole of said fine so received (deducting costs) shall be paid into the said school fund.

Sec. 10. It shall be unlawful for any person to pursue, trap, hunt or kill any animal within the period of ten years from March 15, 1890. Any person violating the provision of this section shall be deemed guilty of a misdemeanor, and on conviction thereof shall be subjected to a fine not greater than \$25 for each offense. The having in his possession the hide of any such animal shall be *prima facie* evidence of a violation of the provision of this section.

Sec. 11. Justices of the peace are hereby empowered to appoint special constables, who, of their own knowledge, or upon the information of a reputable citizen of the county, may arrest without warrant any person or persons violating the provisions of this act, and take him or them before any justice of the peace for trial as in case of any other misdemeanor.

Sec. 12. Hereafter any person bringing into this Territory any deer, elk, antelope or mountain sheep for the purpose of shipping through this Territory to any other State or Territory, or any animal mentioned in this act, or selling or offering for sale any of the animals mentioned in this act, or shipping or offering for sale such animals were killed in another Territory or State, shall, before offering for sale or giving away or shipping to any point in this Territory or out of this Territory any such wild animals or their heads or hides, make affidavit before any officer qualified to administer oaths in this Territory, setting forth that the game or hides or horns so offered or sold or to be shipped were not to his knowledge killed in the Territory of Wyoming; and further, that such animals or their hides or horns were not killed in any other State or Territory in violation of the laws of such State or Territory, and said person shall further name the place and State or Territory where the same were killed; such affidavit shall be recorded in the office of the county clerk and recorder of the county wherein such animals or their heads or hides are offered for sale or shipped, and any person or persons violating any of the provisions of this section shall be deemed guilty of a misdemeanor, and on conviction thereof shall be fined in any sum not less than fifty nor more than one hundred dollars for each offense. It shall be the duty of all sheriffs, constables, or other peace officers to see that none of the provisions of this act are violated. Whenever the attention of any such sheriff, constable or other peace officer is called to any violation of any of the provisions of this act and they shall fail to take the proper steps for the arrest and conviction of any person or persons or corporation charged with violating any of the provisions of this act, they shall be guilty of a misdemeanor, and on conviction thereof shall be fined in any sum not greater than one hundred dollars.

Sec. 13. This act shall take effect from and after its passage, and all acts or parts of acts in conflict with this act are hereby repealed.

Approved March 14, 1890.

The above law, a consolidation of the best parts of former laws, with such additions as experience has dictated, has just been enacted. If it is not enforced, the big game of Wyoming will soon become exterminated as it virtually is the case in neighboring States and Territories. A very little observation shows that in spite of strict laws, either badly enforced or not enforced at all, Wyoming's big game has been gradually and rapidly disappearing for several years past. If this law is properly enforced, the districts of country where the game was so abundant a few years

since, will, from its natural increase, again become abundant and afford valuable food for the people. Attention is especially directed to Sec. 3 in regard to non-resident hunters. Sec. 5, as to trade in green, tanned or untanned hides, as also to the new Sections 7, 11 and 12.

Every neighborhood where there is a remnant of game left should organize game protective associations at once, and raise funds to pay special constables as provided for in Sec. 11, whose duty should be to follow hunting parties, and arrest and bring all its violators face to face with the law. A resolute man employed a few months in the fall season will accomplish wonderful results, as has been the experience in Northwest Wyoming for two years past, and with comparatively little cost.

This game should be considered the common property of the people, in which every citizen is individually interested, and whose duty it should be to promptly and without fear or favor, report every violation of this act.

W. D. PICKETT,
Chairman of Game and Fisheries Committee of the House.
AUGUSTUS TRABING,
Chairman of Game and Fisheries Committee of the Council.
CHEYENNE, Wyoming, March 15.

SIGNS OF SPRINGTIME.

Going north.

—Hennesy (Kan.) Courier.

THE FLIGHT IN WISCONSIN. — Milwaukee, April 4.—The high winds of last week, together with the heavy rains of the 3d inst. have effectually cleared the lakes of ice. Sportsmen are elated with the rainfall, the water being higher now than at any time since the fall of 1887. The flight of ducks and geese has been unusually good, and they are here in large numbers. Last Sunday two farmer boys returning home from the capture of an owl, passed through a cornfield where last fall's crop had been picked, leaving the bare stalks standing. When in the center of the patch, with a rush of wings and vociferous honkings there arose a large flock of Canada geese. But the gun wasn't loaded. Last Monday morning, all along the line of the C., M. & St. P. Ry. for 30 miles west of here, the lakes were fast opening, and wherever there was sufficient water to tempt them down, there fed blue-bills, whistlings and butterballs. Especially was this the case on Pewaukee Lake, where hundreds of birds sat within double gun shot of the train as it thundered by the big Armour icehouses. Milwaukee Bay sheltered many birds last Sunday, and Mr. Hutchings, of the Northwestern Mutual Life Insurance Company, who is an expert non-professional photographer, took several views which it is expected will prove very interesting. The day was a beautiful one; clear, calm and mild. So much for spring protection; but the boys, while protecting the ducks this spring, are beginning to grumble at the tardiness of adjoining States, where ten ducks are now being killed for every one that meets a similar fate in Wisconsin during the fall season. Wake up ye laggards before it is too late, and extend to the persecuted wildfowl the protection they so richly deserve.—GREENHEAD.

PENNSYLVANIA BIRD LEGISLATION.—We have received from Dr. B. H. Warren a pamphlet entitled "Bird Legislation," by G. B. Sennett and B. H. Warren, extracted from report of Pennsylvania Board of Agriculture for 1890. Mr. Sennett's address is a valuable paper, treating of the usefulness of birds to the agriculturist and taking up also the English sparrow question and the best means of getting rid of this pest. Mr. Sennett desires protection for all non-game birds except the English or house sparrow, and recommends the destruction of this latter bird. He also advises the enactment in Pennsylvania of a law for the better protection of song and insectivorous birds, the bill which he suggests being based on the one prepared by a committee of the American Ornithologists' Union for submission to the New York State Legislature, and which is now a law of this State. Dr. Warren's report of the Committee on Birds and Mammals gives the act of the Pennsylvania Assembly of May 14, 1889, and also the history of the so-called scalp act which was passed by the Pennsylvania Legislature in 1887.

FOX LAKE LAST FALL.—Last fall was a good one here for chickens and ducks. Our little Fox Lake can show as many ducks for its size as the best of them, and so far is not controlled by any club. My biggest bags last fall were made from off the marshy shores with decoys. There is also good shooting night and morning as they fly between the islands. Strangers coming here will find a cozy little hotel on Morrison's Island; low rates, plenty of boats, and as nice a lot of country boys as there are anywhere. But don't try to buy the shores or there will be trouble. Our Legislature or printers made a great blunder last year in allowing prairie chickens to be shot Aug. 1; they were then about the size of quail. The law can't make shooting that kind of game right in my opinion.—W. E. W. (Fox Lake, Wis.)

FIRST SNIPER.—Buffalo, N. Y., April 1.—*Editor Forest and Stream*: The first English snipe for the season is now strung up in the show window of Le Valley's gun store. It was shot at Angola, Erie county, March 27, by Ralph West. Last year a West Seneca sportsman brought in the first bird on the 19th of March to Mr. Le Valley. "Salem" always gets the early bird.—E. P. D.

SPRING IN THE NORTH WOODS.—Reports from Jock's Lake in the Adirondaks, received last week, state that the snow is over 2ft. in depth and the ice on the lake is 18in. thick. It is probable, however, that the mild weather of the past few days has reduced the quantity of snow and ice considerably.

DEER FOR CATSKILL PARK.—The State Forest Commission has obtained four deer from the State of Maine to place in the Catskill State park.

NAMES AND PORTRAITS OF BIRDS by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price \$2.50. For sale by FOREST AND STREAM.

Sea and River Fishing.

ANGLING NOTES.

THE appearance of the weather on the morning of the first of April was not very suggestive of spring of trout fishing either, but rather gave one the idea that snowshoes might be of some service to the angler. Snow covered the ground to a depth of from two to four inches every tree, shrub and bramble bush was draped in fleecy white, and when lit up by the first rays of the morning sun was a sight long to be remembered. Fortunately for the anglers the sun took pity on them; it stopped snowing just before sunrise, and cleared off bright and pleasant. In a few hours the snow had disappeared and everything looked fresh and smiling. The birds sang their best and seemed as delighted as the fishermen at the change. There was quite a crowd of anglers at Smithtown, L. I., one of the few public waters left, and they did remarkably well. Mr. D. W. James, Jr. carried off the honor with a catch of nine superb trout that filled his creel to the brim. The largest weighed 2lbs. 8oz and the smallest 12oz. Mr. Jas. L. Livingston killed only three trout, but they were beauties and weighed together 4lbs. 9oz. Mr. Alfred Roe killed five, and almost every one had some thing to show for their trouble. These fish were taken with worm bait.

At the South Side Sportsmen's Club the trout did not rise well to the fly until afternoon, then the sun seemed to put a little life in them and they began to take. They were unusually large, most of them averaging over a pound each in weight and were in fine condition.

The largest trout killed at the Amityville club so far as we have heard weighed 1lb. 10oz., and was taken by Mr. Robt. B. Lawrence.

The Ontario & Western R. R. Co. is building a special car for the transportation and distribution of live fish, to be used in stocking the streams along the line of their road. This company deserves great credit for the trouble they are taking to keep up the supply of trout and bass for the benefit of their patrons.

Reports from Orange county, N. Y., show that the trout streams in that section furnished an unusually large supply of trout on the first, and of excellent size and weight. These streams were stocked by Mr. O. Green three years ago, and the result is very satisfactory and encouraging.

Mr. Thos. Allen, the fish warden at Bangor, Me., reports that salmon have appeared in the pools, though none have been taken as yet.

The ice is going out of the Penobscot River very rapidly.

POLLUTION OF OUR RIVERS.

THE letter which we print below, taken from the Troy Budget, deals with a subject of ever-increasing interest. It bears the initials of one of the State Fish Commissioners, and ought to receive attention from the Legislature of the State. No man nor no company ought to be permitted to convert any stream into a sewer in order to make or save money for himself. The manufacturer should be compelled to care for his own refuse, and if he cannot do that without loss he should go out of business.

An especial interest attaches to the pollution of the Hudson River. After years of patient and persistent effort on the part of a certain State official, this stream has been made a salmon river. The good results of this work will be undone unless provision shall be made for keeping its waters pure. The letter in the Budget reads as follows:

Last summer the Budget called attention of the public to the large amount of pollution the Mechanicville pulp mill was daily discharging into the river. We were informed at the time that the fish commission were trying to get the mill company to remove the nuisance without resort to a suit. We are happy to say, after numerous delays, that the pulp company have now made arrangements with Mr. Sunderlin of the Capital Lime & Cement Company, West Troy, to purchase the refuse. The material turned into the river was powdered lime mixed with water, and would amount, when dried, to some twenty tons per day. Mr. Sunderlin has made a contract with the mill company to have this waste at his own expense, besides paying them a small amount per ton in addition. He immediately commenced the erection of a building with settling pits and grinding machinery to make the lime still finer. We are informed that the plant is now in working order, and the material is being used principally for making paris green. Thus a waste product, which had been illegally turned into the river for years, polluting and moving the deposit year after year, not only kills the fish, but has turned the nuisance into a profit. The sawdust and refuse from the saw mills is another evil on the Hudson and other important streams which we hope the fish commission may be as successful in having removed. Any one who has visited the locality of the water power saw mills cannot but have noticed the effects of the nuisance for miles below on the stream. The enormous quantities deposited year after year not only fill the bed of the stream but it would decompose or ferment under water driving the fish from the locality and of course destroys any spawning beds upon which it may settle. The owners of these water powers have received valuable franchises from the people free of cost and not being satisfied with building the dam, which in absence of a fishway prevents many fish from reaching the pools above, they add insult to injury by dumping their refuse into the waters, filling up the stream and destroying all life in the same. We are pleased to notice a few days ago that the Electric Light Company at Plattsburgh, who use water power on the Saranac river, are about to commence suits against some of the sawmills above for turning their refuse into the stream. The sawdust thickens the water so much that anchor ice forms where it otherwise would not, compelling the Electric Light Company to use steam for power. There is a field for river water, some cheap way of compressing sawdust in shape for fuel or to put it to some other profitable use so that it would pay to save it. Even if no profitable use can be found for it the owners of mills have no more right to dump it into the rivers than the owners of iron works would have to put their refuse ashes and cinders into the same waters. Sawdust can be burned at the mills without great expense, and many sawmills that run by steam power and have no stream to float away their refuse are obliged to resort to this plan. It may be that the laws are defective to stop these abuses, if so it is time some were enacted to protect the public interests before it is too late, and there is nothing left to protect.

H. B.

NETTING TROUT.—A fishery inspector at St. Johns, Newfoundland, has seized a lot of trout, which were packed among smelts and had evidently been taken in nets. Even Newfoundland, with its wealth of trout, has none to spare for this destructive method of capture.

ATTENTION is called to the changed form of the advertisement of the John Wilkinson Company, who make a specialty of camping outfits.—Ad.

THE SALMON OF ALASKA.

[Concluded from Page 211.]

THE marine life of the Alaskan salmon is unknown from the time the young, in their newly acquired silvery dress, leave the fresh water nursery to become salt water sailors until they have ended their cruise, obtained their liberty and come ashore, when, as in the case of so many other salt water sailors, their serious trouble begins. Salmon remain in fresh water until the second or third spring of their existence, and not having a bountiful supply of food, they grow very slowly and seldom exceed 8 in. in length when they start seaward. In the ocean they feed on the capelin, the herring, and a small needle-shaped fish called the lant. They are reputed also to consume large quantities of pink-fleshed crustaceans and derive from them their attractive color. Proposed to this theory is the fact that many other sea fishes whose food consists almost entirely of such crustaceans are never pink-fleshed. There is no fishery at sea for any of the Pacific salmon, as there is in the Baltic or the Atlantic salmon. After the great schools are broken up and the scattered fish come into the bays, some of the species can be caught on a herring-baited hook by trolling. The king and silver salmon are captured in this way. As a rule the fish remain at sea until they are about ready to deposit their eggs, and then they approach the coast in great masses. A few young males accom-

slime has been removed. Both sexes in all the species take part in the building operations, and the male especially guards the nest. Turner states that the silver salmon use their snouts in collecting material for the nests, and he has seen them with the nose worn off completely. The red salmon spawns around the shores of deep, cool lakes and in their small tributaries, preferring waters whose highest temperature rarely exceeds 55°. The nest is a shallow circular pile of stones about as large as a man's hand, and some of them smaller. The eggs are placed in the crevices between the stones. The enemies of the salmon are numerous. Small fish called sculpins, or miller's thumbs, swarm in the nests and eat large quantities of the eggs. Trout devour great numbers of eggs and young salmon. Gulls, terns, loons and other birds gorge themselves with the tender fry. When the young approach the sea they must run a cruel gauntlet of flounders, sculpins and trout, and in the ocean a larger and greedier horde confronts them. The adults are attacked by seals and sea lions. Before they have fairly entered the rivers huge nets are hauling them to the shore almost every minute of the day during six days in a week. When they return to their spawning grounds bears are waiting to snatch them from the water and devour them alive. The salmon, it appears, would have been vastly better off had it never been born in fresh water, where its dangers are cumulative and deadly.

The methods of taking salmon are many and various,

in a day. A first-class cannery can use about 26,000 red salmon daily. After the salmon are caught, they are carried in dories and other boats along the beach and through the river mouth to the cleaning houses on the river bank, or when it is too rough, they are taken across the spit in hand-barrows. Large lighters and scows are also used as fish carriers, and these are towed by steam launches. In the cleaning houses the salmon are prepared for the cannery by cutting off the heads and fins and removing the viscera. Then they are washed and finally thrown into hand-carts, to be hauled into the cannery, where they pass through various processes, almost all of which are carried on by machinery. First they are cut into lengths suitable to the size of the can. These pieces are carried along and fed into cans, inequalities in the filling being supplied by hand work. The cans are then topped in the topping machine, from which they pass to the soldering machine, and then follow the processes of venting, cooking, steaming in great retorts, cooling, janning and labeling. The cans are then boxed and stored in warehouses until a cargo is accumulated, and then, by means of scows and lighters, towed by steam launches, they are carried to vessels lying in the roadstead and soon start upon a voyage to San Francisco, Portland and Astoria, and eventually to other sides of the globe, for these are the greatest globe-trotters of modern times.

Thirty-six canneries were operated in Alaska in 1889,

DOG SALMON.

HUMPBACK SALMON.

SILVER SALMON.

any the schools every year, and may or may not return to the sea without entering the rivers. The adult fish come up from the sea at a certain time of the year, the king salmon arriving first, in the month of May in southern Alaska, and about the 6th of June in Norton Sound. The dog salmon and the red salmon appear in June, the humpback in July and the silver salmon in August. The length of their stay at the river mouths before ascending, and the rate of ascent to the spawning grounds, depend upon the urgency of the breeding condition. In the long rivers the king salmon travels from 20 to 40 miles a day; this species and the red salmon are reputed to be the greatest travelers. The silver and dog salmon, however, are recorded by Dr. Dall as ascending the Yukon at least 1,000 miles. As a rule they frequent the smaller streams, and the little humpback runs into mere rulets.

From the time the salmon enters fresh water it begins to deteriorate in flesh and undergoes remarkable changes in form and colors. Arriving as a shapely fish clad in shining silvery scales, and with its flesh orange or red, it lays around for a little while between salt water and fresh, and then begins its long fast and its wearisome journey. No food, is taken and there are shoals, rapids, and sometimes cataracts to be surmounted, but the salmon falters not, nor can it be prevented from accomplishing its mission by anything but death or an impassable barrier. Its body soon becomes thin and lacerated, and its fins are worn to shreds by contact with sharp rocks. In the males a great hump is developed on the back behind the head, and the jaws are lengthened and distorted so that the mouth cannot be closed. The wounded fish are soon attacked by the fungus and progress from bad to worse until they become unsightly. In the meantime the body colors will have varied from dark gray in the humpback, with the lower parts milky white, to a brilliant vermillion in the red salmon, contrasting beautifully with the rich olive green of its head. The excessive mortality of salmon during the ascent of the streams and in the breeding grounds has led to the belief that none of the spawning fish leave the fresh water alive. There is a substantial basis for this view in the long rivers, and it is doubtless true that a journey of 500 miles or more is followed by the death of all the salmon concerned in it.

The nest is a very simple affair, or it may be wanting. The humpback struggles and crowds up a few rods from the sea and deposits its eggs between crevices in the boulders covering the bottom, or sometimes they are grown in thin layers over a large area in shallow water without covering of any kind. The king salmon seeks the headwaters of streams, and excavates a nest in clear, shallow, gravelly rapids. The dog salmon spawns in small rivers and creeks. The silver salmon does not usually ascend streams to a great distance, and I have seen it return to salt water alive after spawning. The nest is made among gravel and stones from which all dirt and

as might be expected from the extent of the territory and the variety of its fishing population. Arrows and spears are still employed by the natives, and trolling hooks are successfully used in certain bays, but all of these partake more or less of the character of angling refinements. The dip-net, the seine and the gill net are universally applied, the latter even in winter fishing under the ice. Baskets and traps of several kinds are very useful in river fisheries, particularly in winter. Dr. Dall has given a full description and figures of traps constructed by Indian tribes of the Yukon and the adjacent region; these will be found in the report of the Department of Agriculture for 1870. Fish traps of modern type are freely and, it is said, injuriously, used in some parts of Alaska by white fishermen, the injury charged being that of preventing the ascent of the spawning salmon. The Russians built impassable racks of timbers and rocks, which enabled them to kill every salmon that came into the streams if they desired. These were called *zapors*, and have been legislated out of existence, we trust. It was doubtless picturesque in the early days to see an Aleut standing on the crib-work of the *zapor* with his spear gracefully poised and ready to transfix the silvery salmon, but it was like the boy's sport with the frog, and we are glad it is ended. The great bulk of the salmon now caught in Alaska are taken in seines varying from 600 to 1,500 ft. in length, and many of them 20 ft. deep. The mesh is generally about 8 in. The seines are set from seine-boats, similar to those used for shad on the Potomac, and are hauled by from twenty to thirty men. Experience has shown that windlasses and similar appliances for saving labor are undesirable adjuncts of the fishery at least on Kadiak, where the seining is almost entirely limited to salt water. Fishing goes on at Kadiak six days in the week, subject only to the presence of salmon and the suitability of the weather. Night does not stop the work except for a few hours, as it is short in this latitude.

At Karluk, the principal red salmon station in Alaska, the seining beach is less than half a mile long, and the seiners are obliged to wait their turns to set. Several seines are in the water almost constantly, one behind the other. Upward of 150,000 salmon have been taken here

located principally in the southern part of the Territory, none of them north of the Nushagak River, in the British Bay region. Nearly one-third were established on the Kadiak group of islands, and those secured fully one-half of the Alaskan catch.

Sixty-six vessels were engaged in carrying the equipment and workmen for these canneries, and the products of their industry. There were 13 steamers, 4 steam schooners, 1 ship, 13 barks, 2 brigs, 10 barkentines and 23 schooners. Hundreds of boats of various kinds—dories, seine-boats, Columbia River boats, besides scows, lighters and steam launches are employed in the business. The seining is done chiefly by white men and the work inside the canneries by Chinese. It is estimated that 4,000 men are engaged in the salmon fishery in Alaska. The capital invested in 1889 was nearly \$4,000,000 and the value of the pack at an average price of \$5 a case, was about \$8,000,000.

Is this tremendous drain of 8,500,000 salmon in a year likely to endanger the food supply of the natives? At present many of the Alaskans work for the fishing companies and receive more than they could earn if left to themselves. Again, the dog salmon and the humpback, which are the most abundant of the species and the most valuable for the natives, are not yet important commercially. Canneries have not extended their operations north of the Nushagak, and the territory beyond this river teems with all the kinds of Pacific salmon, and especially with the two preferred by natives.

Will this industry decline in value from year to year as it has on some of the more southern rivers? Undoubtedly it will if over-fishing and injurious methods are continued. Impassable barriers obstructing the ascent of breeding fish will unquestionably exterminate the species in a few years. Continual seining across the mouths of rivers will certainly hasten the same unfortunate result. The necessity of protecting this valuable resource must be apparent to every intelligent person. Alaska to-day furnishes one-half of the American yield of salmon, and it will be our own fault if the industry is destroyed. We must regulate the fishing by suitable laws and refuse injurious privileges on Government lands. The supply must be kept up and increased also by artificial propagation. Pisciculture cannot find a more promising field or a more propitious and urgent occasion. There are still plenty of breeding salmon, sheltered harbors in accessible localities, rivers not subject to excessive fluctuations of level and not obstructed by natural barriers, and unlimited supplies of suitable water to be conveyed by gravitation alone. Materials, labor and transportation are cheap. There are no dams, no mill refuse, no pollutions from sewers and factories. The climate is favorable and the population is in sympathy with fish-cultural work. Surely here is an opportunity not to be neglected, and the time to improve it is—now.

T. H. BEAN,

RANDOM CASTS.

THE rod belt recently patented by Wm. Mills & Son is a novelty of value, as it makes bait fishing from a boat much pleasanter. By the simple device of a leather thimble placed in the side of the belt in such a manner that the butt of the rod when under the forearm can be readily rested in it, the strain caused by the weight of rod and reel is, to a great extent, overcome.

A dog once said to a cat: "Pussy, how do you manage to catch your fish? Here have I been rushing up and down this stream day in and day out, getting footsore, tired out and often nearly drowned, in my vain endeavor to get that fine large trout you now see just under that log." "Oh," replied the cat, "it is easy enough if you will do as I do. Move along cautiously until you get within reach, then not having been frightened the fish becomes an easy prey." So it is with many who complain that the large fish are not to be caught; failing to apply the proper methods they are of course unsuccessful.

A perfect day and the other conditions to all appearances just in keeping with what one would expect to find favorable for the rising of trout, but still you reach home after a day on the stream having had but poor success. Don't grumble; you have been with nature, and to the ardent angler this is always a satisfaction that serves to militate against the bad luck of a comparatively empty creel.

BIG REEL.

NEW ENGLAND TROUTING.

THE trout season in Massachusetts seems to have opened with more than the usual interest this year. Probably one reason is that the weather has been unusually pleasant for the first of April, and the streams are free from snow water, with the chances for trout good. The streams in some parts of the State have been pretty well done, if not to say overdone. In one case a Boston gentleman had a particular stream in his mind, which he designed to visit as early in the season as the weather and his business would permit. He thought that he was about master of the situation, for it was an out-of-the-way stream, and the gentleman was not aware that anybody suspected the stream of having trout in it to the extent of being worth trying for. Fast Day, April 3, gave him the much-desired opportunity to visit the stream with rod and reel. Carefully he prepared to fish, but a few rods down the stream showed him numerous footprints, and a little further on he overtook a party of four, and the four had caught a single fingerling. The luck of the Boston gentleman was no better, and he learned at a farmhouse that the stream had been fished by about a dozen men and boys on the first day of the open season. Not quite as poor was the luck of a gentleman who fished a stream in Southboro. The first day of the season he was present with rod and line, but he soon found that he was not first at the stream. Others were ahead of him. They all reached the end of the stream at about the same time. There were three farmers ahead of our friend. To let them tell the rest of the story, they compared notes. The united catch of the three was just four trout, but our friend had twenty as fine brook trout as one would wish to see, and the editor of a leading newspaper had a voucher of the gentleman's success in the shape of a half dozen.

The show of trout in Appleton's window is attracting unusual attention this year. Crowds throng the sidewalk to the extent that policemen are obliged to require those who have looked the longest to move on. One peculiar feature of the show is the number and size of the trout displayed. It is also a feature with some of the many sportsmen who call at the store, and are friends of the firm, to be allowed to cast a fly over the tank. The fly is attached to the tip of a rod, and to get a rise is only the work of a moment. It is curious to watch the motions of the trout, and the positions they take. They dart at the fly frequently, only to stop when very near it, as though afraid of being hooked. Again a trout from the very bottom of the tank, one that has apparently taken no notice of the fly, will make a rush, seize the fly, quicker than the hand of the would-be angler can be turned to save the fish from being hooked. It has been a feat of some of these sportsmen who have been allowed to angle in the tank to "watch the fly from below." That is, to look upward at the fly by placing the head down beside the tank and looking upward through the glass and water. I am not aware that any useful conclusions have yet been reached as to how the fly looks from the trout's standpoint. It is a fact, however, that the scarlet ibis proves about as attractive to these tank trout as any fly that has yet been offered them.

The trout season is certainly early in Massachusetts, but the chances that it will be early in Maine are not quite as sure. The lakes in the northern part of that State are still bound in ice, and ice of great thickness. Open as the past winter has been, people acquainted with that region are inclined to think that the ice in the Rangeley Lakes is as thick as ever at this season. A guide writes me that the ice on Richardson Lake is 14ft. thick of true blue ice, and that this is covered with another foot of snow ice. His idea is that the lakes will be slow about clearing this year. Last year it will be remembered that these lakes cleared very early, starting on April 29 and being all clear on the 30th. But after all fishing was not so much earlier than usual, the first of May being cold and winterish. From the best records that I have ever had the privilege of noting, I am convinced that the big trout taken from these lakes are seldom heard from previous to the last days of May, while about that time a great many have been taken. Last year was no exception to this rule, and there is doubtless a good deal in the theory that the temperature of the water has much to do with the taking of the trolling bait by these great trout, as well as more to do with their rising to the fly. I understand from pretty good sources that the fishing through the ice by "the inhabitants of the State," which the law permits after the first day of March, has not been indulged in to the usual extent this year. The guides are tiring of it themselves and they discourage others, for the good reason that they are beginning to be more and more convinced that such fishing is detrimental to their business in the summer.

The ice is out of the Penobscot up as far as Bangor, and an early run of salmon is looked for. One or two salmon have already been taken in the traps further down the river, which indicates that the fish have already begun their journey up the river to the spawning beds.

The fishing season promises to be a prosperous one, and the correspondent of the daily papers is going to reap his annual harvest out of it. In fact, he has already begun to "write up" this or that resort. He is as replete with adjectives and lies as ever. He heads his articles with "Waters Alive with Trout," and then goes on to describe the location. It is easy of access, or fairly so, and he dares to say that on "no day in the year" can the sportsman possibly fail of getting all the trout he wants. "They always rise there, and hundreds are taken every day in the year." Well, such stuff will do for those for whom it is written, but there is not one sensible reader of the FOREST AND STREAM but what knows that such waters do not exist, and that the chaff is written to catch those who have no real knowledge of the laws that govern the supply of trout. One at all conversant with the trout waters of the country has been out many and many a day when not a trout has been lured to the creel. Indeed, in the case of a lake or stream never before visited by white men, and seldom by Indians, it is found that trout, though abundant, will not always come to either the fly or bait. Even on the lakes and streams of Alaska, where trout and salmon are abundant, there are many days in the season when trout will not take bait of any kind. It is well that such is the law; for after all, where would be the sport if one had only to reach the lake or stream, cast the fly, take a dozen or a hundred, as the case might be, and retire? It strikes one that the good things of this life hardly come that way.

SPECIAL.

KENTUCKY FISH NOTES.—Shelbyville, Ky., March 19.—*Editor Forest and Stream:* There is no river within the limits of Shelby county, but it abounds in creeks which are large enough to furnish fine angling, but for the obstruction of dams. As it is, there is some sport in the proper season. The species found in these waters are common perch, silver perch, catfish, suckers and a few black bass of small size. It is rare taking one of any kind weighing 2lbs. None are game except the black bass and silver perch. Some six or eight years ago the Fish Commission of the State caused large numbers of fry of California salmon to be put in these waters. It was said that though these fish, when grown, would make their way to the sea, yet that they would always return to the same stream whence they came to breed and spawn. I have examined some of the waters and inquired as to the others, and have never seen or heard of a salmon after they attained 4in. in length. It may be their absence is due to the obstructions I have spoken of; but I have always been skeptical as to their returning. There are many fine private ponds in the county, many of which were well stocked with silver perch a few years ago, but they were badly managed. The fish were suffered to become too numerous, and grew less in size and died out. Another cause of their decline is the unfortunate introduction of German carp. These were introduced by the Fish Commission. Are they a success? Yes and no! They will live and grow in any water, even in mud; they attain a large size; but the general verdict is that they are not fit to eat. I have not tested them. Some epicures pronounce them excellent food, and some, who admit their bad taste, attribute it to their being tested at the wrong season. They do not say, however, what is the proper season.—J. S. M.

WALL-EYED PIKE IN KENTUCKY.—Somerset, Ky., March 24.—*Editor Forest and Stream:* I would have answered your inquiry sooner in regard to what we call salmon being the wall-eyed pike, but had to wait until we could get the river in good condition for another fish. We got one day between rains last week and caught about fifty pounds, one weighing fifteen pounds. I send a photograph of one; it certainly looks like the wall-eyed pike, although the snout and teeth are not exactly like the last-named fish. If the weather had not been too hot would have shipped you one, and you could have judged upon its table qualities. We have the true pike here, and he is a dandy; will send you a picture of the first one we catch. As soon as the water falls we expect to have both pike and bass fishing.—J. M. R. [The photograph referred to by "J. M. R." enables us to determine that the fish is a wall-eyed pike, as we supposed. Judging from the size of one of the examples captured this must be the larger one of the two varieties into which the species is divided, and rejoices in a multitude of names, among which are: Wall-eyed pike, green pike, grass pike, yellow pike, pike-perch, hornfish, grass-eye, okow, dory, jack, jack salmon, salmon and pickerel. If this is not confusion worse confounded, pray what is it? Kentucky River claims the palm for wall-eyed pike, for it is recorded that Dr. Buel took one in that stream weighing nearly fifty pounds.]

BALLSTON LAKE FISH AND GAME CLUB.—South Ballston, N. Y., March 31.—*Editor Forest and Stream:* For several months past Dr. J. C. Spiegel and Maj. Geo. W. Marlette, of Schenectady, have been working earnestly to form a fish and game club, the object of which shall be the propagation, protection and preservation of fish and game in and about Ballston Lake, Saratoga county, N. Y. As a result of these gentlemen's efforts a number of sportsmen, residents of Schenectady and Saratoga counties, assembled at Caldwell's Hotel, South Ballston, on Monday, March 24, and organized the club by the election of the following officers: President, Dr. J. C. Spiegel; Vice-President, Maj. Geo. W. Marlette, Schenectady; Secretary, Geo. D. Bull, South Ballston; Treasurer, E. E. Kreigsmann, Schenectady; Executive Committee, Dr. J. C. Spiegel, Schenectady; Samuel Smith, Ballston; S. W. Buell, South Ballston; Maj. Geo. W. Marlette, Schenectady, and Silas Briggs, South Ballston.—LOPIS.

ST. LOUIS FLY-FISHING.—St. Louis, Mo., April 4.—Fly fishing has grown wonderfully in popularity among fishermen here of late years. Two years ago fly-fishing for bass was almost totally unpracticed. Last season quite a little of it was done with satisfactory results. The John C. Meyers Sporting Goods Co. is agitating the question of holding a fly-casting contest in the near future, and the project is meeting with much enthusiasm from the lovers of the sport, and quite a number of valuable prizes will be awarded the winners.—UNSER FRITZ.

TO SALMON ANGLERS.—Thos. J. Conroy, 65 Fulton street, New York, has an overstock of fine salmon rods, assorted kinds, which he will sell at a sacrifice until stock is reduced. Don't miss the opportunity.—*Adv.*

ADIRONDACK JOTTINGS.—D. J. Gilligan, of Ticonderoga, has leased the valuable hotel property owned by Milo B. Miller, at Saranac Lake, for a term of five years for \$20,000. Mr. H. Tousley has been secured as clerk. John Harding has purchased the Alexander House, located on the southeast shore of Lower Saranac Lake, about one and a half miles from the Saranac Lake station. Mr. Harding will begin the work of refitting at once and will open the house about May 15, the time when the spring fishing is the best. The name of the hotel has been changed, and it will in the future be known as The Algonquin, a very appropriate Indian name. Wabek Lodge, Upper Saranac Lake, on the Sweeney Portage, will be open for early fishing in May. Mr. T. E. Krumholz, proprietor. The house is an admirable one, and with its great advantages for fishing and commanding an extensive water and mountain view, must have a large patronage.—S. N.

IT SERVED THEM RIGHT.—The *Commercial Gazette* prints under date of March 27 the following despatch: "St. George, W. Va.—J. W. Ramsey and State Senator A. C. Minear had narrow escapes from death a few days ago. They were descending Cheat River in a boat, and had a package of dynamite along, intending to use it to kill fish with. Selecting a good point in the river, the senator ignited a stick of the explosive, but accidentally dropped it in the bottom of the boat. The result was an explosion which wrecked their bark. Minear was blown into the air about 20ft., alighting in the branches of a tree on the bank, while Ramsey was thrown into the river." Dynamiting fish is fine business for a State Senator to be engaged in.

GOOD WORK ON THE MOHAWK.—Schenectady, N. Y., April 6.—Several days ago Game Constable Potts was along the river bank at Crescent, and suddenly came upon four men floating down the river in a large fishing boat. Potts suspected something wrong and stepped behind a large tree to watch them. Presently the boat drew near shore where they had a net set. On raising it they found a good supply of bass, perch and pike. Potts took in the situation from his hiding place. The men proved to be Roger Van Curen, Chas. Caswell, Isaac Devoe and Samuel Stockton. On Monday last they were arraigned before Justice Smith and held to appear before him on April 19, when Constable Potts promises to make it very interesting for them.—LOPIS.

BROOK TROUT IN MASSACHUSETTS.—We are indebted to Mr. Willard Nye for information as to the present outlook for trout fishing on Cape Cod and the adjacent region. The New Bedford anglers have made their preparations to fish the little brooks flowing into salt water, distant from two or three to twenty miles. Some go to the famous Marshpee, where Daniel Webster loved to follow his favorite pastime of trout fishing. Others visit the streams of Martha's Vineyard. Trout are to be found, says Mr. Nye, almost anywhere. The anglers generally use worms and small fish for bait, because the brush is so thick that flies cannot be handled successfully.

SMELT AND WHITE PERCH.—Winterport, on the Penobscot, is said to be the greatest smelt-fishing town in Maine. The fishing is done with bag nets, which are set at the beginning of the flood tide and drawn at high water. The best catches are made at night. Eighty pounds is considered a fair catch, but this amount is generally exceeded. Old fishermen say that smelts have not been so abundant in the Kennebec River for twenty-five years as they have been this winter. The Bangor market has been bountifully supplied of late with white perch from near-by ponds.—*Gloucester Daily Times.*

We have received from Mr. Heidl a letter expressing very strongly the opinion that the automatic reel manufactured by Messrs. Yawman & Erbe is the "grandest invention of the age for lovers of piscatorial sport."—*Adv.*

Fishculture.

BULLETIN OF THE U. S. FISH COMMISSION.*

THE articles forming this volume relate chiefly to fish-culture and acclimatization, natural history of fishes and other aquatic animals, and to the apparatus, methods and products of the fisheries. Among them are the following:

Report on the fisheries observed in Great Egg Harbor Bay, New Jersey, during the summer of 1887, by Tarleton H. Bean, illustrated by 19 figures of young forms.

Results of investigations by the schooner *Grampus* on the southern mackerel grounds in the spring of 1887, by D. E. Collins, T. H. Bean and Richard Rathbun, the last author having prepared the report on the surface organisms taken in the townets and the contents of mackerel stomachs.

The beam-trawl fishery of Great Britain, with notes on beam-trawling in other European countries, by Capt. J. W. Collins, with many good illustrations.

A review of the mackerels (*Scombrinæ*) of America and Europe, by Fletcher B. Dresslar and Bert Fesler, with 11 plates.

The American sardine industry in 1886, by R. E. Earll and Hugh M. Smith.

The aquarium. A brief exposition of its principles and management, by Wm. P. Seal; also by the same author, An inquiry as to the proper methods for the care of living things held for popular amusement and instruction or for purposes of biological research.

Notes on the hatcheries and fresh-water fisheries of Iceland, by B. S. Thorarinnsson.

The fisheries of Gloucester, Mass., and other localities, by W. A. Wilcox.

W. Oldham Chambers is quoted on American fish cultivated by the National Fishculture Association of England, the species referred to being whitefish, brook trout, rainbow trout and landlocked salmon. Gilbert Ducloux's observations on the calico bass in France have been translated. Mr. Fred Mather has contributed papers on brown trout in America and the results of planting salmon in the Hudson. Mr. H. J. Maynard mentions the success with rainbow trout in Missouri. Prof. McIntosh's account of the eggs of fishes is given in abstract. Consul Frank H. Mason describes the method of obtaining self-reproducing food for young fish.

We notice with pleasure the great improvement in the quality of the paper used for the plates of this volume and congratulate the Commission on the variety and value of its contents.

*Bulletin of the United States Fish Commission, Vol. VII., for 1887. Washington: Government Printing Office, 1889. Pages xiii, 476; plates 89; figures in text 35.

FISHCULTURE BY TUXEDO CLUB.—The report of the Fish Committee of the Tuxedo Club shows gratifying progress in its establishments. An improved water supply has secured water of a nearly uniform temperature summer and winter. The club has a hatching house, in which eggs of brook trout and brown trout are developed. Carp are bred in large numbers as food for the young trout. Suckers are used in the same way. Crawfish and frogs have been placed in the lake to feed the black bass, which are purchased from the Caledonia hatchery. The Wee Waw, now in course of construction, will have an area of about 110 acres, and over 2½ miles of brooks and a pond are thoroughly stocked with trout.

The Kennel.

FIXTURES. DOG SHOWS.

April 15 to 18.—Show of the Buffalo Kennel Club, Buffalo, N. Y. A. W. Smith, Secretary.
April 23 to 26.—First Dog Show of the Schenectady Kennel Club, at Schenectady, N. Y. G. A. Rosa, Secretary.
May 6 to 9.—Second Annual Dog Show of the Southern California Kennel Club, at Los Angeles, Cal. H. W. Wilson, Superintendent.
Sept. 9 to 12.—Second Annual Dog Show of the Toledo Kennel Company, at Toledo, O. C. E. Howland, Secretary.
Sept. 23 to 26.—Second Annual Dog Show of the Central Canada Exhibition Association, at Ottawa. Alfred Geddes, Chairman Committee.
Oct. 6 to 11.—Ninth Annual Dog Show of the Danbury Agricultural Society, at Danbury, Conn. B. C. Lynes, Secretary.

FIELD TRIALS.

Nov. 17.—Twelfth Annual Field Trials of the Eastern Field Trials Club, at Otterburn Springs, Va. W. A. Coster, Saratoga Springs, N. Y., Secretary.
Dec. 1.—Second Annual Field Trials of the Central Field Trials Club, at Lexington, N. C. C. H. Odell, Mills Building, New York, Secretary.

1891.

Jan. 19.—Eight Annual Field Trials of the Pacific Kennel Club, at Bakersfield, Cal. H. H. Briggs, Secretary.
Feb. 7.—Third Annual Field Trials of the Southern Field Trials Club, T. M. Brumby, Secretary, Marietta, Ga.

BOSTON DOG SHOW.

THE seventh annual show of the New England Kennel Club was held at Mechanics' Hall, Boston, on the first four days of the month, and four more charming days could hardly be made to order. The weather was more like typical May than the opening of changeable April. But even that inducement for visiting, and the attraction of the best collection of dogs ever brought together by the club failed to attract visitors to Mechanics' Hall as should have been the case. The attendance was not what it should have been on the first two days, but on Thursday, Fast Day, there was a crowded hall in the afternoon and evening, and the managers informed us that on Thursday noon the gate receipts were sufficient to meet the expenses. The balance, therefore, must have been a handsome one.

The club this year decided to do its own benching and reverted to the old wooden partitions. The benches were conveniently arranged with good wide aisles and plenty of room for the dogs as well. Messrs. Austin & Graves attended to the feeding and John Reed was superintendent. One particular word of commendation is due the officials and that is for the scrupulous cleanliness of the show and the manner in which the dogs were looked after. The attendants were attentive and unobtrusive, and Supt. Reed had no trouble to satisfy exhibitors on that score. The show was disinfected by Ozonos, and the work was most effectually done. While the test was not a severe one, owing to the clear and dry state of the atmosphere and the good ventilation of the hall, the results obtained were most satisfactory, as this disinfectant appeared to do its work very thoroughly and, unlike all others with which we are familiar at dog shows, there was no bad smell of its own.

Though not as large an entry as Boston has obtained during its career as a dog show town, yet it is not always numbers that tell as to merit. Boston was away at the tail end this year, the dogs had all been sifted very thoroughly, and winners could be predicted beforehand with almost absolute certainty provided the expected dogs were entered. This of course acted to reduce the number, but at the same time it only left out the hopeless cases and the quality remained. To a great degree it was New York over again without the unnoticed dogs. Take for instance mastiffs. The winners were Sears' Monarch, Beaufort, Ilford Chancellor, Melrose Caution, Orion, Cambrian Princess, Countess of Dunmore, Lady Phillis and Lady Beatrice. What a splendid collection. And so it was all along the rows of clean pine benching. Previous winners galore, and only a few new aspirants to fame here and there. The judging was generally good. Differences of opinion there were, of course, and also will be, but with a few exceptions no fault could be found.

Having said so many deservedly good things of Boston dogs we are going to make our kick; it is a mild one. The dogs were not benched by catalogue, but by ownership, and as we have repeatedly said that ought not to be allowed. It is convenient only to a few exhibitors, while it is puzzling to everybody else. We find, for instance, on our return from Boston that here and there in our catalogue is a hiatus, no comments respecting a dog we should have seen. Simply because when we had got down to the last dog's number we proceeded to some other class, supposing that the previous one was completed.

On Wednesday, by invitation of the club, the blind children from the Perkins Institute visited the show, and it was a most interesting sight to watch them as by the sense of touch they examined the dogs of the different breeds that were brought before them. Helen Keller, the little blind mute of whom a short sketch was published in our issue of Dec. 19, was the center of attraction. She examined and fondled the different animals with evident delight; finally selecting a beagle puppy she spelled on her pimple fingers that this was the best dog in the show, and she held it and petted it for a long time. One little fellow was inadvertently introduced to one of the dogs for the second time, and as soon as his sensitive fingers were placed on him he exclaimed, "I have already seen this dog."

Following is a list of the judges: Mr. Jas. Mortimer, mastiffs, St. Bernards, bloodhounds and poodles; Mr. John Davidson, English, Irish and Gordon setters, deerhounds, greyhounds beagles and foxhounds; Mr. J. H. Winslow, pointers; Mr. Wm. West, spaniels, except toys; Mr. Martin Dennis, collies; Mr. J. E. Thayer, bulldogs; Mr. Geo. B. Inches, Chesapeake Bay dogs; Mr. N. Seabury, round-headed terriers and schipperkes; Mr. R. F. Mayhew, fox-terriers; Mr. H. W. Lacy, the remaining classes. All of the judging was finished before dark on the first day.

MASTIFFS.—(MR. MORTIMER).

The show of mastiffs was not as good as we expected to see in point of numbers, but the quality was excellent. All of the winners are well known and have been often described. Sears' Monarch was alone in the challenge dog class and there was no entry in the bitch class. Beaufort was an easy winner in the open dog class. There has been considerable talk about this dog, and he has been represented to be blind, a cripple and to have other serious faults, almost without number. How any one with a little bit of knowledge of dogs can pro-

nounce him other than one of the grandest specimens of the breed we cannot understand. He is not perfect, being a little light of bone, but his faults are few, and the more one studies him the less inclined is he to criticize. When we have more such dogs and the critics have on opportunity to become better acquainted with really good ones, we shall probably hear less of imaginary faults and more of mastiffs. Ilford Chancellor, second; Melrose Caution, third; Orion, fourth, and Ilford Caution, vhc., were all that remained in the class that are worthy especial mention. The winners in the bitch class are all well known. Only one puppy was shown, not a good specimen, and the prizes were properly withheld. The novice class was not a good one. First was withheld and second given to Greenwood Juno, that was vhc. In the bitch class, Gyp, placed third, is of fair size, but off in head and legs and not right in back.

ST. BERNARDS.—(MR. MORTIMER).

There were 65 entries in the St. Bernard classes, 8 of which were duplicates, and there were 7 absentees, leaving 50 to face the judge. In the challenge dog class for rough-coats, Ben Lomond, looking well, won, with Plinlimmon, Jr., second. In the bitch class Lady Wellington repeated her recent victories over Miranda. In the open dog class Hesper was placed at the head of affairs with Scotch Bonivard second, Roland third, Pilgrim fourth, and Home Ruler, a new face, vhc. Scotch Bonivard is a very catchy-looking dog, but is not good enough to win over Roland or Home Ruler. The latter is a very symmetrical, well-made dog, rather under size, lacking somewhat in black face markings and not right in one hindleg; he is very good at other points, and should have been placed third, with Roland second and Scotch Bonivard fourth. The last two have been often described. In the bitch class first went to Manon, the New York winner. Zara, placed second, was looking well. Recluse, the winner of third, we failed to find in her stall when we called upon her. Berlin, placed fourth, is not a show bitch. She has a fairish head and shows some character, but she is too low on her legs, and is sway-backed, but as there was nothing behind her nearly as good as she no great harm was done. The puppies were not a good lot. Nero Bernard, the winner in the dog class, is but little better than Wieland, placed second, that was h.c. at New York. Lady Eleanor, the winning bitch, is well marked, and she may grow into a fair specimen.

The challenge class for smooth dogs contained a very nice trio in Hector, Beauchamp and Victor Joseph, placed in the order written. All were looking well. Thisbe was alone in the bitch class. The open dog class introduced to us the magnificent Watch. His head is something wonderful. We expected from the pictures we had seen of him to find his head something of the bulldog type, but on the contrary it is more of a houny character, immense in size, with the true St. Bernard expression, a study for the artist and a revelation to all with an eye to the beauties of this magnificent breed. He was shown quite thin, as was to be expected after his recent ocean voyage and the knocking about across country he has had since his arrival, and we are not sure but his condition, displaying as it did his immense frame, was a more satisfactory exhibition to the breeder and fancier than it would have been had he been shown 50lbs. heavier. His immense size and beautiful proportions command the admiration of every one, and all fanciers of the breed who have seen him are enthusiastic in praise of his many excellent qualities. His ears are a trifle heavy, and although he moves better than nine-tenths of the breed, his gait behind could be improved. He is not yet quite 2½ years old and is not fully developed. With his magnificent frame and four good legs to carry it he should show up next year at not less than 250lbs. If nothing happens him there is a brilliant future before him, and we heartily congratulate the breeders of this variety upon the acquisition of so valuable and useful a specimen as he promises to become. His owner will no doubt receive the hearty support his plucky venture deserves. The other winners in the class are well known and no special comment is necessary. In bitches Cleopatra, the New York winner, shown a trifle thin, was placed at the head of affairs, with Regina, winner of third at New York, next, and Lady Bernard third. Empress of Contocook, placed fourth, looks well enough to be higher on the list, but her ring-tail is much against her. She was first in bitch puppies and first in the novice class. The puppies were not an extra lot. Champ, the winning dog, just a fair specimen, was the best of the lot.

BLOODHOUNDS.—(MR. MORTIMER).

Only three bloodhounds were shown. Burgho, Jr., the only dog shown, is a puppy less than nine months old. He is of immense size, with lots of bone, and has fair head and ears. He is almost destitute of wrinkle, but will probably improve somewhat in this respect with age. Duchess of Ripple, winner in the bitch class, was uncomfortably pressed by Pembroke Star. She is not so good in wrinkle as Duchess, but is better in ear and much better in legs and feet. Mr. Brough, the part owner of Duchess, has sent for her to go back to England, as she is more valuable there as a brood bitch than she will be here. She is the dam of Bono, the sensational puppy that won all before him at Birmingham last year, as well as other good ones.

GREAT DANES.—(MR. LACY).

The Great Dane classes were well up to the standard of this year in both number and quality. The open dog class of thirteen led off with Mr. Leibbacher's Pascha, the New York winner, a dog of good proportions and strong on his legs. His head is a little heavy for the present fancy. Second went to Great Caesar, a dog we spoke well of at New York. His stilty hindlegs will always keep him back in good company. Hector fails in size and quality compared with the two in front of him. Cards were pretty liberally distributed and well deserved. In the bitch class those two good ones, Irene and Bella, met again, and Irene was once more placed in front. They were first and third respectively at New York.

NEWFOUNDLANDS.—(MR. LACY).

There was but one Newfoundland shown, Bruno, and the judge was a little hard on him, for although his coat is not quite right, yet as Newfoundlands go here he might have been given second in place of third.

DEERHOUNDS.—(MR. DAVIDSON).

Mr. Thayer sent fourteen deerhounds from Hillside and they made a grand showing. Chieftain, looking wonderfully well for a dog in his ninth year, was first in challenge dogs, with Robber Chieftain second. We are glad to see Mr. Davidson recognize the superiority of this dog over Clansman. A year ago he thought otherwise. Ramona over Wanda in bitches is right. Both are grand ones. There was nothing new until the puppy class was reached. We did not see these dogs judged, but can hardly imagine that they were put through their paces, otherwise such a stickler for practical purposes as Mr. Davidson would have recognized that Alfred the Great cannot gallop, owing to being straight and weak behind. He is an immense puppy and grand in front. Were he as good all over he could probably beat anything shown. Hillside Harold is younger and smaller, but truly made all over and should have got the ribbon.

GREYHOUNDS.—(MR. DAVIDSON).

Balkis was the only one in the challenge class. In open dogs Master Rich beat Conspirator. We doubt if he will ever do it again, for the black dog has come on wonderfully fast. It was a pity to show him until he was in shape, for it is not so easy to turn the tables after a succession of defeats. A new dog should always be shown right to begin with. Miss Rare was not in her usual condition, one or two

raws marring her appearance. Still she won fairly from Drytime, a well made bitch, light fawn in color and a little weak in jaw. The puppies were anything but promising.

CHESAPEAKE BAY DOGS.—(MR. INCHES).

The only entry in this class was Rex, said to be a dog of good size, excellent coat and quite a good specimen of the breed, but unfortunately he was left at home and so failed to secure the prize.

POINTERS.—(MR. WINSLOW).

The quality of the pointer classes was the best that we have seen this year. The judge evidently was not loaded for pointers and some of his shots were wide of the mark. This was the more notable as he generally handles his classes very well. In the challenge class for large dogs Graphic won, with Lad of Bow second. Graphic is growing old and he must soon give place to a younger dog; indeed, some thought Lad should have beaten him on this occasion, but the latter is not quite good enough and the decision was correct. Robert Le Diable, the only other entry in the class, was absent. Revel III. was alone in the bitch class, Lass of Bow not putting in an appearance. Duke of Vernon, looking well, was given the pride of place in the open dog class, a position he well deserves, as he was many points ahead of anything in the class. Placing Graphite second was a mistake, although he was in the best of condition, his very bad head and ears, to say nothing of his other faults, should have kept him back in this company. Dare-go, placed third, is a better dog than Graphite, and he was in his proper place. Ponset, vhc., was the second choice of the lot. He is the best looking Bang Bang that we remember to have seen. He is a large upstanding dog, with a fairly good head, capital chest, loin and quarters, and a nice set of legs and feet. His worst faults are a short, thick neck and heavy shoulders; he and Graphite should have exchanged places. Beaufort H., looking well, was placed fourth. The others in the class all received cards. A number of them were quite fair animals and none of them were really bad. It was a lucky day for Luckystone, winner in the bitch class. She has improved somewhat in body with age, but her shoulders were still bad and she is light in bone and has not improved in head and ears. Sally Brass II., placed second, was the best in the class, and next to her in point of merit was Belle Randolph, notwithstanding her lack of condition. Luna T., vhc., should have been third. She is a very nicely put together bitch, a bit strong in head, full in eye and has open feet. She has excellent shoulders, good chest, loin and quarters and good legs. Boski, placed fourth, also a new face, was shown much too fat. She is a nicely made bitch, good all round except that she is off in muzzle and was throaty. Westminster Sal, third, is well known. She should have had the reserve card.

In the challenge class for small dogs Duke of Hessen was placed over Naso of Kippen. This was a mistake. Naso was looking well, except that he has not shed his coat, and in consequence looked somewhat rusty, but he was in better form than Duke, who was not in good condition, and even at his best he is not good enough to beat Naso. In the bitch class Meally, Glauca and Stella B. competed, Queen Fan being absent. All are well known. Meally, the best of the trio, was unnoticed. Glauca, the next in order of merit, was placed second, and Stella, the worst of the class, was given the pride of place. She was in the best condition, however, and this probably won her the place. In the open dog class first went to Lancelot and second to Ossington, who should have exchanged places with Naso Peshall, placed third. Sir Anthony came next with the well-known Spot Dash reserve, and the equally well-known Don Quixote vhc. Pomery Sec and Tory Dick were absent. In the bitch class Fan N., the winner at Chicago, was placed at the head of affairs, with May B. second. Mam'zelle, placed fourth, we failed to find in her stall. Naso's Bell, winner of fourth, is a very pretty bitch, a bit short in body, slightly undershot, and not quite straight in front. Miss Freedom, reserve, we liked better for fourth place. Stella, vhc., was not in good condition, having canker in one ear very badly. Buttercup, also vhc., is a nice little bitch, much too cobby built, but with good chest, loin, quarters, legs and feet. Lassie Jean Beaufort, h.c., deserved at least another letter. She is a well-made bitch with considerable quality; she is too fine in muzzle and a trifle light in bone. The puppies were a much better average lot than we generally see. The three dogs shown by the Westminster Kennel Club are very promising, the winner, Westminster Glitter, especially so, although he is too young to show, as he is but six months old. We also liked the winning bitch. If she goes all right she will do to show next year. The winner in the novice class, Nadjy of Naso, is just a fair bitch, a trifle snipy and too shallow in chest; she was not in first-class condition. Luna T., vhc. in the open class, was the best in the class. She beat Lassie Jean Beaufort in the open class, but in this class Lassie was placed third while Luna was unnoticed.

ENGLISH SETTERS.—(MR. DAVIDSON).

The English setters were not so numerous as last year, neither was the average quality quite so good. Mr. Davidson handled the classes very well indeed and we heard no fault found with his decisions. Count Howard was alone in the challenge dog class and Daisy Foreman also had a walkover in the bitch class. In the open dog class, first and third went to the Cohannet Kennels' Kent II. and Royal Kent, that were respectively vhc. and reserve here last year. We then said of these two dogs, "Reserve went to Royal Kent that was commended here last year. It will be remembered that we had a good word to say for him then and thought him badly treated. He has just returned from a winter's hunt in the South and was not in show condition. His good head, chest, legs and feet won him the place in spite of his ragged coat and lack of flesh. His kennel companion, Kent II., in even worse condition, was given vhc. This dog is not yet two years old, and if he comes out next year in good form he will undoubtedly be higher up." Second went to Gus Bondhu who was looking very well indeed for his years. Don Quixote, placed fourth, was second in the novice class at New York this year. Reserve went to Foreman's Nepal. He was in excellent condition. Bow Bondhu, also looking well, was vhc., the same position he occupied here last year. Burr, h.c., looks a workman, but is off in head and coat, and is a bit light in quarters. Ghyllie, commended, is not a show dog. All of the bitches are well known, except the winner of third, Blink Bonnie, wrongly printed in the catalogue Blunt Barrie. She is a well-formed bitch, with good body, legs and feet. She is a trifle coarse, her expression is a bit sour, and her coat is inclined to curl about her ears and on her quarters. The winning dog and bitch puppies are a very nice pair. The dog, Domingo, is a very symmetrical, well-built animal, with a good head and a better muzzle than we often see. His litter sister, Dominion, while not quite his equal in head, is fully up to him in shoulders and quarters and better than him in front legs. The winners in the novice class were all entered in the open classes.

IRISH SETTERS.—(MR. DAVIDSON).

The Irish setters were a good even lot, and the open classes were better than we have seen this year. Mr. Davidson does not like a large dog, and when he has small ones enough to go round it is hard for a large one to get into the money, unless he is considerably better than his smaller competitors. The challenge dog class brought out Elcho, Jr., and Blarney, and they were placed in the order named. Dr. Jarvis informed us that Elcho, Jr. will make his last appearance for competition at Buffalo next week. Laura B. was alone in the bitch class. In the open dog class the judge selected for the money four that were very similar in appearance. None of them are world-beaters, but all, so

far as we could see, were sound and with no very serious faults. Dan Mylrea, placed first, is a new comer. He is down in the catalogue as "date of birth, breeder and pedigree unknown." He is a taking looking dog, good in body, legs and feet, and with fair shoulders, chest and loin. He is rather plain in head, a bit wide in skull and his ears are set too high. Hemmore Shamrock, second, is also a nice looking, well-made little dog of good color and with capital legs and feet. He is rather weak in head and muzzle. Huntington, third, we failed to find in his stall. In the judges' ring he looked very much like the two preceding. Sarsfield, Jr., placed fourth, like those placed over him, is not first-class in head and muzzle; in other respects he will do. Jacqueminot, reserve, is half brother to Sunset, with much the same conformation and a size smaller. Sunset, good dog that he is, was too large to please the judge and had to be content with the three letters. Blaze, also vhc., looked well in the ring, but we failed to find him in his stall when we called. Redstone and Jack Malone, respectively vhc. and c., are well known. Sarsfield, a very nice looking little dog, received hc. He is too small and weedy for the show bench. The bitches that were placed are all well known and have often been described. There was nothing in the puppy classes that looked like a future champion, but Irish setter puppies are so notoriously uncertain that it is guesswork at best to predict their future. The winners in the novice class were all entered in the open classes. They were properly placed.

GORDON SETTERS—(MR. DAVIDSON).

The Gordon setters as a whole were not a good lot. In the challenge dog class the judge went wrong in placing Little Boy over Beaumont. Our criticism of these two dogs has been often given and does not need repetition. In the bitch class Belmont was an easy winner over Rose, placed second. The only other entry, Jessie, was absent. In the open dog class Tyras, that was fourth at New York, was awarded first, with King Item, that was second at New York, next in order. Our criticism of these two dogs in our New York report was as follows: "Second went to King Item, the winning puppy at Philadelphia last year. He has improved considerably, but not enough to make him a good one; his head is good, and that is about all we can say in his favor; he is shallow in chest, low at shoulder, weak behind and a very bad mover. * * * Tyras, placed fourth, also beats the winner of second at nearly all points; he has a good head, nice color, and markings; he is too cobby and straight behind." We are glad to note that so good a judge as Mr. Davidson indorsed this opinion. Dan, placed third, is not a show dog. Dash L., winner of fourth, is a much better specimen, but he shows age and was not in good condition. In the bitch class Countess Rexie had no trouble in securing first. She was second at New York and Chicago. Second went to Neva, the winner at Worcester last year. Daisy, third, and Ven, fourth, received all they deserved. Our old favorite Jessica shows her nine years and could only get a reserve card. We thought her just about good enough in this company for third place. The puppies were nothing very remarkable. The winning dog, if he develops in head and quarters, may be heard from next year. Rexmont, placed second, was the winner at Chicago, and the winning bitch, his litter sister, also won in her class at Chicago.

SPANIELS—(MR. WEST).

Considering that the spaniels have been very well sifted out the support given Mr. West was very complimentary. The Canadian kennels were not well represented, but it is a long way to send to Boston from the spaniel district of the Dominion. In field spaniel dogs Baron well earned his blue and the Spaniel Club trophy. Timbo, second, is too high on the leg. In bitches the litter sisters Lassie and Miss Ben d'Or were first and second. The latter suffers from the drawback of a yellow eye. Lassie was shown in good condition and was a clear winner. Jessie Stubbs is leggy and Boodle is far from flat in coat. There was but one entry in the two any other color classes, Flirt, a liver and white bitch, off in coat and high stationed. She got second, first being withheld. The only entry present of the two Clumbers was Lass of Beauty, small and quite wrong in head, but she got first, all the same. In Irish water spaniels it was again a fight between Patsy O'Connor and Captain Muldoon, and the military gent had to put up with second place.

Cockers began with a challenge class for all colors and both sexes, in which three blacks, Doc, Jersey and Dolly Obo, came together. The judge favored his old love, Doc, who was looking better than at New York, and between Jersey and Dolly Obo came the tug for second place. Owner and judge pleasantly argued it out before the FOREST AND STREAM representative after the judging. Mr. Willey said, "If Doc is right for first, Dolly is the same type and should have been second." "I'll admit the type," replied Mr. West, "but she is not in anything like Jersey's condition." "Well, I'll acknowledge that," was Mr. Willey's rejoinder. The well-known Rabbi won in black dogs. Black Duke, as usual, would not show himself in the ring. It is a great pity, for he is a nice dog. The other three were quite out of class, Prince Obo and Towser being light of bone and leggy. In bitches, a good one made her appearance in Mr. Willey's Little Nell. She is just about as good as has been seen, and looks like filling out without going wrong. Of nice size, good cocker shape, excellent coat and a head that looks like lasting. Nice bitch as Black Duchess is, yet Little Nell was far ahead of her. High Rock Jet is too high and so are the others mentioned. In any other color cockers, the reds had the money to themselves, but Mr. West changed the New York order. Brantford Red Jacket is not in the full flesh he was when he first came out, and his failings are all the more conspicuous. He is not of cocker type, and Mr. West, starting with Cherry Boy for first, a good decision, followed it up with La Tosca second and Red Doc third. La Tosca is a nice cocker, but her head is not right. Slick is a black and white, with particularly good quality of coat, but she is beginning to show her age. La La, in the novice class, is the only other one calling for mention. She was shown by Mr. Frank Dole, who is getting quite an all-round kennel together. La La had the bad luck to meet Little Nell and had to take second place. Lightness of bone is her fault.

BEAGLES—(MR. DAVIDSON).

The beagles were a nice-looking lot and of good average quality. In the challenge class Little Duke, not at his best, and Lou, looking well, were given equal honors. In the open class first went to the well-known Racer, Jr. Rally, placed second, occupied the same position here last year. He was not in good condition and his coat was soft. Reserve went to The Rambler, that was vhc. at New York. Little Drive, vhc., we thought about as good as any behind the driver. He is a bit plain in head and his ears are set on too high, but aside from this he is a capital little hound, very well put together, with nice shoulders and back, exceptionally good loin, plenty of bone, and he stands true on the best of legs and feet; he also moves nicely and carries his stern better than any in the class. Captain, hc., is plain in head, with ears too high; he also lacks substance and does not stand true in front. Whisper, first in the bitch class, is a well-formed bitch, with plenty of bone. She has a staring eye and lacks expression. She was very closely pressed by Merry Maid, second, with her nice head and good expression. Tone, reserve, is of good type and is also good in head and expression. In the puppy class first went to Topsy S., one of the nicest puppies we have seen for some time. She is fairly good in head, has capital shoulders, is nearly perfect in body and spring of ribs, with loin and quarters much

above the average. She also stands fairly true on good legs and feet, and is very symmetrical. If she does not grow coarse she will make it very warm for the best of them next year. Bessie, placed second, is a very nice puppy, well-made and with plenty of substance. She is weak in head and too snipy in muzzle. Ginx, reserve, and Bell Ross we did not see outside the ring. Twint-o-ne, hc., is weak in head and muzzle and lacking in expression. Twint Wo, unnoticed, is much better, with a good head and plenty of bone and substance, but is too long in the couplings.

DACHSHUNDE—(MR. LACY).

Three dachshunde, all differing from one another in type, were led in to puzzle Mr. Lacy as to what to do with a poor lot. Daisy B. did look a little like what a dachshund ought to be, although she has a fox-terrier head and ears. Nigger K. on the other hand resembled a Delaware Peninsula "rabbit dog."

FOXHOUNDS—(MR. DAVIDSON).

There were sixteen foxhounds shown, thirteen of them by the Brunswick Fur Club. The classes were made for American foxhounds, and the display was a very characteristic one. The New England fox hunter cares very little for the looks of his pack provided they get there, and the dog that can go and stay is the one that is bred to regardless of looks or disposition; indeed, it is a very common saying among the fraternity that a handsome hound is not to be depended upon for hard work, and as a rule the stud hound is a very indifferent specimen so far as looks go. While there is no doubt that the so-called American hounds as a class are a hardy race capable of doing a vast amount of work, it is well known that they are far from being a sorry lot, and that uniformity of type nor anything approaching it is to be found among them. The Brunswick Fur Club has determined to make an improvement in this respect, and they are securing the best dogs from all sections with a view to the selection of the very best for breeding purposes, and in the end to establish a strain that will not only do their work in a faultless manner, but be of uniform type. The club has recently purchased in England a dog from the Duke of Scarborough's pack, and if he proves worthy they will use him in the stud. The dogs shown here are very similar in appearance to the packs we have hunted with for many years, no two alike, but all with the gamy appearance that is so characteristic of the dogs that keep Reynard very busy from early morn to dewy eve, and when morning comes again are both able and ready to repeat the performance. Mr. Davidson selected well-formed animals with good legs and feet for the honors, and his decisions were probably as nearly correct as could have been made by any one.

COLLIES—(MR. DENNIS).

There were a good many well-known faces brought in for Mr. Dennis to look at and criticism on his classes will not be long. Scotilla and Charleroi II., and Flurry II, and Flurry III. were the order in the respective challenge classes. In open dogs Roslyn Wilkes was again first, with Hempstead Zulu second. It is pretty evident that Zulu will not grow a full coat; what a pity such a grand-headed dog should have such a drawback. Scotilla II., still improving, was third, and Prince Charlie, the black, white and tan, was the last of the money winners. Reserve went to Scotson, half brother to Scotilla. He lacks liberty, but was shown in grand coat and condition. His pricked ear is now all right. We do not question Mr. Fletcher's statement that the hole in the ear was got in a fight, but it is unfortunate the tooth should have gone through the ear at that particular place. Moonstone II., a son of Scotson, is a well developed puppy, light in color and we do not quite like his expression. Scotland Yet is coarse in head and has a sour expression. This is the dog whose faked ears made such a hubbub across the water about two years ago. The cuts are very plain. In bitches we were introduced to a surprise in the person of Roslyn Queen, by Dublin Scot out of Flurry III. This is the best bitch yet bred at Chestnut Hill. She is excellent in outline, good shoulders, legs and feet, and particularly strong in quality of coat. She is yet a little plain in face, but should improve. Ears small and well carried, almost too well in fact, and Jarrett may yet have trouble with them. Bonnie's Baby was unfortunately too late for the judging, or she would doubtless have been second. Jakyr Dean, who got that place, is an old favorite of the judge's, but we disagree with his putting her so high this time. She is dead out of coat, and has gone off very much in head since last year. Miss Nancy, very much improved since New York, ought to have been second. She lacks quality, but was shown in good coat and condition. Roslyn Exile, with his heavy drop ears, was a bit lucky to get first in dog puppies, and should certainly not have been placed over Queen in the novice class. Blair Athol, black and tan, for some unexplainable reason was unable to move in the ring. He moved all right when we took him off his bench, and Mr. Dennis, who was present at the time, said he was an entirely different dog from when he was judging. He is a little bitchy in head, as his sire was at his age, is of good size and has plenty of coat. There were a number of dogs from Montreal, but Mr. Duncan hasn't got the right sort to breed winners from. The best he could do was hc. for Reality.

POODLES—(MR. MORTIMER).

There were nine poodles shown. First and third went to Jack and Pauline, the winners of first and second here last year. Jet, the winner of second, is only a year old, and his coat is not yet well grown. He promises, when mature, to be a good specimen. Tux, vhc., is also a youngster, but will have to improve considerably to be in the first flight.

BULLDOGS—(MR. THAYER).

The first appearance of Mr. John E. Thayer in the capacity of judge extracted the unusual compliment of indorsement from a number of the bulldog men as soon as it was announced. That he was a thorough master of the situation was apparent as soon as he began handling his first class, challenge dogs. Portswold Tiger was properly selected for first, with Lion second, while Hillside got the barren honors of a vhc. Merry Monarch, the fourth entry, has gone off very much since he was last out. Soudan was well ahead of Carmen in challenge bitches. Harper, of course, won in the open dog class, but as the winners have been out so frequently it is only necessary to give their order. Monarch VI. was second, Oswego third, and Carisbrooke vhc. Fillmore, bad in head and weak-faced, got vhc. A mongrel terrier occupied the stall of Hodge. Dimple and Naid were first and second in bitches, the same as at New York. Jack Horner, the winning puppy, is not likely to cause any astonishment hereafter.

BULL-TERRIERS—(MR. LACY).

Cairo, who is lasting wonderfully well, beat Jubilee, who has got very cheezy, and Royal Rose won from Marguerite. Both proper decisions. A sensation in more ways than one turned up in the dog class. The Messrs. Harris showed their new dog Beryl and won first. We can only say that we were told he is by long odds the best bull-terrier yet shown, for he was kept off his bench after a protest for deafness was made and even after the protest was not allowed he was not forthcoming during the time we remained at the show, although we made several inquiries. The protest was made by Mr. E. Sheffield Porter, and after the dog had been tested in the evening of the first day, when he gave every evidence of being stone deaf, the veterinary decided to make a further test in the morning. The additional test was the firing of a blank cartridge in an adjoining room, whereupon Beryl jumped up and looked all around. Such a test is valueless for the purpose of deciding

under the present rule. It is not a question of whether a dog can notice by concussion of the atmosphere, but whether he can hear for the purpose of obeying orders. When it came to judging the special the judge detected that he was a deaf dog and gave the prize to Attraction. Second in dogs was given to Diamond King, who needs more bone and a blacker eye. Don Pedro, third, we did not like so well as Harvester, who was shown in splendid condition. Attraction won easily in the bitch class from Euterprize, with Queen Bendigo third. They are all well known. Millstream is bad on her legs and too full in eye. My Queen well deserved the reserve. In small size dogs and bitches Mr. Lacy made a mistake in placing Chessett's Flyer over Dusty Miller, who, except in forelegs, beats him almost pointless. Mr. Dole showed a very promising puppy in Protection, which looks at present like developing properly.

BOSTON TERRIERS—(MR. SEABURY).

The round-headed bull and terrier classes were well filled, but as was the case last year there was no uniformity of type either in the classes or among those selected for the winners. These dogs appear to be great favorites in Boston, and in many cases fancy prices are paid for them, and possibly in time, if proper care is taken in breeding, they may be brought to a more uniform type than they now are. We shall not attempt a criticism, as our opportunity to study the breed has been too limited.

FOX-TERRIERS—(MR. MAYHEW).

With a new fox-terrier man in the ring, and a man not inclined to borrow "tips" from any of his predecessors, a shake up was not unlikely, and a shake up there was the first time of asking. Mr. Mayhew bowled over Lucifer and Blemton Rubicon with Baby Mixer, putting Lucifer third of the three. In speaking of Mr. Thayer's dog at New York we referred to his great improvement. He is no longer leggy, while in head properties and terrier expression he was an easy first. Lucifer's weakness of jaw is now more conspicuous, he is going off in front and is too heavy in shoulders. Blemton Rubicon knuckled over badly and is slack in loin, but he is a better finished terrier than Lucifer. The lovely Rachel beat Richmond Dazzle in challenge bitches quite handily. The Blemton Kennels scored again in open dogs with Blemton Racket, who seems to have improved since New York, especially in head. He has a nice body, and his well-placed shoulders are particularly noticeable. Second went to Suffolk Risk, rather light and looking shelly. He would have a much smarter look if his ears were higher. A son of old Scarsdale, Tramp, came in for third money. His failing is size, being too small, but he is quite a terrier. The well-known Blemton Volunteer, representing the Oriole Kennels, got fourth prize, and reserve went to Reckoner, who might well be retired now. Beverwyck Rebel is coarse in head and long-bodied. His bone is his strong point, while it is Suffolk Coronet's failing. The latter is of nice outline, but is soft looking.

Bitches were a large class, but not so good to lead off with as the dogs. Mr. Mayhew selected the smart little Suffolk Rarity for premier honors. It is a pity there is not more of her. Blemton Brilliant's good body pulled her up into second place. She is of better size than the winner, but is wrong in head and front. The new named Empress, shown as Corry I. at Chicago, got third. Although Incognita did not show at all well, yet we preferred her to Empress for third. Blemton Rapture could have done with more flesh, she is also on the small order and lacks coat, the texture being also soft. Rosa Canina and Enid have both been described before. Beverwyck Rebecca is big and common looking. Blemton Racket won again in puppies, with Blemton Brawler second. The latter is making up into a nice terrier, and with a little improvement in bone and body it will take a good one to beat him. Woodall Rustie is large for his age, and will have to let down. He has plenty of bone and substance and looks a terrier. The Hill-side entries were not so good as they ought to be considering their high breeding. Blemton Toil was second to Suffolk Rarity in bitch puppies. She does not carry her ears right, is good in body, and may yet improve.

The wire-haired division presented nothing new in the money winners. Suffolk Toby and Suffolk Settler occupied their New York positions as first and second, with Cuspi cum third. Blemton Racket won the Home Bred Puppy Stakes, and Rachel the special for best fox-terrier.

SCOTCH TERRIERS—(MR. LACY).

Lowrie Dunbar was all alone in his glory and got the blue ribbon.

IRISH TERRIERS—(MR. LACY).

Burnside won his first challenge class prize without opposition, and then came the new dog Mars at the head of the open dog class. He is built on racing lines, is good in coat, but wants a little of the dare-devil in face. In this respect Shaun Boy beat everything in the show. He was well worthy of a card, although his head is short and he is fully wide in front. Expression is not recognized as it should be by our Irish terrier breeders. Master Kildare II. we took no liking to, and Dick is too big and too woolly for an Irishman. Roslyn Murphy was a better one by a long way, but he looks soft. Mr. Comstock had the hard luck to lose Breda Florence a week before the show opened, and this left the way open for Nora, a bitch of the right size with a proper wire coat, though it is hardly long enough, and fairly good outlook. Next came Kathleen, second at Chicago. She has filled out a bit, but will always be light in bone, and she needs character in head. A touch of black around the eyes and about the muzzle would improve her wonderfully. Little Vixen we could not find, and Eileen II. is light and weedy.

OTHER TERRIERS—(MR. LACY).

Border Wang was the only Dandie, and Meersbrook Maiden was alone in the black and tan challenge class. In black and tan dogs Kaiser scored an easy win. This is a smart terrier with a long, clean head and a splendid eye; one the proprietor of the Rochelle Kennels should have bought pending his securing his ideal terrier. Rochelle Knickerbocker is cheezy and too big in eye. Desdemona was first in bitches, and Rochelle Nadyj was lucky to get anything after the judge had detected her trimmed breech, besides which she is weedy and bad in color of tan. Skye terriers found Sir Stafford well ahead for first; second was withheld, and third given to Gamp II., an undersized dropped terrier with a good length of coat. Yorkshire terriers were particularly strong. Bradford Harry had no opposition in the challenge class. In the dog class we could not agree with Mr. Lacy's decisions. Lancaster Ben, which he chose for first, is black-backed, and his tan is dark and smutty, his coat also is scant and not long enough. He looks a good deal older than five years, for his muzzle is quite gray. Toons Royal is a much better dog in color and coat, and so is Prince A1. Harry is too light in both blue and tan. Three others of the old style got no mention. The North Fields Kennels were 1, 2, 3, in bitches, with three excellent specimens rightly placed. The under 5lbs. class was another good one, and North Fields was again first and second. Daisy, the winner, has a lovely coat both in texture and color. Fish Pool Gem is not so good in blue, but she only failed in that when put alongside the winner. Prince Albert was not well shown; his coat did not brush out properly.

PUGS—(MR. LACY).

Dr. Cryer took all four firsts with Max, Bessie, Bob Ivy and Myrtle. Little Jewel was again second to Bob Ivy. These have all been described before. Budge, the third dog, is pinched in muzzle and his ears are large. He has a good

full eye and is well wrinkled. Dot, second in bitches, has a nice body, but is weak in face and too large in ears.

TOY SPANIELS—(MR. LACY).

Roscius had no opponents in the King Charles challenge class. First in the open class was given to a bitch with a white chest and under jaw and a sprinkling of white hairs on the top of her muzzle. Her best point was her flat coat. Don II. should have won. Don Pedro is long in muzzle and his coat is curly, and Puchinello has far too much tan. The winning Blenheim and Prince Charles are all well known.

SCHIPPERKES—(MR. SEABURY).

Five "shipwrecked" ones honored the gentleman from Providence by appearing in his ring. We do not profess to know much more than the next man about the latest thing in dogs, but we have placed them just as Mr. Seabury did. Midnight has a nice frill, which sets off his head nicely. He is a cobby little fellow, but perhaps they should not be cobby. Anyway he fills the eye as a neat, tidy little dog. Darkness is not so bright-looking, nor is she as good in coat as her kennel companion, while Peck, Jr., is rather leggy and short-coated. Othello was outstayed by the winners.

MISCELLANEOUS—(MR. LACY).

First to Bertrand, the basnet hound. He is not typical in head and was shown too fat. White Prince, second, is too much of a bull-terrier to be shown as a white English terrier. Third to Orson, bob-tailed sheep dog. This class contained two new breeds, Mexican spaniels and Italian sheep dogs. The latter looked like mongrel collies, and were white in color; but two of the "Mexican spaniels" were little gems. Sharp, foxy heads, with prick-ears and bright, intelligent eyes. Color, pearly white, with orange marked heads, and feathered on legs and tails. They ought to have been in the money and so should the Russian setter Duke.

CORRECTIONS.

In mastiff bitches W. A. Powers's Greenwood Juno was very high com. instead of Lady Amelia; in Great Dane dogs M. Martin's Sultan was high com.; in challenge deerhound bitches J. E. Thayer's Wanda was 2d, and in the bitch class Berga was reserve and Brazen very high com.; in Gordon setter dogs C. H. Leonard's Dash L. was fourth; in black cocker spaniel dogs, Prince, winner of 3d, was disqualified for over weight, in bitches A. V. Almon's Judy was high com.; in beagle puppies W. P. Whitman's Pearl was com.; in collie bitch puppies J. Duncan's Floe was high com.; in fox-terrier bitches Oriole Kennels' Blanton Rapture was reserve, and in dog puppies J. E. Thayer's Hillside Rake was very high com.; in bull puppies E. S. Porter's Winning Hand was com.; in Yorkshires under 5lbs., P. H. Coombs's Prince Albert was 3d.

SPECIAL PRIZES.

Mastiffs.—Kennel, American bred, E. H. Moore. St. Bernards.—Contocook Kennel; American bred, C. T. Barney; best, Watch; American bred, Nevis; smooth-coat under 18 months, Champ; St. Bernard Club special, smooth-coated border bitch, Regina; American bred smooth dog over 18 months, Nevis; bitch, Lady Bernard; dog under 18 months, Belfer; bitch, Empress of Contocook; rough bitch over 18 months, Zara. Pointers.—Kennel, Chas. Heath; American bred, Westminster Kennel Club; dog with field trial record, Graphic. English setters.—Kennel, American bred, Rosecroft Kennels. Irish setters.—Kildare Kennels; best, Elcho, Jr. Gordon setters.—Kennel, American bred, H. F. Smith's. Spaniels.—Spaniel Club trophy, Baron; kennel, American bred, J. P. Wilcox; dog, Doc. Beagles.—Beagle Club special for best dog, Racer, Jr. Collies.—Kennel, American bred, Chestnut Hill Kennels; Collie Club special for best dog in open class, Roslyn Wilkes; bitch, Roslyn Queen; Chestnut Hill Kennels' special for best dog under 2 years, Roslyn Wilkes; bitch, Roslyn Flirt. Bulldogs.—Best, Harper; American bred, Hillside. Bull-terriers.—Kennel, American bred, W. L. & H. A. Harris; best, Attraction. Fox-terriers.—Blenon Baiter, Blanton Rapture; best, Rachel; Terrier Club's challenge cup, Blanton Rapture; best, Rachel; in open classes, Blanton Racket; home-bred puppy stake, the same. Irish setters.—Best, Mars. Pugs.—Kennel, American bred, Dr. M. H. Cryer.

FOX-TERRIERS AT BOSTON.

Editor Forest and Stream:

In compliance with your request I give you notes on the fox-terriers at the Boston show. The challenge class contained Raby Mixer, Blanton Rubicon, Lucifer and Bacchanal. It was soon evident the latter was outclassed, so I disposed of him early in the contest. In order to make the reasons for my awards the plainer, I will first of all describe the three remaining dogs as far as my opinions of them were formed. Raby Mixer has a keen, hard, determined expression, with a jaw of sufficient power, good skull, well-shaped and beautifully-carried ears; his neck is good, but owing to his upright shoulders not so well placed as it would be did the shoulders lie more oblique; he has clean, hard, grandly-formed bone of excellent substance, neither too lumbry nor too light, and stands on close, deep feet; as regards his front generally the greatest crink in Christendom could not find fault with it; his shoulders, as I have previously said, are too upright, but they are clean and devoid of superfluous muscle; ribs strong and robust; loin powerful; hindquarters as might be expected from his shoulders, straight in stifles and stilty, and not quite nice in second thighs; his set on of stern is very good indeed, and in outline, top and general make-up to my idea just what a terrier should represent, for what is a detraction in many terrier men's eyes with regard to him is to me an attraction, i. e., his total lack of any suspicion of squabbiness or cloddiness; in fact, the height from the ground so apparent in him is to me a feature in his favor, and not a blemish. His coat is not of nice quality, or of orthodox profuseness, but it is dense and close, and quite as serviceable as a longer and more fashionable one. Blanton Rubicon before I went in the ring I confess was my favorite as between himself and Mixer. He has a strong, powerful jaw, but a too prominent and pronounced forehead—not domed as I have heard it described—his ears not a nice shape, but his expression and character are good, of the pronounced Clarke type; neck nicely arched, deep at the base and well placed; bone clean, hard and well formed; his shoulders are oblique, but pitched too much forward at the blade, which makes their mechanism too loose and floppy; ribs well formed and capacious, especially the back ones; loin too long and loose; hindquarters excellent, the muscle being beautifully distributed, with his hocks well let down. In top, set on of stern and general contour, he has all the high-class finish of his dam, which is saying a lot. His coat is of the fashionable profuseness, but is not dense enough, and when angered he puts up his hackles in a very pronounced way, which, to me, is not an additional attraction. In size he is about the same as Mixer, though his extra length of loin makes him appear a bigger and longer-bodied dog. Lucifer I was woefully disappointed in, as I certainly had the impression that he was the best of three. His teeth are none too good, nor is his mouth level by any means; his jaw is short and somewhat wedge-shaped, skull wide in proportion, eyes light and unattractive. In expression and character he is common, lacking that high-class, keen, undefinable property which should be found in a fox-terrier; for though game enough looking, there is a suspicion of foreign characteristics. His neck is short and inclined to be throaty; bone of sufficient substance, but its formation is marred by strong muscle on the outside of the forearm, and he fills away a bit about the pasterns, so that when he stands his front does not present that clean, even appearance so desirable. His shoulders are well placed, but hidden by layers of unnecessary muscle; ribs strong and good; loin, to my mind, too short; set on of stern excellent; hindquarters spoiled by badly-distributed, knotty muscle. In general outline he is too short in couplings and cloddy-looking all through; in fact, this evident shortness of body was a surprise to me, as I had never noticed this defect in him before. In judging the three dogs, I first of all compared Rubicon with Lucifer, and found the former to score

in quality, higher class character and finish in nearly all essentials of a fox-terrier, especially in distribution of muscle, power of head, formation of bone, length of body. Though the former is too long, I preferred this defect to the too short one of the latter, and only in size, and the way they stood in front had Lucifer the preference. After this Mixer underwent the ordeal of comparison with the white dog. In head, jaw, mouth, expression and character, he was the better of the two; in neck, front, formation of bone, cleanness of shoulders and general distribution of muscle, he had the preference, and only in size and movement could Lucifer beat him. This left Mixer and Rubicon to come together; both are good in keenness of expression, etc., Rubicon scoring a little in "quality," but Mixer's better-shaped ears and formed skull more than counterbalanced this superiority. In front there is no comparison; in neck Rubicon wins, as he does in shoulder and a wee bit in back ribs; in loin Mixer was much the better, in top and set on of stern both are exceptionally good; hindquarters Rubicon had a decided preference, as he did in movement; he is also better in length of coat, but not in density and closeness. It will thus be seen Rubicon so far has the preference, but unfortunately for him, and Hopkins, when I was supposed to be looking intently at Mixer on three occasions, I was concentrating my thoughts and glances on Rubicon, and so dreadfully was he knocking over each time, that it would have been impossible to place him first, had he shown more superiority than he really did; in fact, the way I judged them was not orthodox and consequently misleading, and rough on Rubicon, for I looked at him during his intervals of inattention when any one would have thought I was looking at the other dog; had I not previously given Lucifer third, I think after catching Rubicon as I did, they would have reversed positions.

In challenge bitches, Rachel, the most beautiful of her breed, was too much for the grandly made and good topped Richmond Dazzle.

Blenon Racket, first in open dogs, is a much better one than I thought when at New York, although I never saw him off the bench at the earlier show. He seems to me to have improved in expression, and is undoubtedly losing that commonness which characterized him previously. His bone is wonderful, too much perhaps; shoulders excellently placed, ribs strong and well sprung, loin powerful and proportionate; set on of stern nice; hindquarters very good; in outline, top, size and general conformation he is as good as anything one could wish to see, and is all proportion and symmetry, but his head will always prevent him from taking the high position of his wonderful dam. Had he been taken marked on the head he would resemble Hunton Prince (Syrup) very much, though to my mind he is and always will be a better dog. I quite expect to see him win at the English Kennel Club show, unless Venio has not yet got in the challenge class, and of him I know nothing, as he came out after I left. Suffolk Risk, second, was not looking so well as at New York, having, I believe, just got over distemper, which made him look leggy and shelly; he also carried his ears in a helpless fashion, which did not improve his expression. Still the frame, good bone, excellent front and beautiful top was there, and as he wanted time to furnish when at New York, I quite expect him to be better and a much different one on his next appearance. Tramp, third, owes his position to lack of quality in the other contestants more than any excellencies on his part. He is small and I might say insignificant, but he has a fair expression, good front, is a capital made one for his size, and is a very good topped one. Blanton Volunteer, fourth, I am not struck on. He is very sparse in coat, none too good in set on of stern, and could be improved in too many respects to make him a good one. Reckoner was a long way the third best, but I put him back on account of his month; this I have since regretted, as he is a merry, gay little chap, and is much better class than the third and fourth winners. Suffolk Coronet is light in bone, and has a stupid face, but his top and symmetry entitle him to his position. Beverwyck Rebel is not nearly such a good one as I thought when I saw him at New York. He has a plain, common head and expression, is long in body and soft in coat, his only recommendation being his substance and bone. None of the others deserved comment; in fact after the first and second winners the class may be termed mediocre and poor.

In bitches I placed Suffolk Rarity first. She is or will be on the small side, this being about her most serious defect. Her head for its size is all right, and in expression and character she is good; her bone is well formed, shoulders nicely placed, ribs, loin, set on of stern and general outline very good. She is very stylish, and to my mind just the stamp to produce "terriers." Blanton Brilliant, second, in my eyes has a wretched head and expression, nor is she good in front, or cleanness of shoulders. In ribs, loin, hindquarters and top she is very good, as she is in size; beating Rarity a lot in this respect. Empress, third, would have been beaten by Incognita had the latter shown herself better; the former has a long head, lacking expression and character, and ears which would be better were they half the size; she wants more substance, although her bone is well formed; her ribs want filling out, which, perhaps, time will accomplish; at present she is too stilty and flat all through. Incognita, fourth, would probably have been second had she not gone about the ring in such a listless, nonchalant manner; her head is "terrier" bone good, ribs, loin, top and size very good. I thought her a very useful one, and probably hardly used, even considering her bad showing propensities. Beverwyck Rebecca resembles her brother, Rebel, in every respect, although she is the more preferable of the two, being better in body properties. Blanton Comely would have made a much better impression had she been shown with more flesh. She has a fair expression, but lacks power in head; her ribs are not substantial enough, and she is not overburdened with bone; she is a nice topped one, and "if" she continues to grow will make a winner. Blanton Rapture is a stamp I have often seen on the other side. She also, is a nice topped little thing, but should be more useful as a brood bitch than a show one, if properly mated. Blanton Enid will never be a flyer; her head and jaw being too small would handicap her considerably were she good in every other respect. Rosa Canina I care not for; too close to the ground, and lacking type and character.

The only new face to take my fancy in dog puppies was Blanton Brawler, to which I gave second. He is not so good as his kennel companion, Racket, but at the same time is quite a nice one. His head is terrier-like, but not quite my style. His bone and front good; ribs, loin, etc., excellent. He is a nice topped one, and has the right amount of daylight under him. I expect this youngster to improve considerably before he appears again, and be quite a good, useful winner for his owner.

In bitch puppies, Suffolk Rarity upheld her win in the open class. Blanton Toil, a new aspirant, coming second. She is very much like Blanton Verity in head and expression (in fact I took her to be a younger sister), though much better to my mind; she stands on excellently formed bone, but her feet are about as bad as could be; her ribs, loin and general body properties are very nice and she is a very good size. Empress was again third, and the more I saw of her, the less taking did she appear. The only other new face was one of Mr. Thayer's but which I do not know; she was probably a daughter of Raby Mixer's; a nice expressed one, with enough bone and a good top; being young and un-matured I treated her too harshly, in fact I don't think she received anything. I expect time will develop her into a good one and later on to see her come to the front. I had forgotten Woodall Rustic, third in dog puppies. This puppy may make an exceptionally good one, but he may be-

come a rank bad one. At present he is all legs and wings, and must certainly stop getting any taller; his jaw and skull are well chiseled, and his expression good; bone strong and well formed; top and set on of stern excellent; but I am afraid he will get too big.

The same faces in wire-hairs, Suffolk Toby, excellent in type and character, texture of coat and size, outclassing his other opponents. Suffolk Settler, second, losing in character, head and coat to his more successful kennel companion. Capsicum, third, is weak in jaw and light all through, and the reserve is square and plain in face, but good in texture of coat. Billet I was perhaps too harsh on, but he was in much worse coat even than at New York, and he looked shorter in head and squabbier in body than ever. The novice class did not contain a new face. Blanton Racket easily won the special for the best in the open, and Hopkins relied on Rachel for the cup, which she won easily, beating Mixer in neck, placement and quality of shoulders, hindquarters, movement, coat, style and outline generally. The more I see of this bitch the more do I think I shall never see another to equal her. The Blanton Kennels easily carried off the American-bred special with Rubicon, Racket, Brawler, Toil, etc., it not being necessary to have any of the competitors in the ring for this prize, as of course it was a foregone conclusion. R. F. MATHEW.

FOXHOUNDS AT BOSTON.

Editor Forest and Stream:

It has been many years since a pack of foxhounds have been shown in Boston, and this is the first instance of the benching of a pack of pure American-bred foxhounds at the shows of the New England Kennel Club.

There were thirteen hounds in the pack shown by the Brunswick Fur Club, seven dogs and six bitches, and from their diversity of type plainly represented all sections of the country. Among dogs those of New England breeding showed better form and quality than the Southern and Western varieties. First went to Joe Forester, a grand-bodied hound of English type and extraction. This hound has the best bone and muscle I have ever seen in an American-bred dog. His head is good, neck clean, chest powerful, though a trifle wide in front. The loins and thighs are perfect, and his whole action is that of a powerful, free-moving dog. The legs and feet could scarcely be improved. Second went to Jack of Diamonds, a strong-built hound, with a beautiful head and nice legs and feet. He is shaped much like Joe Forester, but has not so much bone and muscle. He was first at Worcester last year in a large class. Third went to Bugle, a Byron hound of the T. G. Tucker stock. He is a compactly built dog, with exceptionally fine chest and shoulders, but lacks bone, and his feet are not of the best. Haye's Beave, reserve, is a gaunt, loosely made hound, very throaty and could be improved in feet and legs. Drive, vhc., is a far better hound than Beave, for he has a handsome head, with good chest, and legs well placed under him. Leads, All, bc., is a Southern hound, off in color and very long in body, but with good legs and feet. Waltham Jewel, c., is a young hound not yet mature.

Some of the best bitches of the club were in whelp and could not be shown; but several very fine ones were in the pack. First went to Modest Girl, a splendid bodied bitch, though light in bone. Her chest, back and thighs are perfect. Second and third went to Flora Temple and Mollie T. respectively; they are sisters, out of Queen by Joe Forester, and though only a year old are beautifully formed, and promise to develop into grand hounds. Flora, reserve, is a grand bitch of English type, 24 in. high. Her head is a study for an artist, and her legs and feet are of the best. She is a little long cast, and not quite deep enough in chest, but is by far the best brood bitch in the pack. Duster and Fanny, vhc., are nice strong bodied bitches, with good legs and feet.

The pack, taking it all in all, shows the kind of hound needed to stand the hard usage required in New England fox hunting, and would evidently endure double the work that the ordinary Southern and Western hounds would.

It is understood that Joe Forester, Bugle, Drive, Flora, Duster and Fanny are going into the kennels of Mr. A. M. Gerry, of South Paris, Me., for breeding purposes, and some grand stock may be expected this spring from these kennels. Mr. Gerry is master of foxhounds of the club, and no better man could be selected to take charge of the breeding of these fine hounds. FOXCRAFT.

ASSOCIATE MEMBERS A. K. C.

A MEETING of the associate members of the A. K. C. was held at 3 P. M., April 2, in Mechanics Hall, Boston, Mass. About twelve members were present, with Dr. Perry in the chair. The chairman having requested Dr. Meyer to take his place, took the floor and made a stirring address to the members; he spoke of the indifference of the members of the club and their apathetic condition; he called upon them to stir themselves and take more interest in the club, and do more work for it.

Mr. Watson stated that the members had no duties to perform, they merely paid in the \$5 and had certain merchandise in return. Notwithstanding the club membership numbered nearly 400, there were hardly 70 votes cast for the late election of officers.

Considerable dissatisfaction has been felt by the members at the manner Secretary Vredenburg has been conducting the associate members' business. For instance, it was discovered that the voting papers recently sent out had no envelope for return, consequently the secretary would be unable to know whether the return was routine work or not.

Dr. Foote moved that a circular be sent out, funds for the same be raised by subscription, asking for the disbandment of the Associate organization, and offering the Stud Book, Gazette and two registrations annually to any one paying \$5 to the A. K. C. The organizing of a National Dog Club, with annual dues of \$25, for the furthering of kennel interests, holding bench shows, etc., such organization to have representation in the A. K. C. and one delegate for every fifty members. Motion lost.

Mr. Morris proposed that a circular be issued by the president asking associate members their opinion regarding the organization and holding of bench shows by the club. Motion lost.

Mr. Watson moved, "It is the opinion of the members present that the American Kennel Gazette should only publish the names of those who have paid their dues for the current year." Motion seconded by Dr. Foote and carried.

Mr. Kendall moved that "The president of the A. K. C. request the secretary of the A. K. C. to publish in the Gazette an appeal to all associate members, to state any suggestions of policy or grievances to their delegates, to be by them brought to the attention of the A. K. C." Motion adopted. On motion adjourned.

VICTOR M. HALDEMAN, Sec'y pro tem.

BUFFALO DOG SHOW.—Buffalo, N. Y., April 7.—Editor Forest and Stream: The railroads belonging to the Trunk Line Association will carry three dogs free, to and from our show, when accompanied by owners or caretakers, who present for inspection identification tickets. This includes the Grand Trunk Railway, N. Y. C., West Shore, N. Y., O. & W., N. Y., L. E. & W., D. L. & W., Lehigh Valley, Central of N. J., Phila. & Read, Pennsylvania, B. & O., Ches. & Ohio. Entries for our show number nearly 400, and the quality is of the best.—A. W. SMITH, Sec'y.

DOG THIEVING IN TEXAS.—Dallas, Texas, April 3.—*Editor Forest and Stream:* There seems to have been a regular organized body of dog thieves working in this city for the past two months, and some valuable dogs have been stolen. Among the number Mr. T. V. Rhodes lost a fine dog, Mr. A. J. Ross also lost a most magnificent Ben Hill puppy, Mr. J. M. Bramlett, a prominent contractor of our city, and a most congenial sportsman, also lost a splendid Irish setter dog. Capt. Bramlett being by nature a worker, started on a hunt for his dog, and after about one week of hard work located him at a station about twenty miles distant from Dallas. He called on the gentleman (?) who had possession of his dog, and the gentleman (?) coolly informed him that he had raised the dog from infancy and that it had never been out of his possession. To say that the air was blue for a while but mildly expresses it, but to make a long story short the Captain took his dog, and also went before a magistrate, and the officers are now on their way to arrest the would-be dog owner. The sportsmen of Dallas have all clubbed together to prosecute this dog owner, and before he is through with it he will wish he had never taken or tried to keep another man's property. The party who had the dog in his possession is a railroad man named Jack Cleary. Your correspondent will write you later of the outcome of the trial.—*OLD SOCKS.*

MARYLAND KENNEL CLUB.—Baltimore, April 5.—*Editor Forest and Stream:* At the regular annual meeting of the Maryland Kennel Club, held this week, the following officers were elected for the ensuing year: H. Malcolm, President; W. Gilmore Hoffman, Vice-President; W. C. Farber, Treasurer; W. Stewart Diffenderffer, Secretary; Board of Governors—Alex. Brown, T. Meredith Jenkins, J. D. Mallory, H. Vanderhorst, C. Malcolm, James Thompson, Dr. Geo. Massamore, C. R. Diffenderffer; Membership Committee—Alex. Brown, T. Meredith Jenkins, J. D. Mallory, Dr. Massamore, C. R. Diffenderffer; Delegate to American Kennel Club, H. Malcolm. It may be worthy of remark that at the meeting it was resolved to follow up our recent successful show with a hummer next year that will not lower its colors even to New York. Whatever may have been past experience in Baltimore, we have certainly demonstrated the fact that here can be held magnificent shows and profitable. I may add that the milk route is to be a permanent institution, and that whoever had a jolly time here last month can count on a better one in '91.—*W. STEWART DIFFENDERFFER, Sec'y.*

OTTAWA DOG SHOW.—Ottawa, April 5.—*Editor Forest and Stream:* At a meeting of the directors of the Central Canada Exhibition Association, held in this city on Tuesday last, it was decided to hold another bench show this year in connection with the exhibition, the dates will be Sept. 23, 24, 25 and 26. The following committee was appointed to take charge of that department: Alfred Geddes (chairman), T. C. Bate, Capt. Veith, Dr. Mills, H. B. D. Bruce, W. G. Young, P. G. Keyes, C. E. Living and F. H. F. Mercer.—*ALFRED GEDDES.*

BUFFALO DOG SHOW.—There are 397 entries for the dog show to be held at Buffalo next week, and among them are many of the best known dogs in the country. St. Bernards, mastiffs, fox-terriers, spaniels and collies are all large classes, and the management are well pleased that exhibitors have supported them so well.

MR. GERMAN HOPKINS sailed for England April 3, with the fox-terriers, Dusky Trap, Rachel, Blemton Racket, Blemton Rubicon and a brace of Mr. Fred Hoy's dogs to be shown at the Kennel Club show next week. He also took over champion Diana to be bred to champion Result.

SCHENECTADY KENNEL CLUB SHOW.—Schenectady, N. Y., April 1.—The Schenectady Kennel Club's first bench show will be held April 23 to 26.—*G. A. ROSA, Sec'y.*

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

Prepared Blanks sent free on application.

Forest. By B. C. Van Heyde, Urbana, O., for white and liver pointer dog, whelped March 19, 1890, by Whiteley Don (Vandevor's Don—Luck) out of Cora Singer (Pap Smizer—Cute).
Stream. By B. C. Van Heyde, Urbana, O., for white and liver pointer bitch, whelped March 19, 1890, by Whiteley Don (Vandevor's Don—Luck) out of Cora Singer (Pap Smizer—Cute).
Glen Gladstone. By A. S. Aborn, Wakefield, Mass., for black and white English setter dog, whelped July 12, 1889, by Con Gladstone (Paul Gladstone—) out of Luella Bondhu (Gus Bondhu—Bessie II.).

BRED.

Prepared Blanks sent free on application.

Queen M.—Pomp. Smith & Blair's (New Burlington, O.) pointer bitch Queen M. (Greek—Queen A.) to B. C. Van Heyde's Pomp (Glendale—Vixen), March 29.
Venus—Beaumont. J. B. Blossom's (New York) Gordon setter bitch Venus (Argus—Rhona) to Beaumont Kennels' Beaumont (Ronald III.—Floss), March 29.
Black Meg II.—Black Pete. H. S. Reynolds's (Poughkeepsie, N. Y.) cocker spaniel bitch Black Meg II. (Oba II.—Dankie) to J. P. Willey's Black Pete (Oba, Jr.—Phonise), Feb. 10.

WHELPS.

Prepared Blanks sent free on application.

Cuba. Wm. R. Clarke's (Bridgeport, Conn.) mastiff bitch Cuba (Max—Juliette) whelped March 28, ten (eight dogs), by Hon. Samuel Sherman's imported Leo (Young Turk—Kyr).
Donna. Roserott Kennels' English setter bitch Donna (Yale Belton—Forest Dora), April 4, eight (three dogs), by F. Windholz's champion Rockingham.
Cora Singer. Van Heyde & Whiteley's (Urbana, O.) pointer bitch Cora Singer (Pap Smizer—Cute), March 19, seven (two dogs), by J. A. Linn's Whiteley Don (Vandevor's Don—Luck).

SALES.

Prepared Blanks sent free on application.

Hill's Hit. Red Irish setter dog, whelped Feb. 22, 1890, by Michael Angelo out of My Dot, by B. C. Van Heyde, Urbana, O., to D. E. Poulton, same place.
Pickaway. Red Irish setter dog, whelped Feb. 22, 1890, by Michael Angelo out of My Dot, by B. C. Van Heyde, Urbana, O., to S. A. Foulk, same place.
Rural Nead. Lemon and white English setter bitch, whelped April, 1889, by Pride of Dixie out of Fairy Belle, by A. S. Aborn, Wakefield, Mass., to Rocky Hill Kennels, Melrose, Mass.
Nellie Bondhu. Black, white and tan English setter bitch, age not given, by Gus Bondhu out of Lynn, by Rocky Hill Kennels, Melrose, Mass., to A. S. Aborn, Wakefield, Mass.
Glen Gladstone. Black and white English setter dog, whelped July 12, 1889, by Con Gladstone out of Luella Bondhu, by Rocky Hill Kennels, Melrose, Mass., to A. S. Aborn, Wakefield, Mass.

KENNEL MANAGEMENT.

No Notice Taken of Anonymous Correspondents.

E. B., Boston.—My young dogs pass a good deal of blood. Feed oatmeal and meat boiled together. What shall I do? Ans. Give a 2-grain pill of extract of ergot morning and evening, hidden in a morsel of meat. Also a 2-grain Bland's iron pill at the same time and in the same way.

J. L., New York.—I have a cocker spaniel, and she has an ulcerated teat. I am using mange cure, but it don't seem to do any good. Would you please name some remedy as a cure? Ans. Rub on some belladonna ointment. Do not allow the puppies, if she has any, to get at it.

T. S., Brooklyn.—You would oblige me by informing me through your paper what to do with a dog I have; he is a setter 3 years old, has been sick for 8 or 10 days, has no appetite, and seems very weak, and has a bad smell coming from his mouth. One of his eyes seemed to turn in his head, and was very much swollen, and he had a fit a few days ago. Ans. Give a teaspoon of syrup of buckthorn every other day for a week, also a 3-grain quinine pill night and morning, concealed in a bit of meat.

W. L. Y., Richmond, Ky.—What is the surest and best cure for a dog with a bad case of distemper? Ans. If there is high fever, give 3 drops of tincture of aconite in water every 3 hours. Give a 5-grain quinine pill morning and evening concealed in a morsel of meat. Keep the bowels clear with castor oil or syrup of buckthorn in teaspoonful doses. If great weakness is present, give brandy and water three or four times daily, about a teaspoonful of brandy. During convalescence give a Bland's pill morning and evening.

H. E. P., South Westminster, Mass.—I have two mastiff pups 7 months old, which have places under their hair become covered with pus, and these places enlarge if I try to heal them. The pups will scratch them, and it makes a very bad sore. They are not confined to any part of their body, but appear first in one place, then in another. Ans. Keep the bowels regular with 1/4 syrup of buckthorn, given in teaspoonful doses once daily. Put 1 drop of Fowler's solution of arsenic in the food every day, and rub in gently some oxide of zinc ointment over the affected spots. A three-grain quinine pill each day will benefit.

Rifle and Trap Shooting.

RANGE AND GALLERY.

FAST DAY SCORES.—Boston, April 3.—The Massachusetts Rifle Association celebrated Fast Day with the best attended rifle shoot held at the Walnut Hill range this season, including a large number of militiamen. The day was fine, but a bad 7 to 11 o'clock wind made it difficult to run up high scores. The scores:

BOSTON, April 5.—The regular weekly shoot of the Massachusetts Rifle Association was held at Walnut Hill Range to-day. The conditions were very unfavorable for good scores, as a young gale was blowing from the northwest, making it hard to hold on the target when shooting off-hand. Following are the scores made to-day, distance 200 yds., Standard American target:

Record Off-Hand Match.			
W Charles	80	J N Mills	87
J B Fellows	80	E Comey	85
P Fitz	78	A S Hunt	84
Champion Off-Hand Match.

BRATTLEBORO, Vt., April 1.—Score made by members of the Brattleboro Rifle Club at Oak Grove Range March 27, distance 300 yds., off-hand, standard target, 10 shots: Cobb 91, French 90, Creedmoor target, military rifle: Knight 40, Walker 39.

April 7.—Members of Co. I, V. N. G., shot a telegraph match Fast Day, at Oak Grove Range, with Co. E, V. N. G., of Barre, Vt. Following are the scores, 10 shots per man, at Creedmoor targets:

Co. I, Estey Guard.		Co. E, Barre.	
Colt	36	McConachie	33
Walker	35	Wells	31
Haigh	32	Lawson	30
Hopkinson	35	Clark	30
Coane	38	Wilson	28
Clark	38	Badger	31
Curtin	35	Avell	24
H Knight	36	Latham	32
H Knight	36	Robb	32
Cain	38	Mills	26

THE FORT SCHUYLER RIFLE ASSOCIATION, of Utica, has elected the following officers for the ensuing year: Pres., W. H. Symonds; Vice-Presidents, G. H. Hendricks and W. E. Wolcott; Sec'y., C. Williams; Treas., A. Wheeler. The above named officers, with A. C. Sieboth and L. E. Goodier, constitute the board of directors. The association has 32 active members. It has closed its in-door range for the season and will soon resume practice on its range at Riverside Park. The annual meeting of the Oneida County Sportsman's Club was held last evening. The following officers were elected: Pres., Dr. W. H. Booth; Vice-Pres., Dr. C. R. Weed; Sec'y., H. L. Gates. Directors, A. S. Hunter, Gustav D. Dexter and W. C. Harris. The first practice shoot of the season will occur April 11.—*PORTA.*

PHILADELPHIA, March 31.—The match of 100 shots for \$100 between Mr. J. G. Rea and Mr. J. H. Felix, club of the Gaiety Rifle Club, came off this evening at the club's headquarters, 127 North Ninth street. The match was very evenly contested, both gentlemen being in fine form, and was full of surprises from beginning to end; first one ahead and then the other, nobody knowing who would win until the last shot was fired. Both contestants used a plain, open-sight Wurflein rifle, strictly off-hand, 25 yds., 25-ring target, 2 in. bullseye. H. J. Mehard, referee; Theo. Shoner, judge for Rea; A. McManus, judge for Felix; Edward Travis, scorer.

Felix.....224 237 216 230 214 220 225 234 214 225—2229
Rea.....221 231 221 221 221 221 221 221 221 221—2237

A return match will be shot under the same conditions Friday evening, April 11.

April 1.—The Gaiety Rifle and Pistol Club held their regular weekly competition for gold and silver medals at their headquarters, 127 North Ninth street to-day. Mr. C. Hoffman wins silver club medal for this meeting. The Wurflein medal was won by Mr. E. T. Travis, silver medal by J. W. Cheney, bronze medal by A. Koch and leather to W. M. Hotz. Range 25 yds., using Wurflein rifles, plain open sights, off-hand, on 24 in. ring target, 10 shots, possible 250. Score as follows:

Rifle Scores—First Class.			
J M Green	244	J J Mountjoy	233
E T Travis	238	F M Frees	232
G W Coulston	237	H J Mehard	229

Second Class.			
J W Cheney	224	A N Koester, Jr.	215
W Wurflein	222	J A Pollock	213
R McCreedy	222	J H Rev.	213

T F Shoner	219	W Meagher	212
G F Rea	216	S W Merchant	199

Third Class.			
A Koch	179	S J Merchant	163
C Boutschpacher	164	H Hesser	142

Fourth Class.			
C Hoffman	161	R Carter	159
H Fox	161	C J Hendler	137

Pistol Scores at 12 1/2 yds.—Wurflein Pistol.			
E T Travis	224	J A Pollock	205
J J Mountjoy	212	F M Frees	196
J A Felix	210	J Coughlin	195
G W Coulston	208	J W Cheney	195
W M Hotz	207	A Koch	181

April 2.—A team of 5 men from the North Broad Street Rifle Club met 5 members of the Parker Rifle Club in a target shoot this evening, in the latter's rooms, on Kensington avenue, below Lehigh. The match was 20 shots for each man, or 1,000 points a side, and resulted in a victory for the North Broad by 19 points. Following are the individual scores:

North Broad.		Parker Club.	
D Wray	190	S Hotherhall	189
W Hayes	194	J Adair	185
B Atkins	193	C Gildner	189
F McCain	191	R Bradbury	188
A Atkins	193—961	Wm Bradbury	191—942

Judges, J. Dawson, for the Parker, and Thos. Willsey for North Broad, referee, C. G. Douglas.

WILMINGTON, Del., April 3.—Target shooting obliged to give way before other business, the regular weekly shooting at Healdmoor rifle range was postponed until to-day. The weather was almost perfect for shooting, with the exception of a variable wind, which was at times very troublesome to the small calibers. Some good shooting was done nevertheless and some individual records were given a good raise, included with the shooting in a 100-shot record match. Following are the scores, Standard American target, off-hand, 100 shots, 50 yds.

H Simpson	85	83	82	80	85	81	85	82	87	84	864
Pistol Match, 50 yds.											
E J Darlington	92	E Lee	89	E Jackson	88	J Evans	89	E Jackson	88		

Revolver Match, 50 yds.			
H Simpson	82	S Howard	69
O E Garmany	81	W Johnson	66
Diamond State Match, 20 yds.			
H Simpson	82	W Johnson	72
J E Seeds	77	S Phillips	72

There was a small attendance at the last in-door meeting of the Wilmington Pistol Club and very little shooting done. The scores at 25 yds., Standard American target were:

H Simpson	83	W Johnson	84	S Phillips	78
O E Garmany	85	E Oliver	78		

ST. LOUIS, Mo., April 4.—The St. Louis Pistol Club still continues to add new names to its already long list. At the last regular shoot two new members took part. Last Wednesday's shoot was the last in the Laclede gallery, and hereafter the club will hold forth at the Crescent gallery and bowling alley, corner of Broadway and Pine street, where Messrs. Bengel and Billmeyer have taken up a new and handsome bowling alley and rifle gallery. Fodge and Alexander tied for the medal on 117, but on the shoot-off the latter came out victorious. All shooting is at a 14 in. bullseye, distance 12 yds., possible in 10 shots 120. The score:

G W Alexander	117	M Summerfield	115	W H Hettel	111
Fred A Fodde	117	O Wallace	113	M O Billmeyer	107
Dave Barker	116	E O Mohrstadt	113	Chas Armfield	103
W Bauer	115	W C Mackwitz	112	J Granger	102
Jay J. Schaefer	115	A Bengel	112	John Dihan	87
L V D Perret	115	UNSER FRITZ			

WORCESTER, Mass., April 3.—The City Guards, Co. A, 2d Regt., M. V. M., went out to the military range at Flat Meadow to-day, and the work of some of the men follows, at 200 yds.:

Lieut M H Tisdale	55435—22	Serjt S D Jefferson	54444—21
Lieut E G Barrett	54444—21	Pvt W H Farnworth	54444—21
Pvt J D McIntosh	55445—24	Pvt C J Bryden	54443—20
Capt W E Wilkins	55554—24		

THE TRAP.

ond, W. S. Perry, Jones, Tee Kay and Strong third, Tinker fourth.

Seventh event, 7 clay birds, 3 unknown angles, 34 entries: Ruble and Yerrington first, Jones, Wheeler and Wolstencroft second, Stanton, Cahoon and W. S. Perry third, Green and Tinker fourth.

Eighth event, 20 bluebirds, Keystone system, 30 entries: Wolstencroft first, Wheeler, Roston and Cahoon second, Heikes third, Bond fourth.

Ninth event, 5 pairs bluebirds, 27 entries: Heikes first, Wheeler, Roston, Bradstreet and Jones second, Ruble third, Eager fourth.

Tenth event, 10 straightaway Keystones, Hurlingham rules, 28 entries: Lindsey first, W. S. Perry, Wolstencroft and Warren second, Heikes third, Yerrington fourth.

Extra event 1, 6 bluebirds, 3 unknown angles, 15 entries: Sanborn first, Wheeler and Yerrington second, Stanton and Cowee third, Brooks and Bradstreet fourth.

Extra event 2, 6 clay birds, 3 unknown angles, 15 entries: Eager first, Roston, Brooks and Sanborn second, Dan, Yerrington, Cowee and Stanton third, Dickey fourth.

Extra event 3, 5 bluebirds, 5 unknown angles, 5 traps 5yds. apart, 14 entries: Roston, Stanton and Sanborn first, Bradstreet, Yerrington and Wheeler second, Brooks and Dickey third, Dodge and Clark fourth.

Extra event 4, 5 bluebirds, 3 unknown angles, 15 entries: W. E. Perry, Wheeler and Ruble first, Lindsey, Jones, Stanton and Sanborn second, Eager and Roston third, Tucker and Lang fourth.

Extra event 5, 6 clay pigeons, 3 unknown angles, 14 entries: Eager and Wheeler first, Davis, Yerrington and Stanton second, Cowee and Dodge third, Brooks fourth.

Extra event No. 6, at 5 bluebirds, 5 angles, 15 entries: Brooks first, Sanborn and Dan second, Dodge and Davis third, Cowee fourth.

Extra event 7, 6 bluebirds, 3 angles, 15 entries: Wheeler and Bradstreet first, Eager, Sanborn and Yerrington second, Roston, Dickey and Stanton third, Dan and Brooks fourth.

Extra event 8, 5 bluebirds, 5 angles, 26 entries: Lindsey first, Sanborn, Heikes, Ruble and Wolstencroft second, Stanton third, Strong fourth.

Extra event 9, 6 clay-pigeons, 3 unknown angles, 28 entries: Bradstreet and Stone first, Lindsey and W. S. Perry second, Bradbury and Wolstencroft third, Jones fourth.

Extra event 10, 6 bluebirds, 3 angles, 29 entries: Stanton, Wheeler and Jones first, W. S. Perry, Lindsey and Bradbury second, Roston, Strong and Ruble third, Dodge, W. E. Perry and Purdy.

Extra event 11, 6 bluebirds, 3 unknown angles, 15 entries: W. E. Perry, Wheeler and Ruble first, Lindsey, Jones, Stanton and Sanborn second, Eager and Roston third, Tucker and Lang fourth.

Extra event 12, 6 Keystone targets, Hurlingham rule, straightaway, 16 entries: Heikes first, Eager and Porter second, Cowee third, Stone fourth.

Extra event 13, 6 bluebirds, 3 unknown angles, 16 entries: Stanton and W. E. Perry first, Stone second, Roston and Porter third, Cowee fourth.

Extra event 14, 5 pair bluebirds, 16 entries: Heikes first, Wheeler and Jones second, Wolstencroft third, Stone fourth.

THE U. S. CARTRIDGE CO.'S TOUR.

[From Our Own Representative.]

NEW HAVEN, Conn., March 31.—We were awakened yesterday morning by the mild, sweet fragrance of the wooden nutmeg, whose odors were wafted through the casement upon the balmy air. The Western inhabitants of the car descended and gazed with curiosity upon the scene around them, for now indeed we had arrived at a land of elegance and culture. Crowds of young men, all of whom wore spectacles and carried canes, gathered about "Cooney," Ruble and Stice as they started out for a morning walk, and remarked, "These are cowboys, ain't they! My look out or they'll shoot!" Many other remarks of like nature were heard, in the quaint, New England patois, which in many ways resembled the language of the countries through which we have passed on the tour.

Heavy snow fell on Sunday, but melted rapidly. To-day the weather was very respectable, and it was one of the few days of recent date when the shoot was a comfortable pastime. Early yesterday and all day through and nearly all of to-day, the car was crowded with visitors. The ladies of the party, who now indeed are Mrs. Quimby and Miss Dimick, who have been with the car from New York, here met friends and have had a very delightful time.

As usual, most of the details of the visit were taken charge of by the hospitable sportsmen of the city, the New Haven Gun Club furnishing guides, counsellors and friends to all the party. Conveyances called at 1 P. M. to-day, and the shooters were taken out to a very pleasant place, where they had the scene much as usual for the day. The drive was a very pleasant one. The party passed the buildings of ancient Yale college, where football and other accomplishments are reputed to be taught with a success not attained elsewhere. In a fine little old common, grown up with grand elm trees, we noticed three small churches, said to have been there *ab urbe condita*, about 1700. There are in good repair, and indeed the churches, which had seen much use. Perhaps they will come into play on Fast Day, Thursday next. This Fast Day business is new to the Westerners, and they hope it will not become a general custom. It seems that the Governor of New England does not like to look upon the reckless hilarity of Thanksgiving Day, so he gets even by proclaiming a day of total abstinence. Nearly all the men in New England, and some of the women, abstain from eating meat on that day, go out to the club grounds and have a shoot. In this way this has become the greatest shooting day of the year, and by evening of that day nearly everybody can see shooting stars.

It was announced that a local team of ten men would contend for the honors with the combined East and West teams. They did so, but, as usual, were defeated, though they shot a very good race. If these veteran hunters now defeat the Boston team they will have made the circuit without sustaining a defeat as a team. No other team of ten will ever do the same, or do so much as this team already has. Score:

Eastern Team.

Mr. Dimick referee.

The tie for the \$25 cash prize offered by FOREST AND STREAM for the winning team at New York shoot was shot off in New Haven shoot, and this \$25 Charlie Budd dropped into his flour sack, where it falls in company with all the other actual cash put up on the entire circuit, the Western team having won all such prizes.

The Western team, by its victory to-day, cut down the lead of the East to five races, and materially added to its own wide lead in totals of birds broken. The East has not won a race since Cleveland. To-day the West again brought up the old talk of shooting off the ties, and again the Eastern team fell stiff. "Another week, and we'd beat you out of your clothes," says Charlie. Certainly, another week and the Western team would win everything. All of which is a pleasant termination of what looked like a hopeless contest. The Western boys have showed themselves clear grit, and they shall not be dismissed without great credit.

To-night a pleasant banquet was offered the tourists by the New Haven Gun Club, at the comfortable hostelry of Mr. David Cowell. The party assembled at about 8:30 and dined at table till approaching midnight. There were present for New Haven: Messrs. W. H. Fulton, E. W. Whitlock, Frank Cowell, Geo. H. Sanders, E. S. Cobb, T. J. Beck, H. D. Folsom, J. H. Gould, E. O. Warner, M. H. Clark, Ed. Russell, L. W. Widman, J. B. Savage, H. H. Bates,

C. E. Longdon, E. Woods, W. H. Hazel and C. B. Bristol. Besides the teams, there were also present Capt. Cramer and Mr. Lindsey, of New York, who are on the car to Boston. The evening was a very delightful one, indeed, and the New Haven boys are to be complimented highly upon their success as entertainers. A brief address of welcome was made by Mr. Bates, president of the club and chairman of the evening, and responses were made by Mr. Dimick, Mr. Quimby, Capt. McMurchy and Capt. Budd. The time passed rapidly, and all too soon the hour arrived when the party was forced to break up and when once more adieu must be made to new-found, soon-lost and but-long-to-be-remembered friends.

The Iolanthe leaves soon after midnight for Boston. This is the last night the boys will spend on the cars.

Boston, Mass., April 3.—On Tuesday morning, April 1, the Iolanthe had reached her final port. An early breakfast was taken and the car was soon at the depot, which Boston sportsmen call the Iolanthe lay in, and which receives a great deal of suburban traffic, and as the passengers of the morning trains passed by they gazed with curiosity at the car and its lithographed coat of arms, as well as with amazement and terror at the bronze and forbidding faces of the wild creatures that inhabited the car. These sturdy Goths soon spread their legions over the city, carrying mingled fright and admiration to all feminine hearts.

On arriving in Boston, mainly those of that vigorous model of shooting clubs, the Wellington Gun Club, had planned a fittingly elaborate reception for the party upon this, its final and triumphant advent, and the boys were early confronted with an army of hospitable friends and a whole list of things desirable to do. Mr. Dimick wished to take the party through the city in a trolley-car, but the boys begged for a day of rest instead, and this was granted them. In the evening the boys swapped down and carried off the teams and their next friends, including the ladies of Mrs. Dimick's party, to a pleasant entertainment of light opera by the McCaull opera company. Four of the choicest boxes were filled to overflowing and the party doubtless attracted attention. Some wicked man had beyond doubt told tales out of school to the actors of that night, elsewise there would not have occurred the incidents which followed. The incident of the night, Mr. DeWolf Hopper, saw fit to drop into the proscenium boxes. Mr. Hopper spoke right up in meeting, betraying a familiarity with the doings of the Iolanthe party which was at least remarkable. "They say McMurchy is fond of white-horse girls," remarked he casually, as he stroked Miss Annie Myers's hair. "I am informed that Cahoon recommends a diet of burnt grass," said he, and a little later, Mr. DeWolf Hopper, by exclaiming, in a cold, hard tone of voice, "Oh, dear! I am as demoralized as Parson Quimby was at 'Erisco!'" Ruble, who was momentarily expecting some allusion to "an elegant pair of sevens," broke out into a cold perspiration which bespangled his brow like stars upon the night.

Wednesday was the day of the final race. The great local interest taken in what was really a Boston enterprise was shown clearly by the goodly crowd that assembled at Wellington Club grounds. There were about 600 persons on hand, including many ladies. Among others present were Messrs. Paul Butler of Lowell, Andy Litchfield of New York, E. W. Yerrington of Connecticut, E. M. Gay of Wilton, N. H., A. M. Dodge of Gardiner, Mass., Robt. Perry of Brunswick, Me., J. F. Houghton of Hudson, Mass., Walker of West Roxbury, and Mr. Quimby of the U. S. Cartridge Company, Lowell, Willis Farrington of Lowell, Capt. Cramer of New Jersey, Ezra Burton of Lancaster, Mass., M. F. Lindsey of New York, Dr. Jarvis of Claremont, N. H., Elsha Knowles of Worcester, J. E. Hutchinson of Lexington, Charles Bradbury of Boston, C. G. Strong and W. A. Cady of New London, E. Shumway of Boston, James Russell of Lowell, C. E. Lord of Boston, Lewis and Frank Eddy of Boston, Dr. Garrison of Exeter, N. H., Dr. C. G. Wield of Brookline, an enthusiastic lover of the sport, Dr. Baker of Columbus avenue, T. W. Merrill of Cambridge, F. E. Peabody of Kidder, Peabody & Company, C. D. Brickley of Boston and A. E. Cooper of Exeter, N. H. The assemblage was preeminently a well-dressed and respectable one, and it would have been well for those ignorant of all the bearings of trap-shooting to have pressed the demand of wit and witless alike for a little after 2 P. M. when the fusillade of sweep-shooting was stopped and the first gun fired in the last race of the series. The two teams were up to this point victorious. They had achieved success after success and had established an unbroken record for team shooting, such as this country will not again see equalled. One after another the strongest clubs of the entire country, including many of the best of the Old Guard, who had long gone down before them. They had heard of the Wellington Club. Should they meet here alike their Wellington and their Waterloo?

It must be confessed that defeat seemed nothing short of probable. The men were nearly worn out. It is impossible to gather from any account of the trip an idea of the physical strain under which the players of the two teams had labored. They had eaten irregular meals, continuous festivities, constant travel—these are the factors which readers should bear in mind, and it is these that makes the record of these men really remarkable and really wonderful. Now, tired, worn out nearly, some of them far from fit, they were to meet a team of men whose shooting has always been practically of the same class as theirs. What would our little phalanx do? Back to back the Old Guard were called and issued its ultimatum. "The Guard dies, it never surrenders."

Mr. Dimick named in advance for his team Messrs. Budd, Heikes, Stice, Wolstencroft and Whitney. The Wellington Club named Messrs. Eager, Stanton, Barrett, Wheeler and Dickey. A team of old gentlemen, each over 50 years of age, begged the privilege of shooting in friendly contest. Mr. S. A. Tucker refused. The following is the score, at 30 singles and 5 pairs of bluebirds:

Eastern Team.	
H McMurphy.....	10 10 10 11—37
W Wolstencroft.....	10 10 10 11—36
W E Perry.....	10 10 10 11—28
W S Perry.....	10 10 10 11—33
H B Whitney.....	10 10 10 11—34—164

Western Team.	
C W Budd.....	10 11 10 11—33
J A Ruble.....	10 11 10 11—34
R O Heikes.....	10 11 10 11—36
C E Cahoon.....	10 11 10 11—33
J R Stice.....	10 11 10 11—37—173

Wellington Club Team.	
H Eager.....	10 11 10 10—31
A S Bates.....	10 11 10 11—35
C O Barrett.....	10 11 10 11—35
H W Wheeler.....	10 11 10 11—26
O R Dickey.....	10 10 10 11—36—173

Fifty-Years' Class Team.	
Nichols.....	10 10 10 10—27
Yerrington.....	10 10 10 10—27
Geo.....	10 10 10 10—27
Warren.....	10 10 10 11—28
Sanborn.....	10 10 10 10—27—137

The race was hot. Two men of the picked team dropped a little. Charlie Budd was hardly able to stand, his right knee being terribly inflamed with rheumatism. He shot pluckily, but not at his best. Whitney lost a bird or two. The enemy was smashing things. The event was to be the matter of a bird or two. The East and West fought a fierce rivalry and pressed in about the score, which showed a fearful array of straight-aways. The Wellington men did great work in the doubles, shooting with clock-work regularity. Mr. Dickey broke his last two pair in great style, and before the call of "both dead!" had died on the air a dozen announcements filled the air. "Won't lost tie!" was exclaimed. But the score read Wellington, 173; the U. S. picked team, 170. On Monday the champions of the two teams met. The last battle had been fought and to the last victory had been theirs.

Further consultation of the scores will show that the Western team of itself tied the score of the Wellington team. Once more the West gave the Eastern boys an unmistakable beating, and this time on their own territory, and even more than that, when the East had lost and ready to back the Old Guard, Charlie Budd could be pleased with anything short of victory in the series, he should have been happy, and he was. His men had won or tied every race from Cleveland east, and had grown stronger to the last. Another week and they would have been winners of the series. The West had shown the justice of the prophecy that it was the safer team to back in a fight to a finish. Further comparison of the scores will show that the Western team of itself tied the score of the Wellington team.

About the strongest finisher on the two teams has been Rollo Heikes. Strong as a horse and of a temper nothing can disturb, he has grown strong on this trip, and has been shooting his best at the last. His would have been top score to-day but for his error in judgment on his first pair. He shot the left quarterer first, and the straightaway, falling low down on a black background, was lost to his sight for a fatal instant. He could have broken both had he reversed his order. Stice beat Heikes one bird and by this won the special prize, which, with rare tact and courtesy, the Wellington Club had offered to the individual of the Western team making the highest score. This was a beautiful solid silver pitcher, of a value of nearly \$100. Mr. Dimick, in announcing this offer before the contest, remarked, "This is for the West; they won't allow the East in it." Not quite so felicitous, that, as the first idea of the donor, being never in this position, that, who not only offered the prize to the strangers and to the defeated, but even insisted on his own identity being concealed. As it transpired, the East had a 37 and the West had one. Captain McMurchy of the East shot a clean and careful race, and deserved the applause he received. Wolstencroft was simply brilliant, and, as usual, caught the multitude with his phenomenal rapidity of shooting. The unluckiest thing of the day was done by "Cooney," who meretriciously knocked out four birds more than his *fidus Achates*, Mr. W. S. Perry. Not so unkind he, however, as Tee Kay, who insisted upon going on record to the effect that Mr. Perry was a worse-ter (Worcester) shot than Cooney! If anybody has any worse pun than that, he would better keep it chained up at night.

The contest was over, and soon the people had forsaken the spot where the battle was fought. Arrived in the city, hurried preparations were made for the banquet at the Revere House tendered by the sportsmen of Boston. This was the closing courtesy of the trip, and as it was, in fact, the reception of Boston to the Boston enterprise, now arrived at its successful issue, it will be seen that the occasion was of far more importance than this hurried writing can display.

The Revere is, we may imagine, at least as fine a hotel as Boston has. Certainly it had slighted no detail of perfect preparation here. The great room set apart for the occasion was brilliant with light and the long double table was a model of prandial decoration. Let us evade the responsibilities of further description by offering in full the elaborate *carte* of the evening, which, shorn of its tasty pictorial frontispiece and the fine lithograph of the old Iolanthe and her crew, read as follows:

COMPLIMENTARY BANQUET
TO THE
United States Cartridge Co.'s Eastern and Western
TRAP-SHOOTING TEAMS.
BY THE TRAP SHOTS OF BOSTON.
REVERE HOUSE, April 2d, 1890.
ENTERTAINMENT AND DINNER COMMITTEE.

C. B. Sanborn,	Chas. Bradbury,	Geo. D. Pushee.
RECEPTION COMMITTEE.		
W. P. Robinson,	J. R. Hamner,	A. W. Gore,
H. C. Warren,	H. F. Amsden,	C. O. Barrett,
O. R. Dickey,	W. H. Allen,	A. L. Tribble,
R. F. Schafer,	E. F. Knell,	H. A. Barker,
T. N. Frye,	H. W. Eager,	

MENU.	
Blue Points, Deep Shell.	Consommé, Spring.
Mock Turtle,	Baked Chicken Halibut, à la Bordelaise,
Potato Duchesse,	Cucumbers.
Filet of Beef Larded, Mushroom Sauce.	Philadelphia Capon, Cranberry Sauce.
Potatoes,	String Beans,
Chicken Outlets, Sauce Suprême.	French Peas.
	Orange Fritters, Sauce Carmel.
	Champagne Punch.
	Roast Quail on Toast.
Jelly,	Dressed Lettuce.
	Macaroon Pudding.
Charlotte Russe,	Frozen Pudding,
	Water Ice.
	Assorted Cake,
Bananas,	Oranges,
Nuts,	Raisins,
	Coffee.
	Apples,
	Figs.

A sheet of paper was passed about the table at the close of the evening, and the signatures secured ran in the following order: George D. Pushee, Wm. P. Robinson, J. R. Hamner, Charles H. Cilley, J. J. McNutt, Jr., Dr. M. A. Baker, Frank B. Richards, T. H. Keller, J. N. Taylor, R. O. Heikes, H. B. Whitney, E. Hough, W. E. Perry, F. E. Peabody, James Mitchell, A. W. Gove, H. B. Plumer, Edward Shumway.

Among the above are many of the most prominent sportsmen of the Boston clubs and of the East. Such a gathering, in such a manner, for any such purpose, is not upon record in our sporting annals.

Mr. Dimick, president of the Wellington Club and head of the enterprise, sought here to be honored, sat at the head of the table; at his left Mr. Gerrish, chairman and toastman of the evening, the duties of which office the latter discharged admirably. Mr. Dimick was called upon for applause, and spoke in English, giving a general recital of the progress and success of the trip. This was not purely a form of private advertising, said he, but one whose intention was to encourage shooting at the trap all over the country. He had reason to think that the main purposes of the tour had been well accomplished. He had record of the formation of new trap clubs, and of the very probable establishment of one or more inter-State leagues, and spoke on the platform of base ball leagues. He thought that team shooting would be greatly increased, and recommended league races of teams between Boston, New Haven and other points. Mr. Dimick spoke proudly and warmly of the two teams, complimenting both captains and men for their part in what he believed was a record not to be equalled.

Mr. E. J. Boyle made a brief and touching appeal to sportsmen's sympathies, and his well-chosen remarks were received with the applause they merited. The tone of the evening, while cheerful, was not purely merry. The hint of parting was in the air.

At 11 o'clock the guests bade their noble entertainers farewell. At midnight a meeting of the Iolanthe party was called at the Quincy House for the purpose of organizing an association looking toward the preservation of the memories of the long tour and toward future meetings of the party. Mr. Quimby was called to the chair, temporary secretary, Mr. Hough. It was moved by Mr. Tucker and seconded by Mr. McMurchy that an organization to be called "The Iolanthe" be formed; purposes, "goodfellowship."

Carried in form. Upon due form Mr. H. McMurphy was elected President of said organization, Mr. C. W. Budd, Vice-President, and Mr. W. F. Quimby Secretary and Treasurer, the vote for the latter office being made unanimous on motion of another member. Mr. McMurchy then took the chair. It was moved by Mr. Tucker and seconded by Mr. Budd that the membership be limited to 25. Mr. Heikes was opposed to so large a membership. Mr. Hough was strongly in favor of including the two other papers, it having been part of the first plan that they should be represented on the tour. This idea was opposed and the motion was lost. Mr. Quimby moved the membership be 15. Mr. Heikes seconded. This was carried. The membership was named to include Mr. C. W. Dimick, the captains, members and substitutes of the teams, Mr. Thos. H. Keller, advance agent, and Mr. E. Hough, of FOREST AND STREAM. It was moved and seconded that the admission fee be \$2 and the annual dues \$5. Carried and all fees paid. It was moved by Mr. Tucker and seconded by Mr. Budd that the first meeting be at Dayton, O., Jan. 26, 1891. Carried. It was moved by Mr. Dimick that the teams then shoot the old team race, the losing team to pay for the supper. Lost. It was then moved by Mr. Dimick that the race be shot, gate money charged and the proceeds placed in the treasury. Carried. Mr. Dimick said his company would be glad to furnish the annual dinner. Mr. Heikes said the Dayton Gun Club would contend for that honor. Upon boys' motion the president, vice-president, secretary and R. O. Heikes, of Dayton, were chosen for a committee on management. Upon due motion a committee was chosen to draft resolutions of thanks to the U. S. Cartridge Co., said committee composed of Messrs. McMurchy, Quimby and one other. The meeting then adjourned. So the long tour, though ended, will be lived over yet again. May the Iolanthe flourish! A number of the boys at the adjournment of the above meeting went over to the banquet of the Studio Club, an organization including the leading actors of Boston, whose invitation had been extended through press relations. Thence, yet later, a few of the same number gathered in Rollo Heikes's room and made him play the banjo and guitar until nearly 4 o'clock in the morning. Not all of DeWolf Hopper's gibes can destroy the faith of the boys in

WAR CANOES.
KO-KO-KO-HO.

WE thought when the "girling canoe" was finally christened a couple of years ago that the demands of every class of canoeist were fully provided for; but each new season seems to bring its particular specialty, and as 1889 and Lake George will always be remembered as a great year of the dude and the open canoe, so 1889 will be marked in canoe history as the date of another novel feature in canoeing. The first "war canoe" was devised by the Toronto C. C. and built by the Ontario Canoe Co. for them, making its appearance in most imposing style at the A. C. A. meet at Stave Island. The Unktahee was a huge craft, 30ft. long, manned

KO-KO-KO-HO.

by 16 paddlers and a steersman, the cargo consisting of pretty girls without number, who were carried off only too willingly by the professional beauties of the Toronto C. C. The idea took at once, and many members of other clubs came home to talk over similar canoes. The largest of these strange craft afloat this season will be the Ko-ko-ko-ho, of the Yonkers C. C., whose lines we are here enabled to give through courtesy of the designers and builders, the St. Lawrence River Skiff, Canoe and Steam Launch Co., of Clayton, N. Y. This enterprising concern prepared designs early in the winter, and as a consequence they are now building two, the larger 35ft. long and 50in. beam; the smaller 30ft. x 50in. The Ko-ko-ko-ho will carry 16 paddlers and a steersman, besides a passenger on each thwart. A race of these boats is on the programme for the A. C. A. meet, and promises to be one of the most interesting features.

Answers to Correspondents.

No Notice Taken of Anonymous Correspondents.

F. C. S., Vicksburg, Mich.—What is the diameter of the targets that you print in your paper? Ans. Thirty inches.
A. C. S., Ithaca, N. Y.—1. Where can I get a good pedigreed Dandie Dinmont dog puppy? 2. Is it harmful to feed a setter puppy 8 months old on Spratts dog biscuits? Ans. 1. There are but few of these dogs in the country. Write to J. H. Naylor, Chicago, Ill. 2. No.
W. L. Y., Richmond.—1. Is that preservative to keep game from spoiling, spoken of by E. Hough in a back number of FOREST AND STREAM, any good? 2. If so, where can it be obtained? 3. Will it also preserve fish? Ans. 1. It seemed to work well on birds. 2. Is called Preserverine and is made in Chicago. 3. Do not know that it has ever been tried on fish.
E. S. T., Thompsonstown, Pa.—Kindly tell me which is the best reel to use in fishing for the small-mouthed black bass. Ans. A double multiplying reel with a capacity of from 40 to 50yds. is best suited for black bass fishing. Rubber reels are the lightest and easy to keep clean, but quality for quality cost a little more than all metal reels. Order a reel with an adjustable click, a drag is not necessary.
M. H. F., Boston.—Will you be kind enough to inform me through the columns of your paper, if any sea trout can be found near this city, that is from fifty to sixty miles distance. Would you also inform me of the locations of some unrestricted brooks at the same distance where reasonably good fishing can be enjoyed? If unable to name any will you refer me to some one in this city who could give the desired information? Ans. We should think that Cape Cod streams would be nearest and best. Ask Appleton & Litchfield or Dame, Stoddard & Kendall, of Boston. We know of no sea trout fishing nearer than the Saguenay or Lower St. Lawrence.
F. H. B., Shepherdstown, W. Va.—Please decide a dispute for several of your readers. 1. Why are some fish called "game fish?" 2. Is it because they are plucky and inclined to resist greatly or because they prey upon other fish or living food? Ans. 1. Because they resist capture with cunning and courage, and can be taken only by the exercise of skill and patience, and are superior in delicacy of flesh. 2. Many worthless species prey upon fishes and other living animals—for example the American angler or belovfish, the burbot, the toadfish, the sculpins, the eel, the bony gars and the sharks; but these have no more claims to "game" qualities than a buzzard.
A. C. B., N. Y.—Will you please inform me whether the law which prohibits a non-resident of the State of New Jersey hunting or fishing without complying with the by-laws of the game protective societies applies to a person who owns land in New Jersey and is a resident of New York? Ans. Ownership of land certainly does not constitute residence, and the mere fact that a man owns property in New Jersey does not give him the rights of a resident. The law by which local fish and game associations claim the right to make regulations for non-residents has never been tested in the courts, and it is doubtful if it would stand any such test, as the Legislature has no right to delegate its power to make laws to any other body. It has done this indiscriminately by vesting all associations incorporated under the State laws with power to make laws for non-residents. Even if "A. C. B." owns the land he desires to hunt on he would be compelled to comply with the by-laws of the local fish and game association, for the right of the Legislature to pass laws for the taking of game is unquestioned, and these laws apply to property owners as well as to others. The fact of owning property in New Jersey gives a person under the fish and game laws no additional rights not possessed by a non-resident, but if some non-residents will appeal after having been convicted under the non-resident law it is quite possible that the law would be set aside. The appeal would lie to the Court of Common Pleas of the county in which the alleged offense was committed and ought not to cost very much. If "A. C. B." wishes to test the law we can put him in the way of doing so.
W. H. E., New York City.—I write for advice in regard to an Adirondack trout stream. I have in Franklin county, N. Y., an artificial pond formed by damming a natural trout stream. Without having been stocked the trout seem to increase in size and numbers each year, although freely taken. There are several tributaries to this pond, and one that if dammed would spread over perhaps ten acres, forming a pond about a quarter of a mile above the first. Would there be any ill effect to be anticipated in these lower ponds, such as elevation of temperature to such an extent as to make trout dull, and could any other fish be introduced in upper pond without detriment to the trout in lower pond? I know of course that it is best to let well enough alone, but if a place can be made more attractive one is inclined to attempt it. How do you think carp would thrive in upper pond? Would they interfere with trout? How is the law in this respect? The sources of these tributaries are not all on my land. The source of the stream I purpose damming is not on my land, but my land alone would be flooded. By the law I mean that about introducing other fish than trout into Adirondack waters. Ans. The law does not forbid the introduction into the Adirondack region non-preying or non-destructive fish, such as usually constitute food for trout and landlocked salmon. Carp belong to this class of fishes and so do the small shiners and minnows, many of which doubtless now exist in your waters. We should hesitate, however, about diverting any of the supplies of a successful trout pond, into which the trout go for food and to spawn. The spreading out of a body of water must of necessity raise the temperature of your original pond somewhat, although it is impossible to judge of the probable results of your proposed dam without complete details as to the depth, temperature and food resources of your present system.
THE new trap just put on the market by the Keystone Manufacturing Co. seems to overcome difficulties in adjusting the angles of flight of the targets, which have hitherto caused much trouble. It is said that it rarely breaks a perfect target.—Advs.

THE GREATEST Trap for Throwing Artificial Targets EVER INVENTED

Is at last ready for the market. The trap winds up with a wrench and can be wound up to throw any distance from 15 to 65 yds. The angles are more easily adjusted than any other trap. By revolving the trap one notch it will vary the flight of the target 6 ft. in 50 yds. and can revolve it as many notches as desired with one motion. There is nothing that can get out of order or break, as there is no jar when sprung. The arm starts slowly and gathers speed as it travels, and with our positive delivery of target if a perfect one is used will not break one target in a thousand on delivery. This cut shows the new and improved Keystone target and trap for 1890, and a trial is all that is necessary to convince one of their superiority over all others.

try supplying sails made of Union Silk.

Yachts and Canoes for Sale.

FOR SALE.

Fast Cruising Yacht

XARA

Cutter rigged. Length over all, 48 feet. Water
line, 40 feet. Draught, 8 feet 4 inches. Beam, 13
feet 2 inches. 14 1/2 tons of lead in keel. No
inside ballast. Cabin and stateroom well finished
in cherry and upholstered with best hair. Ample
headroom for a tall man in stateroom, cabin and
forecastle. Xara was designed by Edward Bur
gess and built by Lawley in 1888. Lawley was
given plenty of time to build her, so that the work
was in no way hurried or slighted. She is as
thoroughly built as a boat can be. She will be
delivered either in Boston or New York.
For further information, address
J. MEANS,
BOSTON, Mass.
Box 5,234.

CRUISING YACHT FOR SALE OR CHAR
ter. She is staunchly built on most modern
lines, 47ft. over all, 14ft. beam, 8ft. draft (stand
ing keel); plenty head room in cabin; comfort
able berths; patent W.C. and well found; is a
fast and excellent seaboard for cruising in the
gulf or river. Apply to Box 1081, P. O. Quebec,
Canada.

FOR SALE.—CANOE 16x30, BUILT BY R. J.

cents. Address
W. M. McMANUS,
5857 La Salle Street, Englewood, Ill.

When a sportsman finds anything which adds to his
pleasure, without increasing his labor, he wants all his
brother hunters and anglers to know of it and share
with him the newly discovered "helper."

WHAT WE CLAIM FOR
The Automatic Reel.

FIRST.—It will wind up the line a hundred times
as fast as any other reel in the world.
SECOND.—It will wind up the line slowly if the
angler chooses.
THIRD.—No fish can ever get slack line with it.
FOURTH.—It will save more fish than any other
reel.
FIFTH.—It will prevent tugs, lines and snells
from being broken by large fish.
SIXTH.—It enables the angler, and makes it
desirable, to use lighter tackle.
These claims have been substantiated by the
most skillful fishermen in America and Europe.

The reel is manipulated en
tirely by the hand that holds
the rod.

YAWMAN & ERBE,
ROCHESTER, N. Y.
Send for Catalogue, Free.

The Most Perfect SPLIT
BAMBOO Rod Ever Made.

THE FERRULES ARE ABSOLUTELY
WATERPROOF. This most desirable result
is obtained by a new and ingenious device
NEVER BEFORE USED IN THE CONSTRU
TION OF A ROD. The Ferrules also are
PRACTICALLY DOUBLE, and fitted OVER
the bamboo is a WATERPROOF cushion of
ZYLONITE, while over that are set the ferrules,
thus adding MATERIAL STRENGTH AT THE
JOINTS. The mountings are of GERMAN
SILVER and HAND-MADE IN EVERY PAR
TICULAR. In short this is the rod anglers have
long wished for. Examine it at any of our stores
and satisfy yourself.

To Sportsmen and Others.

A rare opportunity is offered of acquiring 277
acres of land, 2 two-storied buildings and
six cottages of pleasing architecture, besides
barn, coach-houses, oil and coal stores, skating
rink, ice house, etc.
One of the two-storied buildings is admirably
adapted for a club house, containing, as it does,
large dining and sitting rooms, billiard room,
kitchen, pantries, cellars and a number of sleep
ing apartments. As evidence of the quality of
material and finish of this building it is only
necessary to mention that it was constructed by
S. M. Brookfield, contractor, of Halifax, at a cost
on completion of \$25,000. The cottages are first
-class structures and are more substantially built
than the ordinary class of seaside houses. The
buildings are all in good sound repair.
There is safe anchorage for yachts, and good
sandy beach with splendid surf bathing.
The numerous Lakes and Rivers in the imme
diate neighborhood afford excellent fishing,
Trout and other fresh water fish abound, and
a good supply of Salmon in the season. There is
also the very best Sea-fishing, gamy Bass, raz
zies from 20 to 80 pounds, affording true sport to
the angler, Lobster-spear, etc., and good
Shooting.
This offers an unusual opportunity for a club of
yachtsmen, anglers and seaside sojourners to
obtain a healthy, cool and picturesque resort for
three or four months in the summer, out of the
ordinary run of travelers; and to parties residing
in New York or Boston the delights of a short,
safe and pleasant ocean voyage, equalling in ad
vantages a trip to Europe without its expense
The buildings are within 500 yards of the Atlan
tic Ocean at Tor Bay, Guysboro County, Nova
Scotia, and were until recently the station of the
Direct United States Cable Company, Limited,
and are near the "Terminal City" property on
the Straits of Canso. An experienced steward,
who is a skilled caterer, is now in charge of the
property, and his services can be secured on
reasonable terms. A Western Union telegraph
office on the premises. As this property is no
longer required by the Cable Company, it is to be
sold at a sacrifice, and any reasonable offer will
be considered.
Apply Superintendent, Direct Cable Office,
Halifax, Nova Scotia.
Full particulars will be given by letter or per
sonally at the above address, or by
JOHN NAYLOR,
Real Estate Agent,
93 Hollis Street, Halifax, N. S.
HALIFAX, March 26, 1890.

FOR SALE.

One of the Most Desirable Tracts of Land
in the State of Maryland.

Pesutia and Plum Point Farms, joining and
located as one farm, containing about six hun
dred (600) acres, four hundred and fifty (450)
of which are tillable and in the highest state
of cultivation and sufficiently rolling to be desirable,
the balance in timber and pasture; near one-half
of tillage land is now sown in grass, balance,
if desired, can be sown in one year.
This land is located within 30 minutes drive of
Aberdeen, Md., a station upon the Philadelphia,
Wilmington & Baltimore Railroad, the main line
from New York to Philadelphia and Baltimore—
one hundred and sixty-six (166) miles from New
York; sixty-six (66) from Philadelphia and thirty
(30) from Baltimore. It is also located at the head
of the Chesapeake Bay, and at the Susquehanna
Flats, the great feeding grounds for Wild Duck.
It has about two (2) miles of shore, which embrace
many desirable points for Duck Shooting, Fish
ing, etc., the improvements consisting of two
large Farm Mansions and all necessary out-build
ings for first class farms, which are in good re
pair. The land is also under good fence, and is
especially suited for a first-class Stock Farm, be
ing almost equal in point of grazing to the Blue
Grass regions of Kentucky. Churches, schools,
and stores convenient. A portion of the purchase
money can remain upon mortgage if desired.

The Old Reliable and Popular Blue Rock Pigeons & Traps

Every Target made by us is plainly stamped "BLUE ROCK PIGEON."

A worthless imitation of our justly celebrated "BLUE ROCK" is being put on the market, and if parties who receive these imitations on orders given for "BLUE ROCKS" will refuse to accept them and notify us by whom they were shipped, they will confer great favor. We warn all dealers not to sell as "BLUE ROCKS" any of these worthless imitations.

The cut of our trap shows it to be the most compact and perfect target trap ever devised. As will be seen by the following list of carload buyers, our goods are handled by all the leading dealers in Sporting Goods, and you will find it to your interest to buy from them, as they can give you factory prices and save you delay and breakage in transportation.

BURNING FORESTS.

ONE of the most important needs of the National Park is an adequate police force. Such a force is required for the purpose of keeping order and protecting the natural curiosities and the game, but its chief, and by far its most important duty under existing conditions, is to fight fire.

Those who are unfamiliar with the pine-clad slopes of the Rocky Mountains can have but little conception of the destruction wrought by a fire which passes through these forests. The ground is covered to a depth of a foot or more with the pitchy accumulations of centuries of forest growth. Pine needles, cones, dead branches and the resinous trunks of fallen trees form a forest floor that catches fire like tinder and burns like a furnace. A spark from a camp-fire, pipe, or a cigarette, may ignite this forest floor, which may smoulder for hours or days before bursting into flame. This flame once started, the fire moves rapidly before the wind, constantly finding, as it moves along, new food in the debris upon the ground. The foliage of the living evergreen trees burns as readily as hay soaked in kerosene oil. Each tree, as the fire touches it, becomes a huge torch, which flares up for a moment and then goes out, but in that moment the tree's life has been destroyed, and the thousand trunks of the forest are left to stand for years, black monuments of the fire's destructive force. Before a gale, such as often rages in the mountains, a fire which has got into the thick timber rushes onward with a fury which is indescribable, and destroys in an hour timber that a century of growth cannot replace.

It is unnecessary to show that the chief value of the forests of the Yellowstone Park lies in the fact that they protect the sources of the Yellowstone and Snake rivers, two streams which supply the water for irrigating a vast area of the arid West. This has many times been demonstrated.

It is of the highest importance to preserve these forests, and in order to preserve them they must be policed with

men to protect them from the danger of fire. The greater the number of travelers in the National Park the greater the danger from fire; if there are 10,000 tourists in the Park, it is certain that among this number there will be very many who are ignorant of the damage that a fire may cause, and a still greater number who, though they may be aware of this danger, are yet so thoughtless and careless that they may easily start a blaze, which may sooner or later work terrible destruction. For this reason it is of the utmost importance that the Park should be efficiently patrolled and that all travelers should be watched. This need not be done in an offensive way, but it must be done. The presence of these fire guards is exactly like the presence of the police in our city parks, whose duty it is to prevent the careless, the thoughtless or the malicious from doing any injury to these cultivated parks which belong to the whole people, and must be guarded for them.

The Yellowstone Park is a wild region of great extent, and it is well that it should be left in its wildness, but if the flames are allowed to ravage it, its beauty and its economic usefulness will be destroyed. It is for the proper protection of the Park, for a government which, by the authority of its laws and the agents for their enforcement, shall restrain criminals, malicious and thoughtless persons, that those most interested in the Park have so long been fighting. With a government and with an adequate force of troops and civilian scouts for patrolling it, the forests of the Park can be preserved, and the waters which they protect will always remain undiminished.

There were stationed in the Park last season two companies of troops under the command of Captain F. A. Boutelle. They are efficient, courteous and obliging to tourists, and during the season of travel are very hard worked. Last summer was a very dry one, and fires were numerous. The good work of the troops under Captain Boutelle's command is shown by the fact that sixty-seven fires were fought and extinguished by the troops last season.

Besides these controlled fires—all with two exceptions traceable to careless road makers, freighters, employees of the syndicate and campers—there were three fires abandoned as beyond control, one south of Lewis Lake, one between Shoshone and Yellowstone lakes, and one that jumped the river near the outlet of Yellowstone Lake. These were large fires and probably burned over in the aggregate twelve square miles of timber.

Some of these controlled fires were fought for eight or ten days by the soldiers, who worked at them with the greatest energy and faithfulness, literally eating and sleeping by them. If it had not been for this unremitting work, the destruction would have been far greater than it is.

There were other larger fires on the borders, but outside of the Park, which received no attention, and which burned over a great deal of territory. Among these were one on the north side of the Beartooth range, one on Clark's Fork below the Cañon, one on Upper Clark's Fork, one on the mountains near Sunlight Basin, several near Fall River Meadows, one in the timber near Aeneas's Lake. These must in the aggregate have burned over many square miles of timber, and this destruction means the drying up of many springs.

The best purpose which the National Park can serve is to furnish a place where people of all sorts and conditions may go to return for a while to a life that is purely natural. Let them go there and pitch their camps in the secluded mountain valleys far from the dusty roads crowded with tourists, there to rest and to live for a while by themselves. In this wild and wonderful spot, these campers, whether they come from the East or from the West, may pass happy, restful days or weeks, living as did our forefathers in close communion with nature. There they can gain some conception of what life was in the early days of American settlement, before all the land was full of people and the rush and hurry of the busy life of to-day had begun. But while this is true, and while the Park is above all a place for campers, it must not be forgotten that each camp adds something to the danger from fires, and that a constant patrolling of the region by intelligent fire guards will be ever more and more needed.

A larger force of troops is needed in the Park, and it is earnestly hoped that the Secretary of the Interior will before long call on the War Department to issue the necessary orders for such an additional detail.

TO CODIFY THE GAME LAWS.

Governor Hill has signed the bill providing for the appointment of a commission of three to revise and codify the game and fish laws of this State. In signing this bill, however, he stipulates that no more legislation on game and fish, except that which relates to shad and salmon, shall be pressed in the Assembly until this Commission has acted. We print in another column the full text of this bill, which all who are interested in game and fish protection ought to carefully study.

It will be observed that of the Commission, one is a deputy attorney general, whose functions, it may be presumed, will be chiefly of a legal character. It is to be hoped, however, that the gentleman appointed may be a sportsman, as well as a lawyer, and may take an active interest in game protection; that he may be something more than merely the legal adviser of the Commission. The member of the State Fish Commission and of the New York Society for the Protection of Game who are to belong to this Commission should be selected with great care, for the work that they have to do is most important.

This is New York's great opportunity. If the provisions of this bill are wisely carried out, a series of good plain laws, providing for the protection of game and fish, can be formulated which will not only add greatly to her citizens' opportunities for recreation, but will also contribute largely to the material wealth of this State. It is not now necessary to set forth the points especially needed to be covered, but it may be said that any bill prepared by this Commission should not only provide for the objects set forth in their bills, but should do so in such plain and simple language that the bills can be understood by every one who reads them.

The subject of codifying the game laws of this State is one which requires the most careful consideration and the fullest discussion. On many points there are, among sportsmen, differences of opinion, which are almost irreconcilable, but it may be hoped that such differences will now be laid aside or so modified as not to interfere with the preparation by the Commission of the best possible laws. Sportsmen could accomplish vastly more in legislation if they were united and could present a solid front.

The stipulation made by Governor Hill, that general game and fish legislation shall not be passed in the Legislature at present, makes it unnecessary to comment on any of the bills on these subjects now before that body.

SNAP SHOTS.

A MEETING of the Public Lands Committee of the House of Representatives was held on Monday to further consider the National Park bill. It is understood that after the hearing was ended the committee, in executive session, determined to recommend the passage of the bill substantially as it came from the Senate, but also granting a right of way to a railway, under somewhat strict conditions. Among these conditions is one that the road shall be completed by Jan. 1, 1892. We reserve comments until we have a fuller knowledge of the action of the committee.

Senator Paddock's bill providing for the transfer of the U. S. Fish Commission to the Agricultural Department, has, as might have been supposed would be the case, awakened a great deal of interest among anglers, but especially among people engaged in commercial fisheries. There appears to be but one opinion about the matter, and that is, that the proposed transfer would be a national misfortune. The press of the country almost without an exception condemns the bill, and mass meetings of people engaged in the fish trade have been held on the Atlantic coast and along the Great Lakes. At such meetings resolutions have been passed approving the work of the U. S. Fish Commission and condemning any change in its control and management. No class of men are more interested in this matter than those who are engaged in the commercial fisheries; for no class of men has the U. S. Fish Commission done so much, and no class of men will be so seriously injured in their business if the change proposed by Senator Paddock should be carried out. It is too soon to predict what will be the fate of this bill in the Committee, but it is reasonably certain that even if it shall receive a favorable report in the committee it will be killed in the Senate.

The Sportsman Tourist.

TO THE MAYFLOWER.

Epigea repens.

WHEN from their home beyond the seas
Our Pilgrim fathers came,
They gave to birds, and flowers, and trees,
Some much-loved English name.

The names they left, but not the things,
So cherished in their eyes,
"The lark, at Heaven's gate who sings"
Soars not beneath our skies.

No redbreast of our infant rhymes
Seeks shelter from the storm,
Our robin hastes to southern climes,
Where sun and skies are warm.

Our violet greets the morning hour
In all its purple bloom,
It bears the hues of England's flower,
But lacks its sweet perfume!

Her "daisy ples the velvet mead,"
A modest, shrinking flower;
Our daisy's but a pasture weed,
Which loves the sun's full power.

Our laurel forms no classic wreath,
The victor's brow to crown,
Not from our hills does Scotia's heath
On loch and moor look down.

Yet Scotia's harebell lightly nods,
And England's roses blow,
And blue anemone its buds
Lifts next the melting snow.

Close by its side, a fairer flower,
Unknown to Britain's isles,
Unfolds its eyes to April's shower,
And welcomes May with smiles.

Now richest pink, now purest white,
It blooms in sun or shade,
Or wastes its fragrance on the night,
In many a lonely glade.

Now hiding closely to the ground,*
Where withered leaves have blown;
Now wreathing sweetest clusters round
Old stump or mossy stone.

Some call it "trailing arbutus."
The name our fathers gave
The gallant barque, recalls to us,
Which brought them o'er the wave.

Dear to our hearts the pleasant sound,
The name which first it bore,
The "Mayflower," which the Pilgrims found
On Plymouth's rocky shore.

CHARLESTOWN, N. H., April 9.

* Epigea, close to the ground.

AN OLD PESSIMIST.

KELLUP has grown morose of late. He does very well in sunny weather, but when the rheumatism and the dyspepsia, and the other ailments indigenous to his time of life, all get together and choose a stormy day for a joint attack, the conjunction of malevolent circumstances seems too much. On these days Susan can only listen.

He rarely goes to town now—hates the town. He dislikes to see the tenements encroaching on green fields, and lots all scored and littered with boards and bricks and beds of mortar. He abominates the jolting pavements, and would shun a broad, straight macadam drive to explore an untitled byway, choked with bushes or half broken through a snow wilderness. He has a jealous love of trees. He sighs when he reads of a new use for wood, and the thought of cords of poplar grinding into pulp for paper enrages him. When he took a trip up North, where coal is little used, he begrudged every stick that went into the locomotive, but he took delight in a sapling growth where an old man said the corn grew once instead. He grieves to see the forest felled. The enormous statistics of lumber drives in the spring appal him, and he longs to rush away to some inaccessible place to gloat on the forest there and thank Heaven he won't live to see its destruction.

In younger days he thought seriously of this. He allowed himself to dream of a time when he should start on a trip to the uttermost parts of the earth. He pored over the map with Susan in the evening, till finally they arranged a satisfactory schedule of route and prices. His gun would be his only companion and he could tell you just the make of gun. And he could prophesy adventures. He could tell you what dangers to avoid at such and such a place, and what game should fall before him there. Then there was the question of skins. Not only the transportation to consider, but the duty. However, no price could affect their intrinsic worth; each would have its value when he came home, weatherstained, to recount the story of its capture. On his fiftieth birthday, the date of departure seemed so far, far away that he got out the map, that night, and drew a line around Australia and the Pacific Islands; there would not be time for them now. At fifty-five the last five winters had left traces of frost, and he decided to eliminate the North Pole and immediate vicinity; but it cost a pang to relinquish that polar bear.

"And now, at sixty," said he, "there is no prospect and it's too late, now, to start. The big game of the earth is gone. The last elephant in Africa will soon have his tusks sawed off and I could hardly reach the jungle in time to see the man-eater, dead full of bullets. At home here, the grizzlies have become pusillanimous, the last bison of the plains is only a buffalo robe; even the Indians are corralled in their graveyard. The woods are speechless except for the quail, liberated by count in the spring to be shot in the fall. There's a trap in the path of every shy creature with a coat of fur, and a bounty on his scalp in the town clerk's office. In a few years more we'll study natural history in museums with moths corrupting rare, beautiful skins which now we barter in bales,

and wise men will gather reverently about a foot print in petrified mud where stupid men now congregate in ambush with 'blinds' and 'batteries.'"

JEFFERSON SCRIBB.

GOOSE SHOOTING ON THE ARKANSAS.

THREE years ago last June, the sportsmen of this vicinity were blessed with as good goose and duck shooting as could be had. Two or three of us could go out almost any day and get from 40 to 50 geese and ducks. That day is over, though we get some fair shooting now. But we have to work hard for what we get. The farmers have stopped raising wheat to any great extent, so the geese do not have the feeding ground they used to. They used to congregate on the wheat fields by thousands. I have seen eighty acres literally covered with them. I knew of one farmer, five miles from this city, who with one of our sportsmen killed 350 geese in one day. The country is getting thickly settled and everybody owns a gun of some kind, and during the shooting season there is one incessant boom, boom, from daylight until dark. Worst of all the spring hunter has been getting in his fine work right along, but as long as we have not a stringent law to abolish it, everybody will indulge in it and I am no exception to the rule, as I have done some spring shooting myself. As long as there is no law against it, we might as well have some of the sport while it lasts, as to let the pot-hunter and market-hunter have all of it.

With two friends, Eli and Miles, I started for the Parker Pit, about six miles west of this city. We had a good team, a four-year old mare, the property of Eli, and a three-year-old belonging to your humble servant. The road lay along the A. T. & S. F. R. R., but Eli suggested we take the back road, about one mile from the railroad, as his mare was afraid of the train, and as there was a barbed wire fence on the other side of the wagon road nearly all the way, we concluded to do so to avoid a possible accident. We had proceeded about two miles on our road and were congratulating ourselves on our early start (as it was then only about 4 o'clock A. M. and very dark), when the writer, who was driving, ran on to a railroad grade and upset the entire party into the ditch. The horses reared and plunged, and things looked serious for a minute, but after half an hour's work and a little swearing on the side we started again. We drove about another mile to the bridge that crosses Cow Creek and found the bridge down, and as there was no ford we had to drive about a mile and a half to the main road. No further accident marred our progress, and we arrived at the shooting grounds about 7 o'clock, not at all sweetened in temper, as we had missed the morning flight.

The sun was just rising above the horizon, and as far as the eye could reach could be seen innumerable flocks of ducks and geese on their way to the adjacent wheat and corn fields. We quickly unhitched the team and proceeded to carry our decoys, guns, shells, etc., over to the pit. Our decoys comprised some two dozen Dantz's profile geese and about three dozen wooden ducks, which, when set out on a sand bar about 30yds. from the pit, made a very nice display. The Arkansas River at this point is a shallow, wide stream, full of islands and sand bars. A person familiar with it can wade it anywhere with hip waders. Our mode of hunting ducks and geese here is to locate an island as near the center of the river as possible, with a good sand bar for your decoys within about 30 or 40yds. of it, dig a pit and sit there and "snipe 'em" when they decoy in, providing they come in close enough and you can hit them. We took our places in the pit, Eli on the left, armed with a 10-gauge W. C. Scott circular hammer gun, weighing 9½lbs.; Miles in the center with an 11lbs. 10-gauge Parker; and the writer on the right, with a 10-gauge 10½lbs. Bonehill.

We hadn't long to wait before Miles descried two white geese coming directly at the decoys. "You take the one behind and Eli and I will attend to the other one," said Miles to me. We all cracked away, and I had the satisfaction of seeing my goose come down in the deep water next the bank, about 40yds. away. The other one circled back, and as he was on my side I took him and knocked him down in good shape. I went out and retrieved the two geese and managed to drop into a hole and get wet to my waist. I had barely got into the pit when I saw an old mallard coming. The old fellow was a little wary, but Miles got a long shot at him and killed him nicely. The next to come in was a lone pintail which Eli crimped in good shape. There was a lull in the shooting then, until 10 o'clock, when the flocks commenced to come in from the fields for water. The first to see our decoys were a flock of five fine Canada geese; regular "old honkers." How nicely they decoyed. It sets my blood tingling to think of it even now; they looked as big as cows. Eli gave the word when they were hovering just ready to alight. There were six loud reports and five fine geese lay splashing in the water. We now began to think we were invincible, but the next flock, about fifty geese, made us change our minds considerably, as we fired six loads at them and didn't get one, and out of the next flock of about the same number we got but one.

While Miles was out after this one a flock of redheads came directly at him, out of which he got one. While he was gathering his duck three more redheads decoyed in, and Eli and I got all three of them with two barrels. Next a flock of teal came down the wind like so many bullets, and ran the gauntlet of six barrels without losing a feather. Then a flock of white geese, on which we all three scored a double. It was while Eli and I were out retrieving two of these birds that Miles made the best shot of the day. A flock of white geese came in to the decoys from the opposite side of the river. We were too far away to get into the pit, so we just kept still and let Miles take them. We had left our guns in the pit, loaded and cocked. Miles let them get well over the decoys and then raised up and killed one with each barrel with his gun and one with each barrel with mine. He then grabbed Eli's gun, but as they were too far away he didn't shoot. Well, I will not weary your readers with a description of any more of our shots; but will say that we returned home with a bag of thirty-seven geese and fifteen ducks, having used only about 100 shells and spending one of the most pleasant days of our lives.

Natural History.

BIRDS OF GULL ISLAND, N. Y.

[Read before the Linnean Society of New York, March 21, 1890.]

IN July, 1889 (8th to 16th inclusive), Mr. Frank M. Chapman, Assistant Curator of Birds and Mammals at the American Museum of Natural History, Central Park, New York city, and the writer visited Little Gull Island, Long Island, New York, for the purpose of making a study of the breeding habits of the colony of terns on the adjoining island, Great Gull, and also to observe the habits and obtain specimens of the jaegers which we expected would be common there about the time of our visit. We intended to continue and complete as far as possible the investigations commenced in August, 1888, by Mr. Basil Hicks Dutcher, for a detailed account of which see *The Auk*, Vol. VI., April, 1889.

While the trip was a failure so far as the jaegers were concerned, yet in other respects it proved of great interest and some value. As I shall have to refer somewhat to the influence of the weather in my notes, I give a tabulated statement of the same herewith:

	Mean Temp.	Bar.	Wind and Weather.
July 8.....	73	30.15	Fresh west, clear.
July 9.....	75	30.25	Light S. E., clear.
July 10.....	65	30.30	Calm, variable, clear.
July 11.....	70	30.17	Mod. S. E., rain and fog.
July 12.....	63	30.21	Light, variable, fog.
July 13.....	74	30.16	Light S. E., clear.
July 14.....	71	30.06	Fresh S. W., clear.
July 15.....	64	29.98	Hard N. E., to S. E., rain.
July 16.....	66	30.16	Fresh west, clear.

Little Gull Island being so small and situated at the gate of Long Island Sound, it is almost impossible for a bird of any size to pass it without being seen. Moreover, it seems to be in the line of migration of all the smaller birds. The keeper of the lighthouse and his wife were continually on the lookout for anything to break the monotony of their lives, and thus naturally became good bird observers. In many instances they called my attention to birds I would otherwise have overlooked. The following notes of birds seen refer entirely to Great and Little Gull islands and the waters immediately surrounding them:

1. (36) *Stercorarius pomarinus*—Pomarine Jaeger.

2. (37) *S. parasiticus*—Parasitic Jaeger.

The date of our visit to the Gull islands was fixed with a view of arriving just prior to the first run of bluefish. We, however, were too late, as the first schools were seen about July 1. The first bluefish only remained in the vicinity about two days, when they disappeared, and none were seen while we continued at the islands, although they were quite plenty off Montauk Point. Mr. Chas. B. Field, one of the keepers of the light, reported having seen three jaegers on June 2, the first of the season. On the following day one was seen. None were noticed again until the 17th, when two were observed. On the 28th one was noted. On the first and second of July he saw two each day. During our visit we saw jaegers only twice, as follows: 12th, two; 15th, one.

3. (51a) *Larus argentatus smithsonianus*—American Herring Gull.—On the 9th, four individuals were seen flying by the island westward and up Gardiner's Bay. The following day a large gull was seen, too far off to be identified, which was presumed to be of this species. While it is not a common occurrence for this species to be seen in the summer months in our latitude, yet I think that a few unmated or barren birds remain with us and wander about from place to place. My notes on the species show that at the eastern end of Long Island they remain in some numbers until about June 10 and are occasionally seen until the 20th, the latter being the latest date I have noted.

4. (60) *Larus philadelphia*—Bonaparte's Gull.—A specimen of this species was shot by Mr. Chapman on the 8th inst., on Great Gull Island. It was in company with the terns who were excitedly flying about us and uttering their cries of alarm at our invasion of their breeding ground. I found in the daily record book of Mr. Chas. B. Field the following notes: "June 22, 1889, saw a tern to-day without the black on edge of wings and a pure white head." "June 23, saw two terns same as yesterday, they are a little larger than the common ones." "June 26, saw one of the white-headed terns to-day." The specimen procured by Mr. Chapman was undoubtedly one of the pair of terns (?) that puzzled Mr. Field so much. I call attention to this, however, simply to show how extremely observing the Long Island gunners are of any differences in the appearance of birds, even when they are flying by. The specimen in question was not in summer plumage, consequently the head at a little distance appeared almost white.

5. (70) *Sterna hirundo*—Common Tern.—To visit the ternery on Great Gull Island was one of the primary objects of our trip. This is probably the only place on Long Island where this species now breeds. Formerly they bred in great numbers over almost the whole length of the island on the south shore. But when the sinful fashion to wear their beautiful feathers came into vogue they were persecuted until they were all either killed or driven from their ancestral homes. I well remember in times past how beautiful a sight it was to see them in great flocks, fishing on the bays or the broader but rougher waters of the ocean. Nothing now remains but a recollection of what once seemed part of a summer sail. The colony on Great Gull is all that is left of the once vast numbers that spent the summer months on Long Island. Regarding the time of the arrival of the terns at Great Gull Island, I make the following extracts from Mr. Field's daily record book, which he kindly kept for me: "May 15, 1889, heard common terns before daylight, fog; May 16, saw about a dozen terns; May 17, saw about one hundred terns; May 18 and 19, no increase; May 20, increased in numbers to about one thousand; May 21, still increasing in numbers; May 29, a large bunch arrived this morning; June 2, found first egg to-day; July 4, saw first young tern." We arrived on the 8th, at which time there were probably in the neighborhood of from three to four thousand individuals in the colony. Whenever any one visited Great Gull a large part of the colony would rise up in the air and hover over the intruder, screaming and following him, at times dashing down as if to pierce the object of their wrath with their sharp bills. As the visitor moved away, those

Game Bag and Gun.

"FOREST AND STREAM" GUN TESTS.

THE following guns have been tested at the FOREST AND STREAM Range, and reported upon in the issues named. Copies of any date will be sent on receipt of price, ten cents:

COLT 12, July 25.	PARKER 12, hammerless, June 6.
COLT 10 and 12, Oct. 24.	REMINGTON 18, May 30.

LEFEVER 12, March 13.	WINCHESTER 10 and 12, Oct. 3.
PARKER 10, hammer, June 6.	

CHICAGO AND THE WEST.

CHICAGO, Ill., April 12.—There is an unusual amount of water in our country about here this spring. Passing over the Baltimore & Ohio road early in the week, I noticed that the streams and marshes all through northern Indiana and near the Illinois line were very generally overflowed. By reason of this state of affairs, the shooting this spring has been exceptionally good, the flight of wildfowl having been very well sustained. There does not seem to have been any very general craze among the boys to get out often, the approach of warm weather apparently taking some of the energy out of them. Nearly everybody has been out for a day or so, however, and nearly all had some success at the ducks. The Cumberland marsh seems rather the most favored this season. Mr. Geo. T. Farmer bagged 56 ducks in four hours there a few days ago, and has had good sport during most of his stay at the club house. Other bags, 20, 30 and 40 odd, have been made by Cumberland men. Some snipe were coming in on Cumberland flats early this week. It is very probable that there are numbers in by this time.

Mak-saw-ba has had some flight. The Mak-saw-ba boys grow lazier every year, and they haven't hunted ducks very hard this spring, although a few good bags have been made. Mr. John Watson pocketed a nice lot of snipe this week on Mak-saw-ba marsh.

Mr. Alex T. Loyd and Mr. R. A. Twitte are just back from a week's camp hunt near Fuller Island county, on the Kankakee. They met hard rains and seem to have spent considerable time moving about. They didn't kill a whole lot of ducks, but got all they ought to have. Alex spilled out a two-bushel sack full of game, including two brant and four Canada geese. He killed the geese a double at the time, with 6s and 7s, as they came in over his mixed flock of decoys.

Mr. John Kline, in a letter from Detroit, Mich., two weeks ago, said they were having very good shooting on the flats near there, getting a good many redheads and canvas. Snipe have made their appearance in that locality also.

Fox Lake has had its full share of the fun this season, and on John Gillespie's bulletin I noticed a telegram so old as March 23, announcing a good flight from away down below at English Lake. It is against the law to shoot ducks in the spring in Wisconsin, but I imagine Lake Koshkonong must be full of game now.

An amusing story is told by the boys on Mr. Waldren, of the Mak-saw-ba Club. It seems that Mr. Waldren was down at the club for a week or so, and happened to strike a good flight, so that in five or six days, by reason of perseverance and 400 or 500 shells, he managed to accumulate twenty-seven ducks. This was more than had ever fallen to his lot at any one period of his history before, and he wrote to his family and friends that there would be a shipment of game and a general distribution immediately upon his arrival. Accordingly he packed and shipped his ducks from the club house, addressing the package to his own street number in the city. Unfortunately the card, whose reverse he used for his own address, bore upon its other side the firm address of the well-known commission man Henry A. Sloan, of South Water street, and the wicked express company, taking this to be the actual address, delivered the ducks to Mr. Sloan. In due time Mr. Waldren received a check for \$2.40, less 50 cents express charges, total \$1.90, for a bunch of ducks that \$1,000 couldn't have touched! It was bad enough to lose the satisfaction of showing the ducks to his friends, but add to that the incessant gibes of his friends at him for being a "market-hunter" and the fullness of Mr. Waldren's cup of woe may be imagined.

Some time ago I wrote Mr. Chauncy Simonds, of Milwaukee, president of the Caw-Caw Club, for some information in regard to that organization, across whose trail I had stumbled while gathering information in regard to the Nee-pee-nauk Club, of Chicago. The Caw-Caw, like the Nee-pee-nauk, has extensive grounds and buildings on Lake Puckaway, Wisconsin, and much that is true in description of one club is true also of the other. Mr. Simonds wrote briefly as follows, after referring to a Chicago member who happens to be out of town:

"There are at this date twenty contributing members, out of which during the open season there will average an attendance of twelve to fifteen members at the club house in Marquette, Green Lake county, Wis.

"The club house stands upon the bluff, facing north, overlooking the lake (Puckaway) and Fox River, affording a view of fifteen to twenty miles of rural scenery, picturesque and grand. It is in the center of a large and commodious plot of ground entirely timbered with oak and hickory. The names of the members are: E. H. Abbot, E. P. Allis, Jr., W. W. Allis, A. J. Aiken, H. F. Bosworth, E. H. Broadhead, H. F. Birchard, E. E. Flint, A. W. Friese, Capt. A. R. Houston, C. W. Henning, Jas. K. Isley, Fred'k Layton, J. P. McGregor, J. L. Ranney, J. E. Patton, James C. Spencer, Angus Smith, W. E. Storey, Chauncy Simonds, Robt. B. Tweedy, H. H. Schufeldt."

The Caw-Caw membership is not quite confined to Milwaukee. The club is very well to do, and has a valuable preserve on Puckaway. Mr. Simonds does not name the acreage, but I have heard it stated that they have 5,000 acres. They have canvasback shooting and small-mouthed black bass fishing. The club has been established some years, is solid and prosperous, and is one more worthy organization that FOREST AND STREAM has to chronicle with pleasure.

E. HOUGH.

A CAPTIVE RELEASED.—Norristown, Pa., April 11.—*Editor Forest and Stream:* This morning while practicing at a target on the rifle range on Barbadoes Island, I heard the plaintive note of a bird in distress, and, glancing in the direction of the sound, I saw a robin (*Turdus migratorius*) hanging from a dead limb of a willow tree, about 11 ft. from the ground. Hastening to the spot, I found that the bird had been building a nest about 20 in. to windward of the place of the accident. The nest is about half completed and is mainly composed of the fibre of some kind of weed. The fibre is somewhat of the nature of flax, and a small bunch of it was wound around the bird's foot and had also in some way become attached to the dead branch before mentioned. The bird, in its efforts to get free, had twisted the fibre into a strong cord and also wound it around the branch. The tips of several of the tail feathers were also woven into the snarl. I tried to liberate the bird with a pole, but found it utterly impossible. I then broke off the branch, and getting the bird in hand, cut the flax-like cord from the branch. The bird's leg was broken in two places, or rather two joints were dislocated. I cut off the tips of the tail feathers and then amputated the leg by severing the large tendon, which was all that held the foot to the body. Releasing the bird it hopped away a few feet, but was too weak to fly. The bird had undoubtedly been hanging since yesterday, as I found it at 7 this morning and its condition showed that the accident could not have happened since daylight, blood having dried on its feathers. The bird had some fibre in its bill, showing that it was still pecking away at the cruel bond which had caused it intense agony for many hours. I inclose the fibre attached to the foot and tips of tail feathers as I found it. The impossibility of the bird's escape, unaided, will be apparent at a glance. Have any similar cases been recorded?—E. A. LEOPOLD. [A few cases of this kind have been recorded. We remember especially one in which a swallow was so caught and one of an oriole, but we cannot refer to them at the moment.]

ABOUT THE BOBOLINK.—*Editor Forest and Stream:* Through the columns of your paper I would be glad to hear from some sportsman or some naturalist in regard to the bobolink. Having lived during a number of years in southern New Jersey, most of the time in different parts of Monmouth county, I have yet to see a bobolink in its parti-colored dress, or to hear its, to me, well-known notes. True, I have often shot them as reed birds along creeks emptying into the Delaware River, and once in a while among reeds and tall grasses near where streams enter bays south of Manasquan River, and also a few miles west of some of the inlets on the ocean front south of Sandy Hook. Now, as the birds are migratory, one would naturally suppose that in going north or northeast into the New England States, where I have seen hundreds of them, they would fly over some part of Monmouth county, as that would be their most direct route, or perhaps their migration is to the west of this portion of the State; or does each don its tri-colored plumage after having reached its northern destination? I would like to hear from some one in regard to these points.—A. L. L. (Hornerstown, N. J.) [For notes on the seasonal changes in the bobolink see the *Auk* for April, 1890.]

COLLECTING IN MEXICO.—Tehuantepec, Mexico, March 30.—*Editor Forest and Stream:* A friend of mine says: "While out collecting on the mountains, two days' journey from here, I shot three new birds, two belonging to the flycatchers and the other somewhat like a wild pigeon. Others of the party also got two unknown to them, one a large hawk. Specimens of each were preserved and will be sent to England. They also secured two that were discovered and named by Sumichrast when he collected here some years ago. Others are no doubt to be found unknown to naturalists, collectors never having before visited that part of the country. Many curassows were met with, and turkeys twice the size of tame ones are said to frequent the more thickly-wooded peaks.—W."

EVENING GROSBEEK NEAR TROY, N. Y.—Troy, N. Y., April 8.—*Editor Forest and Stream:* I have noticed in your paper that the evening grosbeak has been seen in various parts of the country. On Saturday, March 29, I saw a flock of seven on the Brunswick road near Troy, feeding on the seeds of the maple. I secured five good specimens, all females. I gave two to Mr. A. T. Parks of this city, who is one of the best ornithologists of this State.—JOHN A. SAMPSON.

LOONS IN ILLINOIS.—Newton, Ill., April 5.—*Editor Forest and Stream:* Last Saturday Mr. P. G., while out hunting with a rifle, fired at and winged a loon. After this the bird would dive at the flash of the gun, and he fired no less than four shots directly over it before he killed it. This is the first one ever killed here. Three others flew off at first shot. Are these birds good to eat, and do they migrate regularly?—C. M. A. [Not good to eat. They migrate regularly.]

WOODCOCK IN FULTON STREET.—New York city, April 10.—*Editor Forest and Stream:* This morning, at the corner of Fulton and Gold streets, I found a woodcock lying on the sidewalk. I only had a chance to hastily examine the bird, as quite a number of men were quickly interested in handling it, but to all appearances it had broken its neck against the telegraph wires that stretched net-like overhead. It was still warm and was in fair condition.—F. LIN.

THE FLIGHT IN MICHIGAN.—Lansing, Mich., April 9.—The winter has been so much milder than usual that all kinds of birds have put in an appearance earlier than in past years. The ducks came ahead of time, and Whitehead, Davis and Wright only got a crack at the tail end of a large flock and brought back eleven of them. They said there had been more ducks on the lake this spring than the past three years put together.—K., Jr.

SPRING NOTES.—Central Lake, Mich., April 7.—First robin seen April 4; first flight of ducks seen April 4. Ice rotten, but not out of lakes. Several small birds seen last week, but not identified.—KELPIE.

first alarmed gradually left, and others, whose homes were being approached, took up the hue and cry. Scores and scores could have been shot, as many were in range at one time. A very limited number of specimens were taken. The colony I fear will not last many years, as it is entirely unprotected, and is at the mercy of all who choose to visit it. It being right in the track of sailing and fishing parties, and the fact that terns breed there being well known to all the boatmen and fishermen in that section of Long Island and the adjacent shore of Connecticut, it is almost a daily occurrence for some one to visit the island for the purpose of eggging or wantonly shooting the birds. In this connection I must say that the keepers of the lighthouse do all they can to protect the colony, driving off those whom they can and reasoning with others. If these keepers could be made custodians of the island, with authority to fully protect this colony of terns, it might be preserved as an added charm to that portion of Long Island Sound; if not, in a few years at most the birds will have passed away as many other of nature's charms have faded from our sight before the thoughtlessness or greed of man. On our first visit to the island it was difficult to find the nests and eggs, but in a very short time it became very easy. It was somewhat more difficult to find those that were deposited on the beach than on the grassy upland portion of the island. The terns seemed to have no choice between the beach or upland, as eggs were quite as common in the one locality as the other. The number of eggs varied both as to numbers in a set and in coloration to a remarkable degree. While the usual set was three eggs, yet in a large number of cases four eggs were found, in a number of cases five, and in three instances six eggs were found in one nest. One of these large sets is now in my collection. I have no reason to doubt that this set was the clutch of a single female. In a great many sets I noticed usually one, but sometimes two eggs that were entirely abnormal in coloration, having a light blue ground with the usual markings. This color, however, seems to fade in time. In a set taken containing one of the blue eggs, that one now shows no trace of that color, it simply having a somewhat lighter ground color than the balance of the set. Regarding the subject of whether this species covers its eggs during the day-time I concluded as the result of my observations that they did. I examined many nests, feeling the eggs, and always found them warm. Again, when the island was visited the terns arose from the ground. Further, on several occasions I remained quietly lying on the ground until I had marked the place where I had seen a tern alight, and on going to the spot always found a nest of warm eggs. On the 15th occurred a very hard easterly storm, and during that day very few terns were seen at all. The colony was not disturbed by any one and but few of the birds seemed to leave the island. Those that were seen were fishing where the waters were the roughest, seeming not to mind in the least the gale of wind or the white-capped waves. Although I was at the Great Gull almost daily for eight days, yet the number of young birds seen was not to exceed ten at the most. It is true that almost as soon as the young chick leaves the shell it hides, yet no evidence of hatched eggs were found until almost the last time the island was visited, when I found a number of nests that had contained eggs when last seen now contained only remnants of the shells of one, two, or all the eggs. The same day I found a dead bird that was almost ready to fly when it died. It must have been hidden very closely, as the place where it was found dead had been visited very often before.

6. (62) *Sterna dougalli*.—Roseate Tern.—With the colony of the preceding species on Great Gull we found a few pairs of roseate terns. They were undoubtedly breeding, but only one set of eggs was obtained that could positively be referred to this species. Mr. Chapman was standing by a nest containing two eggs, when a roseate tern made repeated dashes at him, and exhibited far more than the usual alarm displayed. The bird was secured and proved to be a female. The nest was marked and was visited on the succeeding day, when the eggs were found to be cold. This is the only case that could be called reasonable identification. We probably saw not more than ten pairs of this species. They were very easy to distinguish from the common tern while in the air. The color of the underparts alone would serve to distinguish them without any other characteristics, but to this must be added the different shape of the tail and the entirely distinct cry. This latter when once heard could not be mistaken. When the cry of one or a pair of terns was heard, although hundreds of the common tern were in the air at the same time, each one of which was uttering its cry of alarm, yet the notes of the roseates could be heard, and the birds immediately picked out from the multitude that were hovering or darting over and around us. During our many visits to the colony we did not make an error in selecting a bird for a specimen. The set of eggs taken was found on the grassy upland in a slight hollow from which a small stone had been taken. The hollow was lined with a few pieces of fine grass, but with not the slightest attempt at nest building.

7. (77) *Hydrochelidon nigra surinamensis*.—Black Tern.—In Mr. Field's record book he had noted on July 6, "Saw to-day a tern almost black flying with the rest." On the morning of the 12th we saw a black tern fishing with the common terns, and the same afternoon, while on Great Gull Island, it came almost within gunshot of us, so there was no doubt of its identification. It was probably the same bird that was seen on each of the three occasions.

WM. DUTCHER.

[TO BE CONCLUDED.]

HAWK AND GROUSE.—*Editor Forest and Stream:* While standing in the woods one morning in October, just as the rays of the sun in all his glory came over the tops of the trees and illuminated the dark gorges among the hills, a hawk, sailing down, lit in a small tree near me. He was a beautiful and fearless creature, but not, surely, more beautiful nor bolder than a ruffed grouse, which a few moments later walked out from under a dwarf evergreen, where he had stood concealed about 10 ft. away, and spreading his tail like a fan moved off over the frost-covered autumn leaves. With every step or two he turned his head slightly to look back at me. I stood watching over him for some time till he finally disappeared in the dense and distant cover. Then turning I shot the hawk, the other spectator of the scene.—JOSEPH (Schenectady, N. Y.).

JUMPING CHICKENS IN THE CORN.

I HAD a relative from the East visiting me in the fall, and as he came from a country where there is no chicken shooting, nothing would do but he must have a chicken shoot before going back. As it was well along in October, it was too late for successful stubble or prairie shooting over a dog. The summer here was very dry, destroying the cover to such an extent that the chickens would not lie to the dog if found on the prairie or stubble, but would flush clear out of range and fly to the nearest cornfield. I told M. that our only show for chickens was to take a good retriever with us and go through the fields and "jump them." He replied that he had never shot any chickens on the wing, and did not expect he would kill a bird in a week in this kind of shooting.

We started out one afternoon about 2 P. M., with a good team and driver, and drove out eight miles from town before stopping. We pulled up on the east side of a promising looking cornfield of about thirty or forty acres, bordered on the south by a large slough. I took the south edge of the field; M. went in about twenty rods; we started to the west side of the field. I had only walked a short distance when a fine covey got up in front of me at long range, and I scored the first miss. They dropped down in the ragweed on the west side of the field. We followed them up, and when they flushed each got a bird. This time they flew a mile west to another cornfield. Our driver had them well marked and we got in and drove over.

Arriving at the field we got out and directed our man to drive to the nearest knoll in order that he might mark down for us. M. and I then started diagonally across the field, getting up our old covey and two new ones in crossing the field. The birds got up wild, and every shot was a long range snap shot. We followed these coveys to three or four other fields, swelling our bag to fourteen birds. It was now nearly sundown, and we were twelve miles from home, tired, hungry and cold. Our driver had foolishly come off without his overcoat, and as a consequence he was shaking as if he had a fit of buck fever.

We are blest in this country with good roads, and on this occasion we made good use of them, driving home in about one hour and a half. When I seated myself at the table, I attacked the substantial in a way that made Mrs. S. stare at me as if she thought I had lost my manners or gone crazy.

And now, gentle reader, if you have a friend come to visit you and he protests he has never done any wing shooting, don't flatter yourself that you are going to wipe his eye about every other shot, for if you should you might get left as I did. Friend M. claimed he had never done any chicken shooting, but when we counted our empty shells and birds at night his score stood as clean as mine.

W. H. S.
FOREST CITY, IOWA.

TO CODIFY THE GAME LAWS.

THE following is the text of the bill just signed by the Governor of New York and now a law:

An Act to provide for the revision and codification of the laws for the protection and preservation of fish and shell-fish and of birds and quadrupeds.

That the people of the State of New York, represented in Senate and Assembly, do enact as follows:

Section 1. A commission to revise and codify the laws of this state for the protection and preservation of fish and shell-fish, and of birds and quadrupeds, is hereby established, as follows: The attorney-general shall select from among his deputy attorneys-general one member, the commissioners of fisheries shall select from among their number, one; and the New York society for the protection of game shall select from their membership one; and the three persons so selected shall constitute the said commission. Certificates of these appointments shall be filed in the office of the secretary of state and of the comptroller. The members of the said commission shall meet at the capital in the city of Albany at such time as shall be appointed by the attorney-general, and shall organize by the appointment of one of their number as chairman and another as secretary, and shall proceed to revise and codify the laws of this state for the protection and preservation of fish and shell-fish and of birds and quadrupeds, and report such codification to the legislature on or before the fifteenth day of January, eighteen hundred and ninety-one.

Section 2. The said commission may grant hearings and take testimony at such times and places as they shall appoint, with reference to the subject committed to them, and shall have authority to administer oaths to witnesses and to employ such clerical and stenographic assistance as they actually need in the prosecution and completion of their work.

Section 3. Each member of the said commission shall be entitled to compensation at the rate of three dollars for each day's actual and necessary services, and all the members of the commission shall be allowed their actual expenses of travel and subsistence while engaged in such service. The commission shall be allowed its actual and necessary incidental expenses; and all accounts rendered by the commission or its individual members shall be subject to the audit of the comptroller.

Section 4. The sum of five thousand dollars, or so much thereof as shall be necessary, is hereby appropriated out of any money in the treasury not otherwise appropriated, for the purposes of this act.

Section 5. This act shall take effect immediately.

IN THE DAYS OF MUZZLELOADERS.

AT noon on a cold windy day in December, away back in the fifties, when game was so plentiful along the Mississippi River and its tributaries that any poor shot with a little effort could make a decent bag, four stalwart hunters stood at the steamboat landing of a little town in Illinois on the east bank of the Mississippi, discussing the proposition made by one of their number to go across the river to a lake in St. Charles county, Missouri, to hunt geese during the evening shooting. One of the bystanders remarked, "Boys, it's too rough, you can't make it."

"I never saw the river so rough that I could not cross it. What do you say boys? No time to lose."

"We can cross if you can."

"All right; get ready."

In a few minutes a skiff was made fast to the landing and guns and ammunition were hastily put on board, followed by the stalwarts aforesaid, whose weight brought the gunwales of the skiff to within a few inches of the water. Two pairs of oars were shipped in the rowlocks and the journey began.

A stiff wind was blowing down stream, and when they reached the middle of the river it had increased to a gale, and the white caps were rolling beautifully. Yes, beautifully to look at from a safe distance on shore, but to a timid greenhorn with neither skill nor courage and with nothing but an inch pine plank between him and the bottom of the river, the situation was anything but attractive. But that crew was made of stern stuff. They were going for geese, even with the immediate prospect of a ducking.

The wild waves were saying, "This is our frolic—we'll

pipe and you dance," and dance they did, or rather the boat did in anything but rhythmic measure.

The spray was flying over their heads, and more frequently than was agreeable, the crest of a wave would break over the sides of the overlaid skiff with a wicked sound, wetting the occupants and obliging them to bail her out under difficulties, but a skillful turn of the steering oar would bring her head to the wind and relieve the temporary stress until the next roller came.

After buffeting the waves until nearly exhausted they got to the leeward of an island, behind which was a long stretch of still water, completely sheltered from the wind. Here fresh oarsmen took the blades, and bending to their work with a will, made the little craft fairly spin for a mile or more, when they ran her nose into the mud bank on the Missouri shore, and four hunters crawled out wet, stiff and benumbed with cold, and the ice clinging to their whiskers and clothing.

A two mile walk through a heavily timbered bottom brought them to the objective point of the trip—a lake in the edge of the prairie, covering about forty acres, which was frozen over with the exception of a water hole in the center of nearly two acres in extent, which had been kept open by the geese at night during the previous cold weather. On the north side of the lake was a belt of young timber that protected it from the north wind, and to the south and west were miles and miles of open prairie, dotted over with corn and wheat fields, in which the geese fed during the day. They would alight in the center of a large field open on all sides, and resolve themselves into a committee of safety, and every member of the flock was as vigilant a sentinel as if the lives of the whole feathered creation depended on its efforts alone.

The first thing after reaching the lake was to note the direction of the wind, and station themselves accordingly, for it is well known to hunters that wild geese always rise and fly against the wind, unless alarmed or driven out of their course by storms. Three of the hunters were stationed in the dry prairie grass on the south side of the lake, at places most likely for the geese to cross, the fourth was posted on the ice near the water hole.

The sun was now about an hour high, and no sooner had the men got in position than it began to snow furiously, coming from the north. In a few moments the flakes were falling so fast the boys were unable to see one another distinctly at their stands. The storm had fairly begun, when they could hear the welcome *honk, honk* of the geese coming in from the fields toward the lake for the night.

Here they come, low down, to keep out of the wind, keeping up an incessant goose-gabble that was very interesting to the listeners. Mischievous for that happy family which they were not dreaming of was hid in the tall grass. A series of flashes, bang! bang! in the center; bang! bang! on the left, then they bunched up and swung around over the man on the right, who dropped one fine fellow almost at his feet. The rest of the flock flew across the river anathematizing in vigorous goose language the hunters that were out in such a storm as that. Five geese was the result of that charge on the feathered brigade. Soon another flock, bewildered by the storm, came slowly toward them from a point a little further west, and as luck would have it, ran the gauntlet of three guns, and six more were added to the bag, and one was heard to fall out in the prairie beyond reach.

It was now getting dark and still the geese were coming in, one flock after another, to be decimated by their unseen enemies. As yet no report had come from the hunter at the water hole in the ice. Now two flashes in his direction, followed by a couple of satisfactory thuds, indicated that part of the line was being cared for. Re-loading his gun, he squatted on the ice looking like some inanimate object covered with snow. A few moments later a chorus of *qua-qua-quacks* were heard down the lake coming toward him under the shelter of the timber, and cocking both barrels of his gun, he waited. Soon the birds appeared, bowing their wings to drop into the open waters in front of him. Without changing his position there was a quick raising of the gun, a double report, and nine mallards were picked up and put in a pile on the ice. So the fun went on, fast and furious, until it was too dark to shoot; and gathering on the edge of the lake they counted nine mallards, twenty-four geese and one swan, which was bagged by the silent man on the ice. Thirty-four head of game in about an hour's shooting, not counting those lost in the darkness and storm. This was before the advent of breechloaders. With the modern chokebored weapon the slaughter would have been fearful.

Ah, those well-remembered days, we ne'er shall look upon their like again!

ELSAH, III.

THE QUAIL IN MASSACHUSETTS.—Boston, Mass.—The quail recently liberated by the restocking committee of the Massachusetts Fish and Game Protective Association continue to be heard from, and occasionally in a way that speaks volumes of the habits of this pretty game bird. A gentleman from Wareham recently applied to this committee for some bird to put out in his locality, but the supply had run short and they had only a single pair to give him. He was not aware that there were any wild quail in his vicinity. None had been seen for three or four years, though these birds were formerly quite plenty there. He set his pair of imported quail at liberty, putting out a plenty of grain for them to feed upon. The birds were not alarmed, and quietly fed upon the grain for some minutes after liberation. Then the male bird flew into a tree and gave a peculiar whistle, then cocked up his head as though listening. Soon he whistled again, and was answered by a faint whistle in the distance. He kept whistling and the answer kept coming nearer and nearer, till soon there appeared four or five handsome wild quail, evidently reared in Massachusetts instead of Tennessee. The wild birds found the grain and helped themselves. They were soon on the best of terms with the birds from out of the State, and the feeding ground has been kept up by both the wild and the tame birds. The committee has liberated in all nearly 1,100 quail this season, and the good work is to be kept up.—SPECIAL.

FOREST AND STREAM, Box 2,632, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nant," "Glean," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

WISCONSIN GAME LAWS.

CHICAGO, Ill., April 8.—The protective system of this country is practically the game warden system, which very many, including the FOREST AND STREAM, think to be the best system. Personally, I never did think much of the game warden system, although I do not discover that my personal belief ever made very much difference to the world at large. My own notion is that we will have to cut off the market for game before our New England grouse killers or our Rocky Mountain meat hunters will stop their steady efforts. Probably I don't know anything about it. When I was a boy I used to steal my mother's raspberry jam; then my mother used to punish me. It appears to me now that had the good lady legislated for the benefit of the whole family, she would have devised some scheme which began to take effect before rather than after the robbery of the jam pot. But probably I don't know.

Not the less brightly, however, shines a good deed in a naughty world; and I take great pleasure in writing about the work of Game Warden W. Y. Wentworth, of the southern district of Wisconsin, knowing that the record of his work will comfort a great many people. In person Mr. Wentworth is tall and vigorous, and in age past fifty. Much respected as a citizen, he is proof enough that an officer may be efficient in his duty and yet respected as a man. I will give his words as nearly as I can in the mention of part of his experiences:

"I am State game warden for twenty counties," said he, "including Rock, Walworth, Racine, Kenosha, Waukesha, Milwaukee, Jefferson, Dane, Columbia, Dodge, Washington, Ozaukee, Sheboygan, Fond du Lac, Green Lake, Marquette, Waushara, Winnebago, Calumet and Manitowoc. Of these counties, Waukesha county alone has eighty-six lakes within its boundaries, on almost any one of which there is temptation for a law breaker. My territory also covers Lake Winnebago, a body of water 14x36 miles in extent, and well known to be infested with illegal nets. My salary is \$600 a year, and I am allowed \$250 a year for traveling expenses. I have a deputy in each county, whose sole pay rests in half of the fines imposed under actual convictions. Many of these deputies are timid and afraid to act without my help. I ought to be traveling all the time. How can I be, on \$250 a year? I am a good deal out of pocket on traveling expenses for the past year, and yet I have felt that I was slighting the work. What can you do, under the present careless and indifferent law?"

"You remember the Hansen case, that got into the papers about a year ago? Well, we did get about \$1,000 worth of Hansen's nets out of Winnebago. We stored these nets, and not long ago a bill for \$25 came in to me for the storage. I had it charged up on the docket, and Hansen came up and paid it. Then we took all the nets out and burned them. That was after the final decision in the case. We had good luck in that case."

"Once I got eleven nets out of Lake Winnebago—pound nets and illegal—but the fellow replevined the nets. The State prosecutor told me he didn't have to act in a civil suit. So I hired an attorney and paid him \$20 out of my own pocket. Not very much money or glory either, in that."

"Not long ago we spotted a lot of pound nets in Lake Winnebago. I hired five men on the lake to watch the nets, while I went down and got a boat big enough to carry them. I paid \$20 for a steam yacht. When I got to my watchmen I found the nets gone, and none of the men had seen them go. The men had sold out on me. They all stand in together."

"In 1888 I arrested 24 fishermen in one lot, had each of them fined \$10 and costs, at Menasha. They appealed, and I lost one case in the County Court. So I dismissed all the rest, and all the work went for nothing."

"Some folks say that there are as many fish to-day as we ever had, but old fishermen tell me a different story. Fred Melchow is one of the old-timers on Winnebago. He says: 'Ten years ago a \$50 net caught all the fish we could handle; to-day it takes \$500 worth of twine to catch a less amount.' Mr. Oliver, the Wisconsin State Warden, who has the great lake country in his district, says: 'Our lake fishermen are getting no whitefish at all now worth mentioning.' Pete Larsen, another old fisher of Lake Winnebago, says: 'We catch white bass now instead of pike [pike-perch]. The ground pike and wall-eyes are about gone. We only get sturgeon as plenty as we used to.' When I hear talk about fish being as plenty as ever I know the fellows who talk are either ignorant or careless of the truth. The modern catch is the product of a plant and a system ten or twenty times as elaborate as that of twenty years ago. Do you think it is fair to compare it with the catch of those days? Yet it is not so large as that was. We surely have need of good laws, well enforced."

"The law is lax and faulty enough, and such as it is, it is not respected. The case has to be taken before a jury on demand, and a game case before a jury is an uncertain thing. I had a jury trial not long ago, and they got an Irishman by the name of Mike Cronin on the jury. We proved illegal killing of the duck, but when the jury retired to deliberate, this Cronin appealed to his fellow jurors. 'Gintlemen,' he said, 'I wud loike to know phivat differens it makes to the dook pfwhether ye snake up on him an' prod him, or prod him an' don't snake up on him!' This argument convinced the jury, and we lost our case, which was one for using a float in killing ducks."

"We knew for a long time that old Cap Sherman was 'floating' ducks lower down on Koshkonong. My deputy, Bingham, and I crawled up on the bluff above him, one day, and lay behind a brush pile watching him. We saw him scull out to the decoys, shoot and kill a duck and pick it up. We arrested him and had a big trial. I have just learned that he is fined—about \$5 or so—and that he goes to jail to square that. We lost another good case through the trickery of a lawyer to whom we had extended the courtesy of a continuance. He rushed in ahead of us and got the case dismissed because we were not there at the time set. The sympathy of the juries and the justices seems all for the offender. Mr. Rogers, my deputy at Mukwanago, turned in to me one fine of 25 cents! A learned J. P. there had inflicted that penalty upon a man who had killed a mallard hen. He shot her as she was sitting on her nest in the summer time! That will show you how severe our legal machinery is."

"Once in a while, however, we get so good a case that even our justices can't help convicting. Mr. Levison, my deputy in Dane county, caught four men for \$10 each

not long ago. They claimed to be seining for minnows, but their net was 66ft. long and 6ft. deep, while the law only permits one 50ft. long and 3ft. deep. We got a good conviction of four game dealers in Milwaukee in 1888, Mr. Armour, my deputy there, bringing the action. These men got \$25 and costs, and appealed. They showed bills of lading to prove they got their game from Chicago, but I notice they paid their fines before the appeal came up.

"In the first eighteen months of my term I turned into the State \$1,100 in fines. Judge Bartels, the Ellis Junction warden whose track you crossed last summer, turned in \$52. Calvin Morse, of Monroe, is a new man. John White, of Alma, turned in \$380 in the above time. You can see the total for outraged justice for a year and a half is not large. I do not want you to print this showing, lest it might be thought as drawing too much credit to my own work; but those are the real figures as I have them.

"I have about forty deputies under me and I must say they are usually a faithful lot. My deputy Atley Bingham, at the lower end of Lake Koshkonong, I prize very highly. One night Atley heard a seine at work. He crawled down on the beach and they pulled the seine out right around him. It was pitch dark, but he made a rush and caught one fellow and held him. The others ran away, but after a little one man came back with an oar in his hand and told Atley to 'let that man go or he'd kill him with the oar.' Atley told him if he came closer he would shoot him. Atley then dragged his man off through the woods toward town. The fellow lay down and would not walk. He hauled him four miles by the collar, and then it came daylight, and he made him get up and walk on ahead. This turned out to be old Cap Sherman's boy Fred. Old Cap, is one of the tough ones. Not many men would have done what Atley Bingham did that night.

"I had a darling of a warden up at Manitowoc. He was a little Irishman and his name was Jimmy Carroll. I nearly cried when he was removed—in September, 1887—but the Governor of the State insisted on it, for it began to look as if Jimmy would have everybody in the county arrested. He turned in \$250 fines in eight months, and he told me he put \$800 in his own pockets in that time. You see, a deputy is allowed to figure his mileage in the costs, besides getting half the fine. The further Jimmy could snail a man, the better he liked it. He would arrest a man in one end of the county and take him to a justice of the peace in the other end of it, and in that way he made a pretty good thing of it till he raised such a howl I had to let him go. 'Ye see, Misther Wentworth,' he said to me, 'I can't fer the loife of me see phat's the use bein' a depy unless ye're a h—l av a feller!' I have never since succeeded in getting another 'h—l of a fellow' in there. I have had three deputies there since then and not a single arrest.

"We have an absurd search-warrant clause in our Wisconsin law which has lost us evidence in many a case. Before we can get authority to break open a box which we know holds game billed out of the State, the box is spirited away to some other place, or shipped on an earlier train. A warden ought to have authority to search on suspicion. As it is, it looks as though the law was made to tie a warden's hands rather than to help him. I will tell you how that works. A great many canvasbacks are shipped out of here each year billed as 'poultry.' There is one N. Durham, 138 Reed street, in the great and good city of New York, who buys much of the canvasback product of Koshkonong Lake. It is illegal to ship game out of this State, but so long as New York offers a market, and Chicago does the same, that long the market-hunters will kill and ship our game, and we have no machinery adequate to stop them. No one knows this better than I do, and I have worked my best under our present law. Casper Sherman, who has served two days in jail for it, has been shipping canvasback 'poultry' to that New York man Durham all this fall, and he has been using an illegal 'float' to do it. You stop your Mr. Durham and I'll stop my Mr. Sherman.

"They kill and box up a lot of canvasbacks in one part of the lake and take them off to the other end to ship them. I got wind of two barrels and a box of 'poultry' one night and traced the wagon to Fort Atkinson. I could find nothing there, and it later transpired that they were at once taken to another point for shipment. I telephoned the station agents at all the stations about the lake. After locating the stuff, how could I get to it with the proper search warrant before the first train took it out? That was in October, and the stuff was shipped by Herman Miller who runs the cabin-house we saw opposite Blackhawk club house. Last fall this same Miller shipped 142 canvasbacks to New York, billed as 'bedding.' At Johnson's Creek, where he took the box to ship, the agent saw something wrong about the box, the weather being warm, and he opened the box and counted the birds. At Chicago the box became offensive and all the birds were thrown out. What could I do? Could I get to Johnson's Creek with my little search warrant in time? You stop your Mr. Durham and I'll stop my Mr. Miller. Give us a law with some business, horse sense under it, and we may stop the slaughter of our game and fish. Under the present system, no warden can do much to stem the tide. I have made at least 200 arrests in the two and a half years of my work. I made 186 arrests in the first two years. About one-half of these arrests have resulted in conviction, and you already have an idea of the fines. My barn was burned down mysteriously one night last fall. I don't know who did it. I don't think any of the boys about the lake have that kind of a grudge against me. I have tried to do my duty and I am going to keep on doing that. They ought to know they can't bluff me, and before I'm done I will make it warmer yet around these lakes. But you may set it down, that the game warden business is an uphill job, with mighty little money and mighty little glory in it."

I have given much of Mr. Wentworth's talk from memory, but believe I have not misrepresented him or the facts on any point, and if I have I should be glad to make the correction. No comment would help his straightforward talk if I could give it as actually spoken. There is, however, this to be said, and I hope every member of the Blackhawk Club will say it to the Governor of Wisconsin, and to his successor, and to the successor of him, namely, that Mr. Wentworth belongs just where he is, politics or no politics. He has done good work. He knows the ropes, knows the old offenders and their ways, knows the waters and the places furnishing the most

offenses against the laws, and moreover has a good force of deputies who, like himself, have acquired a practical knowledge of the fore and aft workings of that estimable piece of jocularly, the Wisconsin game law. He is a man all the way through him, with the breadth and charity of nature that only come of a wide look at life. Keep him at work where he belongs. He is the only game warden I ever found who ever warded anything, and I am as proud of the discovery as good Mr. Gordon was of his black-throated guillemot, of which only two have ever been known in America. I have not found the other warden yet.

E. HOUGH.

JANESVILLE, Wis., March 25.—*Editor Forest and Stream:* With the advent of bluebird and robin comes the revival of the spring shooting controversy, particularly so in this locality, situated as we are near the dividing line between open and closed spring shooting.

Our friends across the line send cheering reports to FOREST AND STREAM of glorious sport on the Calumet and Kankakee marshes, and we are entertained by accounts of how some prominent members—in one instance the president of one of our prominent game preserve clubs—is slaughtering the ducks down South during the winter months. Again, we read of clubs organized in Chicago, composed of "way up" sportsmen, who with unlimited command of money, have secured the control of still another of the few remaining good fall shooting grounds of our State. Thus they go, one after the other, and soon the omnivorous greed of these wealthy sportsmen, most of them non-residents at that, will have secured every pond, lake or marsh in the State where wildfowl stop during their fall migration.

Disgusted, we turn to the columns of the old reliable friend, FOREST AND STREAM, where moderation in language, fairness and impartiality in discussions of all questions pertaining to stream and forest have always indicated the higher standard of true sportsmanship. But alas! here also of late we find our people, and particularly the farmers and resident land owners round about Lake Koshkonong, outrageously slandered and our game and fish laws ignorantly or viciously misquoted by some perambulating correspondent, whose inspiration is evidently derived from a peculiar local source.

Your correspondent cheers us with the comforting information that jointly the Blackhawk Club and Peck's Place now controls miles of the best part of the Koshkonong shooting grounds, and that to their influence, in a great measure at least, are we indebted for our present noxious onesided laws on wildfowl shooting.

Now, Mr. Editor, I venture to say that we may all be mutually benefited by a friendly interchange of honest, though it may be conflicting opinions, on even such questions as spring shooting. I believe that we will all agree to the old established principle that the game *ferce nature* rightly belongs to the people of the State and to the whole of the people, and not particularly to those individuals who are everlastingly boring you with the "big I and sportsman" racket. Assuming that we all agree to this, that to the people of the State belongs the game, then such laws and regulations as will best tend to increase the production and equalize the distribution of the benefits of this, the people's common property, should be the aim and object of game legislation. Approaching the question then, if possible without bias or prejudice for or against any of the variously designated classes or individuals of the State, let us face the situation fairly and squarely, even if in so doing we shall be compelled to admit that a short open season for spring shooting of the migratory water fowl will be much more equitable, fair and just to the whole people of the State than our present extremely partial, unjust, and to a great extent inoperative laws on the subject.

If, say, fifty sportsmen kill two hundred ducks apiece in the fall at their club home, the number of ducks belonging to the people is reduced ten thousand. Very likely one-half of these sportsmen are non-residents of the State—which I think is not at all overestimated. Then we have twenty-five citizens of the State who have enjoyed the benefits due to and held in common by all of the people, at the expense of ten thousand ducks out of the common property of the State.

You may reply that all have the same chance, and if they want their share of game and sport and healthful exercise, they must go where the game is and shoot when the law allows. All very well, except for the fact that in the fall of the year the wildfowl shooting grounds in our State are very limited, confined, in fact, to less than a dozen localities, consisting mostly of small shallow marshy lakes, where wild rice and wild celery furnish the necessary feed. Furthermore, these very grounds are already to a large extent owned and controlled by the sportsmen of this and adjoining States, who enjoy their shooting and fishing from the Gulf of Mexico to Winnipeg, from Maine to Washington. I do not object to these people enjoying themselves. I wish there were more that could do the same, in fact I have taken some of the same kind of medicine myself; but I do most emphatically object and protest against these very men so manipulating our legislators as to enact laws that virtually prohibit ninety-nine out of every hundred of the citizens of the State from ever getting a shot at a goose or duck, while they are taxed for the support and enforcement of these very laws. Supposing the people of the State should wake up some day and imagine that they had been gulled and humbugged in this whole game protection business, and should insist on reversing the whole arrangement.

"These lakes and marshes where wild rice and celery grow are the breeding grounds and natural home of our wildfowl; you have legislated for us long enough; you have prohibited us from getting a shot at these birds at all, as the only time they are found in our part of the State is in the early spring during high water. Just see us run the machine for a while. It may be a little hard on a very few of our citizens, but for the benefit of a very large majority of our taxpayers and all the people. We will prohibit entirely all shooting at all times on these ponds, lakes and marshes, and make these places the home of peace and plenty for our birds at any and all times of the year. Instead of furnishing grand sport to twenty-five of our people at the cost of 10,000 ducks, we will give 10,000 people a chance of shooting at and probably not killing 5,000 ducks, by a short open season on wildfowl during high water in early spring, which is the only time of the year that these birds are distributed quite generally all over the State."

Consider further that the landowners are the only ones that have any right to shoot at all. Is it any wonder that the farmers post their grounds when sportsmen have so manipulated the game laws that not one in a thousand of the landowners of the State can ever fire a shot at duck or goose on their own land, and when, if they go to the fall shooting grounds, they very soon find themselves hustled off of somebody's private shooting grounds, and may be thankful if they do not find themselves advertised as "rats" or "brainless idiots," who require the average club house sportsman to guard the "poor farmers'" interest?

With this condition of things staring us in the face, I ask, is it not about time that we ask ourselves, have we "done to others as we would that others should do unto us?" The silly rot about one bird killed in the spring being equal to a dozen in the fall, is not good nonsense. A boy eight years old can tell you that if he has a flock of ten chickens and he kills nine of them in the fall, he has but one left for breeding in the spring, but if he kills only two in the fall and six in the spring, he has still double the amount left for breeding purposes. It matters not so much when our game is killed, but how much is killed. Suppose we should shut out the whole outfit of club house and market-shooters—yes, all shooting entirely—from our wild rice and celery grounds, would there not be many thousands of ducks saved in the fall, which, returning in the spring and scattering all over the State, for a few days, would give hundreds of people a little sport at that time of the year when nothing else is available? Instead of this, now we are having them slaughtered in the fall by a few men who, day in and day out, week in and week out, "pound it to 'em" from a blind over a big bunch of decoys, and ship them by the thousands to Eastern markets, assisted it may be by those very men whom the people imagine to be their game protectors.

H. L. SKAVLEM.

CLUB MEETINGS.

THE New York Association for the Protection of Fish and Game held their regular monthly meeting Monday, April 14, at Pinard's. After dinner the general routine business was gone through with. Mr. John G. Hecksher was unanimously elected a member of the Association and several gentlemen proposed for membership, among whom was Mr. Dean Sage, of Albany, the noted salmon angler, and author of that grand book on angling, "The Salmon of the Restigouche."

Mr. Blackford announced that the bill authorizing the appointment of a commission for the codification of the game laws had been signed by the Governor. The Commission, three in number, to consist of one member appointed by the Fish Commission, one by the Attorney-General, the third by the New York Association for the Protection of Game. This appointment will be made at the next meeting.

A very interesting letter was read from Manasset Smith, an honorary member of the Association now residing at Woodford, Me., where he is confined to his room by severe illness. Mr. Smith, in this charming letter, which is suggestive of sparkling trout brooks and spicy balsam, mentions the fact that the poachers in his section are rapidly being convinced of the error of their ways through their pockets. They find amateur sportsmen pay well for the privilege of getting a shot at a deer, and a live deer is worth ten times—yes, twenty times—his weight in venison. The sooner all guides find this out the better.

The District Attorney's office has been waging war on the city poachers. Mr. Willett Kidd, the warden, has brought several suits to a successful end, and is going for more. Good luck to him!

BOSTON, Mass., April 11.—The regular monthly meeting of the Massachusetts Fish and Game Protective Association was held at Young's Hotel, in this city, on April 10, forty-five members being present, with President E. A. Samuels in the chair. The following gentlemen were elected members: Dr. E. H. Branigan, L. A. Dean, Dr. Geo. E. Bill, Thos. Curley, Dr. Chas. G. Weld, Geo. C. Adams, Wm. Garrison Reed, Wm. C. Thairllwall, John B. Patterson, Edwin A. Hills, Henry B. Callender, Wm. S. Leland, Horatio Davis, Jos. G. Thorp, Jr., Chester S. Day, E. W. Dwight, Lemuel R. Howe, James L. Wesson, Edward C. Hodges, Geo. C. Wadleigh, Geo. C. Dickson, Geo. P. Field, Chas. G. Davis, H. C. Bronsdon, E. H. Eldredge and C. W. Whittier. Nine applications for membership were received. Letters were read from different sections in the South and West, informing the Association that next summer and fall we can procure plenty of the different varieties of quail and grouse, and our committee on game importation is making extensive preparations for continuing the work of stocking Massachusetts with game by procuring and distributing large numbers of these birds. Encouraging reports have been received from different localities in the State where quail have been let loose, stating that many of the birds have been seen, and were thriving and getting along nicely.

RICHARD O. HARDING, Secretary.

SCHENECTADY'S GAME CONSTABLE.—Schenectady Station, April 7.—*Editor Forest and Stream:* At our charter election on Tuesday, April 2, Mr. Harry Coates was elected game constable of Schenectady county. Mr. Coates was sworn in on Saturday last and is now getting his boats ready to watch the illegal fishermen who are using nets in the Mohawk. He promises to make an example of the first person he catches using nets, and he further says, "They can't buy me for a glass of whisky." The Mohawk River a few years ago contained an immense number of bass, but for the past few years the nets have destroyed them. Success to Mr. Coates!—LOPIS.

DETROIT, Mich.—At the annual meeting of the Old Reliable Rod and Gun Club, of Detroit, Mich., the following officers were elected for 1890: Pres., W. P. Hutchins; Vice-Pres., S. R. Baugh; Sec.-Treas., Dr. W. G. Woodworth; Directors, W. H. Smith, B. W. Parker, Thos. Reeder; Capt., R. C. Judge; Lieut., C. H. Preston.—W. H. SMITH.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price \$2.50. For sale by FOREST AND STREAM.

Sea and River Fishing.

SEA BASS FISHING OFF HENLOPEN.

I HAVE been called upon a number of times lately to answer the question, "What did you do during the summer?" So many times have I heard it that I have come to the conclusion that an account of some of my experiences might be of interest and perhaps of benefit to others situated as I was.

I found in July that I was completely run down, and the conclusion was forced upon me that I must have a decided change. I felt that my system needed a strong natural tonic, and I caught myself living over in memory those delightful trips of former days among the splendid lakes and trout streams of northern Michigan. But my circumstances would not admit of a trip to Michigan. I could not afford the expense and loss of time. So I must find something that would afford me profit as well as health and pleasure. After looking around I decided upon becoming one of the crew of a sea bass fishing schooner, and having convinced the captain and the owner that I was quick to learn and willing, I found myself near the last of July, assisting to make sail on the schooner Eden, bound for the southern banks off Henlopen.

The Eden was a fair example of the vessels used in this industry. She was of about forty tons, and carried upon her deck six fishing skiffs, fashioned the same as a yawl boat, 14ft. long. The complement of men consisted of two fishermen for each skiff, captain, mate and steward, fifteen in all. We carried besides two passengers, one, who, for the privilege of the trip, assisted the steward, and one who paid a small amount, just enough to cover the ration.
